## MECHAM & FRITSCH,

—IMPORTERS AND BREEDERS OF—

## Red Polled Cattle.

We have 19 head of Imported Stock.

YOUNG BULLS and CROSSBREDS ON DEVONS for Sale.

H. MECHAM,

Importer and Breeder of Shropshire Sheep. They were all imported from England in '83, or bred direct from imported Stock, and all registered.

H. MECHAM,

Breeder of American Merino Sheep Without Horns.

The only flock in the United States. When we bought our sheep East 20 years ago, among them was a ram without horns. He grew to be a fine large sheep, shearing at 2 years old, a 12 months' fleece, 25 lbs. of long white wool.

I have bred from him and his get ever since and have never made an out-cross and never used the same ram but one year on the same flock. My rams at two years old will weigh from 160 to 180 lbs., have a strong constitution, without wrinkles, and will shear on an average about 25 lbs., a 12 months' fleece, of long white wool. Rams and Ewes for sale. P. O. Address,

Stony Point, Sonoma Co., Cal.

R. R. Station, Petaluma.

## THOROUGHbred JACKS!

A FEW MAGNIFICENT JACKS BRED FROM THE finest strains of blood from Kentucky. Correspondence solicited. L. U. SHIPPEE, Stockton, Cal.

RICE'S PATENT  
CALF  
WEANER  
—AND—  
Sucking Cow  
MUZZLE.

Prevents Calf or Cow from Sucking  
Themselves or Each Other.  
Thoroughly Tested and Endorsed by All. No  
Hindrance in Eating and Drinking.  
No Pain. Complete Success.

No. 1, for Calves, 50 cts. ea., by mail postpaid... \$ 55  
No. 2, for Yearlings, 75 cts. ea., by mail postpaid... 80  
No. 3, for full grown animals, \$1, by mail postpaid 1 10

FUNK'S  
PATENT  
CALF FEEDER.

Also for Colts and Lambs.

Raises better calves than any other method. Better  
than the cow, because can feed prepared feed and give  
all the calf can eat. As soon as the calf feels the nipple  
it tastes the milk and is glad to suck; as it gets older it  
weans itself. No air swallowed; no fingers chewed; no  
ears sucked. Less trouble; greater success; easy to clean.  
Sample Feeder mailed postpaid, \$1.00; per dozen, \$9.00  
There are Great Advantages in REARING YOUNG  
CALVES BY HAND over rearing them with the cow.  
It takes less time and trouble, because they are easier  
handled, depend on themselves and water better; get to  
eating sooner by putting milk-stuff in the milk; make  
better calves, because plenty of skimmed milk and slop  
to spare; make more butter because the cream is saved;  
can run in the same pasture with the cow, never have to  
wean them, and the cow does no fretting for the calf.  
Will send trial Weaner and Feeder, postpaid, \$1.50  
Don't fail to give them a trial.

Horse Liniment

Is certainly the best preparation of its  
kind in the market. Ranchers, Stock  
Raisers and Horse Owners of every  
description will tell you that it does  
good work every time.

MESSRS. H. H. MOORE & SONS, Stockton, Cal.—GENTLE-  
MEN: In answer to your inquiry, would state that I used  
your H. H. H. Liniment on my Holland prize-winning  
cow, "Lena Menlo," for a wrenched shoulder, and it re-  
lieved her very much. She calved the next day, and while  
still suffering from the sprain gave the largest authen-  
ticated quantity of milk ever given on this coast (104  
gallons per day), showing conclusively the great relief  
received from your remedy. I consider it a necessity in  
my stables, and when away from home feel perfectly  
safe, as inexperienced men can do no harm with it, as  
they can with the more powerful blisters. Respectfully  
yours,

## S. H. MARKET REPORT

## Market Review.

## DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, April 29, 1891.

General trade in farm products the past week has been fairly active. The weather has been all that can be desired for crops and bounteous, a harvest of all kinds of products is among the certainties. The money market is reported easy. At the East and also abroad wheat values have tended down. The following is to-day's cablegram:

LIVERPOOL, April 29.—Wheat—Slow. California spot lots, 8s 3/4d; off coast, 45s; just shipped, 45s; nearly due, 45s; cargoes off coast, quiet but steady; on passage, market seems firmer; Mark Lane wheat, slow.

## Foreign Grain Review.

LONDON, April 27.—Mark Lane Express, says: English wheats are quiet, but firm at an average price of 39s, the highest since 1883. Foreign steady. All other grains show an advance. Supplies continue to decrease. At to-day's market wheats were firm. English is held at 40s; best California from 46s to 47s.

## Liverpool Wheat Market.

The following are the closing prices paid for wheat options per cwt. for the past week:

	April	May	June	July	Aug.	Sept.
Thursday	88 1/2	88 1/2	88 1/2	88 1/2	88 1/2	88 1/2
Friday	88 1/2	88 1/2	88 1/2	88 1/2	88 1/2	88 1/2
Saturday	88 1/2	88 1/2	88 1/2	88 1/2	88 1/2	88 1/2
Monday	88 1/2	88 1/2	88 1/2	88 1/2	88 1/2	88 1/2
Tuesday	88 1/2	88 1/2	88 1/2	88 1/2	88 1/2	88 1/2

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	C. O.	P. S.	N. D.	Market.
Thursday	46 1/2	45 1/2	45 1/2	Irregular.
Friday	46 1/2	45 1/2	45 1/2	Firmer.
Saturday	46 1/2	45 1/2	45 1/2	Quiet.
Monday	46 1/2	45 1/2	45 1/2	Kasier.
Tuesday	46 1/2	45 1/2	45 1/2	Weak and lower.

## Eastern Grain Markets.

The following shows the closing prices of wheat at New York for the past week, per cental:

Day	April	May	June	July	Aug.	Sept.
Thursday	20 3/4	19 3/4	19 3/4	18 3/4	18 3/4	18 3/4
Friday	20 3/4	19 3/4	19 3/4	18 3/4	18 3/4	18 3/4
Saturday	20 3/4	19 3/4	19 3/4	18 3/4	18 3/4	18 3/4
Monday	19 3/4	19 3/4	19 3/4	18 3/4	18 3/4	18 3/4
Tuesday	19 3/4	19 3/4	19 3/4	18 3/4	18 3/4	18 3/4

The closing prices for wheat have been as follows at Chicago for the past week, per cental:

Day	May	June	July	Aug.
Thursday	18 3/4	18 3/4	18 3/4	18 3/4
Friday	18 3/4	18 3/4	18 3/4	18 3/4
Saturday	18 3/4	18 3/4	18 3/4	18 3/4
Monday	18 3/4	18 3/4	18 3/4	18 3/4
Tuesday	18 3/4	18 3/4	18 3/4	18 3/4

NEW YORK, April 29.—Wheat—\$1.17 1/2 for May, \$1.14 1/2 for June, \$1.13 for July, \$1.08 1/2 for August, \$1.07 1/2 for September, and \$1.08 1/2 for December.

CHICAGO, April 29.—Wheat—\$1.07 1/2 for May and \$1.05 for July.

## Visible Supply of Grain.

NEW YORK, April 27.—The visible supply of grain Saturday, April 25th, as compiled by the New York Produce Exchange, is as follows: Wheat, 22,343,000 bushels, an increase of 157,000 bushels; corn, 2,464,000 bushels, an increase of 226,000; oats, 2,622,000 bushels, an increase of 114,000; barley, 767,000 bushels, a decrease of 144,000.

## Eastern Wool Markets.

NEW YORK, April 24.—Bradstreet's will say: The movement in wool has shown increased activity during the week, and sales of both domestic and foreign grades were larger. The decline in values has been temporarily checked. American buyers at the London sales are reported to have secured 5000 bales. The arrivals of Australian wools are large and the present supply is in excess of the demand. The first lots from the new clip of Territories, Texas and California wools are due to arrive in a few days. It is said that the prices paid are higher than those at the beginning of last season. Ohio and Michigan wools are in better demand. Several large sales are reported to have been made at prices a little under previous quotations. Territories are running well considering the general condition of the market.

## Miscellaneous.

NEW YORK, April 27.—Hopsales to brewers are reported very fair. Reputable dealers are quietly saying that prices are more likely to advance than to decline in the immediate future. The general market seems gaining a better tone, though the export interest is exceedingly tame.

The Commercial Bulletin says a sale is reported of a carload of choice Fresno loose Muscatel raisins, packed in an artistic style, at \$1.35 per box.

NEW YORK, April 24.—Sales of fair quality California prunes, 40s and 50s are reported as low as 10 1/2c. A visitor from the coast is said to have offered Oregon prunes to arrive at even a lower price.

## Local Markets.

	Buyer	Seller	Buyer	Seller
Thursday	100	108	109	118
Friday	100	108	109	118
Saturday	100	108	109	118
Monday	100	108	109	118
Tuesday	100	108	109	118

\*After July.

	Buyer	Seller	Buyer	Seller
Thursday	100	108	109	118
Friday	100	108	109	118
Saturday	100	108	109	118
Monday	100	108	109	118
Tuesday	100	108	109	118

\*After August.

BAGS—The market is reported fairly steady at 7 1/2c for Calcutta. It is said that orders for prison bags will be received on and after May 1st.

BARLEY—The market has held strong, although buyers are trying to beat prices down. In futures,

trading has been only fair. The following are to-day's sales on Call:

Morning Session: Seller 1891—100 tons, \$1.11 1/2; 100, \$1.11 1/2; 100, \$1.11 1/2 cwt. Afternoon Session: Seller 1891—100 tons, \$1.11 1/2. Buyer season—100 tons, \$1.49. Buyer May—100 tons, \$1.48 1/2 cwt.

BUTTER—Heavy receipts and warmer weather are having an unfavorable effect. Many consignments are forced to be placed at the best obtainable figures. Packing is still in order.

CHEESE—Accumulating stocks have a depressing effect on the market. Quotations are lower and weak at the decline.

EGGS—The market has been shading under heavy receipts from the East and the warmer weather forcing sales.

FLOUR—The market is steady. There is no selling pressure.

WHEAT—As usual at about harvest time, the wheat and ship rings bear prices through the Call Board systems at the East and on this coast. The stock at the East, in California and other Pacific coast States were never before so small, yet in the face of this to get new crop wheat at lower prices the bears and buyers are depressing the markets at home and abroad. The vessels in port here when loaded will take about all the surplus wheat in this State and new wheat will not be available before July. In futures trading on Call has been active at declining prices. The following are to-days reported sales:

Morning Session: Buyer 1891—400 tons, \$1.72 1/2; 200, \$1.71 1/2; 200, \$1.70 1/2. Buyer season—100 tons, \$1.69 1/2. Seller 1891—600 tons, \$1.57; 400, \$1.56. Buyer 1891, after August 1st—200 tons, \$1.62 1/2; 200, \$1.62 1/2; 100, \$1.62 1/2; 500, \$1.62. August-September—100 tons, \$1.59 1/2 cwt. Afternoon Session: Buyer 1891—100 tons, \$1.70 1/2; 400, \$1.70; 100, \$1.71. Buyer season—100 tons, \$1.69. Seller 1891—100 tons, \$1.56; 300, \$1.55 1/2; 100, \$1.55 1/2; 200, \$1.55; 700, \$1.55 1/2; 100, \$1.56 1/2. Buyer 1891, after August 1st—300 tons, \$1.62; 800, \$1.61 1/2; 100, \$1.61 1/2; 100, \$1.61 1/2; 300, \$1.61 1/2; 100, \$1.62; 100, \$1.62 1/2; 100, \$1.62 1/2; 100, \$1.62 1/2 cwt.

## Market Information.

## Produce Receipts.

Receipts of produce at this port for the week ending April 28th, were as follows:

Flour, qr. sks.	191,755	Middlings, sks.	3,865
Wheat, cts.	236,400	Alfalfa, "	"
Barley, "	23,887	Chicory, bbls.	240

Buckwheat, "	"	"	"
*Overland, cts.	†Overland, cts.	"	"

## Cereals.

After such an upheaval in the wheat market as was witnessed the first three weeks in April, it is but natural that prices should ease off. The high prices abroad must have brought in sellers from all supply countries, besides resellers in the demand markets. Under their large offerings, buyers soon had their temporary wants met. The writer still maintains that the statistical position of wheat the world over warrants good prices for at least a year to come. In saying this, it must not be understood that at times there will be periods of depression and low prices, but these will be brought about either by large offerings of sellers or else by bear combination of buyers working on Call in futures. The forefront of every season both in America and Europe, is characterized by heavy selling from farmers, but after this is cared for then better prices usually obtains provided the situation, as it now does, warrants.

The cereal crop prospects in this State and up north promise a very large output. In this State, that of wheat will probably be 25 per cent greater than our largest crop, while that of barley will equal the largest ever before harvested. The crop will not only be large, but the grain will be of a better grade—plumper, cleaner and brighter. In Oregon and Washington the crop promises to be larger than that of 1890. The yield to the acre will probably not average so large, but the increased acreage East of the Cascade mountains will make this more than good.

The stock of wheat in this State, Oregon and Washington is very small. The heavy shipping now going on warrants the assertion that the supply of old on this coast will be nearly exhausted by July 1st.

Barley has held strong throughout the week under a steady demand and moderate supplies. Increased outdoor work in the agricultural sections has created a very large demand for the cereal. Barley feeding in this State is estimated to have increased the past three years fully 40 per cent, and this too, with fewer work horses, owing to the building of cable and electric street cars in the large cities. The planting of vineyards and orchards in the country causes a larger number of horses to be used by farmers than ever before.

Within the past three days quite a fleet of deep sea vessels arrived in port. As they were chartered for wheat loading previous to arrival, they will receive quick dispatch, which will lower the stock of wheat very greatly.

We give wheat quotations in New York and Chicago in cents (100 lbs), which make all quotations for the same quantity. The quotations are as follows: English quarters are for 500 lbs, Liverpool futures for 100 lbs, Chicago, New York and San Francisco for 100 lbs.

Oats have held to steady prices throughout the week under light receipts and lessening stocks. Crop advances are uniformly good.

Corn is stiff, with an advance for white. As a rule, the latter is preferred for shipment to Mexico and Central America. The crop in this State, it is claimed, will be larger this year than it was in 1890. Rye is unchanged.

## Feedstuff.

Ground feed is in good demand for the season. Higher quotations are reported for everything except oil-cake meal. A freer demand for ground feed in the lumbering camps on Puget Sound causes considerable that would come here to be diverted to that part of Washington.

Hay maintains the same strong tone heretofore reported. Receipts are not up to requirements. New hay will soon be in market from the more favored localities down south. In the central and northern valleys the late cool weather kept the crop back, but with a continuance of present warm weather harvesting will soon be in order.

## Live-stock.

Bullocks, mutton sheep and hogs are easier under liberal offerings. Many of the selling offers are from persons who will change their stock ranges. The more abundant supply of vegetables and the fruit season near at hand cause slaughterers to buy sparingly. Then the hot weather which usually obtains in June, July and August is against a free consumption. In cows and horses we are not able to learn of anything new to report.

The market for dressed cattle is quoted as follows to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent:

HOGS—On foot, light grain fed, 5 1/2c @ 5 3/4c lb; dressed, —@—c lb; heavy, 4 1/2c @ 5 1/4c lb; dressed, —@—c lb. Stock hogs, 4 1/4c @ 5 lb. BEEF—Stall fed, 6 1/2c @ 7 lb; grass fed, extra, 6 1/2c @ 7 lb; first quality, 5 1/2c @ 6 lb; second quality 5 1/4c @ 6 lb; third quality, 4 1/4c @ 5 lb; bulls and thin cows, 2 1/2c @ 3 lb.

VEAL—Small, 6 @ 7 1/2c lb; large, 5 @ 6c. MUTTON—Wethers, 7 1/2c @ 8c lb; ewes, 7 @ 7 1/2c lb; spring lamb, 8 @ 10c lb.

## Fruits.

The first gooseberries of the season put in an appearance on April 24. They were sent in by A. Murphy of San Leandro, for which he received from 8c to 12 1/2c per pound.

The first cherries of the season came to hand yesterday (Tuesday) 24 boxes from the Sacramento river and three boxes from Vacaville. They sold at \$2 to \$3.50 per box. With clear, warm weather the market will be soon supplied. The cool weather has kept all kinds of fruits backward.

Raspberries and gooseberries are coming in slowly. Strawberries are in liberal receipt, causing prices to shade off. The quality is improving.

Tree fruit crops promise a large outturn of all kinds.

Lemons and limes went into more general distribution the past week, as did oranges. Receipts of the latter are heavy. Choice oranges are wanted, but the market is overstocked with corks, thick-skinned and trashy stock. Trucksters and cheap dealers buy the latter at their own prices.

In dried fruits and raisins there is nothing new to report.

## Vegetables.

Garden truck is in good supply, yet prices are well maintained for the time of the year. Prices for peas, string beans, summer squash, etc., go down slowly. Rhubarb and asparagus appear to be at bottom. New cabbages are coming in more freely.

Australian and choice old onions command from 3 1/2c to 4 1/2c per lb. New onions are in freer receipt, but owing to their poor keeping quality they are quickly placed, which keeps the price down.

There is a good Eastern demand for the more matured new potatoes, which keeps the market fairly well cleaned up, particularly of the larger and more choice varieties. Old are being neglected and under liberal receipts, prices are shading.

White beans are firm, but colored are barely steady. A dealer reports that last year's crop of Lima beans in Ventura county consisted of about 1200 carloads, of which about 200 cars remain in warehouse unsold. These are being moved steadily and will be out of the way long before the new crop comes in. The market there is \$2.75 @ 3.15. Many of the poorest lots are being cleaned by a machine just invented, which takes out all dirt, stems and chaff, and which undoubtedly will be generally used hereafter. The acreage to be planted in Limas this year will be considerably increased and the soil is in the best of condition. A crop of 1500 to 1600 carloads is expected.

## Miscellaneous.

From reliable advices up to April 29th the following summary of tonnage movement is compiled:

	1891.	1890.
On the way to		
San Francisco	264,529	184,284
San Diego	16,507	12,959
San Pedro	6,807	10,729
Oregon	22,973	28,776
Puget Sound	35,005	18,509

Totals.....344,921 255,257

	1891.	1890.
In port at		
San Francisco, disengaged	7,882	18,950
" engaged for wheat	61,286	54,471
San Diego	5,871	"
San Pedro	1,909	"
Columbia River	16,158	"
Puget Sound	"	"

Totals.....93,106 80,548

To get the carrying capacity, add 65 per cent to the registered tons as given above.

From July 1, 1890, to April 17, 1891, the following are the exports from this port:

	1891.	1890.
Wheat, cts.	11,278,164	11,299,484
Flour, bbls	977,636	910,851
Barley	216,264	919,125

Old poultry, and poultry in poor condition or of small size are hard to place. Large sized well conditioned and young poultry are wanted at higher prices.

Hops are reported scarce but brewers and buyers operate sparingly. For new crop, contracts are being made at from 15c to 20c a pound according to locality.

In wool there is nothing new to report. Present free receipts give a fair assortment for buyers, who are disposed to take advantage of it by making

selections for shipping. The grade taken as a whole is said to be good.

The honey crop will be large and of good quality. Buyers are disposed to bid down. The crop at the East it is claimed will be a full average.

For ham and bacon there is a good demand at strengthening prices.

## Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the low quotations. WEDNESDAY, April 29, 1891.

## The Rate of Tare on Baled Hops.

The People of the State of California, represented in Senate and Assembly, do enact as follows:

SECTION 1. There shall be allowed on baled hops a tare at the rate of two per centum of the weight of the bale for the cloth and other material used in baling; that is, the tare shall be at the rate of two pounds per hundred on the weight of the bale.

Sec. 2. This Act shall take effect and be in force from and after its passage.

**BERKSHIRE SALES.**—Phil. M. Springer, Secretary American Berkshire Association, Springfield, Ill., sends the following transfers of recorded Berkshires: Hard Byron 22001; An-Smith, Redwood City, Cal. to J. E. Lucas, San Rafael, Cal.; Redwood Gem, 24430, Redwood Countess 24433 and Governor 25900, Andrew Smith to Carlos Urrea, Mexico; Model Boy 25867 and Camilla II 25914, Andrew Smith to C. O. Pendleton, Red Bluff, Cal.; Santiago Duke 25947, Andrew Smith to J. E. Pleasants, Santa Ana, Cal.; Dada 25884, J. E. Lucas, San Rafael, Cal. to H. Emerie, San Pablo, Cal.; Wanda 25885, J. E. Lucas to L. Hayden, Black Point, Cal.; Miss Rome Park 25948 and Hubbard's Index 25949, F. A. Hubbard, Rome, Kansas, to Harry Fulton, Flagstaff, Arizona; Mountaineer 25950, U. H. Gentry, Sedalia, Mo. to Harry Fulton; Daley B. 25962, J. E. Pleasants, Santa Ana, Cal. to A. J. Blee, Santa Ana, Cal.; Prestigo 25973, J. E. Pleasants to J. W. Blee, Santa Ana, Cal.

The Bricklayers' Union of San Francisco has declined to boycott iron from the non-union foundries of San Francisco.

J. DE BARTH SHORE, San Gabriel, is said to be grubbing up 50 acres of vine on his place, and will plant the land to figs.

BOLINAS, Marin Co., has a coal vein and iron ore. The latest development is natural gas, near Duxberry reef.

## Housewives, Attention!

Two new first-class Sewing Machines for sale cheap. Will be sent direct from warehouses if desired. Address, H. F. D., Box 2517, San Francisco, Cal.

## New Books for Horticulturists.

**A New Book on Propagation of Plants.**—THE NURSERY BOOK, by Prof. L. H. Bailey, Editor. The American Garden, has been prepared with the utmost pains. The book is absolutely devoid of theory and speculation. It has nothing to do with plant physiology, nor with any abstruse reasons of plant growth. It simply tells plainly and briefly what every one who owns a seed, makes a cutting, sets a graft, or crosses a flower wants to know. It is entirely new and original in method and matter. The cuts number almost 100, and are made especially for it, direct from nature. The book treats of all kinds of cultivated plants, fruits, vegetables, greenhouse plants, hardy herbs, ornamental trees and shrubs, and forest trees. A "nursery list" is the great feature of the book. It is an alphabetical list of over 3000 plants, with a short statement with each, telling which of the operations described in the first five chapters are employed in propagating them. About 300 pages, 16mo. Price, in library style, cloth, wide margins, \$1; pocket style, paper, narrow margins, ..... 50 cts.

**The New Potato Culture,** by Elbert S. Carman. Editor of the Rural New Yorker. For the past 15 years the author has given a part of his time to potato experimentation, in the hopes that he might throw some additional light upon the various questions involved in the central problem, "How to increase the yield without proportionately increasing the cost of production." The object of Mr. Carman's book is to show all who raise potatoes, whether for home use solely or for market as well, that the yield may be increased three-fold without a corresponding increase in the cost; to show that the little garden patch, of a fortieth of an acre perhaps, may just as well yield ten bushels as three bushels; to induce farmers and gardeners to experiment with fertilizers, not only as to kind, but as to the constituents and their most effective proportions, but as to the most economical quantity to use. Price, cloth, 75 cts.; paper, ..... 40 cts.

Address DEWEY & CO.,

220 Market Street, San Francisco, Cal.

## MUSHROOMS:

How To Grow Them. BY Wm. Falconer.

For home use fresh Mushrooms are a delicious, highly nutritious and wholesome delicacy; and for market they are less bulky than eggs, and, when properly handled, no crop is more remunerative. Any one who has an ordinary house cellar, woodshed or barn can grow Mushrooms. This is the most practical work on the subject ever written, and the only book on growing Mushrooms ever published in America.

The whole subject is treated in detail, minutely and plainly, as only a practical man, actively engaged in Mushroom growing can handle it. The author describes how he himself grows Mushrooms, also how they are grown for profit by the leading market gardeners, and for home use by the most successful private growers. The book is amply and pointedly illustrated, with engravings drawn from nature expressly for this work.

Is nicely printed and bound in cloth.

Price, postpaid, \$1.50.

Sold by DEWEY & CO.

220 Market St., San Francisco, Cal.

## How to Make Money

## Poultry and Stock Book

Niles's new manual and reference book on subjects connected with successful Poultry and Stock Raising on the Pacific Coast. A New Edition, over 100 pages, profusely illustrated with handsome, life-like illustrations of the different varieties of Poultry and Live-Stock. Price, postpaid 50 cts. Address PACIFIC RURAL PRESS Office, San Francisco, Cal.

## THE JUDSON RABBIT-PROOF WIRE &amp; PICKET FENCE.

ence colored RED by boiling in a chemical solution that preserves the wood. Address JUDSON MANUFACTURING COMPANY, 14 and 16 Fremont Street, San Francisco.

CHEAPER and BETTER than ever. Their 2-in. high 3-cable fence has taken the trade. Farmers put barbed wire above it and have the CHEAPEST GOOD Fence that can be made in ANY WAY. Rabbits cannot get through. Hogs cannot break it and Horses or Cattle cannot get over it. All our

## Notices of Recent Patents.

Among the patents recently obtained through Dewey & Co.'s SCIENTIFIC PRESS U. S. and Foreign Patent Agency, the following are worthy of special mention:

**RIDING PAD.**—Wm. C. McFeely, Sacramento. No. 449,860. Dated April 7, 1891. This is a device to take the place of a lady's side-saddle. It can be used with or without a blanket or saddle; and may be used in connection with a gentleman's saddle, thereby enabling a lady rider to use such a saddle and have her limb suitably supported by the pad which occupies a space in front of the saddle when the latter is used. The device is light and contains the necessary elements of safety and at the same time is suitable for the horse's back.

**STUMP-PULLER.**—Wm. B. Morris, Seattle, Wash. No. 449,858. Dated April 7, 1891. Mounted on a sled so as to easily hauled over the ground is a vertical shaft suitably braced, and on this revolve two rope-winding drums of slightly different diameter. One portion of the rope is wound around the larger part of the drum and the other portion around the smaller part from the opposite direction so that when this drum is turned around, the rope unwinding from the small part of the drum will be wound up somewhat faster upon the larger part, and the difference in size of the two drums determines the amount of power which is applied. The bight of the rope passes through a pulley-block, and from the hook on this block a chain extends to the stump that is to be pulled. The gearing is so arranged that a horse may walk around with the lever, or it may be operated reciprocally as desired. The device is light, powerful and effective.

**TRACTION WHEEL.**—Geo. R. Duval, Benicia, assignor to the Benicia Agricultural Works. No. 450,484. Dated April 14, 1891. This invention relates to certain improvements in the construction of metallic wheels of large size such as are employed for traction engines and through which power is applied to propel the engine over the ground and haul loads or agricultural machinery. In the construction of wheels of this class which are intended to support heavy weights, and which often traverse rough and stony roads, it is important to construct the wheel in such a manner as to make it exceedingly rigid and capable of resisting torsional strains and such strains as arise from the swaying of the engine which causes an end motion in the direction of the axis, and also to so construct the wheel-rims as to give them sufficient rigidity to prevent their being bent and indented without making them extraordinarily heavy and unwieldy. Wheels of ten and one half feet in diameter have already been constructed on the plan patented by Mr. Duval.

**CHILD'S FOLDING CARRIAGE.**—Fred. Bornemann, S. F. No. 450,362. Dated April 14, 1891. This invention relates to that class of children's carriages which are adapted to be folded into small compass for easy transportation and to be again expanded for use. The object of this invention is to provide a simple carriage of this class adapted to be readily folded and unfolded, and which, when expanded for use, will be stiff and rigid enough for all purposes, and when folded will occupy but small space, whereby it may be readily carried about.

## NEWSPAPER AGENTS WANTED.

Extra inducements will be offered for a few active canvassers who will give their whole attention (for a while at least) to soliciting subscriptions and advertisements for this journal and other first-class popular newspapers. Apply soon, or address this office, giving address, age, experience and reference. Special inducements to old agents.

DEWEY & CO., Publishers,  
No. 220 Market St., S. F.

**SINGULAR.**—A gentleman put on a pair of woolen stockings over his silk ones on a cold winter day. At night, he pulled the stockings off without separating them, and was astonished by the crackling noise and even the sparks of electricity which followed. When he drew the silk stockings out of the woolen ones, the electrical attraction was so manifest that the stockings would incline toward one another, when held some distance apart. It happened that the silk stockings were black and the woolen ones of light color; but when he tried the experiment with both stockings of the same color, there was no electrical manifestation. Why?

**HOW THE DIAMOND OCCURS.**—Geologists have proved that the diamond mines of South Africa are situated in vents or chimneys, varying from about 70 feet to 1500 feet in diameter, and descending vertically through the schists, which form the ordinary strata of the district. These vents are filled up with fragments of silicated and magnesian rock, in which the diamonds are scattered, and before the diggings began, each was capped by a hillock or "kopje." They are 17 in number, and run in a straight line about 120 miles.

## Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

## Unitarian Literature

Sent free by the CHANNING AUXILIARY of the First Unitarian Church, cor. Geary and Franklin Sts., San Francisco. Address Mrs. B. F. Giddings as above.

## HOLT BROTHERS' Improved Combined Harvester.

For Efficiency, Durability, Light Draft and Fine Work it is Far Superior to any other Harvester of the Present Day.

Those contemplating buying are invited to visit our manufactory and see for themselves. Circulars and testimonials sent on application to

STOCKTON WHEEL CO., or, HOLT BROTHERS,  
Stockton, Cal. 30 & 32 Main St., S. F.

## FRESNO CANAL, DITCHING AND LEVELING SCRAPERS.

FIREBAUGH, CAL. (Poso Farm), November 8, 1889.  
MR. JAS. PORTEOUS, Fresno, Cal.—DEAR SIR: In answer to yours of 6th inst., will say that I have found your new style four-horse Scraper the best all-round Scraper I have yet tried. Respectfully yours,  
J. W. SCHMITZ, Supt. Miller & Lux.

## FABIOLA HOSPITAL

— AT —

OAKLAND, CALIFORNIA.

THE FABIOLA HOSPITAL is healthfully and pleasantly located on high ground in the suburbs of Oakland, accessible from every part of the city, the street cars passing the door.

THE APPOINTMENTS of the institution are of the best class; the building thoroughly warmed with Harvey's system of hot water heating; rooms large and sunny; neatly furnished with all the comforts of a private home for the sick and the convenience of a first-class general hospital. Sewerage perfect.

WELL TRAINED NURSES are in attendance, and patients will receive all nursing and care required for any ordinary case without extra charge; but patients in private rooms, requiring a special nurse in constant attendance, will be charged extra.

MATERNITY CASES are given special care, and large sunny rooms are set apart exclusively for such use, with most skilled physicians and careful nurses.

BOTH HOMEOPATHIC AND ALLOPATHIC PHYSICIANS are in regular attendance at the hospital, and patients may choose the school of medicine they prefer.

Should patients desire to employ a physician other than those on the hospital staff, they are allowed to do so at their own expense.

Address S. J. FENTON, Resident Physician, Fabiola Hospital, Oakland, California. Telephone No. 945

# HOOSIER HYDRAULIC TUBULAR WELL TOOLS AND SUPPLIES.

A carload of Hoosier Hydraulic Tubular Well Machines just received. Why waste time and lose money with the old plan of making wells.

The Auger will not bore rock, quicksand or boulders. The Rope Drill works too slow and the principle is beset with drawbacks and failures.

THE TUBULAR WELL TAKES THE LEAD. It can be made through any kind of material with greater facility than any other.

The water can be shut out and the well continued down until pure water is reached. When finished it is a well and pump complete ready to deliver water.

The valves can be removed with the sucker rods and repacked without taking out the pipe or without any extra tools, and as to durability, they will last a century.

In almost every settled portion of the Pacific Coast there is a great demand for reliable wells, and wherever the Tubular Well has been introduced it is preferred over all others.

WELL-MAKERS, LOOK TO THIS. There is plenty of work and you cannot go into any business yielding such profits with so small an investment.

SEND FOR OUR ILLUSTRATED TUBULAR WELL CIRCULARS.

## CYCLONE AND STAR WINDMILLS,

PUMPS, TANKS, TUBULAR WELL TOOLS AND SUPPLIES.

STEAM PUMPS, IRRIGATING PUMPS, POWER PUMPS, ETC.

HORSE-POWERS, PUMPING JACKS, PIPE, FITTINGS, BRASS GOODS, LAWN GOODS, RUBBER HOSE, BELTING AND PACKING, PHILADELPHIA LAWN MOWERS, ETC., ETC.

## PACIFIC MANUFACTURING COMPANY,

575 MISSION STREET, SAN FRANCISCO, CAL.

## THE OLIVER DERRICK

PATENTED JANUARY 6, 1890.

We Claim for This Machine:

FIRST—It is the only Derrick having an Extension Boom, whereby load can be deposited at any point on a very large stack.

SECOND—It is the only Derrick that can be easily and quickly folded for transportation. Horse used for hoisting hay can elevate mast and man can lower same.

THIRD—It is the only THOROUGHLY PRACTICAL Derrick on the market. It is well made of good material, and we will send it anywhere, guaranteeing satisfaction.

PRICE, \$110.00.

A CALIFORNIA PEACH—GEORGE'S LATE—AS GROWN IN KERN COUNTY.

## California Peaches

The months are flying and soon the season for the peach, the grandest of California's deciduous tree fruits, will be at hand. We had a marvelous crop last year, and received plenty of money for it. This year the peach has suffered slightly from spring frosts. In some localities there will be a material reduction of crop; but in others, there never was a brighter outlook, so that the crop for the whole State promises well.

The engraving shows how the peach grows on the irrigated lands of Kern county, the engraving being from a photograph of a tree in fruit upon the Park place, about a mile and a quarter southwest of Bakersfield. The growth of the peach in that region of the State, and its early fruiting may be almost incredible to distant readers. The report is made that trees

planted in orchard at one year from the bud bore on an average of 54 lbs. to the tree the first summer after planting; that the second summer in the orchard, the fruit sold for \$240 per acre; that the third summer, when the photograph was taken, the trees were 18 to 20 feet high, and had trunks about six inches in diameter. The trees are irrigated three times a year.

The peach shown in the engraving is George's Late Cling a California variety which originated in Sacramento, and has been quite widely planted in places where late peaches are profitable. It is a large peach of beautiful yellow color striped and splashed with bright red. The flesh is white with deep color at the pit. In the foothills it is reported a heavy and uniform bearer, a good shipper and P. W. Butler of Placer county, gave it as his judgment that at its season of ripening no

peach grown in Placer county yields the grower so much profit. The variety is, however, somewhat subject to mildew in some localities and for other reasons is not so highly regarded.

The peaches in the engraving were about nine inches in circumference, and many of them weighed ten ounces.

## The State Board of Trade.

Mr. E. W. Maslin has assumed charge, as manager, of the California State Board of Trade, the office of which, for the present, is in the Bancroft building, 721 Market street. He desires to call the attention of the horticulturists and farmers to the advantages to be derived from a visit to the rooms of the board. There are displayed the best specimens of the horticultural and agricultural productions of

the State. Comparisons may be made and opinions formed as to the best parts of the State in which to grow the several varieties of fruits and grains.

The Board is in receipt of the Weather-Crop Bulletin issued by the signal service at Sacramento city. They will soon display a fine collection of the minerals of the State, which will include samples of the soils of the various counties which contribute to the support of the Board. In short they intend, so far as they can, to make the rooms a "bureau of information for all the industrial pursuits of the State."

Mr. Maslin asks any person who has anything which may contribute to the knowledge of the resources of the State, i. e., a box of soil, a piece of ore, an example of tree or vine growth, a specimen of fruit, etc., to send the same to our rooms. The cost of carriage will be paid by the Board.

## CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

## Napa County Notes.

EDITORS PRESS:—The advancing season continues to brighten the prospects of an exceptional yield of grass, grain and fruit throughout our county. The lack of abundant moisture in the earlier months of winter dwarfed grass and growing grain, but subsequent propitious weather advanced all vegetation almost to the usual growth noted at this time of the year.

Early sown grain has made a wonderful growth during the last month and grass destined for hay is forging rapidly ahead. Wild oats are heading, and also tame oats and barley. In a very short time the merry clatter of numerous mowing machines will be heard in every direction and we shall be in the midst of haying. Should present prices for wheat hold, as much of this grain will be reserved for threshing as possible, otherwise considerable will be cut for hay; yet wheat hay does not seem to be as popular with us as oat. Ball barley has been found to make excellent hay here, though perhaps one fault is that it grows too rank. The yield of hay per acre will be up to and about the average.

Regarding wheat, the outlook is not quite so bright as it was three or four weeks ago. The dreaded Hessian fly is working serious mischief in many fields in various localities in the lower Napa valley. It seems more widely scattered this season than in any preceding one. It is a little early yet to tell definitely of the ravages of this pest, but enough is in sight to cause considerable uneasiness on the part of many farmers. We trust things are not as bad as they seem.

For several years the Hessian fly has caused much injury to wheat in the Goscol district. Because of this, comparatively little wheat was sown there during the last two years. But, emboldened by the absence of the fly last year, farmers there sowed a large acreage this season. We await further developments.

The farmer has much to contend with in every branch of his work, whether it be grain-growing, grape-raising, or in caring for the orchard. It is not smooth sailing at all times by any means. This is it that causes many a farmer to take pessimistic views of life, and to bring much uneasiness to himself and his associates. But the happy-hearted farmer avoids all this discomfort, and doing the best he can, making the most of circumstances, fares far better than his complaining bothers.

Our valley never presented a finer appearance than just now when all verdure is growing so fast, the fields and hillsides dotted with flowers, bright sunshine, cloudless skies prevailing daily. Yet this is what we say, each spring of Napa valley.

Orchardists are very busy in finishing their spring work. More attention is paid to details of this branch of farming now than at any time heretofore, for the reason, we suppose, that the past one or two seasons have convinced many, who were before skeptics in the matter, that there is money in fruit raising, far more than in raising grain. Vineyard men are at work early and late plowing their vines for the second time. The young sprouts are growing rapidly and grapes are setting well. It is too early now to judge definitely regarding the coming crop, but present indications are very favorable for a large yield.

The same may be said of other kinds of fruit. The yield will be very large. Much thinning of apricots, peaches and other varieties will have to be done. Cherry trees never bloomed fuller than this spring; they simply could not. The fruit will soon be shipped from here in large quantities. Your readers are probably aware that our cherries were accounted the best that were placed on the New York market last season. At least this was the verdict of the Gothamites themselves.

Again this season many of our fruit-growers will ship large consignments of their produce direct to New York and other Eastern cities. Doing so last year, they realized well on their fruit, obtaining, in a large number of cases, far more than they would have done by shipping to markets in this State.

A growing industry—one yet in its infancy, one that promises to be a leading or at least a very prominent one in this valley in years not very far distant—is olive culture. A few olive yards in this vicinity are beginning to bear, and oil of a superior quality, though in limited quantity, has been made. Results have been obtained that show that there is much profit in this branch of horticulture. A small amount of the home-made oil was given to the public by a generous grower, Mr. Vincent Smith, this winter, and so great was the demand for it that a large quantity could have found ready sale in Napa City alone at leading prices. In the aggregate the number of olive trees planted in this valley is comparatively small, but more are being planted annually. There are hundreds of acres especially adapted to this fruit near at hand, and as it has been demonstrated that the trees fruit with us at an early age, yield abundantly, that a very excellent article of oil can be made and that the market for it is unlimited, there must, of course, be increased attention directed to this industry.

If olive oil snob as we can make in California,

such as is made by Cooper of Santa Barbara, or the Kimball Bros. of San Diego, is made in much greater quantity than at present, a large number of people will use, for many purposes, this wholesome article, who will not now buy the cottonseed surplus so often found in the market. Our home demand will be sufficient to use all our product for some time to come. But there is this further incentive for olive culture: We have the very large market of the whole United States. Consumers of olive oil in States near at hand, and far distant, will come to us for the pure article they cannot make because of climatic reasons, and we shall thus find an ever-widening market.

R.  
Napa, April 30 1891.

## Notes on a Back Number.

EDITORS PRESS:—Permit a few words of commendation upon papers in the PRESS of April 18:

1st. A comprehensive short essay on Agriculture by a young member of Waterloo Grange. I predict the writer will be known to the public before he hears the age of his present critic, who would say to him, go on brother.

2nd. That timely, good tempered, calm and truthful paper upon "These Abandoned Farms." After listening for years to the (almost weeping) Jeremiads of members of the Grange whose minds seem always to move in an orbit above practical labor and its best methods; to descriptions of the lamentable condition brought upon New England farm life by the "tariff," it is a great relief to learn from unquestionable statistics and common sense observation, that these farms are left without occupants from several causes, not one of which has anything to do with protective laws unless it is the making of life connected with manufactures, and transportation more profitable and more agreeable to the present generation of men in New England than cultivating lands (some of which ought never to have been disturbed by a plow, and others of which are not remunerative) in free trade competition with the richer, more fertile lands of the Middle West, chiefly delivered to New England consumers by the cheapest railroad freights in the world. Those who might have wrung a living from those stony hill sides as their forefathers did, it appears from your showing, have acted in accordance with the wise advice of grand old Horace Greely given long ago in the columns of the *N. Y. Tribune*. "If the farm is too poor to produce profitable crops leave it and work a richer soil, or turn to some other useful, more profitable occupation."

You have done a good service by showing that these abandoned farms are such, not because of the "McKinley Prices" Dr. Mateoson throws into his excellent paper on strawberries you give place to in the PRESS, but from entirely different causes.

The next paper which particularly riveted my attention, relates to Mrs. M. B. Stuart's account of the "Fresno Farmers' Institute." I am an old member of the Grange and the reading of Mrs. S's. paper suggested the desirability of having an "Institute" order of business which shall be a part of each meeting, being fully persuaded it would be time more profitably spent to receive instruction leading to making barren lands like alkaline soils fertile or the best method of successful production of a valuable textile like ramie than to listen to windy harangues as to how to compel the Government to furnish us with money enough to satisfy us, and at our own terms. The mention of "Ramie" brings me to the most excellent article of G. Hooziker. The influence which drew my attention to his paper was in part selfish. I own a body of rich alluvial land some of which produces a dense growth of nettles, and his paper leads me to believe that (provided our summer climate is sufficiently warm) it would be good ramie land.

In noting the papers mentioned, it is not to be understood there are not others equally praiseworthy from a different individual point of view.

O. O.  
Salem Or. April 20 1891.

## THE STOCK YARD.

## Damages for Cattle Killed by the Cars.

EDITORS PRESS:—On Dec. 10th, 1889 a train on the S. P. R. R. killed my cow. A neighbor was an eye witness. I wrote to the claim department of the R. R. Co., also to the superintendent of the division, but those officials failed to reply to my correspondence until I wrote to the General Supt when the claim department wrote they had been advised of the accident through the report of the section foreman, and requested that I forward the number of the engine and the name of the engineer. I obtained the desired information, then after a long delay on the part of the R. R. Co. I received the information, which I enjoin was intended for a squelcher, "that the engineer did not know anything about stock being killed, had not seen any." My reply was I did not have anything to do with what the engineer did not know, and if they were not going to pay my claim the court would settle it. The next move on the part of the company was that

an agent of the claim department would come and investigate the matter. He came and sent the section foreman to tell me "I would not get anything." I told him "the court might say differently." He said: "the R. R. Co. own the courts and everything, and do just as they please and you will not get anything."

To that choice piece of news I replied: "I am an American citizen. I believe that the courts of my country are greater than the S. P. R. R. Co., and we will see about that."

The claim agent came again and sent word he would like to see me. After misinformation from this same section-foreman as to where I would find the claim agent which caused me to lose considerable time, I finally met the agent at the Sacramento depot. I found him to be a man, who in my opinion is simply a bluffer and bulldozer for the R. R. company. He has not authority to settle, but could only give the encouragement that a jury would never give me pay for the cow; he would make his report and the company would do what is just and right, and what they did not think was just and right, they would fight until doom's day.

I saw my attorney, Clinton L. White; he told me I had a good case, so after waiting ample time for the R. R. company to do what is "just and right (?)" and they not materializing on that point, I sued the company before Justice Foster of Brighton and got judgment. The R. R. company appealed, continued the case once, and then settled it without allowing the case to come to trial on the appeal; and paid for the cow and costs.

If I were to have another case where the R. R. company owed me for stock they had killed, I would not lose so much time with it. If my claim was not paid on demand, I would have my attorney bring suit at once.

I have written this to give encouragement to others who may have just claims against the S. P. Co. for stock killed, and it is my opinion it is better to sue, even if one knows the lawyer's fee and the trouble will take the entire value of the animal than to be bluffed out by the officials of the company and their assistants, even if they do claim the company "own the courts and everything, and do as they please."

Mr. White only charged me \$20 and I sued for \$45—and got it, and the "owner of the courts" R. R. Co. had to pay the courts and witnesses, so it paid me in dollars besides the satisfaction in proving that the courts of this State are not the property of the S. P. R. R. Company.

If there is one thing more than any other that makes me indignant, it is when I hear this cry about the S. P. Co. owning everything in this State, courts and all, for I don't believe it, and when I hear such talk it makes me think of the history of the Jesse James' gang. That gang defied the authorities for years for the reason the people of the State of Missouri were terrorized to such an extent that they became aiders and abettors of the criminals in that they would hide them and give them information concerning the movements of the officers, and the people of this State have been held up so often by this "owner of the courts" R. R. Co. that they are terrorized to such an extent that they stand and deliver on demand of this Jesse James' gang of California without lifting a hand to strike in self defense.

## Bermuda Grass in the Wrong Place.

EDITORS PRESS:—In the PRESS of the 11th is an essay by Capt. Dawes on Bermuda grass for alkali soils, in which he takes occasion to praise it very highly.

Here we call it "Devil Grass," and the name is quite appropriate and well deserved. From the experience we have had with this grass, we think the article referred to is apt to be a little misleading. If it is wanted to strengthen a ditch bank, we know of nothing which would answer the purpose to better satisfaction. But right there its usefulness ends, for it will run its shoots down to the water's edge and gradually encroach upon the running stream. It stops floating debris and so helps to obstruct the ditch.

It costs our water company thousands of dollars each year to keep our canals and lateral ditches temporarily free from this grass; and the trouble does not stop there either; for the grass seeds drop into the water and are carried on to land being irrigated, and whenever a seed stops there it takes root; and if we give it half a chance it will take possession of the ranch, and choke out everything else. If it once gets a start eternal vigilance and constant cultivation will be necessary to exterminate it.

As a forage plant it is passable, and by its persistency it will crowd weeds and everything else out of the soil. With us the roots run underground as freely as on top.

The rain we had a few days ago is pushing the barley crop along nicely. We have had a cold backward spring, but it is coming out warm and pleasant now. Delicious trees and Muscat vines started out two weeks ago.

We bear many reports saying that the vine disease has run its course and stopped in Orange and Santa Ana, and that many new vineyards have been started successfully in those localities. Now we are slow to believe it with the disease all around us, and we should be pleased to hear from some one living in those places.

## ENTOMOLOGICAL.

## Parasites of the San Jose Scale.

[By ED. M. EHRLHORN, before the California Entomological Society.]

Our knowledge is somewhat limited regarding the amount of destruction effected by the San Jose scale parasite, nevertheless the work that this chalcid fly has accomplished is very perceptible in many orchards.

The *Aphelinus fuscipennis* is the one most commonly found on the San Jose scale (*Aspidiotus perniciosus*), and is known as the "San Jose scale parasite." It is also known to be very parasitic upon the *Mytilaspis* species. I am not positive that I have hatched this parasite from the greedy scale (*Aspidiotus rapax*), although I have observed some evidences of chalcid workings upon them. The two species of scale (*A. perniciosus* and *A. Rapax*) infested the same trees, nevertheless I do not wish to draw any hasty inferences without further investigation.

Description—*Aphelinus fuscipennis*, length of body 0.06 mm.; expanse of wings, 1.3 mm.; width of wing, widest part, 0.2 mm.; color light yellow, antennae fuscous, dark at tip; eyes black, three ocelli of a ruby color; legs and wing veins yellow; forewings with an irregular fuscous patch under stigma, another fuscous streak near base of wing. In hatching a quantity of these parasites I have found two sizes of the same color, and I have no doubt that the smaller one is the male. On warm days, about the beginning of March, I noticed the first parasites of the season sunning their wings and hatching in great numbers.

Although the *Aphelinus fuscipennis* is regarded as the sole parasite of the pernicious scale, I venture to say that I have hatched *Coccophagus citrinus* and *Aphelinus mytilaspidis* from the San Jose scale (*Aspidiotus perniciosus*).

The San Jose scale parasite *Aphelinus fuscipennis* has of late increased very rapidly in my orchard. In examining about ten inches of a branch, I have counted from 15 to 20 openings where the parasites had escaped. For hatching purposes, I use common cardboard boxes, generally from an inch to an inch and a half in depth. For some of the boxes I make a glass cover, as the sunlight appears to be beneficial in some cases, causing them to hatch more quickly. I think these parasites breed all the year round, and in the future, with the aid of the microscope and a closer study of the characteristics of these beautiful little chalcids, I hope we may subdue our scale pests and restore many an infested orchard.

Besides these parasites, we have numerous predaceous insects which are helping us a great deal in destroying scale pests. The twinstabbed ladybird, *Chilocorus binivertus*, stands at the head of the list. I have seen pear trees covered with San Jose scale one season, and have placed ten or more *Chilocorus* on each, and this year I cannot find a scale on such trees. *Coccinella oculata* is doing good work also on lecanium scales.

We are looking forward to the day when our able men will be sent to other countries in search of parasites and predaceous insects to relieve us from all the fruit-tree pests, like the *Vedalia cardinalis* did in vanishing the cottony cushion scale, *Icerya purchasi*, from our State, permitting the orange and lemon tree to resume their beautiful foliage.

## AGRICULTURAL SCIENCE.

## Specimens of Birds and Animals.

EDITORS PRESS:—The College authorities, believing that acquaintance with the appearance of our native animals on the part of students is advantageous, desire that there should be represented in its zoological museum, typical specimens of Oregon birds, mammals and reptiles.

With that object in view, they are prepared to pay just prices for desired specimens in the flesh, or mounted, or simple stuffed skins properly prepared.

Anything of such a nature sent to the college should be plainly marked "Museum of State Agricultural College, Corvallis, Or." and sent when possible by Wells, Fargo & Co.'s express, which company courteously carries such specimens gratis, when so addressed.

The College reserves the right to reject any specimen or specimens in poor condition, or those in which the workmanship does not reach the standard of excellence, or those with which the museum may have been previously supplied.

Although all, even the most common birds, mammals, reptiles, etc., are desired, such as blackbirds, sparrows, pigeons, hawks, moles, gophers, squirrels, snakes, turtles, etc., it would not be so advisable to send the more common species in the flesh (for these can easily be obtained by local collectors) as other rarer animals not so easy to procure. Such animals if they are to be several days on the road, should be disemboweled through a median slit about one-third the length of the animal, in the posterior part of the abdomen on ventral side, and they should be carefully packed.

It would be difficult to quote prices on such specimens as such prices would depend on market value of the animal, its rarity, desirability, etc., at the time of purchase.

A large series of specimens of *Haplodon*,

Mountain Beaver are desired, and if in good pelage, 75 cents each will be paid for ten or more. The same is true of *Lagomys* or Little Chief Hare, Pika Hare, Starved Rat, or Coney. A list of prices paid for mounted birds and bird skins will be sent on application. Representative mammals, as prairie dog, wolf, coyote, deer, cougar, jack-rabbit, etc., and good specimens of our water fowl and land birds, the venomous and non-venomous snakes, turtles, etc., are desired.

Note that everything of this nature sent to the college by express, must be plainly marked as above indicated. It is hoped that all interested in the growth of the museum who can help in this matter will do so. Specimens are frequently presented, and in such cases due credit is given the donor. Specimens molting or shedding their hair are not so desirable as those in good plumage and pelage.

Corvallis, Oregon. F. L. WASHBURN,  
Prof. of Zoology and Entomology.

THE FIELD.

That Bamboo Fence.

The question of the cost of fencing is always important in any country, and it is doubly so in California just now for many reasons. Few countries in the world are being laid out in smaller fields and in few is the price of the ordinary fence material higher than in California, especially at points where lumber is brought some distance by rail.

With these points in view, the *Echo* has given some attention to various plans that have been devised by ingenious farmers for providing a fence at less than the usual cost, and has made frequent mention of the bamboo fence. But some recent observations and inquiries have afforded information that seems to justify further notice of the subject.

The pioneer in the work in this county is C. A. Maul. Some two or three years ago he got a few bamboo roots from Mr. W. A. Saunders of Fresno county. These grew and multiplied until now Mr. Maul has about an acre set to this plant.

In the time that he has had it, opportunity has been afforded for studying its growth here, and it may now be asserted that on that point there is no need for fear. It does best in damp land, producing there the greatest number and largest growth of canes, but a valuable crop can be secured on land of ordinary moisture.

Mr. Maul has just completed the construction of a mile of fence, using these bamboo canes for pickets, and knows what the cost is. His plan was this: Second-hand railroad ties were bought and split for posts. These were set a rod apart. With a machine that costs about \$25, the canes were woven into a web, using six No. 14 wires for the chain. The canes were cut 3 1/2 feet long, the fence posts are four feet high and along the top of the ladder a barbed wire is stretched, so that when completed one has a chicken or rabbit-proof fence as well as a strong stock fence. This fence, Mr. Maul says, can be built for 40 cents a rod where one raises his own bamboo. He thinks the full annual capacity of an acre of bamboo, if well set and well watered, would be fully four miles of fencing.

The advantages of this fence are many. First and foremost it costs less than almost any other fence made; it is neat and attractive; about the only item of expense is for labor, and that keeps the money at home; it is very durable, the bamboo becoming as hard as bone and never rotting; rabbits cannot gnaw it, and it will not ignite from burning grass near it as common pine fencing or lath will; stock can see it and hence will not run against it; it can be made of any height desired, the canes growing as high as 12 to 15 feet; it may be taken down, rolled up and moved without injury and at slight expense. Mr. Maul made a few feet of it the other day and brought it to town, and it may be seen at Drury's drug store. It is worthy the attention of any person in the valley. It is not difficult to get a growth of this material, as it can be propagated by simply laying the stalks down and plowing them under; a bunch of canes will come up at each joint of the stalk covered. When one has raised all the fencing he wants, the roots may be plowed or dug out and the land is not injured.—*Kern County Echo*.

EXPORTING BEEF CATTLE.—Every beef animal that leaves the United States has its ear pierced. A fine wire passes through the hole, and attached to the wire is a tiny brass tag, not nearly so large as some of the ear pendants ladies need to wear. Upon the tag is a number and the initials "U. S. A." This shows that the animal has been examined by the United States Government Inspectors and is perfectly sound and healthy, and that even weak-stomached royalties may eat that beef with impunity. The Government deserves great credit for the pains it has taken to warrant the prime condition of American beef cattle. The influence of these thoroughgoing measures is already beginning to react favorably in Europe.

THE WEALTH OF THE UNITED STATES was assessed at nearly \$50,000,000,000 in 1880 and had nearly tripled in 20 years. Its actual aggregate in 1891 is probably very near to twice the great sum named.

THE IRRIGATOR.

Secretary Rusk on Irrigation.

Secretary Rusk was interviewed at Monterey by the *Chronicle* correspondent. As Mr. Rusk is the head of the Department of Agriculture, his observations in this State naturally are of much interest to the people. He was asked specially about the system of irrigation in California.

"An inquiry relating to this subject," he said, "is now being made by the Department of Agriculture. One report on irrigation and its value will be presented when Congress convenes, toward the close of this year. This second report will be interesting to the farmers of California."

"I have had my eyes opened to the productive capacity of California since I came out here on this trip. In the East, even as far west as the Middle States, California is still looked upon as a wild mining region. Yet statistics show it to be one of the greatest States in the Union in everything that goes to build up a commonwealth. Yet California is just in the morning of her glory."

Mr. Rusk said that the work of his Department in ascertaining the value of irrigation was undertaken by order of Congress, and that it has already revealed many interesting facts concerning this State.

"With skill and ingenuity the irrigation problem has been overcome out this way," he remarked, "and I am led to the conclusion that on a conservative estimate 25,000,000 acres of California's great domain can be made arable provided sufficient water for this reclamation is obtainable. The water now lost through lack of storage reservoirs will help considerably to satisfy the thirst of the arid lands when such reservoirs are built. Though the desert to the south has annually scarce a trace of rain and though throughout the San Joaquin valley the rainfall is only from seven inches at the south to 20 inches at the north, yet an enormous precipitation is had upon the Sierra and Coast Ranges, and if this rain were saved it could be utilized for the other regions I mentioned. In this supply of water there is a source of wealth more continuous and greater in amount than all this State's marvelous production of gold and silver."

The Secretary went on to say that he had found the methods of irrigation in California to be of all varieties, from the primitive ditch of the village Indian to the steel-pipe line.

"In the system of irrigation districts now followed in this State," he went on, "a way is being opened which will doubtless lead to the settlement of the disturbing questions in water litigation. By this system the control of water, the cost of works, the supervision of distribution, is being transferred peaceably and with full equity from private individuals and companies to the community. This system supplies methods which insure unity of supply, economy in use and diminished cost. It is very praiseworthy."

Mr. Rusk generalized the whole subject then by observing that no one question which is being investigated by his Department is of more significance therefore than the growth of the California district system.

"The records of 28 districts," he continued, "have been received at the Department. The territory covered by these reports is more than 1,500,000 acres. For the construction of works in these districts bonds have been voted to the amount of over \$11,000,000. There seems to be no room to doubt after reading these records that the people here have found a wise and equitable method of solving the legal administrative difficulties connected with the use of water as an industrial agent. As a result, California has many orchards and vineyards producing from \$75 to \$400 per acre. In Riverside I was told that some places there yielded \$1100 an acre in one year. I have also been informed that it is getting to be no very unusual thing to make \$1000 off one acre in a single year in California."

"In the southern part of this State it is estimated that ten acres of fruit land will support an average family in comfort, while the prosperity of horticulture with 20 acres of land under their control is remarkable. This method of cultivation by irrigation, which must in a greater or less degree dominate agriculture in California, has already in some sections increased the value of land to a price ranging from \$50 to \$2000 per acre. Of course the number of improved acres fetching the latter price is very limited, but no one can closely estimate the possibilities of semi-tropical horticulture or the limits of reclamation."

Mr. Rusk felt enthusiastic over the future of California. "It is now the first State in the Union so far as fruit is concerned," he said. "It is the third in wheat. Twenty per cent of all the wheat exported last year was sent from California. In the production of wool it ranks third or fourth, its exports of that commodity for a year reaching \$35,000,000. Over \$10,000,000 worth of fruits was sent to Eastern cities from this State last year and readily found a market. A significant fact in this State, is that notwithstanding all these products, the Government land in California still unsettled is 54,000,000 acres, according to the Land Office records. California is indeed a great State."

FRUIT PRESERVATION.

Fruit Evaporating.

The following paper was read by Geo. A. Davis at the N. Y. Farmers' Institute:

Since the first appearance of fruit to the present time, the process of evaporating it has been going on, nor has this natural evaporation always rotted and destroyed the fruit; but in many localities, like the South of Europe or the Italy of our own country—Southern California—it has falsified a product that cannot be equaled by the best artificial methods.

It will be of interest to know that the hand-somest dried fruit in California is dried on trays in the sun. In certain sections, the atmosphere is perfectly dry; in others, being moist, evaporators are used, but the results are not as satisfactory.

It is a singular fact that in localities where Nature cures her fruits best, she produces them in the greatest abundance. But while her ways are worth the time spent in their study, this paper must speak of evaporating by artificial methods.

There are a number of patents in use, and each has its merits. It is not an easy affair to operate an evaporator, and keep everything running smoothly and swiftly to the end of the season, when we take into consideration the rotting apples and the high price paid for them. The complicated paring machines are so easily put out of order that they are a continual source of annoyance.

The gentleman from whom I bought my evaporator informed me that he heard the call "machine broke!" so frequently that at night and for months afterward the cry rang in his ears, so that he quit the business principally on account of this annoyance. When finally we get the apple pared, cored and trimmed, it is bleached, sliced and spread on trays to dry. In order to succeed in producing a fancy article, it is necessary to subject the green fruit to a swift-moving current of hot air, and as it begins to dry to gradually remove from the heat, supplying fresh fruit in its place. A high temperature is greatly to be preferred, as air holds more moisture when heated. To illustrate: Air at the freezing point absorbs the one hundred and sixtieth part only of its own weight of moisture, and every 27 additional degrees of heat doubles its absorbing power. Hence air at 22 degrees F. will absorb four-fifths of its weight, while at 248 degrees heated air will absorb one and three-fifths of its weight. Hot air alone will not do. Fruit will cook in water at 212 degrees, or bake in an oven at 225 degrees, but if the air circulates fast enough, the fruit will not cook or burn or even become heated at the temperature indicated by the thermometer, even at 300 degrees, for the evaporation of water is a cooling process. The air in motion, together with the heat, causes the fruit to dry rapidly. The chemical changes which belong to truly evaporated fruit will now begin, and the albumen is coagulated precisely the same as in an egg when boiled. All the fruit jelly remains in the cells or is left upon the surface by the evaporation of the water in which it was dissolved. The germs of animal or vegetable life are destroyed by the high heat. It is by these changes and uniting a part of the water already contained in the fruit with the starch that the truly evaporated products are rendered more wholesome, more digestible and less perishable, and consequently more valuable.

In regard to the magnitude of the apple evaporating business it is difficult to give exact figures. It amounts to many millions of dollars in the United States, and the other evaporated fruits to several million more; this too, in a business that was unknown twenty years ago. There is very little evaporating done outside of this country, except in Canada, and there the product is not large in ordinary years. When the apple crop is small in New York State, many take their evaporators to Canada. This was the case during the past season, and was also the cause of prices on chops suddenly dropping in November last.

Most of the evaporators in this State are in western New York. Within a radius of 40 miles of Rochester there are more than 1500 with varying capacity of from 25 bushels per day to the large establishment drying 1000 bushels in 24 hours.

The products of the apple evaporator are "white stock," "skins and cores" and "chops." The white stock is boxed and is known to the trade as evaporated apples. The skins and cores are packed in barrels and shipped to New York and other points, where they are used in the manufacture of jellies and other jams. The so-called chops are whole apples sliced and dried, packed in sugar barrels and exported mostly to France for champagne cider, but they are also used in this country for jelly and apple butter. The process of the manufacture of champagne cider has never been found out in this country. Germany takes the largest amount of evaporated apples which are exported; England next; but all countries take more or less, and many go to Australia. Germany has issued a decree that no evaporated apples be admitted into the country without a chemist's certificate that they contain no zinc poison. The fruit is evaporated on galvanized iron trays, and they assert it takes poison from them. How this will affect the future trade with that country remains to be seen.

SHEEP AND WOOL.

Sheep-Raising in Yolo County.

EDITORS PRESS:—The wool-growers of California have received well merited encouragement in their pursuit through the late legislative enactment of a \$5 coyote scalp bounty. This law, it is hoped, will afford incentive to hunters, trappers and others, to wage an aggressive warfare against this destructive quadruped, which has proved a menace to profitable sheep-raising in many localities. The coyote has been especially troublesome and destructive of the interests of small flock-owners and others whose circumstances would not warrant the employment of herders. Heretofore sheepmen in most counties of this State have had to rely almost wholly upon their individual efforts for their protection, while the industry is as essentially beneficial to the State at large as its fruit-growing, which is fostered by the State treasury.

Yolo county was years ago one of the great sheep-raising districts of California, and to this industry may be attributed much of the wealth here accumulated prior to 1870. Upon the sudden transformation of the wild plains into an almost unbroken succession of wheat-fields 20 years ago, the festive shepherd and his faithful dog and flocks sought refuge in the rugged hills of the Coast Range, or hid away to more distant pastures new.

Let it not be understood, however, that sheep raising was then abandoned in Yolo Co. Far from it, though the numbers were greatly diminished the quantity of the stock has been much improved, until to-day the county has some of the most progressive and experienced sheep raisers in the State. Of this class Mr. Frank Bullard of Woodland has scarcely a rival as an importer and breeder of thorough bred Spanish Merino sheep, having taken sweepstakes at each State fair for six years out of the last seven.

The Yolo Co. Wool Growers Association formed two and a half years ago, has been of much benefit to sheep raisers of the county, especially in the matter of encouraging the destruction of coyotes, wild cats, etc., 234 scalps being brought before the association at Esparto since its organization for which the scalp possessors were paid the sum of \$4680. Of this amount Yolo Co., paid \$5 per scalp and the association the balance, \$15. Under the present State law, \$5 a scalp will come from the State treasury, the county will pay \$5 and the association \$10, making \$20 for each scalp as heretofore.

Thinking that perhaps it would be of interest, to publish, Mr. G. W. Chapman furnished me the number of sheep owned in the county by each member of the association. In some instances only an approximation of the lambs is noted. There are few sheep-owners in the county who are not among the following members of the association:

	Sheep.	Lambs.
G. W. Scott & Low.....	7,000	2,300
G. W. Chapman.....	4,500	2,300
W. Levy.....	3,000	1,300
Pace & Craner.....	3,000	1,200
W. Duncan.....	3,000	1,300
C. Nelson.....	3,000	1,800

F. B. L.

Mohair

For 18 months, mohair has sold at good prices, and, in all probability, will continue to be profitable for live-stock men to raise for some time to come.

The slight falling off in the demand for the raw mohair from manufacturers of ladies' dress goods was counterbalanced by the new tariff, and to-day we have a good market for the domestic spring clip of 1891.

Operations in Liverpool, England and Constantinople, Turkey, have a decided influence upon the American market. Recently there have been few sales at the former place, and at low prices. Upon investigation, we found the stock quoted to have been inferior, and, further, that most of the desirable Turkey mohair is now held in Constantinople by strong houses, with confidence in the future.

Latest reports from Turkey show that speculators have commenced to figure there with some prominence, and the effect has been to put up prices already.

A large number of mills are now using domestic mohair, and with this increase in the number of consumers, there should be a more steady demand and a more uniform value.

## PATRONS OF HUSBANDRY.

## Our Grange Edition.

The Grange news of most general interest is given through all editions of our paper on a special page. Several supplemental pages, devoted to Grange interests, are added in our Grange edition, which any subscriber can receive in lieu of the regular edition WITHOUT EXTRA COST, by addressing the publishers.

## The Master's Desk.

R. W. DAVIS, W. M. S. G. OF CALIFORNIA.

The architect prepares a plan for his building; the army officer outlines a plan for his campaign; the orator conceives a plan for his argument and oration; the attorney has a plan for the trial; the doctor originates a plan for curing his patient; the railroad president studies a plan for getting coin; the machinist makes a plan (or model) for his machine; the successful farmer works by plan for cultivating his farms; the thrifty housewife devises a plan for her work. All through the various routine of "daily doings" we find, or ought to find, plan. Life is a plan. The minister tells us of the "plan of salvation." Now, what is wanted is to get you to plan to help the Grange. Help a fraternity that has a plan—a plan to relieve the sick and distressed, to educate, to protect, to purify, to fraternize, to enhance the value and charm of your country home, to make two blades of grass grow where but one grew before, to scatter seeds of kindness, to elevate the standard of manhood and womanhood, to plan wisely and hopefully for the future. Can you, will you, plan for upbuilding? If you are progressive, if you are philanthropic, if you are zealous, you will plan to join the farmers' grandest, best, oldest organization. A fraternity with a quarter of a century's history, the sturdy tree, faithful and tried old Grange. Plan to be a Patron of Husbandry!

Speaking of "plan," who will suggest the best plan for "calling the roll," at our next annual meeting of the State Grange? Don't you know we lose lots of time under the present "plan?"

Happiness ought to be your share. Do you have much of it? There are many persons who make themselves and others unhappy, who ought to be very happy. Let's see! Did you ever think how happy, thankfully happy, too, you ought to be for the full possession and use of the senses? Just think of the person who cannot see; of the other unfortunate who cannot hear; of the third who cannot speak; or of him who cannot walk; or the still more unfortunate one whose mind has been bereft of its reason.

Then there are ten thousand things around you that are placed there to make you happy and comfortable. Do you see and hear and enjoy them? If not, don't blame some one else. 'Tis true, there is sorrow in this world, but then there is much more of happiness than we are wont to admit. Get and scatter all the happiness you can!

## Still Advancing.

Several Granges in various parts of California are increasing in membership in a very encouraging manner. While some are instructing large classes of new candidates, there are a good many others that are receiving small accessions showing a healthy growth.

The adoption of the Trade Card system of co-operative buying in California is having a good effect so far as we can learn, wherever adopted. There should be more pains taken to enlighten all members in regard to this new feature of the Order.

## Three More Granges

Have lately fallen into our working line, viz: California, at Placerville, and Vacaville, both new Granges, and Dixon Grange, revived, giving altogether some 75 to 100 new members at present.

Past Master Overhiser started out this week for a Grange revival campaign southward. He will visit counties between Stanislaus and Kern, enlightening and reviving old Granges, and we hope organizing some new ones.

General Deputy Frisbie has visited quite a number of Granges in his district, sending us some good reports, as lately published.

Now let every General Deputy and District Deputy in the State start in for a general visitation and revival of Grange interests. It is a time that requires activity, and the labora of our husbandmen seem to be well rewarded, as Granges are increasing in membership.

No cause can be more worthy of hard labor. The world has produced no fraternal organization, all to all, superior to the Grange, and none need be asked or looked for. The Grange is what we make it. Patrons, whatever we attempt, strive to do it well!

VACAVILLE GRANGE DRILL MEETING.—A special drill meeting of members of Vaca Valley Grange was held at the residence of W. W. Smith, Esq., near Vacaville, on the evening of the 18th ult. Bro. F. B. Logan, Deputy, presided, and the reports that the attendance and good interest manifested by all to become acquainted with their duties and familiarize themselves with the unwritten work was very encouraging and augured well for the future success of the new Grange.

## Important Railroad Freight Decision.

Interstate Commission on "Farm Truck" Rates.

About three years ago, the good Patrons of Delaware finding themselves ground down by the railroads, and their fruit industries paralyzed, organized against their oppressors, and at a cost of several thousand dollars carried their case before the Interstate Commission.

The fight was a fierce one—unhounded wealth upon one side, oppressed farmers upon the other. The farmers' side was championed by Bro. A. M. Brown, Past Master State Grange of Delaware, strongly aided and upheld by the Worthy Master, Secretary and Lecturer of the National Grange.

The *Evening Star* of Washington, D. C., tells the story:

The Interstate Commerce Commission, April 13, 1891, decided the case of the Delaware State Grange of the P. of H., vs. the N. Y., Philadelphia and Norfolk R. R. Co., the Delaware R. R. Co., the Philadelphia, Wilmington and Baltimore R. R. Co., and the Pennsylvania R. R. Co., in favor of the complainants.

The points decided are briefly as follows: For a special service by a carrier, such as the transportation of perishable freight, requiring quick movement, prompt delivery at destination, special fitting up of cars, their withdrawal from other service and their return empty on fast time, all involving greater expense to the carrier, a higher rate than for the carriage of ordinary freight is warranted by the conditions of the service, and is reasonable and just.

But the higher rate for a special service should bear a just relation to the value of the service to the traffic, and is not wholly in the discretion of the carrier. While a carrier should be fully compensated, the public interests require that the traffic should not be rendered valueless to the producer, if the charges of the carrier have such an effect and can be reasonably reduced.

The requirements of the statute, that all rates shall be reasonable and just, involve a consideration of the commercial value of the traffic and imply that rates should be so adjusted that producers of traffic as well as carriers may carry on their pursuits successfully, if practicable, for both and without injustice to the carrier. The public good requires what is plainly the spirit of the law, that the transportation interests are not alone to be considered, but in the just exercise of regulation, care should be taken that the lawful and necessary occupation of citizens are not unjustly hindered.

The complaint was that the defendants' charges for transportation of specified perishable articles of truck farming from stations on their lines of railroad to Jersey City and Philadelphia were excessive and unreasonable, and that the charges were higher for the shorter distances from their stations on the peninsula in Delaware and Maryland than for the longer distance from Norfolk, Virginia. It was found that the charges on certain articles specified from stations on the peninsula were excessive, and a reduction was ordered of from 20 to 25 per cent.—*Am Grange Bulletin*.

## Stockton Grange Entertains Visitors.

Saturday, May 2d, was a gala day with the Grangers. On the morning train a large delegation of Merced Grangers and other friends arrived to pay a fraternal visit to the Stockton organization. There were also visitors from Placerville in Merced county, Yuba City in Sutter county, and from Martinez. Altogether the visitors numbered about 100.

The stay of the visitors in this city was made very pleasant. In the forenoon they were shown about the city and entertained, and at noon they were provided with lunch at the hotel. In the afternoon an open meeting was held of Stockton Grange and the hall was crowded. The hand-marks of the ladies were shown in numerous bouquets and floral decorations, which made the hall a very fragrant and inviting place. The open meeting continued until 4:30 o'clock, when the Grange went into closed session, and those not members were invited to withdraw.

During the open session Burdette Cornell, Deputy State Organizer of City Alliances, spoke on the subject of the new organization. In addition a program was rendered as follows: Quartet, "Cousin Jedediah," M. A. Alling, L. E. Overhiser, C. A. Merrill and N. Alling; lecture, Arthur Ashley; recitation, "The Bald-Headed Man," Mark Alling; recitation, "The Bright Side," Emma Perry of Merced; recitation, "Trouble in the 'Amen' Corner," Mrs. Mary Merrill; duet, "Hearts and Home," Flora Hareless and Mrs. N. Alling. The lecture, or perhaps essay would be a more appropriate word, of Mr. Ashley was a carefully prepared article, which showed that the writer had entered deeply into his subject. It was fraught with argument that could not but appeal to the best judgment and awaken the interest of the hearers.—*Independent*.

## Tulare Grange Picnic.

Remember that this occurs at Centennial Grove, in Tulare, on Saturday, May 9th. Also that Worthy Overseer A. P. Roache will deliver the address of the day. Worthy Past Master Overhiser will also be present, and no doubt other able speakers will assist in making

the occasion one of the most memorable of fraternal events in Tulare county. This is sufficient announcement to insure every brother and sister of the Order that they will be well paid for their attendance. Let none miss who can consistently go to this grand gathering.

## The Golden Wedding

Of Mr. and Mrs. G. P. Loucks of Pacheco.

"Is marriage a failure?" seems a floating question; but when the negative side recognizes that by array of successful paper, tin, crystal, silver and golden anniversaries, they surely are constrained to say, with writers of old, that "'tis not good for man to live alone," and that the blessedness of one in singleness of life is more than doubled in that of marriage.

Fifty years ago, in that grand old State of New York, a youthful couple took upon themselves those vows that make man and wife, and this same couple, readers mine, was our friends and neighbors, Bro. Geo. P. Loucks and wife. No introduction to Grangers is needed, for this brother stands as guardian of State membership, namely, as one of our Executive Committee, and to Contra Costans has his interest been closely allied since 1854. Births and marriages of their children have marked the intervening years, which but added to and made stronger the links binding them to our county.

As the 50th anniversary drew near, whisperings among home friends culminated in a general invitation to a golden wedding on April 22d, at their home in Pacheco. On entrance as hosts and ushers, were their sons Peter and Frank, with their families, who were ably supported by their daughters, Miss Annie and Mrs. Belle Sear, all of whom were again helped by grandchildren from the young wife of a few months to the wee toddling tots, who now and then imperiously claimed the blushing bride and groom of the day as grandma and grandpa. Gray hairs and spectacled eyes robed not this aging couple of their zest in life, nor of the happiness of the hospitable hours. Mrs. Loucks had from the secret places in her house brought forth the identical silk dress, lace collar and embroidered handkerchief that had graced a like occasion half a century ago. This quaint costume of her real bridal day made it seem as though that long-ago bride had made herself into a picture of today.

## This Ideal Home.

By loving hands had magically grown into a hower, so profuse were the floral gems, and as typical of the day's shadings, prominent was our beautiful State poppy, whose bright tints would almost seem to be stolen from our golden soil. Conspicuous among those tasteful decorations was the initial L, supported by the magical tell-tale year numbers, '41, '91, all wrought by these same flower artists who robbed hillsides and gardens to write in floral letters the old story of marriage. Music for the ear, beauty for the eye, refreshments for the taste, with friendly handshakes and kindly, loving glances, made this anniversary truly a bright and golden one; and if all the wishes of coming and going friends could be crystallized into real life, the days left to our friends will be as bright, if not brighter, than those that have marked their checkered past.

MRS. MARIA B. LANDERS.

Martinez, April 23, 1891.

## Proposed Excursion to Oregon

We have received the following circular which we presume has been sent to all Granges in California:

SANTA ROSA, CAL., April 20th, 1891.

To Patrons of California, Greeting:—Arrangements have been made with the Union Pacific Railway, (Ocean Division) whereby transportation by steamer (from San Francisco to Portland, Oregon, and return, for the purpose of attending the annual meeting of the Oregon State Grange), good for 60 days from date of issue for the round trip, will be made at \$25.00 for ten or more persons. If members of your Grange desire to accept these terms they should send their names, and have their money ready so as to leave San Francisco on or before May 23d. Applications for berths or passage should be made to D. W. Hitchcock, Gen'l Agent U. P. Ry., No. 1 Montgomery Street, San Francisco, Cal., or to E. W. Davis, Master State Grange, Santa Rosa, Cal. These are the best terms obtainable and are therefore submitted to you. If any one goes from your Grange, report the same at once, so that berths, etc., can be reserved. The fare from Portland, Oregon, to Hillsborough and return, will be an additional charge of \$1.80. Fraternally yours, E. W. DAVIS, W. M. C. S. G.

If Secretaries will send names to this office, of those going by steamer we will be pleased to report the same from time to time.

## Grange Picnics.

Name.	Place.	Date.
Tulare	Cent'l Grove	Sat., May 9.
Placer Co. Granges	Loomis	Thurs., May 14.
Sonoma Co. Granges	Bennett Val.	Sat., June 27.
Lockeford	Lockeford	Wed., May 13.
Watsonville	Aptos	Sat., June 6.

Notices of other picnics will be added to the above list when received.

## Sister Thistle at the Grangers' Picnic.

"The way to a man's heart is through his stomach;" so, acting upon this wise adage, I have been very much occupied all the week, cooking delicacies for the Sacramento Co. Grangers' picnic; otherwise I should have replied to Sister Thistle in your last issue. However, I am glad I did not, for I met her at the picnic, and after each of us had extended a hand of welcome to many friends, we slipped away to discuss the "old maid and old bachelor" question. Unfortunately, I did not see the article from "Old Maid" that called forth such a vivid description from Sister Thistle, of how to capture an old bachelor. When I read Sister T.'s article, I felt that she must have drawn upon her imagination somewhat; she tells me not, but that the half was only told. She was evidently unhappy about something, and opened her heart to me, telling me many things in regard to these awful men, which an old maid, who has never succeeded in making one of their hearts go up and down, and round and round, is always glad to hear. She told me that after using hooks, line, pole, and even drag net, to secure Edwin Thistle, that he would not succumb to her entreaties until she had gone through the tortures, perplexities and annoyances of a camping trip. He said he wanted to test her disposition, and after being a perfect model, during the trip had the audacity to tell her that her nose was not long enough. But the matter had gone too far by this time. Mrs. Grundy had them already engaged; and to save her too much annoyance and herself a cook, they were married. Her story touched my heart, and I made an effort to get her out of her seemingly unhappy state of mind. The day was perfect, and all

## Nature Smiled Upon the Thousands.

Who had come from far and near to enjoy the Grangers' picnic. We walked leisurely around and soon I had Sister T. interested in the new spring gowns and bonnets which are always on display picnic day. A feeling of indignation rose in me, when she told me that Edwin had assured her that the crops did not justify her having a new dress and hat, and all the while I knew that he indulged himself in the choicest olgars.

Sister T. ate lunch with me, and some of the delicacies that I had prepared especially for this wonderful drag net, I gave to her, keeping back just enough for one or two haits, for although her story had thoroughly convinced me that I am better off as an old maid, still my curiosity was aroused, and I wanted to try the drag net scheme, which I am obliged to say did not work successfully. I thought I had it quite well filled, when upon examination I found to my surprise that there was a good sized hole in the net, and I was left with only Sister T. on my hands, and Bobby too, for he had been with us all this time, and was beginning to get cross. He being an only child, of course was spoiled, and had inherited his father's peculiar disposition. It finally dawned upon me that possibly I could perform a mission in this world, that I might comfort the hearts of many noble women who are disappointed in their liege lords.

Sister Thistle's sad face inspired me, and I set to work with renewed energy. I put Bobby into a "merry go round" and told the high chief to keep it going until my return. Then again Sister T. and I strolled over the picnic grounds—a spot thickly covered with wide-spreading oaks and carpeted with velvety green—a spot where human nature communes with beautiful nature. Under some of the widest spreading trees a large platform had been erected. Here those who were still in the bloom of youth "tripped the light fantastic toe" to their hearts content, only stopping long enough to listen to

## Our Talented Master, E. W. Davis,

Who had made a real effort to be present with us on this occasion. Those who had the pleasure of listening to his eloquent speech were deeply interested, especially the members of the Grange. He always leads us to the right path, and if we find ourselves stumbling over underbrush (Grange difficulties) sets us well on our feet.

Finally the sun began to sink, and gradually one by one the picnickers gathered together baskets and babies and started for home. In each face there seemed to hover a feeling of satisfaction, and I noticed especially that Sister Thistle was much brighter and more willing to think kindly of Edwin. It was not until I promised her faithfully that I would see that he did not make love to half a dozen girls at one time, in case of her death, that she had me good-bye and pressed my hand with a "God bless you."

OLD MAID No. 2.  
Sacramento Co., May 3d.

TO CELEBRATE JULY FOURTH.—At the last regular meeting of Glenwood Grange, No. 94, it was unanimously voted to publicly celebrate the Fourth of July under the management of the Grange. All will be invited to participate. J. C. Shaw and F. F. Wylie were appointed to select an orator. All arrangements will be made at the next regular meeting for carrying out a full program. Respectfully, Mrs. T. J. SHAW, Sec'y.

BRO. J. O. PURVINE of Two Rock Grange, Petaluma county, sends us a dish of 10 subscribers—all members of that Grange—for which we return thanks.

FARMERS' ALLIANCE.

Alliance Edition.

Subscribers can receive our FARMERS' ALLIANCE EDITION WITHOUT EXTRA COST, by applying for the same. That edition contains several supplemental pages of Alliance matter, in addition to that which appears on this page through all editions.

Our Three Editions.

First, we print our REGULAR EDITION for general circulation, containing about one page of Grange matter, supposed to be of most interest and importance to all subscribers. It also contains a like selection of Farmers' Alliance reading.

SECOND, we print a GRANGE EDITION, containing several supplemental Grange pages.

THIRD, is issued the FARMERS' ALLIANCE EDITION containing several Alliance pages, in place of the supplemental Grange pages.

Which Do You Want?

Subscribers can, at any time, change their subscription from one edition to another, without extra cost, by writing to the office. Be sure to give plainly your name, P. O., the edition now taken and the one preferred.

Alliance Meetings in Solano and Yolo Counties.

[From the State Lecturer.]

Since our report of the very pleasant and profitable meeting with the brethren and friends at Orland, we have visited Dixon and Elmira, in Solano county, and Winters and Dunnigan, in Yolo.

At the meetings in Dixon, Elmira and Winters, we had a goodly number of listeners, and while the attendance at either place was not large, it was much larger than we expected when we learned of their close proximity to the numerous picnics that were held all through that region on and about May Day. One thing, however, was quite noticeable, to wit, that each of the assemblies was composed of intelligent representative men and women, who really represent a larger and stronger element in society than many assemblies composed of five times their number. The greatest possible interest was manifested by all, and throughout the entire proceedings, each seemed to vie with his neighbor in trying to learn the most of the work and the most of the teachings of our Order.

We were met at Winters by Bro. Peter Roth, Vice President of the State F. A. & I. U., who attended our meeting at that place and next morning took us in his buggy to his home, a distance of 15 miles. We found him located in a pleasant and charmingly prosperous home and surrounded by a prosperous family and all the evidences of thrift and enterprise. On the evening of that day (May 1st) he held a oiled meeting, composed of his Alliance and other interested parties, which we had the pleasure of addressing, and to all appearances the time was well spent.

Next morning we went, in company with Bro. Roth and family, to Wildwood Grove, where the great event (a picnic) of the trip was to occur. We are informed that it was the largest picnic held in that section of country. Surely it was one of the most pleasant and successful we ever attended. The prominent figure on the ground was Bro. Gallup, who seemed to have entire control, and that control was exercised in an intelligent and very prudent manner. The exercises, aside from speaking, consisted in music, dancing, games and amusements of various kinds. The music for the picnic was furnished by a local brass band, who did credit to themselves and community, after which we spoke for about an hour and a half. We were followed by Bro. Peter Roth, who made a short but pointed and forcible address. The company then adjourned to the dinner-table, which was loaded with the best the world affords, and in quantities that showed no signs of diminution, even when all were satisfied. While great credit is due to all, we feel like making special mention of Bro. Gallup, and also the ladies who ornamented the grounds and prepared the dinner.

From the number of Alliances organized in that part, and the interest taken by all, we judge he has been doing something besides Gallup-ing around the country, and has probably done as much as any other one man to build up our cause.

I expect to attend the meeting at Lodi, San Joaquin Co., on the 6th, to hear Bro. Cannon speak.

**JOINT PICNIC.**—The Granges and Farmers' Alliances of Tulare and adjoining counties will meet for a grand picnic at Centennial Grove, on Saturday, May 9th. Able speakers on the part of the Alliance and Grange will be present and speak for the farmers' cause. Let there be a grand, co-operative, jubilant time for old and young.

**THE President of Wildwood Alliance, Yolo county, is H. L. Line, and the Secretary, W. F. Smith.**

S. K. SHILLING, FIRST SUB ALLIANCE VICE-PRES. IN CALIFORNIA.

The Alliance at the North and West.

Iowa.

The Farmers' Alliance is spreading in the State like hot cakes, no less than 41 branches having been formed in one week.

Kentucky.

The State Secretary sent charters for 60 new sub Alliances during the month of March. Eighty-six of the 119 counties in the State are organized. There is a total of 2400 sub-unions in the State with a membership of more than 100,000 farmers.

Oregon.

Active organizing work is under way, and a State Alliance will probably be organized within the next two months.

Minnesota.

The number of Farmers' Alliance branches in the State is 1315, and others are being organized at the rate of six or seven a week. The Alliance has 11,000 more members than at the time of the election last fall.

And that is what the Alliance is doing by way of perfecting its organization in the various States enumerated in the foregoing. Other industrial parties are equally active in pursuing the same course, some intimation of which we have already given in a former issue. The information contained in these items shows but a small fraction of the work of organization now going on, but our readers will thereby get some idea of the drift and the activity that is being manifested in this respect.

It will readily be seen, from this brief outlook, that these organizations mean business, and that, if necessary, they will all be in good fighting trim for the great battle that is to come off in the next general campaign.

New England.

The New England States have been showing a lively interest in the Alliance for some time past. There have been hundreds of applications for Alliance literature, and particularly for the sub-treasury plan argument. In New Hampshire the interest has culminated in the organization of the Granite State Farmers' Alliance and Industrial Union at Troy, and a dispensation was sent there last week.

Ohio and New York.

State Alliances were organized this month in Ohio and New York. Both are well equipped for entering upon active organized work. In Ohio there are 187 sub Alliances, with a membership of over 8000.

New York has 241 sub Alliances with a membership exceeding 10,000.

Pennsylvania.

The State Alliance was organized April 14, 1890. There are now over 200 sub Alliances with more than 10,000 members, and our friends are organizing at the rate of one Alliance a day, Sundays included.

Virginia.

There are 1325 sub Organizations of the Farmers' Alliance in the State, and 94 counties are thoroughly organized.

Washington.

Sub Alliances are being organized in every county in Eastern Washington. Conventions to organize County Alliances are called for meeting in this and the following months.

Wisconsin.

Had only 78 sub organizations last June. There are now 236 Alliances organized. Applications for charters are received by the Secretary every day, and there will be over 300 organizations before the end of next month.

West Virginia.

Was organized seven months ago. There are now 433 organizations reported, and the work is more vigorous and active than ever before.

S. K. Shilling.

Bro. Shilling is one of the honest, earnest and steadfast leaders in Santa Barbara county. He has the honor of being the first Vice-Pres. of the first County Alliance organized in the State of California. We had the pleasure of meeting him at the State organization at San Jose in November last, when, with other sterling men, he took an active part in launching the State Alliance in good shape on a safe and fruitful voyage.

Bro. Shilling's parents are of German extraction. When married, they moved from Pennsylvania, their native State, to Stark county, Ohio, where they raised a family of seven children, the subject of our sketch being the seventh-born, seeing the first light of day on Oct. 18, 1839. When nine years of age, his parents moved to Cass county, Indiana. In 1863 Bro. Shilling crossed the "plains," arriving in Nevada in the same year, where he remained until the spring of 1864, when he left for California. He married in the fall of 1870 and with his wife returned to Indiana. In 1877 he was agent for the Grange store at Logansport, Indiana. One year later, or in 1878, he, with his family, moved back to California, settling at Lompoc, Santa Barbara county, where they continued to live. He is a charter member of Lompoc Alliance No. 6, of which he has been president since its organization. He is also president of the Santa Barbara County Alliance, which is the first county Alliance organized in the State. He is a staunch supporter of the Alliance and a firm believer in its principles.

Bro. Cornell at Warm Springs.

**EDITORS PRESS:**—On Wednesday evening, April 29th, Bro. Burdette Cornell delivered a stirring address here under the auspices of the Warm Springs F. A. Owing to the fact that many had driven to San Jose that afternoon, a distance of ten miles, to attend the reception of President Harrison, the audience was not as large as we could have desired, but about 70 of our representative citizens were present.

The gentleman spoke without notes, holding the attention of his hearers for nearly two hours, and in a concise and straightforward manner presented facts and figures relating to the Alliance movement from its first inception down to the present day.

Judging from the frequent applause during the lecture, and the hearty hand-shaking at its close, those present were well pleased with both lecture and lecturer.

Bro. Cornell, though a young man, is a very enthusiastic worker in our Order, and we here speak for him and our cause a brilliant and successful future.

MRS. L. A. SHAW,  
Sec'y Warm Springs F. A. & I. U.  
Warm Springs, May 4, 1891.

Summerland Citizens' Alliance.

The Summerland Citizens' Alliance, No. 1, was organized April 27th, with the following officers: President, H. W. Cornell; Lecturer, J. S. Loveland; Treasurer, J. W. Darling; Secretary, Melvin Snow; Doorkeeper, James Wilcox; Assistant Doorkeeper, Ray Gardner. This is the second organization of the kind in the State, and is the same as the Citizens' Alliance in Kansas that so thoroughly assisted the Farmers' Alliance in that State to play everlasting smash with the usual order of things political there. The organizer was Col. Jo. S. Barbee of Virginia, who organized the first Farmers' Alliance in California a year ago, which now has a membership little short of 25,000, the great majority of whom are voters. *Santa Barbara Star.*

Alliance County Notes.

Butte.

A. W. Hynes, S. Or. of the Farmers' Alliance, will remain for a week organizing sub Alliances in the county.—*Gridley Herald.*

Contra Costa.

Tassajara Cor. says: The Farmers' Alliance has been the all-absorbing topic of conversation lately, and the interest taken in it does not seem to abate.—*Martinez Democrat.*

Humboldt.

We had the pleasure of paying a friendly visit to the Centerville, Port Kenyon and Grizzly Bluff Alliances, and found them in a healthy, growing condition. They are not taking on so rapid a growth as some of the other Alliances, but they appear to be earnestly studying and discussing the objects of the Order, which is the best sign of their success.—*Western Watchman.*

Los Angeles.

The Farmers' Alliance of Wilmington held their annual picnic in the park, a mile to the north of the town of Wilmington, on May 1st. The Long Beach Alliance sent a delegation. The speeches of the day were by Rev. R. M. Behster of Long Beach and H. C. Dillon of Los Angeles. Music, and best of all, well-filled lunch-baskets and good cheer was the order of the day.—*L. B. Breaker.*

Hon. H. C. Dillon of Ceritos, the able exponent and one of the most prominent of the leaders in the Farmers' Alliance movement in Southern California, addressed the people of Rivera and vicinity, at the Rivera Town Hall, on Tuesday night, April 28. Mr. Dillon's address was an able exposition of the political and social conditions of our day, in contrast with the earlier history of our county. The future was of deep concern, and the advice and suggestions of the speaker were received with marked attention, as the deliberate opinions resulting from much study and reflection. Mr. Dillon's lecture could be listened to with profit in every rural hamlet in the land. As a finished, entertaining and eloquent speaker, Farmer Dillon stands first in rank among our Southern California orators.—*Champion.*

San Luis Obispo.

The Starkey Alliance continues to meet regularly, with full attendance and constantly increasing numbers.—*The Moon.*

Last Saturday night we had a pleasant Alliance meeting at Melville schoolhouse. It was well attended by our own members, as well as being honored by the presence of Mr. Smith, the Secretary of Monterey County Alliance, also Messrs. McCain and Pyat of the Parkfield Alliance and Mr. O'Hare of Vineyard, No. 1. Secretary Smith made a short but terse speech. Secretary Waggener gave us a splendid lecture on the principles of the Farmers' Alliance and Industrial Union, also a short lecture from President Cole on the Good of the Order. There were six more applications for membership, which shows that our Alliance is prospering.—*Melville Cor. Messenger.*

Santa Clara.

San Juan has a Farmers' Alliance Club.

Shasta.

The Farmers' Alliance of Enterprise schoolhouse had a picnic on May 1st. Those who attended say they had a good time. Sports, dancing, speaking, etc., was the order of the day.—*Democrat.*

Solano.

J. L. Gilbert, State Lect. of F. A. & I. U., addressed our citizens on Tuesday, April 28th. He described the origin and growth of the new movement, instituted comparisons between its creed and those of the two great parties, dilated on the plans of relief offered to the farmers by the Alliance, denounced national banks, railroads and other corporations, and ended by assuring his audience that the Alliance would not sanction the third party movement, which is at present exciting so much discussion by the press. Mr. Gilbert is a very convincing talker and held his audience in rapt attention for over an hour. At the close of the lecture, R. E. L. Stephens, President of the Silverville Alliance, made a few remarks, closing with the statement that the Alliance will hereafter hold its meetings in K. of P. Hall, Dixon, on the first and third Saturdays of each month at 2 p. m. *Dixon Tribune.*

Tulare.

The members of the Woodville Farmers' Alliance had a lively time at their last meeting. The question whether there should be any dancing at the Alliance picnic at Woodville was actively discussed, and the devotees of Terpsichore were defeated. It is stated that the minority will build a dancing platform anyway.—*Delta.*

**PRESIDENT CANNON** of the California Farmers' Alliance and Industrial Union writes State Deputy Cook as follows: "I intend to put the lecture system promulgated by the National Legislative Council into operation during the summer, and will provide for a system of lectures during the months of September and October by lecturers from the East, ending with the meeting of the State Alliance in Los Angeles.—*Modesto News.*

**H. L. LINE**, President Wildwood Alliance, Yolo Co., writes an encouraging letter, and promises to do all in his power to extend the circulation of the RURAL PRESS. It is through such friends we are cheered in our work of making the PRESS the paper for farmers.

### After Death in Arabia.

*He made life—and He takes it—but instead  
Gives more; praise the Restorer, Al-Mu'hid!*

He who died at Azan sends  
This to comfort faithful friends.

Faithful friends! it lies, I know,  
Pale and white and cold as snow;  
And ye say, "Abdullah's dead!"  
Weeping at my feet and head;  
I can see your falling tears;  
I can hear your cries and prayers;  
Yet I smile, and whisper this—  
"I am not that thing you kiss;

Cease your tears, and let it lie;  
It was mine, it is not I."

Sweet friends! what the women love,  
For its last bed in the grave,  
Is a tent which I am quitting,  
Is a garment no more fitting,  
Is a cage from which, at last,  
Like a hawk my soul hath passed.  
Love the inmate, not the room;  
The wearer, not the garb; the plume  
Of the falcon not the bars  
Which kept him from the splendid stars.

Loving friends! be wise, and dry  
Straightway every weeping eye;  
What ye lift upon the bier  
Is not worth a wistful tear.

'Tis an empty sea-shell, one  
Out of which the pearl is gone;  
The shell is broken, it lies there;  
The pearl, the all, the soul, is here.  
'Tis an earthen jar whose lid  
Allah sealed, the while it hid  
That treasure of His treasury,  
A mind which loved Him; let it lie!  
Let the shard be earth's once more,  
Since the gold shines in His store!

Allah Mu'hid, Allah most good!  
Now Thy grace is understood;  
Now my heart no longer wonders  
What Al-Barsadh\* is, which sunders

Life from death, and death from Heaven  
Nor the "Paradises Seven"  
Which the happy dead inherit;  
Nor those "birds" which bear each spirit  
Towards the Throne, "green birds and white,"  
Radiant, glorious, swift their flight!  
Now the long, long darkness ends,  
Yet ye wail, my foolish friends,  
While the man whom ye call "dead"  
In unbroken bliss instead  
Lives, and loves you; lost, 'tis true  
By any light which shines for you;  
But in light ye cannot see  
Of unfulfilled felicity,  
And enlarging Paradise  
Lives the life that never dies.

Farewell, friends! Yet not farewell;  
Where I am, ye too shall dwell.  
I am gone before your face  
A heart-beat's time, a grey ant's pace.  
When ye come where I have stepped,  
Ye will marvel why ye wept;  
Ye will know, by true love taught,  
That here is all, and there is naught.  
Weep awhile, if ye are fain,  
Sunshine still must follow rain!  
Only not at death, for death—  
Now I see—is that first breath  
Which our souls draw when we enter  
Life, that is of all life centre.

Know ye Allah's law is love,  
Viewed from Allah's Throne above:  
Be ye firm of trust, and come  
Faithful onward to your home!  
"La Allah illa Allah! Yea,  
Mu'hid! Restorer! Sovereign!" say!

*He who died at Azan gave  
This to those that made his grave.*

—Edwin Arnold.

\* Cf. Koran XXIII. Chapter "Of Believers."

### Mabel's Boarder

[Written for the RURAL PRESS by MAUD S. PEASLEE.]

It was such a cozy, pleasant little room with its bright red carpet. The canary obliterated sleepily in his brass cage hanging against the white lace curtains; the firelight flickered on the gilt frames of the pictures, and brightened the soft gold of Mabel's hair.

"Are you going down town this evening?" she asked, looking up from her work. She was sitting before the open fireplace with some pretty red knitting in her warm white hands. Her bright blue house dress was very becoming to her fair skin, and altogether made a pretty picture in her husband's eyes.

He thought so, and coming over, kissed her with a glad sense of proprietorship, as he answered her question with:

"Yes, but I won't be late."

She arose to help him on with his overcoat, and followed him to the door. It was always hard to see him go, this tall, handsome husband of hers. She pressed her head tenderly against his sleeve.

"I wish you weren't going to-night. I be-

grudge every hour you spend away from me, Bert," she said.

"Foolish little woman!" he said caressingly, "just run and get me a match for my cigar, Mabel. Now don't sit up for me, dear," he continued, as she came running back with his forgotten fence case, "I know you need the rest, and something may detain me." With another kiss, he hurried away, and she stood in the doorway listening to his footsteps dying away in the distance.

When she could hear them no longer, she roused herself with a little shiver, and closed the door. It was quite cold outside, and the afternoon had left a light fall of snow on the ground. It made the warm fireside quite comfortable, this lingering at the door, but Mabel stood leaning her head against the mantel, and hot tears dropped down on her interlaced fingers without being wiped off.

"Last night it was the club," she said aloud, "and to-morrow night is the lodge meeting, and after that it will be something else. Oh dear!" and she began sobbing in a pitiful way.

Presently she dried her eyes and pushed back the little rings of soft hair that had fallen over her forehead. She had not been well for quite a while, and it was against the doctor's orders to go out at night.

"It is of no use to expect Josie to-night," she thought, "for they have company. I wonder what I shall do with myself till bedtime." She opened the piano, and for quite a while played from memory by the light of the leaping, dancing flames. Then as her back began to ache, she rose and flung herself into the large sleepy hollow chair near the window.

The curtains were not drawn, and she could see the lights in the opposite house, and through the thin curtains could discern the shadowy outlines of the guests at Josie Farrell's home.

"I think it must be nice to be an old lady with lots of grown-up children," she said aloud, "then I'm sure one wouldn't ever be all alone."

She didn't envy Josie a bit, for she was a loyal little wife, and would not have changed places with any one else in the world. Only, she was so lonely, and she missed Bert so when he was away from home. The day was bad enough, but the winter evenings were so long, and she was so far from being well and strong that she was tired after doing her light housework. She could not employ her time with book, pen or needle for any length of time without great bodily weariness.

She looked about her now; it was such a dear little room, she loved everything in it. If Bert were only here! He often said she ought to have some of her friends come in and stay with her evenings, but she hated to parade her loneliness, and besides she loved him too dearly to be satisfied with anyone else's company save his. It seemed wrong to complain when it was the one grievance of her married life. Bert was good and tender to her. It was his hand that had surrounded her with all these comforts, with the soft pretty things her heart delighted in, with all the comforts that made life easy. Her piano was a present from him, but how little pleasure she took in playing or singing when he was not there to listen or join her with the violin.

She was too wise in the ways of mankind to make herself disagreeable by protesting very strongly against his habit. She was too unselfish to urge her own claims as much as she might have done. Sometimes, she suspected she was a little cowardly about it, for she so greatly dreaded any difference of opinion between them.

She felt it would be very hard to convince him that it was anything more than a whim of hers, but oh! she did hate staying alone so much. At home before she was married, the house was always full, and often seemed running over.

Josie was there very often in the evening, because she had a very tender corner in her heart for Mabel's oldest brother, now away at sea. She loved to talk of him, and was sincerely attached to his fair-haired sister for her own sake.

Half-defiant thoughts had all this while been running through Mabel's pretty head, as she swung her foot to and fro for want of other occupation. There seemed to be mutiny brewing in the Lightman family. She had never cried when he left her, or let him find her in tears when he came home, but she was sure he knew how she missed him. She had all this time been trying to think of a sure, practicable way to make him think she didn't care, and so rouse him to see what he was in danger of losing.

Now, of a sudden, her face lighted up, and the dimples played round her mouth, as she sprang to her feet, exclaiming: "Eureka! I know what to do now. My! won't there be some fun for a little while?"

Evidently a plot was on foot against Mr. Bert's peace of mind, for a letter was hastily written and sealed.

"Let me see," she said, "it ought to go out on to-night's mail to be sure to be in time. I can send it by the boy who brings the evening paper."

A cheery whistle soon warned her of his approach, and, with a white shawl over her head, she ran down to the gate to give it to him.

She laughed heartily when she regained the bright, warm room.

"Won't the dear boy be surprised when he gets the letter," she cried softly. "Let me think now, what were the songs he used to like best? I must get them out and practice them."

She did so, and, almost before she knew it,

the little clock chimed out ten o'clock, and she heard her husband's footsteps on the porch.

"Why Mabel, you up yet? What bright eyes and rosy cheeks you've got to-night. Did you miss me much, little girl?" he asked.

"No; not nearly as much as usual," was her surprising answer.

"The deuce you didn't," he muttered under his breath. "Have you had company?" he asked aloud.

"No; I've been all alone with my thoughts," she answered with a queer little smile.

"They must have been wonderfully good company," he thought, "to make her look like that."

The next morning, at the breakfast-table, she said:

"Bert, I've decided to take a boarder."

"Well, I hope she'll be a pleasant companion for you," he answered. "It seems to me a good plan. I am out so often in the evening, it leaves you a great deal alone. Who is she?"

"It's a gentleman."

"What!" exclaimed Bert. "What nonsense! It's impossible."

"Hardly impossible," said Mabel. "He is an old friend of mine, and comes with every necessary recommendation besides. I wrote to mama last night that I would take him, and enclosed a note to him, so it can hardly be helped now."

"Well! you settled it quickly. What induced you to take him at all, I can't see."

"It had to be decided at once, for he wants to come next Monday, and I see no reason why I should not take him. You suggested my keeping a boarder some time ago."

"Only because you are alone so much. This will not help that trouble at all."

Here a queer little smile flitted over Mabel's face.

"Besides, her husband continued, it will only make extra work for you, and you are so opposed to keeping a girl."

"If I find the work too heavy, he can take his meals down town," said Mabel. "See! it is nearly eight o'clock; you will be late at the office."

She followed him as usual to the door for the good-bye kiss, and then went about her tasks with a light heart.

"Dear old Ned!" she said, "what happy times we will have together."

The next brought a letter from her old home. At the close, the writer said:

"I will surely be with you on Monday. There is not the slightest danger of recognition. You will hardly know me yourself. I hear that the Farrells are living in Glenn City now. I wonder if Josie remembers me. I think we'll have great larks together old girl. I suppose it will hardly do now, to send you a good hug and kiss, but I'm much afraid I can't refrain when I see you."

This letter Mistress Mabel very carefully destroyed, nor did she speak of it to Bert, who was as yet, all unsuspecting.

The boarder arrived in due season, and was soon comfortably settled in his new quarters. A cleverly contrived errand sent Bert down town before supper, and Mabel was soon in the arms of the black-headed stranger, who kissed her many times before he set her on her feet.

"Oh! how glad I am to see you," she cried, giving him a pinch to convince herself of his presence in reality. "However will we keep Bert from finding out who you are? Mind, you wait for the word from me."

When Bert came back they had supper, and that evening he and Mr. Spencer went down town. They were together for awhile and finally Bert missed him in a crowd, and was not surprised to find him at home when he reached there a little earlier than usual.

"I missed you, and so made my way home, where your wife has been kindly entertaining me with some music," said Mr. Spencer, as Bert came in.

"Mr. Spencer has a fine voice," said Mabel, and then turning to him, said:

"Let us sing that duet we were trying for my husband."

It was very well rendered, for their voices blended admirably, and when they were through Bert applauded heartily.

"You sing wonderfully well together," he said.

"Yes," answered Mr. Spencer, "we used to sing together a good deal."

"You know we were schoolmates," said Mabel a little hastily.

Just before they separated for the night she found a chance to caution him against alluding to the past.

"I should think he would wonder what I am here for," said Mr. Spencer. "Don't he ask lots of questions?"

"Yes, he was rather curious, but mamma's recommendation seemed all-sufficient at last. I assured him it was none of our business why you came."

"What shall you tell him by and by?"

"Oh, when it all comes out I'll try to make him believe you were only trying to find out whether Josie had forgotten you or not. I wonder if she would marry you after you had given her time to fall in love with you, or if she would remain 'true to the sailor boy' she used to know."

Mr. Spencer's dark face flushed as she finished.

"I would rather she were true to the first love," he said.

"Oh, yes, I know you always made a point of constancy. I'm grieved at one thing I see in you, my dear; you've been smoking. Now

Bert never smokes or drinks or gambles; he's a model husband in such matters, I can assure you."

"Don't hold him up as a pattern to me, sweetheart, or I'll be tempted to break his head."

"What! jealous still? Silly fellow," she said. "Hush! here he comes. I'm off to bed now. Good night."

When Bert came in the room Mabel had left, and Mr. Spencer was ready to retire when his light was given to him.

After that the days slipped away rapidly. Mr. Spencer seemed to be reading law in a lawyer's office, and was rarely at the house in the daytime. At first he went down town in the evening with Bert, but was always home first. By-and-by he said he thought he would stay at home and read. After one or two evenings, during which Bert's thoughts kept turning to the cozy little parlor at home, where one could be so comfortable (strange he had not been accustomed to give it a thought till bedtime) he, too, stayed at home.

Early in the evening, Mr. Spencer went over to Josie Fuller's and was not back till late.

Bert spent a very pleasant evening with his wife, and did not leave her in the evening again for nearly a week. Each evening Mr. Spencer spent at Josie's, or down town, but when Bert began going down again at night, he had to leave the boarder by the cozy fireside with his wife.

Poor Bert began to be much puzzled. He was not a jealous or suspicious man, but he wondered why Mr. Spencer never cared to stay at home when he was there. He spoke to his wife about it in a laughing way, but she treated the matter with perfect indifference.

"He comes and goes as he pleases," she said, "and the least I can do is to be pleasant to him when he stays."

"Oh! I always want you to be that, Mabel," said her husband. "Pray do not misunderstand me." But the poor fellow was no easier in mind than before.

Mabel seemed much more cheerful, and while she always showed pleasure at having Bert at home in the evening, she now took his frequent absences quite as a matter of course.

This was anything but pleasant to her husband, and he began to be watchful, for little things had aroused his suspicions, and he could not help being worried about the presence of this man whose company seemed to reconcile Mabel's heart to the loss of his own society.

Gradually he began to take less and less pleasure in going down town at night, and before a great while had passed, spent all his evenings at home.

From that time he could see nothing to confirm his suspicions, for Mabel was bright, natural and happy, whether Mr. Spencer was present or not. She invited Josie over often, and the four practiced new music together, and learned new songs, till Bert laughingly proposed that they should go out serenading. He proposed that while the ladies were busy with their fancywork, he and Mr. Spencer should take turns in reading aloud from one of the popular books of the day.

Whenever occasion presented, the two couples went together to places of amusement, and somewhat to Bert's surprise, his wife always preferred his escort, and laughingly refused to allow him to take Josie. He began to notice a very marked tenderness in the attentions Mr. Spencer showed Josie, and spoke of it to his wife.

"I thought she was greatly attached to your sailor brother," he said.

"She did seem to be," said Mabel, "but she was always opposed to his following the sea, and perhaps she will give up him for Mr. Spencer. Who knows?"

"What kind of a looking man is your brother, dear?"

"No doubt he has changed a great deal since he went to sea," she answered evasively. "I think he must look much changed since he began wearing a beard."

It was not long after this that Mr. Spencer ventured to tell Josie how dear she had grown to him, and then asked her to promise to be faithful to him till he had finished his legal studies and had a home to take her to.

"She owned she loves me," he said to Mabel in telling her of his success, "and at the same time told me, with many blushes, that I was not the first one who had held her affections. She confessed that she loved me better than this other one, whose name she would not tell me. Is it not fortunate that I am loved best?"

"Yes indeed," said Mabel laughing, "and I think you ought to acknowledge your identity now, and let her see how true she has really been. I'm sure she will recognize you when you have shaved off that great beard. She has several times asked me if I didn't notice how much you look like Ned."

"Well, I'm willing to unmask if you are through with Mr. Spencer."

"I've no more need of him," said Mabel, with a lightened color. "Bert has grown very well used to staying at home in the evening. He says he had no idea how much he was missing when he stayed away so often. I don't know just how he'll take the little trick we have played on him. I think he likes you very much without knowing who you are. Don't tell him it was on his account you concealed your identity. Let me do that by and by."

So it was agreed, and that evening, Mr. Spencer made a pretense of going down town, and while he was gone Josie came in. She

wore a ring on her engagement finger which she seemed quite shy of showing.

"I couldn't help loving him; he reminds me so much of Ned," she whispered to Mahel who laughed and called her a little flirt.

"By the way," she said, "Mamma sent me a picture of Ned the other day. He must look funny with a beard."

Just as she stood the large cabinet of her brother before Josie and her husband who sat beside the centre table, the door opened, and in walked.

"Ned!" cried Josie, and quietly fainted in his arms.

"Why its Spencer!" said Bert Lightman as he looked up from the picture to their boarder who had brought Josie back to consciousness with a very audible kiss.

"What does this mean?" he asked of Mabel a little sternly.

"Only a little ruse on the part of my sailor brother and your sometimes lonely wife to have some fun, and see if Miss Josie here did really love him or—some one else."

"What do you think Jo? Which have you jilted?" asked the quondam Spencer who, denuded of his heavy black beard, looked very like the sailor whose picture Bert was holding.

"Neither," she said shyly, "but I think I like the lawyer best. I wouldn't like to have you way on long voyages, and I wouldn't dare go too."

"You couldn't have fooled me, old fellow, if I had known you," said Bert. "I'm glad you're not likely to leave us, for we sing together too well to be separated. Besides Mabel might be lonely when I'm away," he added with a quizzical smile, for he had the good sense not to be offended at the lesson his wife had taught him.

### Fruit for the Fruitless.

EDITORS PRESS:—There is nothing of greater interest at home or abroad to every lover of the beautiful than a display of fruits or flowers.

As the producers rarely ever arrange their own exhibit, or give much thought to it after handing it over to a committee, it loses much of its individuality and becomes a heterogeneous mass. The careful growers' exhibit is mixed with others that may not have had half the thought and labor expended upon it.

We have had one year of citrus exhibits, one to the north of us, one to the south of us, and it is to be hoped that hereafter our eyes will be spared the torture of beholding any more towers, castles, dams, monograms, etc., being built up of oranges. Thousands of fruits that were used in such decorating, supposing they were not first-class in appearance, could, after the exhibits were over, have been sent to the kindergarten schools in the cities where the fairs were held, or, better still, to those of San Francisco, where Wells, Fargo & Co. carries and delivers all such gifts free of charge. Remember that, ye large orchardists whose trees groan under their burden of luscious fruits, and where some seasons grapes decay by the ton on the vine. It would be but the labor of a few moments to fill a box and take it to your express office, whose agent will very kindly attend to the address for you from a list that will be furnished them. Could you but see the delighted little ones gather about their box and enjoy its fullness like butterflies around flowers you would be so thankful that you had it in your power to make so many little ones happy at once. They rarely get enough fruit—in fact not too much of anything, and would have sad lives except for noble people that labor for them. M. M. C.

### Gems of Thought.

LIFE is not a game of "Button, button, who's got the button?" with its message, "Hold fast all I give you," and its end, empty hands for most, and the useless button for the favored one. He who takes for his motto, "Get all you can, and keep all you get," will invariably come to the preacher's conclusion, "Vanity of vanities, all is vanity," sooner or later.—*Lyman Abbott.*

How is it that there are men who, as Socrates did Aristides, make us better merely by our being with them? How do great authors bring it about, that their invisible spirit in their works seizes and holds us fast, without our being able to quote the words and passages whereby they do it, as a thickly leaved forest always murmurs, though not a single branch stir?—*Richter.*

In ordinary life a man who is unwatchful, wavering, unmanly and weak achieves nothing, gains neither respect nor confidence, and, if he does not become an absolute wreck, is still as nothing but a piece of driftwood floating aimlessly down the stream of life, and carried whithersoever chance currents may direct its course. Such a life accomplishes nothing for its possessor, and no man is helped or bettered by it. It may not be marked—probably it will not be—by any great crime or wickedness, but its very barrenness and uselessness are crimes, and it simply numbers the earth until its end is reached. Dangers and temptations not watched against, and therefore carelessly yielded to, must leave blots and defects, to say no more, that long years of sorrow and effort may not wholly remove and cure. Opportunities snatched, through lack of watchfulness, to pass by unheeded and unused, are not likely to occur again.—*Bishop Williams.*

## YOUNG FOLKS' COLUMN.

### Matie's Mistake.

[Written for the RURAL PRESS by Mrs. C. E. ROBINSON.]

"Matie, Matie! Where are you, child? I want you right away. Matie!" There was no response from the upper regions, toward which the voice of the anxious mother was sent. The stair door was closed with a sharp bang, and in a moment from the rear of the house I heard the same voice calling: "Matie, Matie! wherever are you?" Still no response came to the anxious call.

Now I was a privileged character and I could see through walls and my ears were sharp, and this is what I saw and heard:

A little girl with short dark hair, with snapping black eyes and very rosy cheeks, plump and round, and lips that now were pouting, sat in a corner of that sunny attic chamber to which the stairs led. Her lap was filled with bits of ribbon and lace, and a large doll lay close by her. On her finger was a tiny thimble, and pins and needles were strewn in profusion about her and on her lap. The little hands held something that looked like a doll's hat, and the child twisted herself this way and that as she critically looked at the dainty feather she was trying to fix upon it, and these were the words that came thick and fast from the pretty, pouting lips:

"I dinst sant say one word, if she do want me right away off now; all she wants is me to feed the chickens, an' I don't want to feed chickens. I want to fix dis dolly's hat—this minit, too. She hasn't one single hat that's fit to wear. I dinst sant go, vare now, Mamma Bent. Ise agoing to stay right here. Vose chickens can wait, my dolly cant!"

There was much hurrying to and fro downstairs, hasty opening and closing of doors, one more anxious call of "Matie! Matie!" Then came a roll of wheels, which the little maiden seemed not to hear, she had shut her lips so tight so as not to answer the mother's last call.

Now everything was still and Matie stitched and pinned and ripped with the little bright scissors that came from grandma in the pretty workbox by her side, then pinned and stitched and ripped again; a long time she worked before dolly's hat seemed to suit the little maid and the doll's peculiar beauty. Downstairs all was still. No mother's quick step, no rattle of pots and pans, nor opening and closing doors. Outside could be heard the "quirk, quirk" of the young turkeys and the soft "cheep" of the downy chickens, with sometimes the hurried call of the anxious mother hen to her brood, and an occasional clear crow from the proud rooster who strode about, monarch of all he surveyed. Very long for a little girl had this one sat in such earnest occupation on that dainty hat. Still, it didn't please her, but at length, perhaps oppressed by the unusually long silence, she lifted her head and drew a long sigh. "What's the reason she don't tell me adain? I dinst I'm some hungry. I'll dinst go down softly. I wonder what my ma will say zis time. Will she say, 'why Matie Bent, where have you been?' I dinst vose chickens is hungry, too!"

Very quietly little Matie slipped down the stairs. Something in the region of her stomach didn't feel good; she pressed her hand hard over it. It was so still she began to feel afraid. "Oh," she whispered, "if I only had Zonto. Ise don't bieve mamma's here." She opened the little sitting-room door; all the curtains were down. Mamma's bedroom, too, all darkened. With a big sob in her voice, the child tried to call "Mamma! O mamma, where are you?" but just then she heard something rustle in the kitchen; between her and it was a closed door. More frightened than ever Matie cried out, "O mamma!" but as the rustle continued she fled out of the house, looking over her shoulder in terror for what might be after her. Down to the barn she ran, through the chickens who flew crying to their mothers. Again and again she called, "Mother! Mother! Oh, what shall I do? My mother's gone, and I'm dest as hungry, and I can't go in vat kitchen; there is somefin there," and the hot tears poured like rain. "I wisht I'd vent when she called me now. I dinst gess she's gone to Aunt Nellie's. What shall I do?" Just then around the house flew little Tonto, the black and tan terrier, jumping and frieking about Matie, who took him in her arms. "Where is mamma an' everybody, Tonto? Where was you? What's in that kitchen? Oh, dear, and Ise so hungry, an' I dinst go there." Still hugging the little doggie as her one only friend, the child wandered around the barn to find the huggy and the bay horses gone, and not a sign, as she looked away across the fields, could she see of her father or the team, and the little girl wept and wailed until the bright black eyes were dim and the soft cheeks red. She feared to go back to the house for food, because "sumfin" was in the kitchen. She was hot and thirsty and tired, and for the first time in her life no one had answered to her call. How strange it all was, so still, only "Tonto." At length, worn out with her worry and weeping, she curled herself down at the base of a freshly made hay-stack, and with "Tonto" in her arms resolved to watch for some one coming down the road; but weeping eyes slept soon, and when the still moon came the little girl had forgotten to watch for some one coming down the road. She was wandering in dreamland,

and Tonto, ever satisfied to be in his mistress' loving arms, was still, though now and then a long ear would flip an intensive insect away and a black eye wink through the tangled mass of black and tan hair. So Matie slept, the sweet sleep of childhood, the long hours away. Papa and the hired man had unexpectedly taken dinner with a farmer neighbor whose house was nearer than home to the large field where they were working, and so the child slept on until the afternoon sun sank low, when she awoke to find herself still alone with Tonto. This time so hungry was she that she ventured to the open kitchen window, where the hanghty Tonto had torn a hole in the screen, and carefully looked in; nothing, nobody was there. Tonto gave her courage; he also was very hungry.

"Mamma, mamma," called the little girl. No answer save Tonto's bark, which seemed to say, "Come on! Who's afraid!" So very carefully she opened the kitchen door; while Tonto rushed in and ran smelling round the room, stopping only at the cupboard door, and then flew back to trembling Matie with renewed barkings. "Bow-wow! who's afraid?" he said; "meat in there for me, pie for you!" And so Matie found when at last she mustered up courage enough to open the door.

All at once there came hurrying down the road the sound of carriage wheels, while Tonto flew to meet the noise. Matie, trembling, waited till she heard her mother's voice calling "Matie, Matie." This time the little feet were not slow to respond, and, with choking sobs and a rain of tears, she threw herself into her mother's arms.

"O Mother Bent, vare have you been? I did a'most die dead, Mamma Bent."

Now Mamma Bent was crying too. Little Matie's trial had been, after all, not so great as here. She had been sent for in the greatest haste to come to her sister, whose life seemed in such peril that even a moment's delay could not be thought of, and the anxious mother, after calling Matie as we heard, dared not wait. She intended taking Matie with her, and the long day spent, in terrible anxiety, at her sister's bedside was made still harder to bear at the thought that she did not know where her darling little girl was, though she thought at noon the father would find her and comfort her. And when Matie knew her naughtiness in refusing to answer her mother's call had brought this long, lonely day upon her, she said:

"I dese, mamma, I shall always answer you next times; but if it hadn't been for 'Tonto,' I should have dest been scarved to def and be a starvin' now."

"Why," said mamma, "I thought you would go to the kitchen the first thing; so I shut 'Tonto' in there so that he wouldn't follow me, and you would find him and your lunch when you first came in."

"An' he made the noise in there ven and fraided me more; but he tared a hole in the net, he did. But, mamma, I shall always 'member to answer you the next times."

## GOOD HEALTH.

HYGIENIC BREATHING.—The many systems of physical culture now practiced unite in a recommendation of slow and deep breathing, and of a frequent practice of taking long breaths, which will force the air into all the lung cells. One physician says that six breaths a minute make a profitable average. Women especially are inclined to take many short breaths a minute, and exhaust their force in rapid and imperfect lung expansion. There exists a difference of opinion among the best authorities in regard to the best manner of breathing, some recommending abdominal and some chest breathing for women. "Breathe from the diaphragm" is a rule given by one leader of a system of physical culture. In a paper read before a woman's club in New York, a novel exercise was mentioned. It was that of drawing deep breaths and walking very rapidly at the same time. The speaker said: "I draw a deep breath, walking very rapidly when I have filled my lungs, and I do not take another until I have reached a certain point in the block. The result is exactly as if I had been running hard. My blood tingles all over me and I seem to have brought every nerve and muscle into active play." There are many "breathing exercises," one of the best of which is that of taking a deep breath and swinging the arms, first one and then the other, and finally both while the breath is inhaled. The exercises which expand the chest are among the best offered by systems of physical culture, and their practice to-day by so many women, especially in Boston, is an encouraging promise of health for the future as well as the young. *Boston Journal.*

PINEAPPLE JUICE FOR DIPHTHERIA.—"Nature has her own remedy for diphtheria," says a Chicago man. "It is nothing more nor less than pineapple juice. I declare that I have found it to be a specific. It will cure the worst case that ever mortal flesh was afflicted with. I did not discover the remedy. The colored people of the South did that. Two years ago I was engaged in lumbering in Mississippi. One of my children was down with diphtheria, and the question of his death was simply the problem of a few hours to determine. An old colored man, to whom my wife had shown some kindnesses, called at the house and, saying he

had heard of my little one's illness, urged me to try pineapple juice. The old fellow declared that in Louisiana, where he came from, he had seen it tried a million times, and that in each case it had proved effective. So I secured a pineapple and squeezed out the juice. After awhile we got some of it down the boy's throat, and in a short time he was cured. The pineapple should be thoroughly ripe. The juice is of so corrosive a nature that it will cut out the diphtheritic mucus. I tell you it is a sure cure."—*New York Tribune.*

ORANGE BLOSSOMS FOR CHILDREN'S AILMENTS.—Peter Arimond informs the *Anaheim Gazette* that a tea made from orange blossoms is a good preventive of all the ailments of children, and is also a great invigorant for older people. It is not necessary to gather the blossoms from the tree, but when the fruit sets, the ground will be found to be white with the fallen petals. These are gathered by spreading a cloth for them under the trees. The petals may be dried and preserved indefinitely, but in the green state are also efficacious in warding off disease. Mr. Arimond states that this tea will greatly alleviate or do away with the ailments and disorders usually experienced by children and save thousands of dollars in doctors' bills. It is certainly a very simple remedy and easily attainable in California, and might prove valuable. We should be pleased to hear of any good results that might be received from such use.

## DOMESTIC ECONOMY.

### Hints.

To prevent pie juice from running out in the oven, make a little opening in the upper crust and insert a little roll of brown paper perpendicularly. The steam will escape from it as from a chimney, and all the juice will be retained in the pie.

If you wish to keep pickles in your glass fruit jars, rub the insides of the metal caps with lard. The caps with oaps lined with porcelain are much to be preferred for all purposes.

About the only way in which the dried or evaporated apples can be made palatable is to stew them slowly for a long time. When thoroughly done, so there will be no lumps, pass through a colander, making a homogeneous mass about the color and thickness of apple-butter. Add the juice of a lemon, cinnamon and cloves with discretion, and sugar with a liberal hand, regardless of tariff, and by "making believe very hard," after the fashion of Dicken's "Marchioness," you have a very fair substitute for apple-butter.

When you are tired of lemon and vanilla flavoring, try mixing them. To a teaspoonful of lemon extract, add about a third of a teaspoonful of vanilla, and you will think you have discovered a new flavor.

THE USES FOR HONEY.—A correspondent in the *Iowa Homestead*, in an article on the value and uses of honey, says: The extensive use of sugar on fruit is not as bad as the cake mania that rages in so many kitchens. The fruit acids largely neutralize the indigestible and injudicious use of sugar. It is no serious thing to eat considerable saccharine food in a pure state, but not in the form of pure refined sugar. If eaten and taken in the form of honey, it at once becomes a valuable medicine and food. Instead of having it given us in this form in a mixture with bulk foods, as in the case and beet, we have it mingled with fruit juices exuded from flowers highly charged with medicinal properties in the alchemy of nature and the apothecary of the bee-hive. The advantages of honey as a medicine or food are too extensive to be considered at length here. Honey taken as a food becomes a powerful medicine to the sugar-fed and half-diseased, and many must begin on small quantities and acquire an appetite for it. Foul air, improper ventilation, coal gases, together with the sudden change and exposure of lungs and throat to zero weather or worse, in a moment, is the source of no end of throat and bronchial troubles. A free, regular and constant use of honey is probably the best medicine for throat troubles there is, and its regular use would be largely corrective here. It is always best to take our medicine and food together.

DOVER BISCUITS.—Half a pound of butter, half a pound of sugar, three-quarters of a pound of flour, two eggs, one tablespoonful of rose-water, half a teaspoonful of nutmeg. Stir the butter and sugar together. Beat the eggs light and stir into it, with the rose-water; add the spice and flour. Roll out thin and cut into small cakes.

BAKED APPLES.—Wash large, sour apples, and cut out the blossom end. Arrange them stems up in a baking dish. Dissolve half a cup of sugar in a cup of boiling water and pour over them. Cover closely, and bake in a moderate oven until tender, from one to three hours. Serve with cream.

VANILLA CUP CUSTARDS.—Pound a vanilla bean in a mortar, and stir it into three pints of milk, eight well-beaten eggs, and sugar to the taste. Fill your cups, place them in a pan of hot water, set them in the oven, and as soon as the custard is formed, take them out. They are very nice if placed on the ice, in warm weather, an hour or two before they are served.

## The Week.

The traditional hay rain has come, but the lateness of the season makes the showers hay-makers instead of hay-destroyers. The preopulation has been quite generous in some regions, namely the coast valleys and the Sacramento valley and surroundings, and in such parts of the State will be of inestimable benefit in finishing up the hay and grain crops, which were beginning to show the need of moistening. There is naturally much good feeling in favorable regions, which can now count their crops safe—harring unforeseen accidents. Unfortunately the drier portions of the State have not fared so well, and field crops, except on irrigated lands, will not make a good showing, though the promise in fruit is abundant and the crop will bring large amounts of money.

The Presidential party is giving this week to Oregon and Washington, and the reception is enthusiastic. California's greeting to the dis-

tingnished visitors seemed to please them, and with their experience in our sister States at the north, they will be fitted to testify to the enterprise, free-heartedness and great future of the people of the Pacific Coast.

## Fatal Accidents to Farmers.

Fortunately the peaceful vocation of the farmer calls for little loss of life through accident. It is true that the industry of the farm has always called for victims to mishap, but the percentage of such sad experiences is, we imagine, small in farming as compared with many other lines of work. Still lives have always been lost and bodies maimed when the full tribute of the destroyer was not exacted. Falling trees, vicious bulls, fractious horses, were death-dealing agencies, even when farming was a simpler occupation than now. The wide application of machinery and steam-power to agriculture has increased the death rate by accident, and every year we have to record the loss of life by explosion or by remorseless mechanical motion. These experiences should always be noted, not to feed a morbid curiosity, but to serve as a warning to all to be careful and to proceed with agencies of great power or high velocity with constant watchfulness. Never allow familiarity to breed contempt or carelessness. Do this because of your own danger and of the menace to the life of others around you.

There is another class of accidents in which very simple devices become murderous, through carelessness or ignorance of the danger that may lurk in them. The daily papers one day this week contained the following items:

Thomas Denton, a young farmer, was accidentally killed to-day near his home, three miles from Stockton. He was riding in a buggy with his brother, returning from a neighbor's farm, where they had been sharpening scythes. They had the scythes with them in the buggy, and while driving along a levee the horse shied, overturning the vehicle. Edward Denton was not hurt, but Thomas fell upon one of the scythes, which entered his thigh, severing the femoral artery and entering the abdominal cavity. The flow of blood could not be stopped, and he bled to death before a physician reached him from Stockton. The deceased was a native of England, 29 years of age.

John Davey was instantly killed near Placerville while spraying his trees. The air chamber of a Bean pump burst and struck him on the head. The pump was thrown a distance of 60 feet.

The first of these accidents may belong to the unforeseen class. Scythes have been carried in buggies from time immemorial, and probably always will be, and yet to know of the cause of this young man's death may be a warning to so load the dangerous implement that danger may be reduced.

The fatal explosion of the air chamber of a spray pump is a most lamentable occurrence, but it comes none too soon to warn manufacturers that they must modify their patterns or materials. A large air chamber with a pump of great force is naturally a constant source of danger. The principles employed in these pumps are invaluable and their operation is exceedingly satisfactory. With proper caution not to run the pressure higher than the point on the gauge which is safe, the pumps can be used with no fear; but carelessness in not noticing the gauge, or the clogging of the same from any cause, may, as in the case at Placerville, cost the operator his life. We know of another case in which the large air chamber of a spray pump was overbarged and explosion was prevented by the blowing out of the gauge where its pipe was tapped into the air chamber. The gauge and its attachments were blown clean through the roof of the shed in which the trial was being made. Contact with it would have killed.

We must have a better understanding of these force agencies. They must be more strongly made or more thorough notice given of the danger in the careless use of them. We mourn for the victims, but such mourning should always be attended by the learning of lessons which should never be forgotten.

**FRESNO RAISIN EXCHANGE.**—At a large meeting of raisin producers held in Fresno, last week, it was decided to organize a raisin exchange, and a committee of 15 was appointed to prepare for organization. The plan is to form a large co-operative packing association, with branch packing-houses all over the county. It is desired to get all the growers of raisins and dried grapes to become members, if pos-

sible, in order to control the raisin pack, etc., and divide the proceeds and profits pro rata among the producers properly united. Such action, it is claimed, is necessary to maintain this great and growing industry on a sound and prosperous basis. All those desirous of learning more of the particulars with the intention of throwing their influence with the movement, are invited to attend the next meeting, to be held at De Witt's hall, on I street, Fresno City, on Monday, May 11th, at 2 P. M. We commend the movement to our Fresno county subscribers. They should attend and participate in the shaping of the enterprise.

## Scarcity of Cattle.

The shrinkage of the live-stock supplies east of the Rocky mountains, to which we have frequently alluded, is becoming more and more clearly apparent. Beef cattle are said to be selling at higher prices than have been realized for five years. The following from the Sioux City Journal gives interesting items concerning the situation and the conditions governing it:

The receipts of cattle at the stock yards for the first part of the year have been almost a half less than they were for a corresponding period last year. The reasons for this decided falling off are numerous. One is, that the rapid advance in prices has caused the owners of stock to hold the stock cattle to feed themselves. Then in Dakota and Nebraska, cattle cannot fatten altogether on the native grasses. In Montana, grass-fed cattle can be taken off the ranch, rolling with fat and sent direct to the butchers. The high price of corn has, as a consequence, caused thousands of cattle to be sent from those States, the very ones which furnish the Sioux City markets to Montana, to be fed on the ranges. Stockmen report trainload after trainload of stuff moving to Montana over the Great Northern and Northern Pacific roads, to be fed and returned to the butchers in the fall. They report that but very little of the stuff is changing hands, and most of it will be fed in Montana by the owners before it is shipped.

Another cause is that the Government has advertised for contracts to furnish the Indians with between 40,000 and 50,000 head of cattle. The specifications require that the cattle must be all domestic stock. This practically shuts out Texas cattle and leaves the Northwest to fill the contracts. Stockmen say that the ranchmen are bidding on the contracts, and as a consequence are holding back large quantities of stock in case they should be awarded them. The cattle advertised for are as many as have been received in Sioux City since Jan. 1st. This cuts a big hole in the cattle supply of the Northwest.

Hundreds of cattle this year will be fed on grass until the new corn crop comes in. Corn, it is expected, will be cheaper then, and the cattle will be finished up on it in the fall preparatory to marketing.

While it is thought generally that there will be as many cattle on grass as ever before, not half so many stock cattle will go to market, although as many of them are being taken as are offered for sale. Most of the stock is being held by the original owners because of the excellent prospects for profit. It is predicted that next year's cattle run will be large and of good quality.

Though some of these statements have a local bearing, their drift is to show the reduced cattle supply and the likelihood of maintenance of values for some time at least. Such a state of affairs has an influence upon our coast, and will no doubt result in an effort to restock ranges which have run light during the period of depression and low values.

## A Righteous Payment.

There has been a decision rendered in a court trial of issues arising in a wheat corner which should be proclaimed upon the housetops. It cannot be too often and emphatically remarked in the public ear that grain gambling and food cornering is impious and should be criminal. Continual enforcement of this idea will ultimately form public opinion which will enforce measures to do away with the nefarious business. We are glad to see that the courts are speaking out in no mistakeable terms.

It is telegraphed from Chicago that Judge Waterman has rendered a decision in the Appellate Court reversing the decision of a lower court by which the commission firm of Foss, Strong & Co. recovered judgment for moneys advanced and services rendered in attempting to run a corn corner.

It was understood that this movement would force up the price of corn. William Foss of the firm of Foss, Strong & Co., agreed that his firm would advance all the money necessary to buy all the cash corn that might be delivered and May options. Foss said there would be no trouble in running the corner, as his firm

had 150 customers in Iowa, who had corn in cribs, and he could control them. There was some mishap about the affair somewhere, and the men who put in the money called upon the courts to help them get it back again. The lower court complied, but Judge Waterman turns over its position, and in doing so, writes the following memorable paragraph:

"This was clearly a combination to enhance the price of corn. It was not made to purchase corn merely, but to prevent the free selling of the same. They were to control the price of a staple commodity—one of the prime necessities of life. It is a manifest attempt in the present case to create an artificial scarcity, and to compel those whose necessities compelled them to buy, to pay, not the price determined by the entire freedom of buyers and sellers, but a price to which their combination might be able to force the market. This is purely against public policy, and under the common law, as it existed a century and a half ago, would have been a criminal offense. The law will not attempt to adjust the differences which arise out of the transactions which it condemns. It will leave the parties where their own conduct leaves them. It will not compel them to divide the plunder, or share the loss of unlawful enterprise. Neither will it require them to remunerate those who, with full cognizance of the character of such an undertaking, assist them with money or service."

This is a righteous judgment and will stand firm. It is a reiteration of the old scriptural doctrine that those who take the sword must perish by the sword. The courts do not propose to serve unscrupulous people in aiding them to recover money which they embark in enterprises which are against the public weal.

It is a notable remark of the judge that under the old common law the offense would be criminal. It is time we returned to the wisdom of the fathers. We are trying to do this, and undoubtedly the statute will be ere long recorded which will embody the wisdom and provide for the public safety which the old common law insured. Truly there is progress being made in this matter.

## Gum in Ramie Fiber.

The recent discussions of ramie-growing and fiber extraction have had allusions to the gum in the fiber as it is removed from the stem of the plant and the necessity of its removal. There has been inquiry as to the proportions of raw fiber to stem, of ungummed fiber to raw fiber, etc., in California grown and treated samples of ramie. Some assays of ramie have recently been made at the Experiment Station laboratory in Berkeley, concerning which we have secured from Prof. Hilgard the following preliminary facts, which will no doubt be presented in more formal shape in some future Station publication.

The samples of ramie used in the investigation were (1) raw fiber decorticated by machine during the last Mechanics' Fair in this city; (2) a sample worked by hand for comparison at the University. The following are outline results of the assays:

Machine-made fiber from S. F. contained:	
Moisture (dried at 100° C.).....	12.00 %
Gum.....	34.00 "
Ramie air dried and worked in Berkeley by hand:	
Moisture (dried at 100° C.).....	11.17 %
Whole bark.....	21.20 "
Fiber (raw with gum).....	15.90 "
Fiber (pure without gum).....	11.00 "
Whole bark (air dried) contained:	
Cuticle.....	25.00 "
Decorticated fiber.....	75.00 "
Gum (contained in above).....	41.50 "
Fiber decorticated by hand:	
Contained gum.....	30.80 "

The above data show that the estimate heretofore made of 15 per cent of raw fiber from the dry stalks is a conservative one; and the fact that the percentage of moisture in the stalks and in the raw fiber is practically the same, shows that the same ratio will hold out in the drier air of the interior of the State, although, of course, both stalk and fiber will weigh several per cent less in absolute measure.

It is also seen that about 79 per cent of the entire stalk is recovered in the form of trash, available for return to the soil; to which will be added five or six per cent of offal, consisting of the outer skin (cuticle) of the bark and of gum mechanically detached in the process of decortication. The value of this offal as a return to the soil is now being investigated.

The two last columns give a good idea of the large proportion of gum contained in the outer coat of the stalk, being nearly 42 per cent in the "whole bark," and from 30 to 35 per cent in the "decorticated" fiber. The smaller percentage found in the sample treated at the University is doubtless due to the raw fiber having been worked (by hand) in the driest condition possible, while the machine worked in the damp air of San Francisco, renders the gum less brittle and therefore detaches less of it than will be the case in the dry air of the San Joaquin valley.

## Peach-Tree Borers.

[By ALEXANDER CRAW, Quarantine Officer and Executive Entomologist of the State Board of Horticulture.]

**Intodnotory.**—For several seasons great quantities of peach and other deciduous fruit trees have been imported into California from the Eastern States, and as the Eastern peach tree borer (*Ageria exilis*, Say) is very widely distributed over that portion of the Union, and in order that fruit-growers may be able to detect the California or the Eastern species, and protect their trees against the attacks of borers, this bulletin is issued.

This season, 1890-91, I made a careful inspection of nearly all the large lots received, and in some of them found the larva of the *Ageria*. As soon as I discovered that the trees were infested with borers, I addressed letters to the Boards of Horticultural Commissioners of the various counties in the State, calling their attention to the danger. Notice was served upon the owners to disinfect the trees by immersion in strong and hot solution of whale-oil soap. It was soon observed that where the borer was protected by the gummy exudation some of them escaped. The trees were then carefully inspected, and every tree with indication of borers was rejected and destroyed by burning. This is the most certain remedy for such stock, still the dipping into the whale-oil soap solution should be enforced in every case, as it will be death to any other pests upon the trees.

The perfect insects resemble wasps or ichneumon flies, more than moths, and fly in the daytime.

**DESCRIPTION.—Female (Fig. 1).**—Body is of a glossy steel-blue color, with a purplish reflection, and a broad band of orange-yellow across the abdomen. The fore wings are opaque, and similar in color to the body; their tips and fringes have a purplish tint, both above and beneath. The posterior wings are transparent and margined with steel blue; wing expanse, nearly an inch and a half.

**Male (Fig. 2)** is smaller and more slender than the female. The thorax is marked with yellow, and the abdomen has two bands of the same color on the upper side. Unlike the female, all the wings are transparent; fringe, steel blue. It also differs in having the antennae fringed with very short hairs. Legs have yellow markings.

**Larva (Fig. 3)**, when full grown, measures nearly an inch in length; it is a soft whitish-yellow grub, with dark-brown head and jaws; upper part of first segment is horny, and a deeper yellow than the balance of the body. It has three pairs of short, spine-like legs. The five pairs of hind fleshy pro-legs are yellow, each margined with a fringe of very minute reddish-brown hooks. Over the body are scattered a number of very short, reddish-brown hairs.

**Habit.**—The habits of this species are similar to the California peach-tree borer.

## The California Peach Borer.

**DESCRIPTION.—Female (Fig. 4)** differs from the Eastern species in not having any yellow markings upon the abdomen. The head and eyes are jet black; thorax and abdomen are bluish-black, with a slight bronze tint; edges of abdominal segments are marked with light blue; fore wings are black, opaque, and, in certain light, have a beautiful greenish luster; tips are fringed; posterior wings transparent, with six black veins, narrow margin of black, and lower edge with purple fringe; antennae and legs black.

**Male (Fig. 5).**—Head, eyes, thorax, and abdomen bluish black; forewings transparent, with a black blotch across the veins; extremity of wing black, with purple fringe; posterior wings transparent, with narrow black border; lower edge of wing furnished with purple fringe. Antennae black, and upon the inner edge are two rows of very minute hairs; legs black, with light yellow hairs at the joints between the femur and tarsus. Expanse of wings one and one-quarter inch.

**Habit.**—The female moth deposits her eggs on the bark, generally near the surface of the ground. The larvæ, soon after hatched, burrow into the bark and work downward, and as they increase in size penetrate deeper, devouring the inner bark and sapwood, causing the tree to exude gum. This species has more of a tendency to work vertically, still where the borers are present in numbers the death of the tree is certain. I have recently examined apricot and peach trees where the entire bark around the collar was destroyed by this species.

**Larva (Fig. 6).**—A soft, pale yellow cylindrical grub, resembling somewhat a full grown apple worm (*Carpocapsa pomonella*); head dark brown; first and last segments are darker than the balance; it has sixteen legs—six horny, and ten fleshy or membranous ones; very few short hairs upon the body.

**Pupa.**—When the larvæ are fully developed they crawl upward and near the surface they construct a pupa case with their castings and gum. In California they reach this stage of their existence in April, May and June, remaining in this condition three to four weeks. The pupa is brown, and when about to change to the moth, it forces itself through the end of the cocoon (Fig. 7), from which the moth afterward issues.

## How to Find the Grubs.

Peach-growers should make a careful examination of their trees in the spring, by removing the soil a few inches deep around the trunk, brush the stem, and if any part shows an ex-

cess of moisture or gum, it is a sure indication of the presence of borers, unless the tree has been injured in cultivating. Carefully remove the bark on the suspected part, and cut in the direction of the burrow until the larva is found. Hot water has been recommended by some, and others use a thin flexible wire, with which they probe the wound; but the most certain and satisfactory way is the knife. After the borer has been found and destroyed, cover the part with moist soil; or where the injured surface is large and the sapwood cut away, allow the wood to dry and apply two coats of rubber paint; afterward cover with clean sand. This treatment will keep the wood sound and healthy until the bark again covers the part.

## Preventive Measures.

Nearly all our warfare against insect pests has been carried on after they attack the tree, but with this one we have the means of preventing, to a great extent, any very serious damage. They prefer the moist, cool bark near the surface of the ground, and as this is the most vital part of the tree, it can be so protected that it will be impossible for the moth to reach it. The old system of banking the soil against the tree to the height of 8 or 12 inches has been found of great benefit in preventing the borer from reaching the roots, if the banks are formed in May—before the moths deposit their eggs—and kept in position until winter. This will not prevent their attacks, but when the soil is removed they can be reached to better advantage. In our dry climate the placing of a small conical bank of soil against the trunk has no injurious effect, provided it be removed before heavy winter rains. The trees can then be examined and the borers destroyed before they have done any serious damage. If by the action of the wind the soil parts from the tree, fill up the intervening space with dry soil or sand, so that the moths cannot deposit their eggs lower than the top of the mound. The placing of dry sand or ashes on a level with the surface of the soil helps to some extent to repel the moths; but when the young

FIG. 1.

FIG. 2.

FIG. 3.

EASTERN PEACH TREE BORER.—*Ageria exilis*, Say.

FIG. 4.

FIG. 5.

FIG. 7.

FIG. 6.

CALIFORNIA PEACH TREE BORER.—*Sannania pacifica*, Riley.

batch, they cut through the bark, away from the ashes, and reach a place among the roots, where it is a difficult matter to destroy them.

Another way is to remove one or two inches of the soil and wrap the tree with a band of stout paper six or eight inches wide, tie the upper edge with twine or stranded haling rope, and cover the lower edge with soil; straight straw or tule will answer the same purpose. Strips of galvanized wire screen, the same as used for windows or doors, cut in widths of six or eight inches, are also recommended. This protector is held in position by removing a little of the soil a few inches from the trunk of the tree, so as to prevent the wire coming in contact with the bark, unless at the upper edge; fasten the top with a strand of wire or tie with twine, and place the soil against the lower edge. This is more expensive, but it will last for years. It also has the additional advantage that you can see if any borers are at work without having to remove the protector.

## Notes.

Trees budded upon almond, cherries upon Mazzard, and apricots and prunes budded upon peach stocks, should be examined, as they are also subject to their attacks. The female moth (of both species) prefers to deposit her eggs near the ground, but occasionally a borer is found in the trunk or branch, especially in the orotob.

The use of carbolic acid, mixed with other solutions or substances, as a repellent, should be avoided. Borers of various sizes will sometimes be found in the same orchard and even in the same tree. This is owing to moths developing and depositing their eggs later than others, for it takes nearly one year from the egg to imago, and on this account an inspection should be made of the trees in infested orchards in the fall, and all larvæ destroyed, which will save the tree from further depredation through the winter.

**A NOVEL INCUBATOR.**—D. G. Pitner has now 6000 eggs hatching in his hop-kiln, which he is using as an immense incubator. He is adding more eggs every day, and expects to have 8000 in before the kiln is full. Everything has gone on nicely so far, and the indications are that this novel hatching project will be a success.—*Sutter Independent*.

## State Horticultural Society.

The April meeting of the State Horticultural Society was held on the 24th at the hall of the State Board of Horticulture. A. L. Bancroft presided until the arrival of President Hilgard. Statements were made by many members concerning the fruit prospects in the regions in which they resided.

Judge Blackwood of Haywards reported many cherries blasted and many plums and prunes dropping badly. His apricot orchard never promised better.

W. W. Smith of Vacaville stated that the fruit outlook all around in his region was never better. The cherries promised better than for the last five years, but the crop was coming in rather late. Apricots looked well; even Moor-parks were doing well this year. Bartlett pears were being contracted for at \$1 per box for Eastern shipment.

J. L. Mosher of San Jose reported the outlook good for all kinds of fruits, so far as his information went.

Judge Stabler reported from the Sacramento valley, from Sacramento to Chico, that apricots were only fair, but peaches promised exceedingly well. Prunes and pears are also a good crop. He had heard of 2½¢ being offered for cling peaches for canning and 2¢ for free-stones.

Howard Overacker Jr. of Centerville reported apricots a full crop; peaches fair. Other fruits were not far enough advanced to warrant judgment.

Mr. Coates and other speakers thought it rather early to speak definitely. Early indications are for a good demand and buyers abundant and ready to make contracts.

## Cultivator or Plow.

Mr. Bancroft stated that his experience during the last winter was in favor of using the disc harrow followed by a duck-foot cultivator instead of plowing. With these tools he calculated he got his orchard into good condition with one-half the horse-power needed for plowing. He cultivates to a depth of eight

mixed lot of California dried plums shipped East in sacks, and in Philadelphia it was packed in boxes with a fancy brand.

Prof. Hilgard was requested to address the society at its next meeting upon "Weeds and Their Repression."

The society adjourned early to attend the meeting of the

## Entomological Society.

At which President Ehrhorn presided. There was a good attendance. Mr. Ehrhorn read an interesting paper on the parasites of the San Jose scale, which is printed elsewhere in this issue. Mr. C. C. Rledy gave an excellent demonstration of mounted insects with five microscopes. Several new members were elected and the society enters upon the promise of a successful career.

## AGRICULTURAL NOTES.

## CALIFORNIA.

## Butte.

**FRUIT VS. MINING LANDS.**—*Register*, May 1: John M. Ward and Chas. St. Sure own 92 acres which 30 years ago was a mining camp. Of this they have cleared, leveled and planted 45 acres. They are steadily working at the remaining 45 and intend to keep on planting until the whole tract is in an orchard. They have 2,500 peach trees in bearing this season and Mr. Ward estimates the crop at 100 tons of fruit. The two gentlemen who own this land have recently added 90 additional acres and expect in time to clear, level and cultivate it. All of it has been used in the past for mining land and it will cost fully forty dollars an acre to put it into condition to use.

**GRAIN CROPS AT MOORE'S STATION.**—*Cor. Oroville Register*, May 1: The Danville estate, Wm. M. Pierce, manager, has about 600 acres sown to wheat and 200 to barley; Arthur Switzer, 400 acres wheat and barley; N. F. Wood, 200 acres wheat and barley; L. H. Phillips, 300 acres wheat and barley; Crum & Welch, 400 acres barley; Thos. Gaffney, 320 acres wheat; Mrs. Gould, 750 acres barley; John Keitle, 160 acres wheat and barley; Geanilla Bros., 1,100 acres wheat and 200 acres barley; Jabez Upham, 60 acres barley; Greeley & Smith, 1,000 acres wheat and barley; J. J. Crum, 80 acres barley; C. Welch, 60 acres barley; D. Ahhey, 400 acres wheat and 50 acres barley. There is considerable summer fallowing being done.

## Fresno.

**REPLACING SUMMER-FALLOW LAND.**—*Expositor*: Mr. Reed, Mr. Matthews and others in the vicinity of Reedley are replowing their summer-fallow land. They all say it pays well to plow the second time, and I should judge it does to see some of the summer-fallow wheat in this section of country this year. We have wheat here five feet high on summer-fallow land, and good judges say it will go 12 or 14 sacks to the acre if no accident befalls it.

## Humboldt.

**A NEW COMPANY IN HUMBOLDT.**—*Western Watchman*: The Grizzly Bluff creamery is being erected upon plans and under the supervision of R. A. Simpson, of Ferndale, who has been making a special study of creamery processes and arrangements. This creamery will be somewhat of a new departure from the others now in operation in this county, as it will be fitted with a butter extractor, the only one that has been set up in the county or on the Pacific Coast. The butter extractor separates the cream and makes the butter at one operation, which it is claimed has many advantages over any other process, in saving of labor and purity of the article produced. This machine is so constructed that it can be used as a simple separator by changing the interior arrangements. Slowly but surely the creamery system is supplanting the old pan process.

## Kern.

**TROUT BREEDING FOR MARKET.**—*Bakersfield Californian*: L. M. Underwood, who lives near Glennville, will sell his stock and make an artificial lake his ranch, when he will undertake the enterprise of raising trout for market. With comparatively little cost he can build a dam across a deep canyon, where he will have a lake fed by clear and cool mountain streams, admirably adapted for trout culture.

**A LARGE WOOL CLIP.**—*Bakersfield Californian*, April 28: Malo & Nunez have shipped the last wool from their sheep-shearing camp at Pampa. In all about 66,000 sheep were shorn, and as a product 45 carloads, containing 1800 bales, or almost 720,000 pounds of wool were shipped. This makes a clip averaging pretty nearly 11 pounds per fleece.

**SHEEP PROFIT.**—*Bakersfield*, April 28: One sheepman, who sold his flocks to Henry Miller about a week ago for the sum of \$27,000, was heard to say that he only paid \$600 for feed last year.

**A BAKERSFIELD VINEYARD.**—*Echo*, April 30: J. E. Smith has 35 acres of one and two-year-old vines with scarcely a single vine missing, and 20 acres more that was planted this year that look well; he has orange trees two years from the nursery that contain a large number of blossoms and some fruit just setting on the trees; he has two-year-old fig trees which at this date hang full of figs as large as eggs. All of this has been accomplished by perseverance and pump irrigation. The water for all this orchard and vineyard is raised from two wells with 5-inch sock pumps operated by

## Frauds in Fruit Trade.

Prof. C. H. Allen of San Jose, by invitation, gave his observation on the sales of fruit under wild-cat brands at the East. He showed that such trade is injuring our Eastern market, and thought there should be some authoritative information given to the Eastern consumers concerning legitimate California fruit grades, labels, etc. He thought this should be done to a certain extent at least by the compilation of a cheap pamphlet emanating from some authoritative source explaining known brands, grades, etc., and that possibly an association of producers to agree upon standard grades and brands would do a good work. He described at length his experience with the so-called "Spanish prunes" at the East. Mr. Rowley stated that he had traced that fruit. It was a

horse-powers employing one or two horses each. The two-year-old vines and a large percent of those planted last year hang full of grapes and give every promise at this date of yielding a remunerative harvest; experienced raisin growers place the crop on the older vines at \$50 per acre this year.

#### Los Angeles

**A NEW PARASITE DISCOVERED.**—L. A. *Express*, April 29: Mathew Glesser brought to this city yesterday a new parasite in the shape of a small gray beetle, that has attacked the leaves of his apricot trees, and threatens to be an unwelcome visitor. John Barr, Horticultural Commissioner from Fernando, and Mr. Washburn of Rosamond, took specimens of this vicious little stranger to Prof. D. W. Coquillette of the U. S. Department of Agriculture for his inspection. Prof. Coquillette had, last week, found at Indio one of these parasites on a wild shrub, and had secured him for further investigation. His recommendation is that of a paris green wash composed of one pound of paris green to 180 gallons of water made into an emulsion with three pounds of soap and used as a wash. Mr. Glesser is of the opinion this little stranger will not prolong his stay after his trees get a little further along, or his soil has been more thoroughly domesticated by cultivation. Mr. Glesser will also send specimens to Prof. Alexander Craw, State quarantine officer of the State Board of Horticulture, and do all in his power to make his parasitical majesty's visit as sultry and sulphurous as possible.

**GARDEN TRUCK FOR THE EAST.**—L. A. *Express*, April 28: Glendora is shipping three or four tons of tomatoes East daily. They go by express to Kansas City or Chicago, packed in 20-pound boxes, and net the growers nine cents per pound. The second carload of green peas for the season went East from Glendora a few days ago.

**TREE PLANTING AT LONG BEACH.**—*Breaker*: Many additional acres were planted with trees this spring. Mr. Stovell put out several acres in walnuts, apples, etc. Mr. Butler planted 60 acres in figs, peaches, apples and oranges and is now starting in to bud about 20,000 Washington Navel and 5000 lemons. One lemon tree bore 120 pounds of fruit this past year, which, considering it is only three years from the bud, is a good crop.

**FRUIT TREE PRODUCT AT PASADENA.**—*Cyrus Wright in Star*: I raised last year from a small ranch: Of apricots from 200 to 300 pounds to the tree; peaches from 200 to 300 pounds to the tree; apples from 200 to 300 pounds to the tree; Green Gage plums from 200 to 300 pounds to the tree. All the above trees were six years old and no irrigation. The trees were eighteen feet apart or a little over 100 to the acre.

**PROPOSED LARGEST PRUNE ORCHARD IN THE WORLD.**—*Santa Maria Times*: Thomas A. Garey, of Garey nurseries in this valley, is negotiating with Los Angeles capitalists for the planting of 1,000 acres to "Tragedy Prunes" during the season of 1891-2. This will be the largest prune orchard in the world.

#### Merced.

**CONTRACTING NEXT SEASON WHEAT AT MERCED.**—*Star*: Several farmers have sold a portion of their coming crop at \$1.40 per cental and upward. Contracts are made between the seller and the buyer by which the former agrees to deliver to the latter so many hundred tons of the wheat he produces. That is to say, he does not agree that it shall be No. 1, but if any such is grown on the farm of the farmer then he must furnish it. Advances are made on these contracts. As a rule, selling wheat which is not already in hand is a dangerous thing, but those who have sold under the contracts described above consider themselves perfectly safe.

#### Napa.

**PROLIFIC OATS.**—*Register*, May 1: J. H. Jordan is farming a 100 acre tract of land northeast of town. He brought into our office yesterday a stool of growing oats pulled from one of his fields, which contained 61 stalks. The stalks are nearly six feet high. It is a fair estimate to say that each stalk carries 40 oats, which would make for the whole stool 2440. All this from one seed!

#### Nevada.

**PROGRESSIVE FARMING IN GRASS VALLEY.**—*Tidings*, May 1: About three years ago, when citizen Wm. Loutzenheiser abandoned the drug business after a experience of over 30 years in this city to become an honest Granger in the outskirts, he among other experiments gave the much-talked-of forage plant "Euphorbia" a trial. The experiment attracted much attention for a time. After awhile interest in Mr. Loutzenheiser's experiment died out, as it proved a failure flat and complete had been the result. Mr. Loutzenheiser now pins his faith to alfalfa and is content to harvest four crops a year of that meat-building product. In this he is coincided with by all of our progressive farmers, a fact to which the ever-increasing acreage of alfalfa bears witness. Among other of his experiments is the French prune, which, while not a failure, is not a pronounced success at this altitude, the fruit not maturing early enough to permit of its proper curing. At lower altitudes in the county—down where our oranges attain perfection—this objection will not stand. On the Loutzenheiser place are 3500 vines and 7000 cuttings have recently been set out. These cuttings are from the vines from which the Santerne is made, this wine comprising the juices of various varieties of grapes in varying proportions. The Loutzenheiser orchard embraces 900 trees. This

week the work of setting out a nursery comprising 2000 seedling pear trees was completed. In due time these will be grafted and transplanted.

#### Orange.

**SWARMING BEES IN A HAT.**—*Santa Ana Blade*: A swarm of bees made the locality of Fourth and Main streets exceedingly lively, when an elderly gentleman, with an eye to business, stood in the street in their midst, and by dint of perseverance, managed to persuade the queen to take up quarters on his hat. In a short time he was covered a dozen deep with bees, and with them he departed for home.

#### Placer.

**ARRANGING FOR FARMERS' INSTITUTE.**—*Auburn Republican*, April 9: At the last meeting of the Horticultural Society, a committee was appointed to arrange for the organization of a Farmers' Institute in connection with the Horticultural Society. This will include farmers of all kinds and be entirely free to everyone. All who wish to make farming a profession as well as a business will certainly take advantage of this Institute. At the next special meeting essays will be read and agricultural topics discussed. Prof. Wickson is expected to be present to organize the Institute and deliver lectures.

**CROPS IN PLACER Co.**—*Auburn*, April 29: Fruit of every kind promises well. Did not bloom till very late owing to cold and backward spring—latest known for many years. Owing to same cause, gardens are very late, many just planting seeds, and the hay crop will be quite short, possibly three-fourths of average. Springs and rivulets as low as usual six weeks later. Trees will make a less growth than usual, but the fruit crop holds fair to make up for all deficiencies.—W.

#### San Benito.

**WIRE VS. ROPE FOR BALING.**—*Hollister Free Lance*: About 150 farmers of this section have obligated themselves to use wire instead of rope for baling purposes. They hold that the cost with wire is but 40 cents or eight pounds per ton at 4½ cents cash, or five cents on time. It requires 6½ pounds of rope at a cost of 13 cents per pound or 85 cents per ton, leaving a balance of 45 cents in favor of wire.

#### San Bernardino.

**SUGAR BEET CROP PROSPECTS.**—*Chino Champion*, May 1: There are over 1700 acres planted to sugar beets on the Chino ranch, and planting will continue all this month and into June. About 2500 acres of Chino land have been rented for beets, and renting is still going on, and, making due allowance for partial failures here and there, there will be at least 2500 of a full stand. Thus far the crop promises to exceed the most enthusiastic expectations. The plants can now be seen on hundreds of acres from the point of just peeping through the ground to the husky tops which almost cover the surface, with slender, perfectly shaped roots two feet long. The porous, friable character of the soil encourages the natural tendency of the root to strike deep. These beet fields lie over the country from Euclid avenue, about two and a half miles southeast of this town, to the northwest line of the ranch on the borders of Pomona—say over five miles. It is a cheering sight to look over the fields and see hundreds of laborers hoeing and thinning beets. Several hundred acres are already thinned and hoed, and the long green rows only 15 to 18 inches apart are quite picturesque. The same hopeful reports come from the crops at Ontario and El Monte, where at least 300 acres are already planted—over 200 at Ontario. A considerable acreage is planted at or near Downey, Florence and Tropic, in Los Angeles county. In one form and another, this industry this year requires the labor of near a thousand people in the field and in and about the factory.

**ORANGE PLANTING—RIVERSIDE.**—The planting season has opened in this valley, and between this time and June 30th, 4500 acres of new land will be set out to orange trees on Arlington Heights. Of the property of the English syndicate 1800 acres will be improved.

**ORANGE SEED PLANTING.**—*Ontario*, April 30: It is estimated that 3,000,000 orange seeds have been planted out in seed beds in Ontario and Chonawonga this spring, and the quantity of seeds planted in this (San Bernardino) county will be enough, three or four years hence, to plant 1,000,000 acres of orange grove. There will be no lack of trees then, which has been the principal hindrance to a larger acreage being set to oranges in Ontario the past two seasons.

#### San Diego.

**HISTORY OF THE SICILY LEMON IN CALIFORNIA.**—*San Diego*, April 26: The fruit sent to the Presidential car for Mrs. Harrison by the Ladies' Annex was accompanied by an explanatory letter from the committee, of which Mrs. Jennie Whiteley Snyder was chairman, from which we excerpt. This box of raisin clusters comes from the famed El Cajon valley, 15 miles distant in our back country. The lemons you will find unlike any other known, and it is anticipated that the Bonnie Brae will in a few years make the same representation for this county that the renowned Navel orange has for San Gabriel valley. It was about 16 years ago that H. M. Higgins planted the seed of Sicily lemons received from Messina. This was at his Bonnie Brae ranch, red tableland or mesa, in the Sweetwater valley, some ten miles southeast of San Diego. The result was one tree, and its subsequent fruiting introduced a lemon in shape, quality and texture heretofore unknown.

It was generally seedless, and became a prolific bearer. From it more trees were budded; and from this unique orchard, numbering now about 100 bearing trees, buds have been sent over the county, and the fruit introduced to market. This year the first overland transportation was made, and the analysis received from New York City proves that the Bonnie Brae lemon has three times the acidity of any of its competitors.

**THE UMBRELLA TREE.**—*San Jacinto Register*, April 30: The graceful umbrella tree, which ornaments so many front lawns about town, is one of the most beautifully symmetrical trees grown in this semi-tropical climate. As its name would imply, it is carefully trimmed into the shape of a huge umbrella, and serves the purpose much better than the last-named article, its dark, heavy foliage forming a complete shade all summer from an often too fervent sun. For ornament and use the umbrella tree is unequalled, and seems particularly adapted to California soil.

**A TEN-MILLION-DOLLAR IRRIGATION ENTERPRISE.**—*Los Angeles*, April 28: Articles of incorporation have been filed of the Lake Elsinore Reservoir Co. The object proposed is to tap this lake at its lowest depth, about 50 feet below the surface, and conduct the waters on to the adjacent lands in Los Angeles, San Bernardino and San Diego counties. This can easily be done, as the lake lies at an elevation of 1300 feet above the sea, and as compared with Riverside, 900 feet elevation. A vast domain is thus under the control of this scheme. The capital stock is \$10,000,000.

#### San Joaquin.

**RAMIE CULTURE.**—*Stockton Mail*, May 1: R. R. Smith of this city is planting two and a half acres of his land north of town to ramie for the purpose of raising roots with which to plant about a hundred acres next year.

#### San Luis Obispo.

**FINE CROP PROSPECTS.**—*Arroyo Grande Herald*, May 1: Last week we made an excursion to Santa Maria, returning by the way of Guadalupe, Oso Flaco and the sand hills. The crops all along the roads looked fine, but in the Sand Hill region and around Black Lake they are the finest we ever saw. Good judges estimate the yield of barley in that region at from 20 to 30 sacks to the acre. Mr. Fowler has about a hundred acres that will tax his team to haul off before the rains set in. The grain is all four to five feet high and nicely headed out.

**WHEAT CROP YIELD.**—*Eastern San Luis Cor. Tribune*, May 1: Never in the history of our county has the agricultural outlook been one-half so promising as it is at present. Thousands of acres hitherto untilled, and in the rheumy eye of the hairy-toothed Silurian regarded as untillable, have under the magic force of mind controlled by muscle been changed from barren and unprofitable pastures, of which at the best 12 acres are hardly sufficient to fatten a steer, into smiling wheatfields and fruitful orchards. Mr. Brown tells us that not less than 150,000 centals of wheat will be hauled this year across the Cholame creek. Upon the Californian rancho between five and six thousand acres of grain are now heading out, and the yield for the season, according to Mr. Albert Rosellip, will be 15 centals per acre at least.

**GRAIN CROP PROSPECTS AT STARKLEY.**—*The Moon*: Wheat is growing splendidly and the plant is getting taller and bigger. D. B. Shaw has a field in full bloom. There is a world of grain growing up the San Juan and Cholame. Nothing to be compared to the present crop was ever seen here before.

#### Solano.

**CEREAL CROP PROSPECTS.**—*EDITORS PRESS*: The grain prospect in this vicinity is not more than an average, with chances of being under. Wheat late, and foul of oats, chess, grass and weeds, probably the result of the excessive rains of last year. Barley acreage about an average, and the prospective yield later than that of wheat. I think we need another rain or much cool south wind or both, to insure a fair grain yield.—Wm. H. Fry, *Elmira*, May 1.

#### Sonoma.

**SONOMA CO. CROPS.**—*Sonoma*, April 24: The weather during the past week has been quite warm, and in consequence crops of all kinds are making rapid growth. The yield of fruit of all kinds promises to be exceptionally heavy, while hay and grain never looked better at this season of the year. Pears, including Bartlett's, Beurre, Glargo, Dearhorn, Seedling and Winter Nellie, which showed a tendency to pear blight about a week ago, are being sprayed in this valley with good results. This not only checks the fungoid growth, but destroys the red spider, codlin moth and San Jose scale, which at this time are making another deposit of eggs.

#### Sutter.

**FOUL LANDS AND COMBINE HARVESTER.**—*Farmer*, May 1: We hear it stated that in No. 70 a considerable portion of the grain fields are very foul. The condition of the lands is attributed to the use of the combined harvesters. These machines gather all the seeds with the grain, and scatter it broadcast again after threshing it out. This is considered a great drawback to these machines, and we have heard it stated that in some sections of the State the matter of discarding the harvester is being seriously discussed. Land once allowed to foul is hard to purify again, especially where there is but one crop grown.

#### Tehama.

**TEHAMA COUNTY FAIR.**—*People's Cause*: The Directors of the Tehama County Agricultural Association have decided to hold their annual fair August 18th to the 22d, inclusive. The Association is determined to have an exhibit of agricultural, horticultural and manufacturing products at the pavilion, also stock, etc., at the fair grounds, and has appointed a committee of gentlemen to prepare a premium list and take charge of the pavilion exhibit whose well-known enterprise and public spirit is a guarantee of a grand success.

#### Tulare.

**HOW THE VISALIA CHEESEFACTORY IS MADE.**—*Times*, April 30: It is a two-story structure, the lower floor having three walls. The first wall is of brick, 13 inches wide; ten inches from this is a wooden wall, the space being filled in with sawdust; outside of this again is another wall of rustic lumber, the ten-inch space being open and acting as a ventilator. On the first floor are two rooms containing shelving on which to place the cheese while curing. These rooms are as cool as a refrigerator box, and no ice is required for giving the temperature required in summer for the proper keeping of cheese. There are two small rooms on the lower floor designed for use in making butter, when the supply of milk is greater than can be used in making cheese. The upper floor of the building is the manufacturing department and contains several living rooms for the use of the parties employed in the establishment. The cheese made last winter was sold in the San Francisco market, one firm contracting to take all that was made up to the 15th of March last at 13½ cents per pound. To-day cheese is quoted at 11 cents per pound in the San Francisco market, but that manufactured here has attained such a reputation that the last shipment, consisting of over 8000 pounds, was readily disposed of at an advance above quoted rate. Something over 400 pounds of cheese is made each day, and should the supply of milk continue to increase as it has of late, another vat will have to be secured.

**A LAMB CROP.**—*Porterville Enterprise*: Henry Zimmerman's sheep made a pretty good record this season, as out of 2600 ewes he obtained 2800 lambs, of which number he shipped 2400 to San Francisco.

#### EDGEWOOD FARM.

Maj. W. H. Boyce, late Sup't above Farm, Terra Haute, Ind., says, "I consider Quinn's Ointment the best of its kind on earth. Have had success in every case." For Cuts, Splints, Sprains, Windpuffs, Bunches, has no equal. Trial box 25 cents, silver or stamps. Regular size \$1.50 delivered. Address W. B. Eddy & Co., Whitehall, N. Y.

**ASBESTOS** is now used to make complete suits for firemen. It is said. Masks are made of asbestos, which are fireproof, and the heat from the hottest fire is said not to penetrate to the skin. Air is drawn from beneath the mask for breathing, so that the burned or flamed and smoke-laden atmosphere is not inhaled. Aprons and insulated coverings for the entire body are now constructed of asbestos. For domestic use sad-iron holders of asbestos may be had, and with these the grasp of the iron, however hot it may be, never causes pain or burning. Plumbers welcome asbestos cloth for joint-wiping, and larger holders intended for use by smelters, molders and workers in metal generally are among the most recent uses of this mineral. Asbestos mittens to guard the hands are made for assayers, refiners, etc., and armed with a pair, the artisan or worker can grasp hot irons, crucibles and the like without discomfort. The mittens are sufficiently pliable to permit of small objects being readily picked up and held in the hand wearing them.

Not many physicians make great therapeutic discoveries. For the most part they content themselves with administering judiciously what is prescribed in the books. To Dr. J. C. Ayer, however, is due the credit of discovering that greatest of blood-purifiers—Ayer's Sarsaparilla.

**BOTANICAL GARDENS.**—In Europe, there are over 300 botanical gardens, displaying the vegetation of every clime and affording perpetual delight and information to the people. In the United States there is only one—Shaw's garden, at St. Louis. The west has taken the lead of the East here. But the prospect is, that in the course of a few years, New York City will have a magnificent botanical garden at Bronx park, rivaling in time even the royal Kew gardens at London or the Jardin des Plantes at Paris.

#### WHY THE HORSE DIED.

If you had read the "Treatise on the Horse," you could have saved his life. Ignorance has cost you the price of the horse. Buy the book and know how. Sent for 10 cents, a stamp or silver. Pioneer Buggy Company, Columbus, O.

A GREAT many people are interested in knowing how to remove oil marks on wall-paper, where careless people have rested their heads. This may be done by making a paste of cold water and pipeclay or fuller's earth, and laying it on the stains without rubbing it in; leave it on all night, and in the morning it can be brushed off, and the spot, unless it be a very old one, will have disappeared. If old, renew the application.

#### ORANGE PLANTERS

Should read the advertisement of the Aloha Nurseries. The best varieties are offered at rates so low that no one need hesitate about planting for experiment, or for investment in places where the orange is known to thrive.

## From Sample to Gown.

UR shelves and counters are taxed to make room for the new stuffs that our buyers are sending from Europe and our own New York. Gay stuffs, sombre stuffs, with the delightful stamp of newness!

No reason now why any woman in town or out of town should be badly dressed. Be her purse light or heavy, we can meet the demand for the beautiful in dress materials. The out-of-town woman selects from a generous envelope of samples; her city sister sees the pieces from which the samples were cut, but learns no more.

Samples are straightforward. They tell a plain tale of quality, width and price. In these days of steam, an order is mailed, and presto! the package in return is at your door. Before catalogues were published and railroads traversed California, the luckless housewife was compelled to take such goods as the neighboring stores supplied. Now, an out-of-town customer shops with almost as wide a choice as her city sister and may wear garments of equal style. Why should she not? The fashion magazines go everywhere; the Sunday newspaper has a fashion column; the great store advertisements are fashion news—the best of all perhaps.

Send for catalogue, as that is a great help in ordering. Also send for samples of such dress materials as you may think of buying, stating colors and about the prices you wish to pay.

### HENRIETTA CLOTH, 50 CENTS.

We are meeting with great success in our all-wool Henriettas at fifty cents a yard. They have a silky finish and are of fine soft texture. These Henriettas are full forty inches wide, which is unusually wide in goods at this price. May be had in black and twenty leading colors. If you send for samples, state colors preferred.

## WEINSTOCK, LUBIN & CO.

400 to 412 K Street, Sacramento, Cal.

CLOTHING, HATS, SHOES, BOOTS, DRY GOODS, MILLINERY, UPHOLSTERY, TRUNKS, SPORTING GOODS, TOYS, ETC. 7

## STANDARD MOWER

ONE MAN AND TEAM instead of two.  
TWENTY ACRES A DAY instead of ten.

**CUTTER BAR** has no nuts or obstructions on top; the obliquely bolt to finger bar with nuts on under side, leaving upper side of cutter bar perfectly smooth surface.  
**RECESSED GUARDS**  
**MAIN WHEELS** made interchangeable—one wheel fits either side of mower.

**NO SIDE DRAFT**  
as CUTTER BAR is carried entirely on Main Wheels.

**7-FOOT** mower will do as much with one team as two 4-foot machines, SAVING half the corners.

THE FOOT LIFT raises cutter bar with perfect ease without the aid of hand lever, the first ever made.

**EASILY TILTED.**  
can be entirely taken apart and put together again by the farmer with a common wrench. SEND FOR SPECIAL CIRCULAR.

## STANTON, THOMSON & CO.,

SACRAMENTO, CAL.  
Agents for Northern California.

## FARMERS' UNION,

SAN JOSE, CAL.

Agents for Central California.

### GREAT REDUCTION!

IN ORDER TO CLOSE OUT OUR RETAIL CARRIAGE BUSINESS in San Francisco, we will sell our large stock on hand of first-class Carriages, Top Buggies, Phaetons, Four-Spring Wagons, Carts and Harness at Cost. Now is the time if you want to buy a good carriage cheap. Salesrooms, 220 and 222 Mission St., San Francisco, Cal.

BRIGGS CARRIAGE CO., C. Greco Agent.

## TO SHIPPERS!

## California Ventilated Barrel

EXCELS ALL OTHERS!

IT IS LIGHTER, STRONGER, MORE DURABLE AND BETTER VENTILATED THAN ANY OTHER BARREL.

This engraving of the CALIFORNIA VENTILATED BARREL makes plain to the practical shipper its points of superiority over the common barrel, which may be enumerated as follows:

It weighs from five to seven pounds less than the ordinary barrel, making a material saving in freight charges.

It costs less than one-half for trimming, and does not require an experienced hand to cooper it.

It is the only thoroughly ventilated barrel made, a very important point.

The heads are warranted not to come out in transit, and no liners are required.

It is stronger and more durable than any other barrel.

Never varies in size, even to the extent of a quart.

— ALTOGETHER MAKING IT —

**The Cheapest and Best Barrel on the Market.**

It is Made of the Best Quality of Spruce, Woven Together with Copper Wire, And can be furnished in any size desired.

THE CALIFORNIA BARREL IS ADAPTED TO SHIPPING THE FOLLOWING ARTICLES:

Apples,  
Oranges,  
Onions,  
Potatoes,

Sweet Potatoes,  
Dried Meats,  
Bottled Goods,

Glassware,  
Canned Meats,  
Crockery,

Eggs,  
Poultry,  
Walnuts,  
Almonds,

And Vegetables of All Descriptions.

A factory making these barrels is now in operation in San Francisco, with a capacity of 4000 barrels a day. The success of the barrel is almost unprecedented, and it is bound to become the package in a very short time. EVERY ONE USING IT IS ENTHUSIASTIC IN ITS PRAISE. IT HASN'T A FAULT. When shipped in knock-down form, about 2500 barrels can be placed in a single car. Special rates given on car lots. WRITE FOR PRICES AND PARTICULARS.

## HORTICULTURE.

## Orange Culture.

[By D. H. MURRAY, of Thermalito, Butte Co.]

The culture of the orange in the northern parts of California, particularly in the foothill regions of Placer, Yuba and Butte counties, being now an acknowledged fact, a desire for a practical knowledge of its propagation and culture has been aroused in the locations mentioned.

Everything depends upon the character and situation of the land to be planted, and according to those you must select and arrange your orchard. The orange delights in a warm, fertile and well-drained soil, as a cold and damp soil is fatal to it. A gravelly loam is best suited to the orange, for it is generally a warm, well-drained soil, while the roots of all trees delight to work their way around and among the gravel, which retains more moisture for the roots to draw upon, the result being less irrigation. The large amount of iron contained in our red gravelly soil gives to the fruit a deeper and richer color. Our heavy adobe soil will not do for citrus fruits, as it is too heavy and cold, stunting and stopping the growth of the tree as soon as the roots reach the cold subsoil, thus producing an inferior tree and poorer fruit, even if the ground is in a well-cultivated condition and plenty of water at hand. On poor and barren soil the orange cannot be maintained unless there are plenty of fertilizers and water. In the end good, deep, rich land will be cheaper than poor land at half the amount per acre.

Drainage is of the utmost importance, as it increases the fertility of the soil and promotes the health and vitality of the tree.

Prepare your land so that it will have a uniform surface over which water can be carried. The land should never be plowed when very wet, for it then has a tendency to run together, making it more difficult to thoroughly pulverize. The tramping of the horses also does the land an injury, causing it when drying out to form and bake into clods. After your land has been well leveled, cross plow it eight or ten inches deep; then let it lay for a day or two, then harrow it. Use a light drag or scraper if needed to fill the slight depressions, and follow up with a harrow. Lay off your trees evenly, either on the square system or by the quincunx system. In digging the holes to set the trees they should be dug round and straight down; a little under is better; this gives plenty of room to enroot the roots to advantage on every side. In filling the holes, the top soil should be thrown in first, then fill up with the other soil, avoiding any large stones or hard clods of earth.

## Trees.

In the selection of the trees too great care cannot be taken; it is advisable to secure them from a reliable home nurseryman who makes it his whole duty to offer for sale nothing but vigorous, healthy trees, true to name. The best class of trees to plant is a one-year-old bud on three-year-old healthy seedling stock. Should it be deemed too expensive to purchase good budded trees, there is another method of acquiring a budded orchard, which the writer has proven to be better than many of the budded trees.

Secure good healthy three-year-old seedlings and plant them in an orchard form, taking the best care of them for two years, then have them limb-headed, putting in from two to three buds to each tree, in two years time it can confidently be said that you will have more fruit to the tree than if budded trees had been put in in the beginning. Another good and desirable result is that the trees will be stronger and harder, two to one than the budded stock.

Citrus trees can be planted at all seasons of the year, but the best time is when the ground begins to get warm, after the first spring growth gets nicely hardened, say from the latter end of April till the middle of June, when the trees will start and do well. If the trees have been lifted with balls of earth, they require but little cutting back, simply taking off some of the largest points to make the top more shapely. If lifted with naked roots, they require more cutting back, more particularly the tender shoots; the roots should also be pruned before planting, and great care taken not to expose the roots to the hot sun.

Should a north wind come up, while planting is in progress, cease work at once and heel in the trees, covering the tops with wet sacks or any substance that will hold moisture. The writer believes that more trees die by being handled when the north wind is blowing than from any other cause. After examining trees that have died from the effects of a north wind, the small roots have been found shriveled-up beyond recovery, while some of the larger roots actually cracked open; when planted the water finds its way into them, the bark rots and peels off in a stringy substance, the tree dies and the nurseryman who furnished the trees is blamed for having sold trees with unsound and unhealthy roots. Never neglect to give the newly planted trees plenty of water as long as it does not stand about their roots, chilling them and preventing their spreading out in search of food. The presence of too much water can be easily detected as the leaves commence to turn gradually yellow.

If carefully watched in their growth, the

trees will require but little pruning; remove all crossed branches, to prevent chafing, which might terminate in the dreaded "gum disease."

Pruning is certainly overdone in a great many cases, especially by those who go about styling themselves "pruners;" they care little for the tree or its appearance, but have a great care for the dollars that are in sight. Not 1 in 20 really understands the object and gain of well-considered pruning. Pruning regulates the form of the tree, and causes it to become more fruitful and with larger and better fruit. If practiced to too great an extent, the desired result is not obtained, for every tree must have a certain amount of foliage to absorb the flow of sap; otherwise it will send forth a great number of suckers, which are an injury to the tree.

On the other hand, all dead and surplus limbs, which are only a harbor of dirt and vermin, should be removed from the center of the tree, but bearing in mind that the citrus family has always a luxuriant and heavy growth of foliage.

Keep your orchard well manured, as the luxuriant growth of foliage requires a large amount of nutriment, rapidly exhausting the natural fertility of the soil. As the trees increase in size, spread the manure broadcast, so that the roots which feed the tree may get the full benefit of the manure; it would be better to plow the manure under, thus keeping it from evaporating and drying out. This also helps to make the land more friable and to keep in condition.

## Irrigation.

There are many ways of irrigating, and of these the following has been found to be the most successful on the redlands in this part of the State, and is the method generally adopted. Furrows are plowed on each side of the rows of trees, in young orchards about two feet from the trees, which distance is increased as the orchard gets age. Care should be taken to so place the furrows that the water may be easily conducted over the land; turn the water over the first row, and allow it to run there till it reaches the lower end, then turn out nearly all of the water, leaving only enough running in it at the head to carry it through; continue on through the orchard until the supply is all in use; let it run in the rows until the soil is thoroughly tilled with water, then turn it out. After the land has dried enough to permit of a horse traveling over it, start the cultivators at work so as to keep the soil loose and mellow. Irrigation should be practiced at least once a month during the dry season, and oftener if the trees show any signs of flagging. No set rule can be given, only remember this—do not let your trees suffer for moisture; and if they show any indications of wanting it, irrigate at once, no matter if one day or one month has elapsed since the last irrigation.

## Propagation.

The orange is propagated most successfully from the seed, although all the citrus fruits can be rooted from cuttings. The following method has been practiced by the writer for many years, and has been very successful. As soon as they can be procured, say about the middle of January, sow good fresh seeds thickly in boxes filled with a mixture of sand and leaf mold, and place them in a hotbed with a gentle bottom heat; as soon as they appear above ground, give them plenty of air, that they may not grow up spindly; by May they will be from three to four inches in height. When of this size, they should be removed to prepared beds under a latb house, where there is always a half shade. The young trees are taken from the seed boxes and pricked out from three to four inches apart in rows, and left until the following spring, care being taken that they are regularly watered and weeded. If your ground is inclined to be wet or cold, it would be well to dig down under the pathways from 12 to 15 inches deep, and filling in with large stones, then fill again with earth, thus forming a set of blind drains into which the surplus water will flow and not remain around the trees.

The trees should attain an average height of from 12 to 15 inches and have an abundance of fibrous roots, ere they are transplanted to the nursery rows. In the spring, the trees should be transplanted to rows which are far enough apart to allow a one-horse cultivator to pass between the rows. The trees are set out about one foot apart and are left undisturbed for two or three years; they should be irrigated every two weeks, and thoroughly cultivated to keep down weeds and other foul stuff.

It will be found that the shaddock makes the strongest stock in the least time to bud on, but the common sweet seedling makes an elegant and thrifty stock in three years, and, in the opinion of many nurserymen, is the most profitable. The writer has banded a very large quantity of sour stock in the last few years to bud on, and found it an excellent stock, but as the sweet stock has been found to be all that is desirable, he would recommend the growing of the sweet stock. Should anything happen to your buds, you can let the sweet stock grow and more than likely get a good orange, while the sour stock must be rebudded as its fruit is worthless.

Budding is done in the spring, summer and fall; as the spring season is very short and buds are often hard to obtain, spring budding is not extensively practiced, particularly where there is a large amount of budding to do; on account of the danger of north winds in June, summer budding is not recommended. The experience

of most nurserymen is that fall budding is the most profitable; you do not have the hot winds of summer to contend with, the days are warm and pleasant, and everything is favorable. Last fall the writer inserted 3000 buds, and lost but 20 in the whole number.

## Selecting Buds.

Nothing but the best buds should be selected; select well-ripened wood of about the size of a lead pencil; see that the eyes of buds are full and plump, as they will always put out good, strong canes or shoots; if immature buds are used, they are sure to remain dormant a long time, and in many instances can never be excited into growth.

Trim the stock six or eight inches above the ground, so that the buds can be inserted as low as possible; with a budding knife make a cut in the bark in the shape of a large T, having the top run across the stock, slightly raising the bark at the top. Take the bud shoot between the thumb and finger of the left hand, with the point away from you, and gently cut the bud off, drawing the knife toward you. Make the cut as thin as possible; take off as little of the wood as possible, insert the bud in the T cut, pressing it firmly down into the bottom of the cut; start binding the bud from the top, as this has a tendency to tighten it more firmly, and then loop the twine through itself at the bottom.

If fall budding, the twine can remain on for three or four weeks before being removed. The stock is allowed to remain untouched until the following spring, when it is cut down to within four or six inches of the bud, the left part above the bud answering well to tie the young shoot to. This should be done as soon as it is four or five inches long, as it keeps the shoot straight, making fine straight trees. Great trouble is experienced in inserting the buds in the wood of old trees, hence the trees should be well cut back on limbs, leaving only enough to shade the trees. The cutting should be done in the spring and the tree allowed to throw out a new growth of wood. In the fall there will be plenty of good wood to bud on.

In conclusion, Mr. Murray gives his opinion upon the merits of the seedling as compared with the budded trees, and then recommends the following as the best varieties of budded fruit to plant in this section of California: The Washington Navel, Mediterranean Sweet, Malta Blood and St. Michael. He admits that the yield of the seedlings is large, but prefers the budded fruit on account of its quality and its earlier ripening.—Oroville Register.

## Does the Walnut Influence Neighboring Trees?

EDITORS PRESS:—Gen. Brislin, in his book on trees, states that fruit trees will not do well in the vicinity of either the English or the black walnut, owing to the exhalations of the walnut. If this be the fact, it is one which it would be of interest to the orchardist to know. As I observe you are about to publish a new edition of Wickson's California Fruits, etc., it occurred to me to suggest that you call Mr. Wickson's attention to this, so that he may take some notice of that question in the new edition. D. B.

San Francisco.

[We would like to have the observation of RURAL readers on this point.—EDS. PRESS.]

## "ART AND FANCY WORK"

Is a 16-page book, giving directions for making water colors, coloring photographs, painting on silk, velvet, chamois, etc., dye embroidery, tapestry painting, etching upon cotton and linen, together with instructions for many other useful and novel ways of using Diamond Dyes and Diamond Paints. A copy will be sent free to any reader of this paper.

Gas fixtures, lamps, statuettes, and many other articles can be made to look like new with Diamond Paints—Gold, Silver, Copper and Bronze. They cost but ten cents a package, yet none of the higher priced paints surpass them in quality or strength. It takes but a few minutes to make a cheap plaster-of-paris ornament look like an expensive bronze. Sold by druggists or mailed for 10 cents each. Wells, Richardson & Co., Burlington, Vermont.

## Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription, paid in advance, 5 mos, \$1; 10 mos, \$2; 15 mos, \$3. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

TILTING  
BAR.

# WALTER A. WOOD MOWERS.

FOUR SIZES: 4 ft. 3 in. Cut, 4 ft. 6 in. Cut, 5 ft. Cut, 6 ft. Cut.

## WHY IS IT?

The Walter A. Wood mower takes first premium on all competitive occasions and at all the great WORLD'S FAIRS has received highest honors. At the 1889 PARIS EXPOSITION, the grandest World's Fair ever held, Walter A. Wood's mower, his binder and his reaper each received highest award for field work; and Mr. Wood personally received highest honors as inventor and manufacturer; the greatest sweep-stakes ever carried off.

Why is it that 875,549 Walter A. Wood machines have been made and sold and their sale has increased each year?

THE WISE MAN BUYS THE WOOD AND KNOWS THE REASON WHY.

The Cutting Apparatus and Gearing are the Vital Parts of a Mower. Walter A. Wood makes the best ever yet produced and the lightest draft of all mowers. Try pulling it, in gear, with a man in the seat; then try others.

The Walter A. Wood Cutting Apparatus does not clog. By its design the largest possible amount of power is saved, from friction, for the actual work of mowing.

THE BEARINGS are boxed with brass—the best for light draft and durability. These boxes preserve the shafting from wear and can be easily renewed, but a worn shaft or frame is costly to replace.

THE GEARING is compactly enclosed in a dust-proof box and has the motion for heavy cutting and light draft.

THE UNEQUALED HEIGHT TO WHICH THE BAR AND DROOP FRAME CAN BE RAISED permits passing obstacles, whether under the bar or between the wheels, which would otherwise have to be driven around.

The Mower combines Great Strength with Lightness of Draft.

HIGH WHEELS, WIDE TREAD, IMPROVED PITMAN.

This Reaper is not only effective in good standing grain, but in the worst crops of all kinds it will save where other reapers cannot work. The raking is instantly controllable to suit any crop.

Is it the lightest-weight Reaper in the world, yet the strongest, and is often available where land is too rough for others. It makes very easy work for a team.

The broad sweep of the rakes delivers the grain so well that men can bind after it better and faster than after many other side-delivery reapers. The frame is a single piece, exceedingly strong.

The driver has perfect command of the machine without turning his head from the team. With the levers he can adjust the height of the machine or tilt it to any angle independently or regulate the size of the gavel by setting a lever.

LIGHT ENCLOSED GEAR REAPER.

# WALTER A. WOOD SELF-DUMP RAKES.

THREE SIZES: 8-FOOT, 10-FOOT AND 12-FOOT.

OPERATED BY ANY ONE WHO CAN DRIVE.

The Walter A. Wood Rake is both a self-dump and a hand-dump, though generally operated as a self-dump. A light touch of either foot of the driver causes it to dump and resume raking without noise or jar and without skipping any hay. It is the easiest and best working of all Rakes.

Steel Wheels of the Best Design ever used on a Rake. Steel Axles.

The Rake is strong, free from dead-lock, neck-galling, side-jerk, dirt-scratching and liability to breakage. If desired, an attachment is furnished so the shafts on the 8 foot Rake can be quickly changed to a pole for using the mower team in place of bringing out a single horse. Seat is instantly changeable to accommodate a man or child.

## RICE'S PATENT

CALEF  
WEANER  
—AND—  
Sucking Cow  
MUZZLE.

Prevents Calf or Cow from Sucking Themselves or Each Other.

Thoroughly Tested and Endorsed by All. No Hindrance in Eating and Drinking. No Pain. Complete Success.

No. 1, for Calves, 50 cts. ea., by mail postpaid... \$ 55  
No. 2, for Yearlings, 75 cts. ea., by mail postpaid... 80  
No. 3, for full grown animals, \$1, by mail postpaid 1 10

FUNK'S  
PATENT  
CALF FEEDER.

Also for Goats and Lambs.

Raises better calves than any other method. Better than the cow, because can feed prepared feed and give all the calf can eat. As soon as the calf feels the nipple it tastes the milk and is glad to suck; as it gets older it learns itself. No air swallowed; no fingers chewed; no ears sucked. Less trouble; greater success; easy to clean. Sample Feeder mailed postpaid, \$1.00; per dozen, \$9.00. There are Great Advantages in REARING YOUNG CALVES BY HAND over rearing them with the cow. It takes less time and trouble, because they are easier handled, depend on themselves and winter better; get to eating sooner by putting milk-stuff in the milk; make better calves, because plenty of skimmed milk and slop to spare; make more butter because the cream is saved; can run in the same pasture with the cow, never have to wean them, and the cow does no fretting for the calf.

Will send trial Weaner and Feeder, postpaid, \$1.50. Don't fail to give them a trial.

**G. G. Wickson & Co.,**

### Southern California Pomological Society.

The Pomological Society of Southern California is evidently in the field for business. An adjourned meeting was held yesterday afternoon in the rooms of the Chamber of Commerce, preceded by a meeting of the committee of eight members from the different localities to prepare the necessary articles of incorporation of the society. It was decided that the name of the corporation shall be The Pomological Society of Southern California, and that the purposes for which it is formed are to encourage the culture of all kinds of fruit to which the climate and soil of Southern California are adapted, the destruction of fruit pests, and for the holding of agricultural fairs. It was further decided that the place where the principal business of said corporation is to be transacted shall be the city of Los Angeles, and the term for which it is to exist be 50 years. The incorporators are Thos. A. Gary, Garey, Santa Barbara county, Cal.; Hiram Hamilton of Orange, A. C. Thompson of Pasadena, D. Edson Smith of Santa Ana, N. C. Hudson of South Riverside, Frank A. Kimball of National City, O. P. Chubb of San Bernardino, H. W. Kroeberburg of Los Angeles, and A. C. Fish of Riverside. There were chosen 11 directors, including, in addition to the names of the incorporators, those of N. W. Blanchard of Santa Paula, Ventura county, and — Somers of El Cajon, San Diego county.

After some discussion concerning the revision of the constitution and by-laws, in accordance with the articles of incorporation, the principal topic of discussion was the display of Southern California horticulture at the World's Fair in 1893.

Messrs. Kimball, Thompson and Hamilton were appointed a committee of three to consult with Commissioner L. J. Rose in regard to the disbursement of the State appropriation for the World's Fair.

The committee having in charge the growing of both fruit and ornamental trees to be used for planting a grove of citrus trees at the Fair, reported that the growers of each county supply a certain number of trees, from which the committee will make selections in the spring of 1893. It was agreed that San Bernardino county furnish 75; San Diego county, 50; Los Angeles county, 75; Orange county, 30; Santa Barbara county, 25; Ventura county, 25; and it was further recommended that in addition to this number, one-fifth of the several numbers of trees be of an ornamental character with which to surround and embellish the grove. Each member of the committee is expected to take immediate steps to start these trees growing in the proper shape for transportation in 1893. It was further unanimously decided that this exhibit go forth as a typical horticultural display of the semi-tropical fruits and vegetation that are peculiarly characteristic of Southern California, and that it be recognized as the display of the Pomological Society.

Tonching methods of planting and cultivation there was considerable discussion, but the consensus of opinion was that the better plan would be to start the trees in large boxes, say from 2 1/2 to 4 feet square and possibly from 18 inches to 3 feet and over deep; these boxes to be intersected by smaller boxes, so that as the lateral feeders or fibrous root of the plant filled the inner box, it could be removed, more soil added, and when the fibers had again filled the outer box, this could again be removed and soil again substituted until ready for shipment. In removing the inner boxes, it was thought that in some cases the fibrous roots would have to be cut, but this would in no way injure the trees, as any root clipped would naturally send forth a number of new lateral feeders. In this way the tree, with possibly a little commercial fertilizer, would find ample scope for growth, and its removal would in no way check its development.

It was further agitated and discussed that in the future, exhibitions of fruits held by reason of securing appropriations from the State be under the auspices of the Pomological Society. This matter will undoubtedly come up for final consideration at some future meeting.

There being no further business, the meeting was adjourned subject to the call of the president or notification by the secretary that the incorporation papers had been filed, and that the Society was in a position to go ahead with its work and the transaction of its regular business. — Los Angeles Times.

—AGENTS FOR—

## FISKE'S WEATHER VANES

GRAIN AND WAREHOUSE SCALES,

NEW RAISIN PACKING SCALES

Fruit and Grain Trucks of all Descriptions.

Descriptive Catalogue of all Styles of Scales and Trucks sent on application.

## "SUICIDE" Gopher and Mole Trap.

See cuts of "DEAD LOCK" Traps in April numbers.

Two Traps in One.  
Single or Double.

THE ONLY TRAP which catches from either end and cannot be covered up from rear. Placed in the run or across the fork it does the work of two traps and costs less. Simple and effective. Price, postpaid, 30c, or \$3.50 per dozen.

(DEAD LOCK Single Trap, 25c. Show this to your dealer or send direct to sole manufacturers, Ira F. White & Son, Pomona, Cal.)

## BUDDING.

WANTED, a contract to bud large quantity of citrus or deciduous nursery stock, or budding by the month; all work guaranteed. Address H. E. V. PICKSTONE, Postoffice box 597, Santa Clara, Cal.

### Ditching Machine for Sale.

If any farmer in Russian river or Santa Rosa valley desires a DITCHING MACHINE at a very low price let him address S. E. G., P. O. box 2517, San Francisco.

### BEST TREE WASH.

"Greenbank" 98 degrees POWDERED CAUSTIC SODA (tests 99.3-10 per cent) recommended by the highest authorities in the States. Also Common Caustic Soda and Potash, etc., for sale by

T. W. JACKSON & CO.,

Manufacturers' Agents,

104 Market St. and 3 California St., S. F.

DEWEY & CO., PATENT AGENTS, 220 Market St., San Francisco. Elevator, 12 Front St.

## Educational.

### School of Practical, Civil, Mechanical and MINING ENGINEERING.

Surveying, Architecture, Drawing and Assaying, 723 MARKET ST., SAN FRANCISCO, CAL. Open all year.

A. VAN DER NAILLEN, President. Assaying of Ores, \$25; Bullion and Chlorination Assay, \$25; Blowpipe Assay, \$10. Full Course of Assaying, \$50. ESTABLISHED 1864. Send for Circular.

IF YOU WANT A FIRST CLASS THOROUGH SCHOOL and a pleasant, refined, safe home for your boys, send them to

### HOPKINS ACADEMY,

OAKLAND, CALIFORNIA. Next term begins August 5th, 1891. Send for Catalogue to W. W. ANDERSON, Principal.

## HEALD'S

### BUSINESS COLLEGE,

24 POST ST., S. F.

FOR SEVENTY-FIVE DOLLARS THIS College instructs in Shorthand, Type Writing, Book-keeping, Telegraphy, Penmanship, Drawing, all the English branches, and everything pertaining to business, for six full months. We have sixteen teachers, and give individual instruction to all our pupils. Our school has its graduates in every part of the State.

SEND FOR CIRCULAR.

E. P. HEALD, President.

G. S. HALEY, Secretary.

## CHESNUTWOOD'S BUSINESS COLLEGE SANTA CRUZ, CAL.

BEST EQUIPPED ON THE COAST. INDIVIDUAL instruction. No classes. Ladies admitted to all departments. Board and room in private families, \$16 per month. Tuition, six months, \$42.

J. A. CHESNUTWOOD, Box 43, Santa Cruz, Cal.

### C. H. EVANS & CO.

Manufacturers of

## Sheet Iron and Steel PIPE!

ALL SIZES,

130 Beale Street, San Francisco, Cal

Iron cut, punched and formed, for making pipe on ground. All kinds of Tools supplied for making Pipe. Estimates given. Are prepared for coating all sizes of Pipe with a composition of Coal Tar and Asphaltum.

THE LATEST AND BEST.

# CALIFORNIA'S TRIUMPH!

A COMBINED HARVESTER  
— FOR —  
HORSE POWER OR TRACTION ENGINE.

AWARDED FIRST PREMIUM  
— AT —  
California State Fair, 1890.

## Daniel Best's New Steam Harvester.

SHOWN AS AT WORK IN THE FIELD.

Improved for season of 1891 with all latest improvements, including Best's Peerless Grain Cleaner.

All sizes made to order, from 14 to 40 feet.

As a Steam Traction Harvester, Straw, Wood or Coal can be used for fuel.

These Steam and Horse Power Combined Harvesters were run successfully all last harvest, giving entire satisfaction in all ways in grain in every condition.

SEND FOR NEW CIRCULAR. For further information, prices, etc., address

DANIEL BEST, San Leandro, Cal.

## THE "TRIUMPH"

The Best Pulverizer in the World.

## ALL METAL SPADING HARROW.

HORTICULTURISTS AND FARMERS, TRY IT.

JUST THE THING FOR WORKING SUMMER FALLOW LAND.

FOR TWO HORSES. Works the soil about six feet wide. Angle of teeth adjustable to work the soil at desired depth. THIS HARROW is something entirely new. IT IS THE GRANDEST ACHIEVEMENT of its inventor, C. LA DOW, who is the recognized authority on Harrows, there being but few leading harrows at the present time not built under his patents. We have made exclusive arrangements for its sale and it can be obtained only through us or our agents. THE NAME "SPADING" refers to its action on the soil. The action of each cutter is like that of a small spade, lifting and turning the soil from a depth of four to six inches, doing more perfect work than is possible with any other harrow in the world. THE BLADES are made from spring steel, in operation vibrating and shaking off sticky soil. IT NEEDS NO SCRAPEKS to clean the revolving cutters.

Considering the immense amount of labor done, the draft is very light, as the pulverized soil passes through the gangs of revolving cutters, being left smooth. THE GANGS are so arranged that the most uneven ground is thoroughly harrowed and left level. It leaves NO FURROW or ridge; when the field is harrowed it is all left smooth. 10, 12 and 14-ft. sizes in stock. SEND FOR CIRCULAR.

### TESTIMONIALS.

HAYWARDS, CAL., Jan. 15, 1891.  
H. C. SHAW PLOW WORKS, Stockton, Cal.—DEAR SIR: Your Triumph Spading Harrow is all that is claimed for it. It is the most perfect pulverizer I ever used in my orchard and is not wearying or exhausting on the team. Yours truly,  
WILLIAM C. BLACKWOOD.

SANTA ANA, CAL., Jan. 16, 1891.  
H. C. SHAW PLOW WORKS, Stockton, Cal.—DEAR SIR: The man using the Triumph Spading Harrow we bought of you, writes us as follows: "The Spading Harrow is all that could be wished. In orchard work it can be run nearer to the trees than any other kind, and does away with hand hoeing to finish with. I have also used it to harrow new soil, and it is first-class for that. It takes nine days only with one span of horses to harrow my orchard of over 100 acres, and does it better than with any other cultivator I have ever seen.—DWIGHT WHITING, El Toro, Cal." Yours truly,

SAN FRANCISCO, CAL., Jan. 16, 1891.  
H. C. SHAW PLOW WORKS, Stockton, Cal.—DEAR SIR: The gentleman using the Triumph Spading Harrow we bought from you for him writes us as follows: "That the Triumph Spading Harrow is in fact a triumph over all the harrows I have ever used. The first trial I made was on a 30-acre field sowed with barley; 15 acres were harrowed with the Triumph in one day as perfect as it is possible to be. The other 15 acres I harrowed with a common harrow and it took me three days, and then it was not in as good condition as that harrowed with the Triumph. The Triumph does splendid work and as a harrow I consider it worth three times as much as the ordinary harrow, as well in the field as in the orchard and vineyard. It is a perfect pulverizer and weeder.—C. STROEBEL, Eagle Home Farm, Searsville, Cal." Yours Truly,

COLMENA ORANGE GROVE; Capital Stock, \$100,000; A. F. ABBOTT, Pres.; G. W. PEACOCK, Treas.; E. P. McDANIEL, Sec. MAYSVILLE, Yuba Co., Cal., Jan. 20, 1891.  
MESSRS. H. C. SHAW PLOW WORKS, Stockton, Cal.—GENTLEMEN: Enclosed find check for payment of your bill for Spading Harrow sold to me by Mr. Hill. I shall take pleasure in recommending it to my friends, and think the Triumph will have a large sale in this locality. I am pleased to say to you that the machine is a most excellent one for cultivating the ground and pulverizing it in good shape. For an all-round useful machine, I feel sure any one buying it will appreciate its value. Yours truly,  
A. F. ABBOTT.

SPECIALLY ADAPTED FOR ORCHARDS AND VINEYARDS.

### TESTIMONIALS.

CHAMBERS OF THE JUDGE OF THE SUPERIOR COURT, JOHN C. GRAY, JUDGE. }  
OROVILLE, BUTTE CO., CAL., Jan. 17, 1891.

H. C. SHAW, Esq., Stockton, Cal.—DEAR SIR: I purchased from your Agent, Mr. Hill, one six-foot Triumph Spading Harrow, and sent the same out to my olive farm to try. My foreman declares that it will do the work of four plow teams, and requests me to get another to put into the field by the first of March. He is highly delighted with it and calls it the greatest improvement in farm machinery he has yet seen. Instead of putting a number of teams into the field to plow and then harrow the ground, I shall go over it with the Spading Harrow twice and the work will be more thoroughly done, and at one-third of the expense. This is one of the most complete pieces of farming machinery that I have yet seen, and I cheerfully recommend it to those, who, like me, want the most and best work done for the money. It gives entire satisfaction.  
Yours truly,  
JOHN C. GRAY.

WALNUT GROVE, CAL., Feb. 21, 1891.

H. C. SHAW PLOW WORKS, Stockton, Cal.—DEAR SIR: The Spading Harrow arrived all right and gives perfect satisfaction. I put it on a piece of very rough sod that had been used for pasture for several years, and when it was plowed it was as rough as it was possible to make it. I also had one of the leading Disc Harrows (6-foot) side by side with the Spading Harrow, and we gave them a thorough test, and it was conceded by all present (and there were five or six present) that the Spading Harrow they had ever seen. It did better work and the draft was at least one-third less than in the Disc Harrow, and when we were through the man who owned the Disc Harrow said he wished he did not own it, as he would buy one of the Triumph Spading Harrows.  
L. D. GREEN.

BAKERSFIELD, CAL., Jan. 26, 1891.

H. C. SHAW PLOW WORKS, Stockton, Cal.—DEAR SIR: After using your Spading Harrow in all kinds of work, I will say it is the best pulverizer that I have ever seen. I used it to cultivate my orchard and vineyard, and it does not only cut up all weeds, but leaves the roots up to the sun, which is sure death to them. You may praise it as high as you like, as you cannot say anything it does not deserve. Yours respectfully,  
C. A. MAUL.

LOS ALISOS RANCH, EL TORO, ORANGE CO., Jan. 25, 1891.

MESSRS. H. C. SHAW & Co., Stockton, Cal.—GENTLEMEN: The six-foot Spading Harrow which I purchased through Messrs. Nichols & Ulm of Santa Ana has given much satisfaction, and it does its work thoroughly and quickly. I have given my orchard several harrowings to keep down weeds, and with one pair of 1200-pound mares I harrow 8 to 11 acres per day. You can get nearer to trees than with any other rotary harrow I ever saw used. I have also used the harrow for seeding barley and for fallow land, and I consider it the best machine in use, as for a lump or clod breaker and an orchard evenner it does its work better than any harrow I have ever used. Yours truly,  
DWIGHT WHITING.

EUREKA, HUMBOLDT CO., CAL., Feb. 17, 1891.

MESSRS. H. C. SHAW PLOW WORKS, Stockton, Cal.—DEAR SIR: We would have written sooner in relation to the Triumph Spading Harrow, but we have been waiting for the foreman's report on the Harrow's work. He says it is a "daisy" and beats anything he ever saw. Send us another at once, and oblige,  
Respectfully yours,  
H. H. BÜHNE & CO.

PIXLEY, CAL., Jan. 12, 1891.

H. C. SHAW PLOW WORKS, Stockton, Cal.—DEAR SIR: Regarding the Triumph Spading Harrow would state that we are satisfied it is as light draft as any, and lighter than the average cultivator of its kind, and, as to its work, we think it cannot be beat. Yours truly,  
PIXLEY COMMERCIAL CO.,  
By L. E. SMITH, Secretary.

H. C. SHAW PLOW WORKS, Stockton, Cal.

 451,138.—SNOW PLOW—Small & Heintzelman, Sacramento, Cal.  
 451,314.—SNAP HOOK—Frank White, Pomona, Cal.

The following brief list by telegraph, for May 5, will appear more complete on receipt of mail devices:

California—George T. Campbell, ladder; N. L. Darling, assignor to Benicia Agricultural Works, traction engine; J. J. Graff, S. F., cable grip; A. Hartung, Nevada City, watch-makers' jewel-setting cutter; A. C. Sewell, S. F., boring machine; Colin Kendre Jr., Nevada City, valve gear for ore stamps; J. W. Lindsay, Fresno, horse-tail holder and rein guard; A. Sommer, Berkeley, neutralizing sulpho-chlorinated oils; L. A. Steger, San Jose, stratified brick; Annie T. Welch, San Jose, veterinary inbaler; James B. Williams, Oakland, insulated electric conductor.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail for telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

## Mr. Haggin's Spring Sale.

The great success and popularity of the annual sales of Mr. J. B. Haggin are due to several causes. An important factor is, the animals are placed upon the market absolutely without reserve and limit, and bidders are certain they have but the public to compete with. Another is that no effort is made to induce buyers to believe they are purchasing trotters. There is simply the assurance that well-bred harness and road horses are offered, in addition to draft animals. But these are all of the best quality, and are in such prime condition as to indicate they have received the best of care from date of foaling to day of sale. Experience has proven that animals used for business purposes with an infusion of trotting strains, greatly outlast in usefulness those of cold blood, to use a technical term, and show a high class of individual as a rule. As the animals offered are only broken, no opportunity is presented for testing their qualities, and numerous instances of phenomenal speed have occurred, notably Wells-Fargo, 2-1834, Ben Ali, 2:22, Small Hopes, and others. Since Mr. Haggin's establishment of his breeding farms, his constant endeavor has been to "breed up," hence each year's consignment shows an improvement upon the previous one. We have but to say to purchasers who have need for useful animals that in attending these sales they have a large number to select from, so that the most critical is certain to find an animal suited to his wants. A great advantage in purchasing at these sales is that it gives opportunity for increase of value consequent upon development.

We quote the above from the catalogue of J. B. Haggin's spring sale, which will be held by Killip & Co., in this city, May 14th. See advertisement in another column.

**THE ALVARADO BEET SUGAR FACTORY**—At a meeting of the stockholders of the Alameda Sugar Company, held in this city last week, President Isaac Hecht reported that the books showed a profit for the year, 1890-91 of \$21,000, which, with the profit of the year previous of about \$6000, makes a net balance for the two seasons of \$27,000. This money has been applied in part payment for the permanent improvements, leaving the company still in debt \$35,000, against which there is on hand \$15,100 in seed, material and molasses. To cover the indebtedness and put the company on a solid financial basis, an assessment of \$4 a share has been ordered. The President thought it discouraging that an enterprise so legitimate and of so much promise should be barren of returns for the capital invested and the risk involved. He hoped, but was not certain, that the immediate future would be more satisfactory. On account of a probable shortage in the sugar-beet crop, the directors have advanced the price of beets from \$4.50 to \$5 a ton. The President also referred to the probable necessity of removing the company's works from Alvarado, because the Spring Valley Water Company is diverting the waters of Alameda creek from their regular course to the refinery. "The beet-sugar industry," said Mr. Hecht in conclusion, "must in time become one of first importance to the State and country. The income last year from 1320 acres in beets averaged about \$100 an acre, while \$25 an acre for wheat land is considered very good."

**A SUCCESSFUL TRAP?**—We are informed that money has been sent to the "Success Trap Co." at Stockton, and that no goods have been received. We have made inquiry at Stockton and find that no such firm is known there.

DANIEL BEST, THE CALIFORNIA INVENTOR AND MANUFACTURER.

## Daniel Best.

The necessity of labor-saving machinery, especially of agricultural implements, and also the opportunity for rich reward, has stimulated the best talent and brightest minds in devising and inventing implements and machinery suited to our condition and environment. Among the men who have ministered to this demand is the subject of this sketch, Mr. Daniel Best of San Leandro. He is a native of Ohio and a descendant from that noted ancestry that settled in Ohio and Kentucky with Daniel Boone. His occupation was a farmer. In 1859 he went to Portland, Oregon, and led a roving life, alternating as a prospector and laborer. At the age of 21, he commenced carrying slabs at a sawmill, and in less than six weeks he was foreman and manager. Shortly afterward he was the subject of a mining fever, and made a venture in the mining region of the Blue mountains of Idaho and Oregon.

He commenced manufacturing lumber with a

whip saw, but soon devised a plan to build a sawmill out of the waste iron that had been scattered on the plains by emigrants. With a tool-chest containing one saw, broad-ax, square and augur, he succeeded in building a sawmill that could turn out 1200 feet of lumber per day. Mr. Best afterward ran a sawmill in Washington Territory, and while there, met with a severe accident that induced him to come to California, settling in Sutter county.

He saw the necessity of portable cleaners for grain, and designed and invented one, a half-interest of which he sold for \$5000 to Mr. L. D. Brown, the joint interest of which was sold for \$32,000 afterward. He organized the Marysville Mining Co., and spent two years in Oregon up to 1876.

In September, 1885, he bought out the San Leandro Agricultural Works, Alameda county, and entered largely in the manufacture of agricultural implements, principally grain-cleaners and combined harvesters. During the last four years he has given a great deal of at-

## Clark's Cutaway Revolving Gang Plow.

Our illustration represents Clark's Outaway revolving gang plow, made by the Higginum Mfg Corporation of Higganum, Conn., and, like all their celebrated cutaway goods, is fully warranted to be as represented.

The same elements are contained in that as are found in the original plow. The land-side is made of a 16-inch flat steel disk, sharpened. Like the land-sides of other plows, it prevents the plow from moving sideways; at the same time it cuts a track for the share through the trash or sods. The share is larger than on other plows, is made from 20-inch round steel plate, which is notched, sharpened and disbed as shown. Directly behind these shares are suspended spring-steel mold-boards. A clearing knife is so placed that it will remove any substance that adheres to the disk shares. The landside and shares of these plows revolve, and they open and lift the earth more easily than the sliding abrupt wedge form of the old plows.

These plows each cut a furrow eight inches wide by four to seven deep. The furrow is twisted and lifted in the bosom of the disk so

that it stands nearly perpendicular, and thus suspended, the mold-board gives it a slight touch and it is inverted. This process more completely breaks, loosens and aerates the soil than any other.

A long beam or pole is used, which is supported by a 16-inch castor wheel. The body of the plow is supported by two 24-inch carrying wheels, which are attached to a lever within easy reach and at the right of the driver. These wheels gauge the depth of cut and provide a means of transit when not in use. The lever upon the pole regulates the relative depth of cut of the land-sides.

The lever upon the rear side of the frame controls the mold-boards and enables the driver to keep them free from trash. Thus protected and controlled, these plows will perform excellent work on nearly all kinds of stubble or light soil land, and on all kinds of free-working soil.

They will work well on all kinds of land not heavily sodded or extremely sticky. Hard-baked adobe and clay soils will only require more power.

The draught is claimed to be less than one-half that of the common plow, requiring but four horses to out and turn a furrow 40 inches wide.

tention to the building and improving the Remington traction engine. With his improvement, for which letters patent have been granted him, he has succeeded in making the traction engine a necessity to our large ranchers and lumber men. Of these traction engines there are now 23 in actual use, and in every competitive trial the Remington has been awarded first premium. His latest invention is a gas engine that has given unqualified satisfaction.

Mr. Best is a genial, modest and reliable citizen, prosperous in business, and enjoys a high reputation as a man of veracity and integrity. He has been blessed in his domestic relations, and at his hospitable home is surrounded by a most estimable wife, who has shared his fortune in adversity and prosperity, and six promising children. He is an honored member of the Ancient Order of United Workmen.

He is possessed of a high mechanical talent, and may be properly termed an inventive genius. The results that have followed his inventions and the success of his labor-saving machines and agricultural implements entitle him to rank with other great American inventors, such as Whitney, Singer and McCormick. Our artist has made a correct likeness of Mr. Best, whose name has become noted as the sagacious inventor and successful manufacturer of agricultural implements and traction engines.

## Grades All Kinds of Fruit.

For a decade or more, each year has shown an increasing number of acres given to fruit-tree planting on the Pacific Coast, and as each season brings into bearing many new orchards, the production of fruit, though the industry is admittedly in its infancy, has already reached a point, where the economical handling of its immense bulk has become a question of importance. Following picking, the next and most vexatious and expensive problem presenting itself to the orchardist is that of properly grading the fruit for the market. This work, formerly done by hand, has been taken up by men of enterprise and inventive genius, the result being that a number of mechanical appliances, intended to save time and labor have been placed upon the market, as a rule meeting with but indifferent success.

As an exception to this rule the "New California Fruit Grader" manufactured by Messrs. Mosher, Chandler & Co. of No. 116 Front street, this city, is attracting wide-spread attention among fruit-growers and canners. Its work at the Mechanics' Fair last fall was witnessed by a large number; and by those interested and best capable of judging, it was pronounced a decided success, both in principle and action. It was awarded the silver medal, being the highest prize given to exhibits of its class.

In bringing the machine to its present state of perfection, the manufacturers have solicited and adopted the suggestions of many practical men engaged in the fruit industry, the result being a fruit grader that grades all kinds of fruit, and gives perfect satisfaction. This fact may prove of more than ordinary interest in view of the recent action of the dryers and canners of this coast to the effect that that in the future they will charge 1/2 cent per pound for grading, or pay the producer 1/4 cent less per pound for ungraded fruit, as the California Grader will do the work at very much less cost. The advantage to be gained by its use is obvious.

Though placed upon the market less than a year ago, quite a number of these machines are in use, from numerous letters testifying strangely in their favor a couple are submitted:

KING-MORSE CANNING CO., S. F. Sep. 6, 1890.

Messrs. Mosher, Chandler & Co.—GENTLEMEN: The New California Fruit Grader you sold us on August 15th has been a pleasant surprise to us in every way. We have run it by steam power, and the accuracy and speed of its work has been a wonder to ourselves and all our help. We have easily graded from 20 to 25 tons of peaches per day in better shape than could have been done by hand, and at a very great saving of expense. The rubber band which carries the fruit along so regularly and smoothly is the best invention we have ever seen, and saves all jamming and clogging of the fruit. We most cheerfully recommend your Fruit Grader to anyone who wants a perfect machine. I remain respectfully yours, JAS. S. COWAN, Foreman.

SAN JOSE, August 26, 1890.

Messrs. Mosher, Chandler & Co. 116 Front Street, San Francisco.—GENTLEMEN: In reply to your inquiry regarding the California Fruit Graders sold us several weeks ago, I would state that they have been in continuous operation during the past month—the single grader on peaches and the double grader on French prunes. Both graders are working to our entire satisfaction and the readiness with which the canners (we send them all clings over 2 1/2 inches) accept our graded peaches is good evidence that the fruit is in no wise injured or bruised in grading. I think your machine cannot be excelled for rapid and careful grading of fruits. Very truly, ELTON R. SHAW.

Messrs. Mosher, Chandler & Co., 116 Front, St. S. F. will mail all particulars upon application.

SPECIAL attention is invited to the advertisement of the Japanese Insect Destroyer in another column. It would be well to purchase some of this preparation at once before the bugs and worms have touched your vegetables. You can obtain same by addressing the Friend Medicine Co., Gresham, Nebr.

## Breeders' Directory.

Six lines or less in this Directory at 50c per line per month.

## H. H. H. Horse Liniment

Is certainly the best preparation of its kind in the market. Ranchers, Stock Raisers and Horse Owners of every description will tell you that it does good work every time.

**MEMORANDUM.** H. H. MOORE & SONS, Stockton, Cal.—GENTLEMEN: In answer to your inquiry, would state that I used your H. H. H. Liniment on my Holland prize-winning cow, "Lena Menlo," for a wrenched shoulder, and it relieved her very much. She calved the next day, and while still suffering from the sprain gave the largest authenticated quantity of milk ever given on this coast (104 gallons per day), showing conclusively the great relief received from your remedy. I consider it a necessity in my stables, and when away from home feel perfectly safe, as inexperienced men can do no harm with it, as they can with the more powerful blisters. Respectfully yours,  
BREEDER OF REGISTERED HOLSTEINS AND BERKSHIRES.  
Menlo Park, Cal., January 22d, 1893.

The Farmers' Alliance in Kansas  
—AND—  
Its Great Paper, The Advocate.

To the Alliance Brothers and Sisters of California The Advocate desires to send greeting, and to say through the columns of the RURAL PRESS: Send for a sample copy of THE ADVOCATE and it will tell you how we are "holding the fort" here in Kansas and pushing the movement along with the same zeal and enthusiasm as the RURAL PRESS tells us you are doing on the Pacific Coast. The ADVOCATE has over 125,000 readers in Kansas and sister States. It contains 16 pages, 64 columns, and bears the proud distinction of having been the most potent factor in the glorious political victories of the Alliance in Kansas. We will send you sample copy free, and 52 copies, one year, for \$1. Yours Fraternally,  
ADVOCATE PUBLISHING CO.,  
Topeka, Kansas.

We will send the RURAL PRESS and the ADVOCATE one year for \$3 to any address in the United States.—PUBLISHERS PACIFIC RURAL PRESS.

THE RAISIN INDUSTRY.

A Practical Treatise on the Raisin Grapes,  
Their History, Culture and Curing.

By GUSTAV EISEN.

This is a book of marked character. It is an attractive volume of more than 200 pages, printed on heavy paper, with wide margins, and is well illustrated and neatly bound. It has won the thoughtful attention of specialists, and called forth the hearty commendation of the newspaper press. Prof. E. W. Hilgard, of the University of California, says: "It is certainly a most timely work, and one that your training and experience have fitted you peculiarly to undertake. I congratulate you and the raisin industry upon the work. In which I recognize from the outset the Germanic thoroughness and a close adherence to facts that do not always characterize such publications." Prof. E. J. Wickson, of the same institution, writes: "I discern in the work a breadth of information and a faithfulness in details of practice which will constitute it the standard treatise on the raisin." Col. Forsyth says: "With your book in hand the inexperienced farmer or clerk can safely engage in raising-grapes with expectation of success from the very start." Says the Fresno Republican: "No work on a technical subject has ever been published that more thoroughly, completely and honestly discussed its specialty than does Dr. Gustav Eisen's work on 'The Raisin Industry.' This valuable book, just out, is published by the H. S. Crocker Company, San Francisco. It is just what it pretends to be, a practical treatise on the raisin grapes, their history, culture and curing." The Rural Press says "Dr. Eisen's work is broad and scholarly, and yet compact and definite in the development of the subject. It should find a place on the book-shelves of all California horticulturists, and will no doubt go to the uttermost parts of the world." The California makes this reference to the book: "It is a clear, vigorous, fresh and logical treatise; learned, exhaustive, profound and yet extremely practical and useful." The Marysville Appeal says: "A very valuable contribution to the literature of horticulture is the volume on 'The Raisin Industry,' from the pen of Prof. Gustav Eisen. Among California raisin-growers Prof. Eisen has long been recognized as an authority upon everything relative to their industry." The San Francisco Chronicle says: "In this work the author has performed a much needed task, going into the details of every branch of what has become one of the foremost industries of California. No man better qualified for the enterprise could have been found." The State Horticultural Society, by its committee, reports as follows: "We find Dr. Eisen's work a most valuable treatise upon raisin production in all its branches, historically complete, broad and comprehensive in its scope, accurate in its details and a valuable guide in the practice of the growth of the raisin-grape vine and the preparation of its products for the market, and as such we earnestly commend it to the public." Price Three Dollars, postpaid. For sale by DEWEY & CO., 220 Market Street, San Francisco.

Raisin, Fruit and  
Grain Lands

AT EXTREMELY LOW PRICES,

Seven miles S. W. of Tulare city. 164 acres of rich land is offered for sale, with well-improved homestead, large flowing artesian well, reservoir, alfalfa, orchard (seven years old), pasture, one of the healthiest and most comfortable seven-room, two-story residences in Tulare valley. ORANGE CULTURE IN CALIFORNIA.

Now that the interest in the culture of the orange is extending so as to embrace nearly all parts of the State, a book giving the results of experience in parts of the State where the growth of the fruit has been longest pursued will be found of wide usefulness.  
"Orange Culture in California" was written by Thos. A. Garey of Los Angeles, after many years of practical experience and observation in the growth of the fruit. It is a well-printed hand-book of 227 pages, and treats of nursery practice, planting of orange orchards, cultivation and irrigation, pruning, estimates of cost of plantations, best varieties, etc.  
The book is sent post-paid at the reduced price of 75 cents per copy, in cloth binding. Address Dewey & Co., Publishers "Pacific Rural Press," 220 Market St., S. F.

Dewey & Co.'s Scientific Press  
Patent Agency.

OUR U. S. AND FOREIGN PATENT AGENCY presents many and important advantages as a Home Agency over all others, by reason of long establishment, great experience, thorough system, intimate acquaintance with the subjects of inventions in our own community, and our most extensive law and reference library, containing official American and foreign reports, files of scientific and mechanical publications, etc. All worthy inventions patented through our Agency will have the benefit of an illustration or a description in the MINING AND SCIENTIFIC PRESS. We transact every branch of Patent business, and obtain Patents in all countries which grant protection to inventors. The large majority of U. S. and Foreign Patents issued to inventors on the Pacific Coast have been obtained through our Agency. We can give the best and most reliable advice as to the patentability of new inventions. Our prices are as low as any first-class agencies in the Eastern States, while our advantages for Pacific Coast inventors are far superior. Advice and Circulars free.

Treatise on the Horse and His Diseases.

By B. J. KENDALL, M. D.  
36 Fine Engravings showing the positions and actions of sick horses. Gives the cause, symptoms and best treatment of diseases. Has a table giving the doses, effects and antidotes of all the principal medicines used for the horse, and a few pages on the action and uses of medicines. Rules for telling the age of a horse, with a fine engraving showing the appearance of the teeth at each year. It is printed on fine paper and has nearly 100 pages, 7x5 inches. Price, only 25 cents, or five for \$1, on receipt of which we will send by mail to any address  
DEWEY & CO.,  
220 Market St., S. F.

THE JUDSON RABBIT-PROOF WIRE & PICKET FENCE.

cheaper and BETTER than Ever. Their 2-ft. high 3-cable fence has taken the trade. Farmers put barbed wire above it and have the CHEAPEST GOOD Fence that can be made in ANY WAY. Rabbits cannot get through. Hogs cannot break it and Horses or Cattle cannot get over it. All our fence colored RED by boiling in a chemical solution that preserves the wood. Address JUDSON MANUFACTURING COMPANY, 14 and 16 Fremont Street, San Francisco.

**ANALYSIS OF AN ECHO.**—To obtain, so to speak, an articulate echo, one that shall be a clear and exact repetition instead of a confused resounding of the speaker's utterance, requires that the speech shall be accurately timed in its delivery. An ingenious calculator has lately reduced the matter to an exact statement, based on the assumption that not more than five syllables per second can be distinctly uttered and clearly heard. The sound of each syllable has thus one-fifth of a second in which to reach the reflecting surface and to be returned by the echo, before the next syllable is pronounced. Taking the velocity of a sound at 1120 feet per second, the syllable can make a round trip of 224 feet in the one-fifth of a second which is allowed it; and the reflecting surface must therefore be at half that distance, or 112 feet. For obvious reasons, however, the combined effort of articulation and attention in such minute subdivisions of a second is scarcely possible in practice. The rule would seem to be more satisfactorily tested by the utterance in one second of five syllables in succession, followed by a pause of equal length. If the echo is 560 feet distant, the first syllable of the five will then return just as the last one has been spoken; and the last one will arrive just before the first of the next series starts upon its journey.

**THE CENTER OF POPULATION.**—The center of of population of the United States on June 1, 1890, as given by census bulletin No. 34, was in latitude 39° 11' 56", longitude 85° 32' 53", being a little east of Greensburg, Ind. The closeness with which the center of population, through such rapid westward movement as has been recorded, has clung to the parallel of 39° of latitude is very noticeable. The most northern point reached was at the start, in 1790; the most southern point was in 1830, the preceding decade having witnessed a rapid development of population in the Southwest; Alabama, Arkansas, Mississippi, and Louisiana having been admitted as States and Florida annexed and organized as a Territory. The extreme variation in latitude has been less than 19 minutes, while the hundred years of record have accomplished a movement of longitude of nearly 9.5 degrees. Assuming the westward movement of the center of population to have been uniformly along the parallel of 39° of latitude, the westward movement of the several decades has been as follows: 1790-1800, 41 miles; 1800-1810, 36 miles; 1810-1820, 50 miles; 1820-1830, 39 miles; 1830-1840, 55 miles; 1840-1850, 55 miles; 1850-1860, 81 miles; 1860-1870, 42 miles; 1870-1880, 58 miles; and 1880-1890, 48 miles, a total westward movement of 505 miles in 100 years.—*Railway Review.*

**PECULIARITIES OF IRON.**—Add carbon to pure iron and it becomes steel. Add a hydrocarbon to iron, and steel itself becomes so extensively modified that its properties are not recognizable. Thus steel may be as soft as pure iron. Add hydrogen, in varying quantity, and it has the quality of resilience, as in watch spring, or the quality of tenacity, as in the knife or razor, or may be given nearly the hardness of a diamond, as in a file. With steel at a low temperature, from 400° to 450° F., edge tools are produced, the color in the yellow shades; from 500° to 525° various sorts of springs are produced, color blue; while by heating iron to whiteness and plunging it into water, which is mainly composed of hydrogen, files are produced or forms even harder.

**Mamma** (to her little boy). "Now, Bennie, if you'll be good and go to sleep, mamma'll give you one of Dr. Ayer's nice sugar-coated Cathartic Pills, next time you need medicine." Bennie, smiling sweetly, dropped off to sleep at once.

**BIRDS.**—An American naturalist has made up a list of 210 birds, which are indigenous to Alaska, but alas! the English sparrow is not among them, and the people of that land cannot be blamed for declaring that the United States has no real sentimental interest in them.

#### NEWSPAPER AGENTS WANTED.

Extra inducements will be offered for a few active canvassers who will give their whole attention (for a while at least) to soliciting subscriptions and advertisements for this journal and other first-class popular newspapers. Apply soon, or address this office, giving address, age, experience and reference. Special inducements to old agents.

DEWEY & CO., Publishers,

#### Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (postage one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

#### Unitarian Literature

Sent free by the CHANNING AUXILIARY of the First Unitarian Church, cor. Geary and Franklin Sts., San Francisco. Address Mrs. B. F. Giddings as above.

PLEASANTON seems a charming rural town. The Rose hotel, we understand, will accommodate many summer boarders, and at very reasonable rates.

## Good News!

No one, who is willing to adopt the right course, need be long afflicted with boils, carbuncles, pimples, or other cutaneous eruptions. These are the results of Nature's efforts to expel poisonous and effete matter from the blood, and show plainly that the system is ridding itself through the skin of impurities which it was the legitimate work of the liver and kidneys to remove. To restore these organs to their proper functions, Ayer's Sarsaparilla is the medicine required. That no other blood-purifier can compare with it, thousands testify who have gained

## Freedom

from the tyranny of depraved blood by the use of this medicine.

"For nine years I was afflicted with a skin disease that did not yield to any remedy until a friend advised me to try Ayer's Sarsaparilla. With the use of this medicine the complaint disappeared. It is my belief that no other blood medicine could have effected so rapid and complete a cure."—Andres D. Garcia, C. Victoria, Tamaulipas, Mexico. "My face, for years, was covered with pimples and humors, for which I could find no remedy till I began to take Ayer's Sarsaparilla. Three bottles of this great blood medicine effected a thorough cure. I confidently recommend it to all suffering from similar troubles."—M. Parker, Concord, Vt.

The Harvest Queen  
COMBINED HARVESTER.

The Lightest Draft Harvester in the Market.

ENDORSED BY ALL FARMERS AND RANCHERS. SATISFACTION  
GUARANTEED. NONE EVER RETURNED.

## POINTS OF MERIT:

FIRST—Having two pivot wheels on the ground enables it to turn square corners like a mowing machine.  
SECOND—All of the frame work about the cylinder is the best of oak lined with sheet steel and put on with screws. Other parts built of the best of material and painted inside and out.  
THIRD—The driver is NOT isolated by a ladder from the machine, but is safely seated on the separator where he can hear and see the working of the machine and drive to suit.  
FOURTH—The new cleaner put on last season works perfectly.  
FIFTH—The machine is so geared that the cleaner, separator or header can be started independently of each other.  
SIXTH—The header is portable. By the use of our supplemental truck we can pass a 16-foot header through a 12-foot gate.  
SEVENTH—The shaftings are all made of steel.

SIZES, 10 TO 16 FEET.

Send for Price List.

With all our Machines we furnish Straw Dump and Header Truck separate from Machine. Machines delivered on board cars or boat.

HILL'S IMPROVED  
LIGHTNING BALER.

Capacity, 32 Tons per Day.

AWARDED FIRST PREMIUM BY THE CALIFORNIA STATE AGRICULTURAL  
SOCIETY FOR 1890.

MULES  
VERSUS  
MEN.

CALIFORNIA'S  
TRIUMPH.

No tramping. No forking from the stack. No cutting of stacks necessary. You can sit at a hundred-foot stack and bale it without a move. It makes the best bale in the market. You can put ten tons in a car. The forking from the stack is all done by the horses. The Baler can turn out more hay in less time and better style than any other Press. Here is one of the recent endorsements of this wonderful machine:

J. F. HILL—Dear Sir: We baled on James Ryan's Ranch on the Cosumnes, one mile from the Slough House, 277 bales of alfalfa hay, that weighed 32 tons and 35 pounds, with one of your Lightning hay presses on the 21st day of July, 1890. Yours respectfully,

CONNOR &amp; ANDERSON.

## PACIFIC SPADER AND VINEYARD CULTIVATOR. PATENT COMBINED ROTARY PLOW

THE BEST IMPLEMENT OF ITS CLASS EVER PRODUCED.

FRESNO, May 5th, 1891.  
MESSRS. TRUMAN, HOOKER & CO., Fresno, Cal.—Gentlemen: The "Pacific" Spader purchased from you recently I have thoroughly tested to my entire satisfaction. It cuts deep, completely pulverizes and is not heavy on the team. I am working 150 acres raisin vineyard and would not be without this implement under any consideration. You can highly recommend it to your customers. Yours very truly,  
D. GRAHAM WHIDLEN.

BOROEN FARM, MADERA, FRESNO CO., CAL., Feb. 28, 1891.  
MESSRS. TRUMAN, HOOKER & CO., San Francisco, Cal.—Gentlemen: In answer to your recent favor, will say I am using the Pacific Spader (bought at your Fresno house) on some newly plowed alfalfa land, and cannot speak too highly in its praise. This land was turned up in heavy sods, but the Spader reduced them in a way that gives me entire satisfaction. I expect to call upon you next week. Very truly yours,  
W. H. WERFIELD.

CUNCO, March 18th, 1891.  
MESSRS. TRUMAN, HOOKER & CO., San Francisco, Cal.—Gentlemen: I am in receipt of your favor of the 10th inst., and in reply desire to say, that so far as tried the Pacific Spader recently shipped me has proved eminently satisfactory. I am quite sure it is going to make a very useful implement. Very truly yours,  
JOHN BIDWELL.

## California Dairy Scenes.

The photographer has been kept so busy upon landscapes, to illustrate the peerless California scenery, and upon trees and vines, to set forth the great horticultural resources and industries of the State that the camera has not caught many scenes illustrative of our other industries. Our animal industries and their environment do, however, present many charming subjects, and no doubt in the future more attention will be paid to them both by photographer and engraver. The *Overland Monthly* of this city has with commendable enterprise undertaken to present a series of industrial articles, and thus extend the knowledge of our open-air industrial affairs among people who expend their activities in other directions,

A PAIR OF EVERY-DAY HOLSTEINS.

acreage, and bringing to the owner a weight of out forage which makes paltry the mowing of coast hayfields. To the alfalfa dairyman, there come dreams of abundance which cause him to pity his coast brother, and naught save the heat and flies to admonish him that paradise is better than his quarter-section.

The dairy-house shown in the picture is one of the most picturesque we have seen. Its angles must have perplexed the carpenter as much as they pleased the owner. The display of utensils bleaching in the sun,

good young animal can be obtained for two figures, there seems no longer any reason for clinging to scrub stock.

The two largest pictures upon this page are illustrative of two extremes in the line of California dairy pastures. One is a picturesque hillside pasture near the coast, with its rich herbage and its natural wealth of fragrant shrubs and handsome trees but partly cleared. In the cool, moist air of the coast, the growth of forage continues late in the season, and though the feed produced is small in amount as compared with the alfalfa product on irrigated lands of the interior, the land is cheap, the feed fragrant and fitted for the highest quality of dairy goods, and the conditions such that the coast dairyman is content with his lot, except when the rush of bogus products robs him of his rightful reward.

Quite in contrast with this picture is the pasture scene in the San Joaquin valley. Here we have the vast treeless and shrubless plain reclaimed from aridity by the water flowing from the artesian well in the foreground. A few years ago, it was an abomination of desolation, inhospitable even to the lonely herder who drowned and dreamed away his sanity upon it. Now, by the vivifying water, it has become an expanse of verdure, capable of maintaining many times the population of coast

the environment of trees which no doubt give partial shade perhaps from the afternoon sun and the situation and building generally must have attracted the wandering camera devotee.

WASHINGTON WILL TELL US WHAT TO DO. A Washington dispatch to the *Examiner* credits one of the officials of the Department of Agriculture with this statement: "Numerous inquiries are received at the department from the Pacific Coast, asking for a list of agricultural products now imported, which the department thinks can be successfully produced in California. This list, which will require careful study and examination, will be produced soon by the department, and be of vast interest to farmers throughout California."

A SERRA MONUMENT.—It is announced from Monterey that the Junipero Serra monument furnished by Senator Stanford will be completed in about ten days. The dedication will take place on June 31, the one hundred and twenty-first anniversary of Junipero Serra's landing. There will be a procession in which Mr. and Mrs. Stanford, the Society of California Pioneers, the Native Sons of the Golden West, the Young Men's Institute and other organizations will participate.

A PICTURESQUE HILLSIDE PASTURE NEAR THE COAST

This is a desirable undertaking, and will spread the fame of our agriculture, both among Californians engaged in other pursuits, and carry a knowledge of it to most distant parts. The attractive pictures on this page are drawn from the *Overland's* portfolio, and were among those used to illustrate the first article on "California Dairying," which appeared in the April

number. To people who entertain doubts about the accuracy of the outlines of ordinary live-stock engravings, which are often thought to represent the breeder's ideal rather than his attainment, the little photographs will represent the Holstein cattle as they appear in their actual, every-day dairy life. The cattle represented are only good fair specimens of the common run of Holsteins, such as can now be had at very reasonable prices, and are a decided improvement upon the common dairy stock of the country. California's experience with this breed has been very satisfactory, and there is now no reason why the breed, and, in fact, all the improved breeds should not become the rule instead of the exception. Not every one can pay four figures for a fancy animal, but now that a

A TYPICAL PASTURE SCENE AT THE ARTESIAN BELT.

## THE DAIRY.

## Proposed Meeting of Dairymen.

EDITORS PRESS:—In your issue of May 23, I read with pleasure your timely edition on a proposed meeting of dairymen, to be held on June 1st, next. It seems to me that California dairymen should hold such a meeting, and that they should organize for self-protection, and in so organizing they should have the hearty co-operation and support, not only of the consumers of dairy products but reputable dealers also, for both classes are seriously affected.

That bogus butter is sold in this State, in defiance to the U. S. Revenue law, there seems to be little doubt, and with the facilities employed by the Revenue Collector, he can hardly be expected to detect every package of butterine that comes into the State, disguised under the brands of creamery, or dairy butter. During the past four or five months I have watched the butter market of the Central Western States, and from reliable information, am satisfied that the makers of bogus butter in Chicago (that city being the headquarters of the manufacturers of the bogus stuff,) have manipulated the market, forcing up the price of the genuine article that they might find a more ready sale for their adulterated product, which in former years they brazenly called "the poor man's butter."

The dairymen of California are suffering from the sale of bogus butter; they should thoroughly organize, and then, in the absence of a wholesome State law, assist the Internal Revenue Collector in detecting the bogus stuff. Does any one know how many retailers have taken out a license to sell oleomargarine or butterine? If not, it is time the matter was looked into. How often are consumers swindled when they go to the grocery and call for and pay for butter, and receive in lieu thereof a bogus article made of questionable compounds which have been declared injurious to the human stomach by many of the best chemists and physicians of the land?

Several years ago the French Government, after careful analysis, decided that oleomargarine was so unwholesome that it should not be used in the orphanage hospitals of that country. France protects her paupers, but in this country we make but a feeble attempt to protect the health of our people. Butterine is perhaps more injurious to health than oleomargarine. Five or six years ago it was clearly proven that the fat of hogs that died of cholera, as well as of those smothered in transit to the leading markets, was used in its manufacture. Men who will sell an article fraudulently will not hesitate to use deleterious substances in its compounding.

The consumer is virtually interested in this matter, and commission merchants who have regard for their business reputation ought to be.

Besides bogus butter, there is bogus cheese. In some of the dairy States where cheese is made, the milk, after standing 24, 36 or 48 hours, is skimmed and the skim milk, after having neutral oil added, is made into cheese, which is marketed as full cream. It is well made and almost deceives the very elect. No doubt much of this cheese is sold on this coast.

As to the proposition that the dairymen establish a central depot for the sale of their product, it seems to be a good one. At Elgin, Ill., there is a Dairy Board of Trade, which was organized in 1872. I have received report of the yearly business of that organization for 1890, and find the sales of butter for that year to be 24,701,492 pounds, and of cheese 5,032,400 pounds. Since the board was organized, the total sales of butter and cheese have been 237,500,000 pounds, and it has been effected at a cost of about \$3 per year to each member. When the board was first organized, there were only 12 cheese factories and creameries that availed themselves of its office; now there are 221 of these factories and creameries interested in it and make their sales through it. Since the board was organized, the manufacturers have not paid one cent to commission merchants to handle the product. The latter, coming from the leading cities of the country, attend the weekly meetings, buy direct from the manufacturer and obey such rules as the board has adopted. So important has the Butter and Cheese Board of Trade of this little inland city become, that it rules the New York market for butter, at least, as much as it does in the town where located.

For ten years I was the secretary of this board, as well as secretary of the Illinois State Dairymen's Association, and the Northwestern Dairymen's Association, and learned the ups and downs of the dairymen, and the means they employed to protect themselves and the consumers.

In some 18 or 20 States, the dairymen have State associations, strong in numbers, and therefore a power for good. They hold annual meetings in which are discussed topics of great value to them, and if they desire a State law, or a national law, as when the Oleomargarine law was passed by Congress, they are organized and ready for the fray. Oregon, I believe, has a State Dairy Association that is doing much good for the dairymen of that State, and now why not California? Surely the dairy interest is of sufficient importance to have a strong, useful organization, and I hope the RURAL

PRESS will continue to agitate the question, until the proposed meeting is held. Let the dairymen who attended the recent meeting, issue a call, properly signed, and I believe there will be a general response to it, for the time has come when action should be had. Delays are dangerous. R. P. MCGILINCY, Campbell, Cal.

[Col. McGilincy is an old and experienced worker in dairy organization, and we are glad to hear from him on this subject. It is important, as he suggests, that a call be issued, signed by reputable dairymen, and we hope it will not be delayed. Unless this is done we hardly expect that much attention will be paid to the announcement. Such a call need not be published, if there is objection to it. It may be mailed to dairymen in each neighborhood, but there should be some indication as to who backs the intended movement.—EDS. PRESS]

## Humboldt County Creameries.

W. A., writing for the Eureka Watchman, gives the following interesting information:

The creamery at Arlynda is a corporation and buys its milk of the customers, paying therefor 65 cents per 100 pounds; and if the customer wants skim milk for calves or hogs he pays 6 cents per 100 pounds. The creamery now has 25 patrons who deliver their milk daily, from which there is a weekly output of butter of 35 boxes of 100 pounds each. The milk is delivered from 6 to 8 o'clock in the evening and from 7 to 9 in the morning. A 25-horse power engine furnishes power for the various operations—the elevator, the separator, the churns, the pumps, etc. As soon as the milk begins to come in, the separators—three in number—are started. There are three large vats for receiving the cream, three large storage and packing rooms and two churns of 300 gallons capacity each. The butter is shipped twice a week to San Francisco, about 1700 pounds each shipment. About one-half the skim milk is returned to the customers at 6 cents per 100 pounds and the balance led to the hogs at the creamery. The establishment is under the management of Mr. J. F. Henley, foreman, assisted by Mr. C. D. Spencer.

The Ferndale Creamery is a co-operative enterprise, started last year by six subscribers as follows: J. Jacobson, P. J. Peterson, John Hansen, Lawrence Peterson, Peter Thomson and Peter Jacobson. The association is regularly incorporated under the laws of the State. There are eight patrons—two besides the stock-owners. The creamery is now receiving 11,000 pounds of milk daily, and through the light of the season this amount will probably be increased to 13,000 or 14,000 pounds. A ten-horse power engine furnishes the power, and the two separators do the work of separating the cream from the milk; besides these, there are three cream vats, two churns and a power butter-worker.

The creameries are all built on a general plan, with some variation as to arrangements and minor details, having in view a weighing room or tower, a separator room, cream room, and rooms for working and storage. The first operation is receiving the milk, which is delivered from wagons in large cans which contain, when full, 175 pounds of milk; the receiving and weighing room is a sort of tower, elevated 15 or 18 feet, having a derrick for hoisting the cans, which are drawn up and swung into the room and emptied into a large tank sitting upon the scales. This holds about 800 pounds, and after the weight is marked down opposite the name of the owner, is quickly discharged by a large faucet and pipe into the receiving vat in the adjoining room which will hold 600 gallons of milk. Just before starting the milk from the milk vat into the separators, the separators are speeded up to the requisite number of revolutions, some 7000 a minute, which requires several minutes to attain; when all is in readiness the milk is carried by means of a pipe and discharged downward in the bottom of the separator, a cylindrical, urn-like affair. The cream being the lightest is carried up and escapes through a small tube, while the heavier portion, or "blue milk" by reason of its specific gravity maintains a lower position, and is discharged through another tube at a point lower down in the separator. The "blue milk" thus discharged, is sweet and a novice would scarcely discern any difference between it and full cream milk. It is drawn off into a reservoir and the wagon delivering milk at the weighing room, after discharging, drives around and receives such quantity of this sweet, warm milk as he requires for feeding calves, etc., and the balance is forced by a pump to the hog pen away up the hill a quarter of a mile distant, thus located so as to keep all stench from the creamery. The cream passes into coolers, which cool the cream from the animal to the required temperature, when it is turned into large cream vats, there to slightly sour before churning.

The churns are the ordinary square churns, but the butter-worker is an innovation. It is a round table depressed in the center and revolving on a pivot, reaching from the outer edge to a sort of hub in the center, something like two adjoining spokes in a wheel; 2½ inches in diameter at the center end, and 7 inches in diameter at the outer end are two corrugated rolls or butter-workers. Both the tables and rolls are so geared as to be driven by power,

the rolls revolving in a stationary position, while the table turns under them. The butter is thrown upon this table in great lumps, passes under the rolls, and is turned and sliced in every manner by the man in attendance. A hundred-pound lot is quickly worked by the process. From 425 to 450 pounds is the daily output of butter at present.

It takes from 24 to 25 pounds of milk to make one pound of butter at this season. A couple of months later 17 to 18 pounds of milk will make one pound of butter, the grass becoming more nutritious and less watery.

The creamery is under the management of Peter Biger, assisted by Raemus Asgaard. Mr. Biger is a skillful and successful butter-maker, and the butter from this creamery has a high reputation in the San Francisco market.

The advantages of the creamery are many, and especially the co-operative creamery: 1st, by having the means of cooling the cream and regulating the temperature, a larger per cent of butter is obtained; 2d, a uniform grade of the best butter is produced; 3d, sweet milk is retained for the calves; 4th, the producer of milk has more time for his farm work, and last, but by no means least, the co-operative creamery returns to its stockowners all the profits.

The vicinity of the creamery is a busy, hustling community; nearly every one is engaged in producing milk and all seem to be thriving.

## THE FIELD.

## Changed Relations of California Farming.

The farmers of Solano county have good cause to be joyful. A fair crop is assured, and the price of wheat is higher than it has been for years. On these two things depend the success of the wheat-grower. When one fails the outlook is had enough, but should both fall the situation is deplorable indeed. There is no record of a complete failure of crops in California, but it is safe to say that the price of wheat has not been sufficiently elevated of late years to make farming a glorious success. Our tillers of the soil will do well to look about them for some use for their land other than repeated cropping to wheat and barley. There is no soil but will become exhausted by continual sowing to one kind of seed. This has been proven in all countries, on all kinds of soil. A rich loam will keep its strength longer than light sand, for the simple reason that it originally contains more of those elements necessary to the growth of vegetation, but no matter how rich the land it will lose its productiveness in time if continually sown to one thing. The course of California farming is the constant draining of the soil without putting back. Land cannot be expected to replenish itself, any more than the flour-barrel can be kept full, if nothing is added to its stock. Land may be likened, in one sense, to the human system. It is possessed of certain elements, in which lie the secret of its strength; if these be taken away by over-tasking, and it be given no chance to recuperate, failure is inevitable. There are places in this State, familiar to the writer, where 40 bushels per acre could once be harvested, but now it is barely possible to produce one-half that amount. Constant sowing to wheat has impoverished the soil. Wheat-growers may not realize that their land is failing, so gradually does it give away, but that they will in time be forced to acknowledge it is as certain as the setting of the sun. Nature is a bountiful giver, but it is one of her inexorable laws that some return must be made. Probably no class of people recognizes and follows this law so closely as the Italian gardeners. The rotation of crops and the fertilizing of land are in their estimation as necessary to success, as sunshine and showers. That they are correct in their views is shown by the results. An Italian will cause an acre of land to produce as much as the average farmer could raise on five acres. He will sow and gather six or seven crops in one year, but he never plants cabbage after cabbage, nor turnips on land where turnips have just been taken off. He varies the crop and after every harvest manures the land in a lavish manner. The amount of labor necessary to succeed in gardening is, of course, enormous and many Italians work from 12 to 16 hours daily. This ceaseless toil would no doubt prove irksome to our native population, but Americans, from their superior intelligence and talent for using the shortest method, would accomplish as much in a less number of hours.

An old Californian, speaking on the subject of changing from wheat to other crops, said: "It would keep one working all the time." Certainly it would, but therein lies its greatest charm. Nothing can be accomplished in any venture, be it humble or great, without continued effort. There is no class of people so miserable, so restless, or so prone to mischief as the unemployed. Labor is necessary for the promotion of civilization and the protection of society. If we were to say, "Let us work no more, but live on the fruits of the earth," we might be reasonably happy, but a few decades of such indolence would lower us to the condition of savages. Labor may be rendered even pleasant by selecting tasks suitable to our various natures. Some may dislike farming—

let them try something else. Others may not be content with carpentry or blacksmithing; they should try to find that which is agreeable to them, and follow it faithfully. Farmers should teach their children to work; the day is not far distant when they will have occasion to use such knowledge. The California of today is not the El Dorado of thirty years ago, and the sooner our people realize it, the better for us all. The day of great fortunes is past and the coming generation cannot expect a revival of the gold excitement, to make them wealthy without toil. Let our farmers cut up their vast grain-fields and plant them to trees and vines; let them raise more live stock, and pay some attention to other crops than wheat. There will be pleasant and profitable employment be provided for our young people, and increased prosperity accorded to all.—S. A. Lovelace, in Dixon Tribune.

## HORTICULTURE.

## Orchard Drainage in Oregon.

The subject of underdrainage with tiles is a growing one in this State and many will be interested in what we publish below, being the chief portions of an essay read before the Oregon Horticultural Society by F. J. Beatty:

I became convinced that prunes would be a profitable crop to raise, and so I started to prepare a place for an orchard. The ground I had selected was covered with large fir brush and trees; a heavy clay loam, about eight inches black loam, about a foot of yellow clay, and then layers of clay and quicksand alternately, the layers of quicksand getting thicker gradually until about 20 feet down it is almost pure quicksand. There is a hollow running across the northwest corner, at the lowest point 18 feet below the main part of the 11 acres which is very flat, with a slope toward the hollow of about six inches in 200 to 400 feet. I found in digging around on my place that these layers of clay are not level by any means, but pitch at all kinds of angles. On the west of my place they rise toward the north. Therefore, where the surface slopes down to the north the water accumulates until it runs over the edge and then all the water remaining must be evaporated in the spring, making the ground cold and wet until quite late. I put my tile in every fourth row of trees, or 60 feet apart, with a main, 30 feet from the north side, running west. The main is down about five feet deep, on an average—one place it is six feet. The laterals average four feet in depth, with a fall of one-half inch to the rod. The main is graded to one inch fall per rod. This is the main system and drains about seven acres. Total cost, \$152. The remaining three acres I put in differently. The main here runs diagonally across to the northeast, along the brow of the hill, with laterals every 60 feet as in the others, only the laterals here come in at an acute angle. Then I put in a line parallel to this, half way down the hill, to prevent wash, and then one line along the lowest depression nearly parallel with the last, then a short line on the other slope, and this completed the job. Total cost, \$225 for 10½ acres. Results: I can plow or work the ground almost as soon after a soaking rain now as they can on the sandy soil on the river bottom, and it turns up mellow like an ash heap. My trees are about a year's growth larger than trees of the same age in the neighborhood on undrained soil. This is about all the difference that I can certify to at present, as the tile in the oldest part of the orchard has only been in two winters. I am told that there is a difference in the matter of late frosts in the matter of late frosts in the spring that sometimes makes a difference in the fruit crop of half or more, and any one can get an idea of how evaporating of water cools the soil, by dipping a hand in even warm water and holding it in the wind. Now if this water is taken out from below, the warmth of the sun is sooner taken up by the soil, and this must make some difference in the time of frosts, so the theory looks reasonable. And if this tiling should make a difference of half a crop of prunes once in ten years, I am satisfied with the investment as an insurance policy; because if this is put in right once, it is ready to work for all time. Your great-grandchildren's grandchildren will not see the end of its usefulness. In the matter of stopping surface washing during hard rains on steep grades, alone, it is of great value. I find that since putting in my tile no water runs over the surface, even during the hardest rains, where formerly there was a stream of from six to eight inches deep and a foot or more wide, washing out enough silt in one winter to cover a place of 100 square feet to the depth of seven or eight inches. This was the richest and finest of the top soil that was carried off. Now if I put on manure it will do some good, instead of being carried off toward the ocean.

Now as to the capacity of the different kinds of tile: With a fall of one inch to 100 feet, a 2½-inch tile will carry all the water that can get into 40 rods of it. If your line is 80 rods long, use 3-inch for the lower end. Any one can compute the relative capacity of tile by the old rule of finding the area of a circle; viz., multiply half the diameter by half the circumference. Thus a 3-inch tile, 1.5 x 4.5 or 6.75; a 4-inch is 2 x 6 or 12, or nearly double the capacity, and the difference only one inch of diameter. Take the same grade, and a 4-inch

tile carries about as much water as three 2½-inch or two 3-inch. My largest main is only five inches in diameter for the last 180 feet, but the increase of grade from one-half to one inch to the rod makes it carry all the water from over 400 rods of 2½ 3 and 4-inch tiles on a grade of one-half inch to the rod; and it has never been entirely full yet, though I expect after the ground gets a little more porous that it will tax the full capacity of the 5-inch main. One thing I noticed this winter was that an open ditch of three feet depth would not take the water from seven or eight feet away, yet a tile in the same field four feet down kept the water from showing on the surface at the same time, over 30 feet on each side; but this may have been caused by the layers of clay, I have mentioned, being in position to hold the water out of the open ditch. I know only the fact that it was so.

#### Method of Laying Tile.

I now lay off the lines of main and laterals by stakes, and then plow out two or three furrows each way, making the deadfurrow about as near a grade as possible, by running shallow or deep as necessary. I can get down generally about a foot this way. Then with a pointed shovel I clean out and off the high places and get as near the right grade as possible. Then come in the long tile spades 18 to 20 inches long. Stretch a line and dig first trench eight or ten inches wide, and stick the spade in full depth every time and hold the handles always at the same angle so the bottom will keep the same grade as the top. The next spade must be out the right size for the kind of tile you use, but it is as easy to cut four inches wide as any smaller size. I never use less than a four-inch blade for the bottom cut. April and May is the best time of year to put in tile here, as then there is always a little water in the ground, and thus one can cut off the high places so that the water never stands over one-fourth of an inch deep, and get a nearly perfect grade. Begin at the lower end and put in tile with a tilehook, made of three-fourths inch iron rod about 15 inches long stuck in the end of a seven-foot pole and bent at right angles. With this hook, I can stand on the top of the ground and place the tile in position better than any one can standing in the ditch and putting them in with the hands. The tile should be bedded, that is, put on about four or five inches of dirt tramped down well. Stand in the ditch to do this; use a hoe or light shovel and see that the tile is not moved out of position. To fill the ditch, I use a 14-inch plow and a V scraper. Plow up one side and down the other, two rounds. With the scraper, you can walk the horse in the furrow, and the wing of the scraper pushes the dirt into the ditch; use plow and scraper alternately, until full; costs about two cents per rod to fill, of course. The junctions of the laterals and main have to be filled up by hand for a few feet, so the horse can cross. Usual price for filling by hand, 5 to 7 cents per rod. As to depth: A man could not put in tile for me less than 40 inches deep if he was doing it for nothing and board himself. I consider four feet a good depth, with main eight inches deeper.

#### Gophers and Woolly Aphis.

EDITORS PRESS:—In your paper of February 7th is an item copied from the *Petaluma Argus* relating to the "gopher plant." I got one of the plants from a local nurseryman, and it seems to be the same as was described under the head of "Spurry or False Caper" by the late W. G. Klee in a lecture on noxious weeds, which lecture was reported in the *RURAL PRESS* a few years ago. The weed has grown near the stream in my garden for years; so have the gophers. I cannot say they have ever eaten this plant, but they killed a fig-tree near it. A few years ago castor beans were recommended to me as displeasing to the gopher. They were accordingly grown in my garden until the rodent was observed to use their roots for arhings to his burrows.

#### Woolly Aphis.

About a year ago I discovered this pest on some dozen apple trees in my orchard. The onlons thing about it was that only trees with suckers were thus affected. Not all with suckers were touched, but trees near by without suckers were free. There may be no connection between the having of both sprouts and insects. The fact is noted for the consideration of the learned. The trees were treated with ashes and with gas lime. The former were thrown through the tree and against the trunks. The authorities say gas lime may be used "sparingly." Thus, if the tree dies, it may be concluded that the owner has used enough lime to kill it or not enough to save it. I put about two quarts to a tree, spreading it on the upper side within a radius of about three feet from the trunk. The trees were small. The lime was used early in the rainy season; the ashes were used as they were made.

A recent examination shows the aphis on only two of the trees treated as above. It was found, however, on a tree at a distance, also having suckers.

WILLIAM CROSBY.

Mulfont's, Livermore.

The alleged "gopher plant" is *Euphorbia lathyrus*, with common names as given by our correspondent. Our observation has been like his, that the gophers do not begitate to eat things growing near it. We also agree on the

castor bean proposition. The woolly aphis experience is interesting. We have, however, had the best on plenty of trees which had no suckers.—EDS. PRESS.]

#### When to Plant Orange Trees.

At the Pomological Society meeting held in South Riverside the 2nd of April there was considerable discussion in regard to the proper or best time and method to set out citrus fruit trees. As a result of the discussion the following was adopted:

WHEREAS, It seems that the true methods to be made use of in planting trees of the citrus family should be made generally known for the benefit of those inexperienced in the work, it is

Resolved, That, in the opinion of this society, the spring and early summer are the season which experience has demonstrated to be best suited to their transplanting; and that it is essential to the best success that they should be moved only at a time when the buds are beginning to show signs of starting, or at the latest before the new growth shall have reached two inches in length; and in no event when the tree is dormant; and it is further

Resolved, That while such trees are being transferred from the nurseries to their places in the orchard that all exposure of the roots to the sun or a dry wind should be avoided to secure the best results; and further that the irrigating water should be applied with promptness and effectiveness, immediately upon the covering of the roots with the soil.

There is undoubtedly a greater mistake made in transplanting orange trees than any other. They have their seasons for growth and seasons for rest. They grow rapidly in late winter and early spring. Those who set orange trees out in winter should do so early enough to anticipate this winter's growth. We can show trees that were set out in January that had six inches of fresh growth. The result was that growth was all lost. The trees have been stunted and they will scarcely make up the loss during the present year, thus losing one year's growth. In order to get the trees off their hands some nursery men will tell purchasers that trees with six inches or even a foot of tender growth will live and grow all right. Yes, the tree will live and grow, but you lose the tender growth which blackens and dies and it takes from three to four months to recover from the shock, and even then is not as vigorous as before.

If you have delayed setting out orange trees and the same is true of lemon trees till the present time, better wait till they take their rest after the winter growth and begin to bud out again in the latter part of May or early in June.

There is of course a difference in different localities. But as near as South Riverside, orange groves set out in June have done much better than those put out two or three months before.

Don't listen to the man who tells you "It makes no difference when you plant trees provided you take good care of them afterward." If you do not intend to take good care of them do not plant them at all.—*Orange Herald*.

SHADING GREEN HOUSES.—There is some difficulty in choosing a shading for green-houses, as some materials wash off too quickly and others not readily enough, as in the case of the common lime-wash. A correspondent in the *Gardener's Monthly* says he has tried many materials, but all have proved unsatisfactory. He found the following, however, very useful for many other purposes besides shading: Take one pound common whiting, one ounce of the best glue, and a quarter of an ounce of bichromate of potash, called also red alum. Soak the glue the day before using, melting in a common glue-pot, and then dissolve the bichromate in warm water. Mix the materials together and thin them down to the consistency required. These, after being exposed to the light, are almost as adherent as oil paint. Of course, by reducing the proportion of bichromate, the material can be made less retentive, but a coat of this wash on the green-house will last the whole summer, and even be troublesome to wash off, not to such a degree, however, as lime-wash. It should be constantly stirred up while being used.

## THE IRRIGATOR.

### Bonds of Wright Districts.

Isador Jacoby, chairman, with W. T. Y. Schenck, John F. Kennedy, S. G. Hiiborn and W. L. Merry, comprising a special committee of the Chamber of Commerce appointed to confer with delegates from the Irrigation Convention and the State Board of Trade with reference to irrigation district bonds, have prepared the following interesting report. It was submitted to the trustees of the chamber at a special meeting on the 30th ult. and ordered presented for discussion at the regular quarterly meeting July 3d:

Your committee respectfully report that, at the conference held on 22d inst. with the delegation above named, the question of the value and sale of irrigation district bonds issued under the Wright law was fully discussed, with the following general result:

Your committee is fully satisfied and convinced that, with the proper and customary examination by the investor, or party representing him, of the prior compliance of all the conditions required by law,

and also of the character of the land which it is proposed to bond and the supply of water available, irrigation bonds issued under the Wright law are as good security and as safe an investment as any bonds issued under statutes. With this decision as a conclusion, we respectfully recommend the adoption by the honorable Board of Trustees of the following resolution:

Resolved, That the Trustees of the Chamber of Commerce of San Francisco, after careful investigation of the conditions connected therewith, are of the opinion that bonds issued by irrigation districts in the State of California under the Wright Irrigation law are a safe investment and excellent security to investors, provided the two following conditions precedent are complied with:

First—A careful investigation as to the compliance with the requirements of the law prior to the issue of said bonds.

Second—An examination of the character of the lands on which it is proposed to issue said bonds and the facility for obtaining a water supply.

With these qualifications, which should control all investments with real estate security, we can confidently recommend these bonds to capitalists as worthy of their confidence, both principal and interest being as secure as any investment can be made by legal enactment and intrinsic merit.

The *Bulletin* remarks that a growing sentiment favoring the purchase of bonds of properly organized districts is noticeable. W. H. Mills, at the last meeting of the State Board of Trade, urged the immediate attention of that body to the matter. The attorney for the San Francisco Savings Union has advised that institution that the bonds are a safe investment. It is understood that Daniel Meyer and one or two other local bankers have already made some irrigation bond purchases.

"It seems very odd," said E. A. Belcher, a local attorney, who is much interested in the legal aspect of irrigation and mining matters, "that these irrigation bonds have to be sold abroad. There are several Supreme Court decisions already upholding their legality. All the decisions have gone to the very essence of the matter, to wit., the constitutionality of the Act and the question whether districts are public corporations. In every instance it has been upheld as being so. Bankers have questioned whether a tax could be levied sufficient to hold the lands, and whether it could be collected. All this rests on the legality of the Wright Act, and that having been determined, that is the end of the matter. The bankers seem to have lost sight of all these recent rulings. There can be no trouble in properly organized districts, when they come to collect the tax, for the tax simply becomes a lien, and the collection is a mere clerical matter. The decisions of Judge Belcher in the case of *Crali vs. the Poso district* (December 15, 1890), and of Judge Beatty in the case of the *Modesto district vs. Tregea* (March 30, 1891), are very complete in covering disputed points. This carrying out of the Wright law is a grand reclamation scheme in which the State at large is interested, especially the commercial and monetary interest.

#### The Organized Districts.

According to the latest reports there are now about 30 organized districts in California, although all of these have not come into membership with the State association. The list, so far as it can be obtained, is as follows, with the location of district, acreage and bonds issued. Less than half of these districts have yet placed all their bonds, some for reasons not connected with any lack of demand for the investment:

	Area in Acres.	Bonds Issued.
Turlock, Stanislaus county.....	210,000	\$600,000
Central, Colusa.....	200,000	750,000
Poso, Kern.....	60,000	50,000
Anshelm, Orange.....	32,000	600,000
Brown's Valley, Yuba.....	44,000	110,000
Alamo, Fresno.....	12,000	.....
Alta, Fresno and Tulare.....	130,000	675,000
Escudido, San Diego.....	13,000	450,000
Spring Valley, San Diego.....	22,000	.....
Modesto, Stanislaus.....	81,500	800,000
Madera, Fresno.....	305,000	850,000
Tulare, Tulare.....	35,000	500,000
Perris, San Diego.....	18,000	442,000
Vineyard, Los Angeles.....	4,500	50,000

BELTS.—When first put on, belts are always made tighter than they need to be for the work required, in order to allow for the stretching which is sure to follow. They are then run until they become too loose for efficient service and the process of overstraining and stretching is repeated. When vertical, this stretching of the belt acts directly to loosen it, and the necessity for tightening occurs more frequently than it does on horizontal belts, where the weight between pulleys maintains more or less tension in the slack side. For this reason a long horizontal belt can hardly be made to slip, without working it to destruction, while the driving power of a vertical belt depends directly upon its initial tension, and this must be carefully looked after to obtain the best results. The position in which a belt may run does not affect the size required for any given duty, but it does affect very seriously the amount of care and attention required to keep it in efficient service.

## FRUIT PRESERVATION.

### A Southern Californian's Suggestions on Drying.

If you live seven or eight miles from the market, it will pay you to dry the fruit yourself, for you cannot get ripe apricots to market in good condition farther, unless you haul them in a large wagon. If you have no spring wagon you cannot haul more than a few hundred pounds at a load; so that, if you have ten tons, it would take 35 to 40 days to haul the crop. The amount of fruit, if properly thinned, would average from six to nine to the pound, and if carefully ored would give you two tons of dried fruit. If your trees are neglected and not thinned or overbearing, the fruit will be very small, averaging from 14 to 18 to the pound, and when dried weighing 800 pounds to the ten tons green. If you had an easy time while your neighbors thinned theirs, you will have a light job hauling it off when dried, and your pocket-book will be very light, too, when you get home and settle up for putting the fruit. The cutting of large fruit will cost 18 cents per hundred, while it will cost 40 cents per hundred to out small fruit, and when the first-class fruit is dried it will bring from 10 to 15 cents a pound, while the other will sell at from 4 to 6 cents per pound, and hard to sell at that. If your fruit has been thus neglected, it will pay you to get a lot of pigs and turn them upon it in the orchard.

If you have as much as ten tons of fruit it will require 500 trays. I use redwood and pine shakes for the trays, preferring the pine, although they cost about one-third more than the others. I use four shakes to the tray, making them two feet wide and three feet long. Take 1x3 redwood or pine and rip them through the middle, cutting them two feet long. These are used for the ends of the tray. Get 6 foot lath and cut them in two for the sides. I prefer the lath ripped, as it will take only as much and is just as good. Be sure to put a lath across the middle of the tray on the inside. Next, you want 52 pieces 1x4, 16-foot lumber, which will make enough scaffolding to hold your 500 trays. Make the supporting stakes of any kind of lumber, 2½ feet high with one end out square. Drive three stakes in a straight line seven feet apart; now drive three more the same way, three feet one and a half inches apart, making 25 rows; then take the 16-foot pieces, lay them on the stakes and drive a six-penny nail in each stake, making 25 rows with a 3-foot gangway between. You will save enough in convenience of handling to pay for the scaffolds. A great many put their trays on the ground. I do not like this plan, as the dirt sticks to the bottom of the trays when you want to stack them of damp nights, falling off and softening the fruit. If the trays are not stacked the dogs and rabbits will be racing over them or perhaps a stray cow will run over them and ruin the trays and fruit. If your dried fruit has to be washed, it will hardly be fit to cook.

You will want a sulphur-box for bleaching, and it must be very tight. Make it 2½x3½ and 6 feet high. It will then hold 25 trays. It needs no bottom, but dirt should be hanked around to make it tight. A little trench is necessary for the sulphur-pan. One-half pound of French sulphur burning two hours will bleach 25 trays of fruit. Some people think sulphur is injurious to the system, but it is healthy for man and beast. It is true a great deal of fruit is spoiled by being too much of it; so is butter often spoiled by using too much salt.

The most important part in the drying of fruit is to let it get entirely ripe. Then it will be better, brighter and weigh heavier. The first two or three pickings should be very carefully made. If you pick green fruit, you will beat yourself and every one who has anything to do with it. Apricots will dry in four days if the sun shines brightly. Soak the fruit in good sacks, and before the sun is down. Then there will be no worms in the fruit. The moth comes soon after the sun goes down, depositing its eggs on the fruit, but the hot sun of the next day spoils them. Your sacked fruit should be placed so the wind will not strike it which prevents the fruit from drying out too much. The best way to grade the fruit is to do so before it is out, making it three grades, carefully removing dust or dirt.

Do not take apricots to the cannery that will run more than 11 to the pound, and in gathering, do not use a pole to knock off the fruit. Last year, much was brought to our drier gathered in that way, and we do not want thus to discourage or break up the drier, but rather encourage them to bringing good fruit. The man that dries poor fruit will stay poor, and the poor man that eats it will not get very fat. I think the man who markets this trifling fruit should be compelled to put a pound of sugar with each pound of fruit and a bottle of "pain killer" along with it, and I think growers would then take a little more pains, and the consumers a little less, with it. We cannot expect a cannery to locate with us unless we generally improve the fruit, and the very men who produce poor fruit are the ones who will cry "hard times" the loudest as they demand a second mortgage on their farms.—H. D. H., in *Pomotropic*.

## PATRONS OF HUSBANDRY.

## Our Grange Edition.

The Grange news of most general interest is given through all editions of our paper on this page. Several supplemental pages, devoted to Grange interests, are added to our Grange edition, which any subscriber can receive in lieu of the regular edition WITHOUT EXTRA COST, by addressing the publishers.

## Will Increased Money Help Us?

Suggestions by Past Master Coulter.

It is claimed, and almost universally admitted, that the volume of currency in circulation in our country is too small to subserve the convenience and best interest of the great body of our people.

Now, while I freely admit this claim, I want to suggest whether there is not some undue excitement on this subject, and a disposition on the part of some to push remedial action to the other extreme.

Prior to the election of the last Congress the contraction of the currency had occasioned serious depression in the business of the country and had become a serious burden to the debtor class, and by way of relief we were promised the free coinage of silver; but Wall street objected, and by a coalition between the "gold-bugs" of Wall street, the National banks and the "silver kings" of the West, we got that most iniquitous piece of legislation known as "The Silver Bill," which requires the Secretary of the Treasury to go into the market and buy, at the current price, 4,500,000 ounces of silver per month and lock it up in the treasury, and thus prevent it from doing its office of beneficence among the people.

Would it not have been wiser statesmanship to have required him to buy \$4,500,000 worth of whiskey and lock it up and prevent it from doing its office of damnation? In either case, \$4,500,000 would be added to the circulation, and make money more abundant; and demagogues tell the wage-winners that abundant money means higher wages, and that high wages is the summation of all earthly good.

## Do High Wages Bring the Millennium?

Now, let us see how that is. Let us see if high wages bring the millennium to the wage-winner. For what purpose does he desire wages, but that with them he may buy food and raiment and shelter and comfort and culture for himself and his loved ones? All these are the product of labor; and, just in the proportion in which the wages of labor advance or recede, just in the same proportion does the cost of all these advance or recede. This is necessarily and inevitably so, and this law always operates to the detriment of the wage-winner in every inflation or contraction of the currency.

Those who furnish the supplies for which he exchanges his wages know in advance when an inflation is coming, and put up the prices. The wage-earner discovers after awhile that his wages are inadequate to his support and begins to clamor for higher wages. His employer is relentless, and he "goes on a strike," and after weeks and months of idleness he accepts a situation at the best wages he can obtain.

When a contraction of the currency occurs the employer is the first to take notice of it. He finds it difficult to dispose of his products and begins to talk of "overproduction." Then he proposes the alternative of half time or a reduction of wages. Those who furnish the supplies for the wage-earner have bought their stock at inflation prices, and cannot afford to reduce their prices. The wage-earner again discovers that his subsistence costs more than his wages will pay, and away he goes "on a strike" again.

So it goes, and neither abundance nor scarcity of money inure to the advantage of the wage-earner, but always to his detriment.

## Increased Money on the Debtor Class.

Now, what effect will an increase of the amount of money have on the debtor class—that unfortunate class to which I have always belonged? Candor compels me to admit that, notwithstanding we are industrious and enterprising, on the whole, we are a thrifless not to say profligate set; and however much the abundance of money might stimulate our enterprise, it could scarcely have any beneficial effect on our judgment and would be quite as likely to impel us to run deeper in debt as to assist us to discharge what we already owe.

But it is claimed that more money is needed to carry on the business of the country. The business of the country is not carried on with money. It is done with checks and drafts and exchange, and the balances are settled at the clearing houses and the money lies idle in the bank vaults.

After all, are not our opportunities for prosperity as good or better when money is scarce than when it is abundant? Scarcity of money gives us low prices not only for labor but also for all its productions. When prices are low enough, we can send our productions into the markets of the world in competition with the products of every other country. It has been the high prices that have prevailed in this country during the last 30 years that has destroyed our merchant marine, but probably an infinitely more disastrous result has been the flooding of our country with a poisoning tide of pauper and criminal immigration lured hither by the promise of higher wages. S. T. COULTER.

## Grange Children's Day.

Proclaimed for Saturday, June 6th, by National Master Brigham.

DELTA, O., May 5, 1891.

To the Patrons of Husbandry of the United States of America: Pursuant to a resolution adopted at the Twenty-second Annual Session of the National Grange, I have selected the 6th day of June, A. D. 1891, as "Children's Day," and I sincerely hope that our entire Order will strive to make it one of pleasure and profit to the boys and girls who are growing to manhood and womanhood upon the farms of our country.

State Masters are requested to supplement this proclamation and to do all in their power to interest all in the exercises of the day. For good reasons State Masters may select some other day for their jurisdiction, but it is desirable that all unite upon the day named. Fraternally,

J. H. BRIGHAM,

Master of National Grange.

## The Master's Desk.

E. W. DAVIS, W. M. S. G. OF CALIFORNIA.

Unless the signs fail, the outlook for the American farmer is brighter than it has been for many years. Already the grain and fruit growers of the United States feel the effect of higher prices. The *school* which has held their faces so long is now giving place to the *smile*. Already signs of prosperity in agricultural districts are more or less manifest; but this is not all. The signs on the political horizon also indicate a newer and brighter prospect for the soil-tillers. Unless these signs are delusive, there will be a bigger demand, and in political conventions for farmers than there has been "since the war." This is to our liking. Why not let some of these thoughtful farmers turn the "wheels of State" for a while? They have been turning the wheels of machinery for a long time. Turn about is fair play.

It is said "even a liar loves a truthful person."

The death of Dr. John LeConte of the University of California removes from earth one of God's noblest men. His whole life was as pure as the spotless snow. He loved the truth; he knew how to find the truth and how to impart it. The aim of his life was to do good. He never failed. Though ripe in years, he was yet riper in all that is noble, true, elevating, man-like and Christian-like. Not one of those of us who have heard his instructive tongue—now forever on earth silenced—but will shed a scalding tear. We all loved John LeConte. He was teacher, friend, brother, parent and philosopher. He loved humanity. He loved right and dared to be right. Dear, true, beloved friend, farewell! But your advice, your love we will keep in sight forever. Sweet peace to your sleep!

If you have learned anything in the Grange tell about it in the RURAL.

The Grange is a power in this land. We must use that power with care, discretion and usefulness. Whether it be in the financial, social, political or fraternal circle, the power of the Grange, to be constant and respected, must be used in the true utilitarian spirit, viz., the greatest good to the greatest number. Just so long as the Grange continues to act intelligently, positively, cautiously, progressively and in an honest spirit toward all who want to be right and to do right, just so long will the Grange be a power for good, so strong that no enemy can undermine it and no politician can control it. Let the world know we are in this contest for self-protection and for the good that we can do, and we intend to fight it out even though it may take several summers.

We send our children to school and urge them "to study." Life is a school in which we are all pupils. Do we do the requisite amount of study to prepare us for the lessons which each day has for us?

Do you read? What do you read? These are two important questions, and every person has a right to ask them of his neighbor. Better read one book a year of the right kind and ponder it well than to read a dozen books a month of an uncertain tone. A good book not only gives healthy and valuable suggestions directly, but it stimulates to original thought and pure purpose indirectly. Don't read the flashy novel, for it will add nothing valuable nor will it suggest clear, clean and wholesome thought indirectly. Select your books as you would your friends, with due knowledge and much care! As well be seen with an unsavory person for a companion, as with an uncertain book for your leisure hours. Then ask your friend, do you read, and what do you read?

Woe be to the political party that attempts to ignore the farmer in the coming elections.

This old game of the politician to the farmer of "You take the buzzard and I will take the turkey, or, 'I will take the turkey and you take the buzzard,' is fully "played out," and the farmer don't care who knows it.

Look to the primaries, to the county convention, to the State convention, and finally be sure to look well to your ticket on election day! By so doing, farmers and others interested in industrial pursuits can be placed in official station.

That recent decision of the Interstate Commerce Commission in the State of Delaware is a grand thing for the Grange. The State Grange of the little State of Delaware filed a complaint against the railroad companies (several railroad companies) for charging excessive freight on fruits, vegetables and general truck produce. The case was fully argued by the W. M. and the W. L. of the State Grange for the complainants, and by a score of paid attorneys for the several railroad companies. After a careful review of the situation the Interstate Commerce Commissioners reduced freight rates 20 per cent on several articles and 25 per cent on all other products of the farm. Potatoes get the 25 per cent reduction. The freight reduction in one year alone will amount to more than \$1,000,000. How is that for an Order that some say is dead? How is that for a fraternity that is doing nothing? But that is done in one small State. Join the Grange, oh ye honest farmer, and learn more of its good deeds. You ought to join and help the Grange.

If you want to make some money, and at the same time help a good cause, secure a charter list for a new Grange. There is good wages to be made by an energetic person. Who is the next one to send a charter list?

Don't be surprised to learn that Merced Co. has another subordinate Grange. The heaven is working.

One of the noblest objects of the Grange is "to suppress all selfish ambition." Did you ever fully consider what those words mean? Suppress—I guess that means to "choke out." Selfish—you know what that word means, though, of course, you are not at all selfish. Ambition is a proper attribute, if it is properly studied, curbed and circumscribed. Again, then, let us strive "to suppress all selfish ambition."

Be a somebody at all times and in all places!

Graft a new thought into your tree of knowledge! Now is the time to do the work!

Floral and Memorial Day at Two Rook Grange was a grand success.

Why should not the United States Government furnish the Agricultural and Horticultural outlook by telegraph, every day, to the general public? A few thousand dollars expended in this way would be of great benefit to all classes, and it would amount to more than a little to do away with the trusts, combines, pools and syndicates that conspire to pluck both the producer and the consumer. All are willing that the law of supply and demand shall govern the price of labor as well as of products, but few believe that such law governs.

Write for the Grange Department of the RURAL PRESS. Give us all the Grange news in your vicinity. We all enjoy these short notes; they do the paper, the reader and the Order great good. Write!

## Grange and Alliance Picnic at Tulare.

EDITORS PRESS:—On Saturday morning, May 9th, the members of these Orders and their friends gathered at the beautiful Centennial Grove, two miles from town, and started in to make a day of it. At one time, Worthy Master Shoemaker counted 300 carriages on the ground. The location in a grove of oaks, which could hardly have been more suitable, had been improved by the erection of a speakers' stand, seats for audience, booth for dancing, and grounds for all sorts of games you can imagine or describe.

The Master of the Grange opened the ceremonies by a very neat, thoughtful and hospitable address of welcome, followed by a song from the Glee Club of well-trained voices. Pres. I. N. Wright of Tulare Co. Alliance responded in well chosen and forcible words. Then came the addresses of the principal speakers of the day, A. P. Roache, Overseer of the State Grange and J. L. Gilbert, Lecturer of the Alliance.

The Address of Our Overseer Was one of which every Patron should feel proud; a thoughtful statement of the aims and accomplishments of our noble Order. We have only space for a few of the points that we recall. A very grateful and feeling tribute of appreciation for the veterans who have stood by the grand old cause here through heat and cold, sunshine and storm, and who gave the State Grange such a grand welcome. From a condition of helplessness, owing to scattered forces, the Grange has a well drilled force of 28,000 Granges and 4,000,000 members. It

was organized by Masons who appreciated the benefits to be derived by such a class as our American farmers through such an Institution as they founded. They made politics and religion free, placed woman by man's side as his equal, united the North and South in ties of brotherhood, removed jealousy and systematized business. Of late, through subordinate, Pomona and State Granges represented by Legislative and Congressional Committees, they have exerted a powerful influence in the farmers' behalf upon the Silver and National Banking questions, the election of U. S. Senators by direct vote of the people, a pure ballot, the exact equality of all callings in Government favor; with their watchword "Tariff for all or tariff for none." The speaker was not inclined to condemn middlemen as our worst enemies, but rather those farmers whose vital interests are at stake, but refuse to bear any part in the burden of the conflict waged for their rights and homes. The address was thoughtful, elegant and forcible.

J. L. Gilbert, Lecturer for the Alliance. Referred very gracefully to the grand work done by the Grange, and gave us a speech bristling with points and booming with facts. Referring to eligibility for membership, he chose the first of these four classes: Tollers, who live by the sweat of their brows; dealers, who live by the sweat of others' brows; real estate men, who live by the sweat of their cheeks; tramps, who live by the sweat of their feet.

The farmer and his laborer have really no conflict of interest, but their interests conflict with those who would sell a sewing-machine costing the manufacturer \$6, to the consumer for \$50 to \$75; a mower costing \$15 to \$20, for \$50 to \$100. They conflict with those of Wall street, whose influence has reduced our circulating medium from \$52 to \$5 per capita.

In 1850, farmers owned of property 80 per cent and paid of entire taxes 80 per cent; in 1880, farmers owned of property 30 per cent and paid of entire taxes 80 per cent; in 1890, farmers owned of property 20 per cent and paid of entire taxes 80 per cent. These figures show that our only inalienable right is to pay 80 per cent of the taxes. If the old parties won't do our work, we will turn them off and hire those who will. Relief we most have. The National banking system was the confessed mistake of Chase's life. If cheap money is going to ruin people, let the Government ruin the farmers just a little, and not concentrate all their ruin upon banks and railroads. We must aim to legislate to develop no special interest save that of manhood.

Abolish rather than try to alleviate poverty. Stanford's bill was adroitly devised in the interest of large landlords. Cleveland and Lugalis are getting ready to come into the fold and Blaine is adroitly peeping through the gates. The Government should regulate transportation, and if that proves too weak to protect public interest, then own it. Australian railroads operated by Government carry laborers for one-third of a cent per mile and middle classes for one-half cent per mile. Railroads include in their capital, gifts from Government, land grants, watered stock and everything else they can think of; then vote salaries to their officers large enough to use up nearly all the net earnings and declare the balance in dividends small enough to show the public how cheaply they are doing their work.

The contraction of currency has increased the purchasing power of money and so favored capital that thirty thousand now hold a controlling interest among sixty million people. We stand now as a nation on the brink of ruin from that cause under which Rome (proudest Empire of the world) went down.

Many Alliance badges were worn by members from distant parts of the county, and a lively interest was taken.

## Caledonian Games.

These seemed to be very popular. For hours we saw the heavy weights tossing a heavy stick of timber in such a way as to have the top strike the ground as far off as possible with enough momentum to carry the lower end over and let the stick fall beyond where it struck. Throwing the heavy hammer attracted much attention. For the small boys and many not so very small, the chase of the greased pig was a drawing card. Many of them will look back for years upon the Tulare Picnic as a red-letter day in their lives. Those who tripped the "light fantastic" seemed to enjoy themselves at the booth, and we presume had a grand time at the warehouse in the evening.

Tulare, May 10th FRANK S. CHAPIN

## Sacramento Co. Pomona Grange.

The regular quarterly meeting of Sacramento Co. Pomona Grange will take place May 30, 1891, at 1 o'clock, at Granger hall Tenth and K streets, Sacramento. All fifth degree members are cordially invited to be present.

D. FLINT, Master.

A. A. KRULL, Secretary.

## Floral Reception.

EDITORS PRESS:—Waterloo Grange will give a floral reception on the evening of the 15th inst., consisting of a floral march and a short program. The Balkwell Bros. will then give a dance.

All Patrons and friends are invited to be with us without further notice. Fraternally yours,

Waterloo, May 3.

## FARMERS' ALLIANCE.

## Alliance Edition.

Subscribers can receive our FARMERS' ALLIANCE EDITION WITHOUT EXTRA COST, by applying for the same. That edition contains several supplemental pages of Alliance matter, in addition to that which appears on this page through all editions.

## Farmers' Alliance Picnic at Lodi.

[From the State Lecturer.]

Since our last writing we attended a large and enthusiastic Alliance picnic on May 6th at Lodi, San Joaquin county.

Lodi is not only noted for its large and delicious melons, but if the assemblage on the picnic grounds was a fair representation of her citizens, she surely ought to be noted for her intelligent and industrious men and women.

The morning was showery and threatened destruction to the success of the occasion, but about 11 o'clock the clouds broke away and the grand march from the hall to the grounds commenced. At first sight we were convinced of the fact that extensive and studied preparations had been made for the accommodation and comfort of the people and the success of the occasion.

The assemblage was called to order by J. A. Anderson, Pres. of Lodi Alliance, who made a few well chosen remarks, and subsequently read the program and introduced the speakers. Appropriate music was rendered by the Alliance Glee Club. The first speaker introduced was Bro. Burdette Cornell, who delivered a spirited and eloquent address of about 40 minutes duration. Bro. Cornell's address was composed mainly of statistics and the causes which led up to the organization of the F. A. & I. U., and was a fine specimen of intelligence, eloquence and earnestness. We bespeak for Bro. Cornell a successful and useful future. Next we occupied a few moments, and then came the event of the day, the address of

## President Cannon.

Bro. Cannon spoke in clear tones that could be distinctly heard over the entire audience. He dwelt largely on the firm principles and demands of the Order, and in a manner that evidenced the fact that he knew what he was talking about; and we are of the opinion that when he finished his address many of his hearers also knew what he had been talking about. Bro. Cannon's remarks were followed by a short but forcible address by Rev. —, (we regret that we are unable to give his name) of Lodi. Each address was followed by music and one or two "spicy" recitations by Lodi's little boys and girls, whose names we did not get. The audience was variously estimated at from 1200 to 1500. Dancing and the usual amusements occupied the young people the remainder of the day, while President Cannon and many of the members repaired to the hall where the secret work was exemplified. We left Lodi under the impression that the Alliance in San Joaquin county is in intelligent and prudent hands.

## The Farmers' Movement.

We fail to find in history but few instances where the quiet, submissive and conservative farmers have been revolutionary in their ideas and methods. They have submitted to a great deal of oppression and robbery.

They have been the victims again and again of injustice and wrong, but in the nature of things there is a limit to human endurance.

We find that in two great revolutions the farmers took the lead and were victorious. Writing on the subject the Tallahassee Alliance says that as far back as the year 1381 the farmers of England had but few rights, and none that were respected by the governing classes. They were oppressed until exasperated manhood was goaded to desperation, and under the leadership of Wat Tyler they sounded the tocsin of war and bid defiance to the cruel exactions of their taskmasters. This movement in the rural districts spread to the towns and cities, and the toiling masses all over England were soon handed together to resist unjust taxation and oppressive laws. The farmers, with their town allies, came together in a solid compact body and swept over the country with the terrific force of the cyclone. From county to county and from town to town they pushed their rapid march until they reached the city of London, where, in a deadly assault, they lost their leader; but the king made satisfactory concessions and acquiesced in their demands, and they dispersed and returned to their homes.

The Government ran down and tortured with the most cruel death the leaders in this revolution, but the solid fruits of the victory rested with the people. For one hundred years afterward the farmers and workmen had the use of as much land as they needed, and were permitted to meet and combine together for self-protection, just as the Farmers' Alliance and the Knights of Labor do to-day.

This era was the golden age of England. Poverty was unknown in the land. It was the golden time of peace and plenty. Afterward, in the 16th century, the money power got control of affairs, and by a similar system of concentration of wealth and contraction of the currency, as obtains in this country to-day, plunged the people into universal bankruptcy

and abject poverty, from which they are suffering unto this day.

In the 18th century the farmers inaugurated a gigantic revolution which drenched France in blood. They had for centuries past been oppressed and tyrannized over until the long pent up fires of their wrath broke through their casement of submission, and like burning Vesuvius sent death and destruction wide-spread.

The farmers and laborers of France were well organized, and in the course of a bloody carnival, brought their king and queen and thousands of their oppressors to the guillotine. Generations of suffering made them unreasonably violent, and they gave France what is known in history as the "reign of terror." Yet this revolution was a great triumph; it modified monarchical rule in every European nation and paved the way of Republican France of to-day.

These two revolutions were conducted by farmers. And when we are forced to condemn their excesses as cruel and wrong, we are mindful that in those days the people did not have the ballot to right their wrongs and were compelled to resort to force. The upheaval of the toiling masses in this country of to-day recalls the historic events to which we have referred. Our farmers and laborers, like the tillers of the soil of France and England, are groaning under the yoke of oppression, and are kept down by unjust taxation, unwise and unequal laws, and are struggling for life's breath under the tyrannical heel of Shylocks, who are, in their way, as dangerous and despicable as the feudal barons of old. But under our free American institutions the people are armed with the ballot, and realize fully the power of organized action. They understand the force of numbers and realize the power of moving as a unit. And while this great movement of the farmers is thoroughly peaceful and free from sensation and excitement, it is destined to be as sweeping and final in its work of reform as the revolutions in the past to which we have alluded.

The Alliance is a determined effort to restore the government of the people to the people. It stands upon the broad plane of equal rights to all mankind. It will win, and its triumph will be made more glorious because it will be a victory of peace, a victory of honest toil won by ballots, not by bayonets; won at the polls and not on the field of carnage.

## From Our Nebraska Farm Boy.

EDITORS PRESS:—For some time in the past, I have been asking myself the question, why this uprising of the people of the country? Why the vast assemblages of people here and there gathered to listen to the discussion of the farmers' movement? But it is not as strange as it might seem to some who are not directly connected with the movement itself. To the laborer who earns his bread by the sweat of his brow, and the producer who toils in the field for another's gain, it is the natural outgrowth of the peril of the times.

While our rapid growth may seem marvelous to some, when we come to reflect that although we live in the most intelligent age that history ever recorded, basking in the light of the 19th-century civilization, with all the modern conveniences of life, our industrial classes are poorer than ever before; when we learn that 3,000,000 of our 63,000,000 people are paupers, while 30,000 men, or about one-twentieth of one per cent of our population are in possession of (I will not say own) three-fifths of the wealth of the entire nation; when we are confronted with the fact that thousands in the streets of our great cities die every year of starvation, while granaries are bursting with golden grain, and thousands of others revel in all the luxuries that civilization and wealth can afford, that as time goes by, our social evils instead of being remedied are becoming more perilous, the marvel of our rapid growth ceases, and we only wonder that the industrial workers have not united before. I think that I may truthfully say that now we have reached

## The Most Critical Period in the History of Our Organization.

More than ever the times demand that we should act together as a unit for the best interests of all concerned.

Organized capital is opposing us on every hand. We see it manifest in localities here and there, in organized bodies, with varied interests in State and National affairs. Not long since, the N. Y. Tribune made the statement, and gloated over the fact that the National bankers were so thoroughly organized that they could act together in a day's notice, and resist any Act of Congress, and this, that paper, once the emblem of freedom, the precursor of truth, the abettor of reform, but now the tool of the most gigantic monopoly on earth, says is a very good thing.

## The Farmer's Foes.

We have in our country at the present time three deadly foes to the Alliance and freedom, viz., national banks, railroad corporations and landlords, but perhaps the most formidable lords of American soil are those who reside across the waters. As long as the currency of this country remains under the control of a trust company known as national bankers, we can never hope for anything better than we have at the present time.

As long as railroad corporations are permitted to rob and pillage, we cannot hope to obtain a higher civilization, and while our lands are per-

mitted to be centralized in the hands of the few, our only hope is to eke out a miserable existence, to submit to serfdom as galling as that of the Irish peasant. The bank corporation has already become so thoroughly organized that it may produce a panic in order to break it up, but we must look to the final outcome.

The idea that the condition of the present time is the natural outgrowth of "free institutions is remote. The people are beginning to look into these matters. We are getting tired, for one thing, of a money system that makes it possible for a Gould, Vanderhilt, Sage and Rockefeller to create an artificial panic at any time, and thus cause the failure of dozens of business men.

## Capital is Becoming More Ravenous and Greedy

With each succeeding generation. We have a late example of the organization of the money power in Nebraska. When the subject of lowering the legal rate of interest was under discussion in the House of Representatives, every hanker in the State suspended loans and refused to let money to any farmer upon any security, at any rate of interest. Finding this formidable foe drawn up before them, they dare not advance. Already they had a panic upon their hands. The subsidized press then came out with the cry and sent it ringing through the country—"The Farmers' Alliance Legislature is ruining the State of Nebraska." Then came the accusation that the farmer representatives had not lived up to their agreement.

Where is our boasted heraldry of power? Where the freedom that our forefathers won on the battle grounds of old New England's hills? Where the liberty so valiantly won on the Southern battlefields? Thank God that we are not all serfs to the money power. These facts should spur us on to renewed and determined efforts. We are nearing the eve of a mighty conflict, a conflict that will try the power of the Government and test the loyalty and patriotism of our people. The question is no longer, when the crisis will come; it is already upon us; it is here and now.

## Business Interests Are Failing

More rapidly than ever before, wealth is concentrating faster, and tramps and paupers are on the increase. The gulf between the two great classes is growing wider and wider and deeper and deeper. What shall the outcome be at present? This is the only pertinent question. Homes are sinking beneath the burden of debt, lands are centralizing into a few hands and the legitimate owners of the soil are daily becoming tenants. In Kansas, during the past six months, 2650 farms were sold under mortgage, but that is not the worst, for 60 per cent of these mortgages or 9 out of every 15, the average number foreclosed each day, are now owned by foreign syndicates who have no sympathy with the American producers except to ring from them the almighty dollar.

How our sympathies go out to the suffering poor of the Emerald Isle dominated over by absentee landlords, and how little we realize the fact that in our own fair land, the home of the free and brave, we have laid the foundation for the most gigantic landlord system on the globe. Already foreign syndicates own enough land in the United States to make three States the size of Indiana, and in ten years hence, unless there is a change, will have added to it enough to make five States more.

## We Fought Eight Long Bloody Years

to free ourselves from the bondage of Old England, and to-day we are sitting idly by and letting our lands drift out of our own hand. We are growing more and more subservient to her power as the days go by. I shall not attempt to predict what the outcome will be. With three-quarters the farms of the country under mortgage, how long will it be until the whole nation is absorbed by the very few?

Counting the interest on our bonded and mortgaged indebtedness at 6½ per cent and the increase in the nation's wealth at 3 per cent, we find that already more than the annual increased wealth of the country is absorbed in interest. How long we can stand this enormous drain is more than I can tell, but I am satisfied that if you add to that the burdens of another \$1,000,000,000 Congress and hoodle Legislature, we will fall beneath its weight.

Every nation of the past has fallen beneath the burden of debt, and unless we provide a means for the payment of the debt already contracted in our own country, we, too, will be committed to the same ruin.

In my next letter I will try to explain how a change can be wrought by a change in our financial system.

I cannot help but think that the present condition of our country is but transient, and I thank the eternal principle of right that is molding and shaping ends for the better, and in the Alliance I see the guiding star to brighter, happier and more prosperous days.

BURDETTE CORNELL.

Wheatland, May 8th.

## At Denver.

EDITORS PRESS:—An Alliance of 11 members was organized here April 17th by T. A. Gallup of Yolo county, and to be known as Aurora Alliance. We had an addition of six at the next meeting, and on last Saturday initiated four more. Is not that encouraging? I think we can have as strong an Alliance here as any

other place in the county. The officers elected are as follows: Samuel Stewart, President; L. P. Larsen, vice-President; Grace Stewart, Secretary; T. C. Stewart, Treasurer; G. T. Muker, Chaplain; Mrs. E. Barnes, Lecturer; Geo. Fotheringham, Door-keeper; F. Barnes, Assistant Door-keeper; Olive Wilson, Steward. MRS. GRACE STEWART, Sec.

Denver, Cal., May 6th, 1891.

P. S.—Shall try and get a cluh for the Press.

## County Alliance Notes.

## Butts.

A Farmers' Alliance has been organized at Palermo by State Organizer Gaines, with the following excellent corps of officers: Pres., John T. Palmer; V. P., W. Vorhees; Sec., Liter Armstrong; Treas., S. B. Onyett; Chap., Mrs. Mitchell. There were 12 charter members and good prospects of a large membership in a very few weeks. This item shows that the Palermo people are abreast of the times in social and political matters as well as fruit-growing.—Mercury.

## Fresno.

J. L. Gilbert, State Lecturer of the Farmers' Alliance, made The Californian office a short visit on Monday last. He had returned from a professional trip to several of the northern counties, and reports the Order in good condition in all portions of the State where he has visited, and expects to be kept busy on the go until harvest-time. He says the interest in the Alliance among the producers is only in its infancy, and thinks that every farmer in the State will be a member before the close of the year.—Central Californian.

## Lake.

The F. A. & I. U. organized in Lakeport on Saturday, May 2d, with 20 charter members. The officers are R. D. Merritt, Pres.; D. T. Seeley, vice-Pres.; Thomas Porteus, Sec.; William Gessner, Treas.; George Hammack, Door-keeper. Regular meetings are the first Saturday in each month at 2 o'clock P. M.—Avalanche.

## San Diego.

Menifee is in earnest on the new farmers, warehouse question. The Alliance decided to unite with Winchester and other Alliances in pushing the project to completion. We understand the Menifee men favor building by subscription, rather than by forming a joint stock company.

## San Luis Obispo.

The Farmers' Alliance is gaining strength in this "land of the free." A strong lodge of the Order has been organized in the old Huerfano district. It now numbers some 37 strong, with more knocking at the door for admission of the go ahead people of the district. The Creston Alliance is on its feet doing good work. There is no hurrah boys about this Farmers' Alliance business here, but rather there seems to be a stalwart resolution formed among the farmers and the workmen to draw together in closer relations for their own good and salvation.—Creston Cor. Tribune.

Adelaide Alliance has full and enthusiastic meetings; they mean business.

At our last meeting Melville Alliance was called to order by President Cole. A good crowd was there; which was more than was expected, so many being out Friday to the picnic and dance. Every one knows that they do not feel like being up all night one night and half the next, but our Alliance is in earnest and intends for nothing to stand in the way. May our Holy Father help us to make a success and relieve the poor, overburdened farmer is the wish of an Alliance sister.—Cor. Messenger.

## Santa Cruz.

There was a most enjoyable gathering on the ranch of P. R. Adams at Bonny Doon, May 1st, under the auspices of Bonny Doon Farmers' Alliance. The program of music was the delight of all present. After listening attentively to music—both vocal and instrumental—and lecturing for one hour and a half, the entire assemblage repaired to the grove in which the table was spread, full of everything that was good to eat. The Alliance at Bonny Doon will make itself felt when the proper time comes, for it is composed of the right kind of material, and they are giving this economic question their careful attention.—Aptos Cor. Sentinel.

## Tulare.

The Woodville Alliance Mayday picnic was a success in every way. A great concourse of people assembled on the grounds and everything was done by the committee to make the visitors comfortable. There was plenty to eat, and after lunch the prize essays were read and the following awards made: Essay on Agriculture, first prize, Miss Lizzie Harper, \$5; second, Edwin Harris, \$2 50. Essay on Horticulture, Miss Alice McDonald, \$5. Essay on Housekeeping, Miss Mary Andrews, \$5. Miss Kelley of Deer Creek gave a recitation which was much applauded and the Hon. J. Roth rendered an address which was well received.—Enterprise.

The Farmers' Alliance have a nice organization here and are buying most of their supplies through that organization at prices they say astonishingly low.—Esperanza Cor. Times.

The citizens of Cramer that attended the Alliance picnic at Pleasant Valley report a fine time. Milo Alliance has a new banner, the work of a Porterville artist. On account of ill health the writer was unable to be present.

## After Years.

(Written for the RURAL PRESS by S. H. DRYDEN.)

The skies seem not so glorious,  
The sun is not so bright,  
And not so sweetly tremulous  
As the stars which gem the night.  
Yet there is still in sky and stars  
That we love well in after years.

The earth seems not so beautiful,  
Nor the flowers half so gay,  
Nor are we now so happy,  
To hear the wild bird's lay.  
Yet there is naught earth's beauty wears  
But we love best in after years.

We may not love so fondly  
As in our early hours  
For the love we cherished kindly  
Has perished with the flowers.  
And yet with all our anxious fears  
We truly love in after years.

It is not meet that childhood  
Should have the brightest days,  
Or that the heart's best music  
Should pass with childish lays,  
And nought be left but sighs and tears  
Along our path in after years.

Ah! Heaven has never granted  
To youth's bright, thoughtless hour  
Such lofty thought's power  
By inspiration's power.  
Imagination's soul-fire bears  
Its deepest glow for after years.

Then sigh not that our childhood  
Has faded like a dream,  
Or that the glorious sunlight  
Has darkened on life's stream,  
Though shadows come, there still appears  
Life's rainbow tints in after years.

Gilroy.

## An Uncle's Surprise.

An elderly man, shabbily attired, was seen walking through one of the fashionable streets of a large city one cold December day. His coat was of coarse gray and had evidently seen hard service. The traveler walked slowly along, examining carefully, as he passed, the names on the different door-plates. He finally paused before a dwelling of showy exterior, which, if we may credit the testimony of the plate upon the door, was occupied by Mr. Alexander Beaumont.

"Alexander Beaumont! Yes, that's the name," murmured the traveler to himself, as he ascended the stairs and rang the door-bell.

His summons was answered by a footman, who, after a moment's scrutiny, said roughly: "Well, what do you want?"

"Is Mr. Beaumont at home?" asked the old man, without heeding the intentional rudeness.

"No, he is not."  
"Then perhaps I can see his wife?"  
"I think it very doubtful, but I will go and see."

The servant withdrew without asking the old man to enter, although the day was very cold and his clothing seemed to be hardly sufficient to protect him from its inclemency.

Mrs. Beaumont was reclining on a sofa in a room handsomely furnished. The last new magazine was in her hand and her eyes were listlessly glancing over its pages. She was interrupted in her reading by the entrance of her servant.

"Well, what now?" she inquired.  
"There is a man down stairs who wants to see you, ma'am!"

"Man! A gentleman, you mean!"  
"No, ma'am," said Charles, stoutly; "it isn't a gentleman at all, for he has got on an old gray coat and he has not got any gloves on."

"You didn't show him into the parlor, did you?"

The man shook his head.  
"You did right, and you had better tell him I'm not at home."

"Mrs. Beaumont is not at home," said Charles, reappearing at the door.

"I suppose that means she is engaged," said the old man. "I think she will see me when she learns who I am. Tell her I am her husband's uncle and my name is Henry Beaumont."

The man servant returned and delivered the message.

"Good heavens!" said the mistress, "it ain't that old fellow who strolled off years ago, nobody knows where! I did hope he never would come back again; and now I suppose he is as poor as a rat and wants help. Well, he won't get it if I can help it, but I suppose I must see him."

She descended the stairs and received the old man at the door.

"Are you Mrs. Beaumont?" he asked.

"Yes, I am the wife of Mr. Beaumont, and I suppose from your language you are?"

"His Uncle Henry! Ah me! I have been gone so many years, and it does me good to return to my kindred."

The old man's features worked convulsively as thoughts of the past came over his mind. Mrs. Beaumont stood holding the door, as if waiting for him to depart. She did not give him any invitation to enter.

"Is your husband well?" inquired the visitor, looking as if he expected an invitation to enter and refresh himself.

"He is. If you have any message for him you may leave it with me, and I will deliver it," said Mrs. Beaumont.

"You may tell him I have called," said the visitor in a disappointed tone, "and that I would have liked to have seen him."

"I will tell him," said the lady, as she was about to close the door.

"Hold! There is one question more. What has become of Alexander's sister, Anne?"

"I don't know much about her," was the rather disdainful reply; "but I think she married a clerk or some such person. His name is Lowe, and he lives in Norton street. Is that all?"

"That is all."

The old man turned his steps toward the street indicated with many forebodings lest his second visit might be as unwelcome as the first.

"Charles," said Mrs. Beaumont as she closed the door, "if that old man comes again be sure and not forget to tell him I am not at home."

Norton street was not a fashionable street, nor was the two story dwelling occupied by William Lowe either handsome or costly. It was marked, however, by an air of neatness which indicated that its tenants were not regardless of outward appearance.

We will take the liberty of introducing the reader to a little sitting room, where Mrs. Lowe and her three children were seated. The furniture, though of a kind that would hardly be selected for a drawing room, had a comfortable, home-like appearance, which amply satisfied the desire of those who derived their happiness from a higher and less mutable force than outside show. Mrs. Lowe was engaged in an employment which is tabooed in all fashionable society—that is, darning stockings.

Emma, a girl of ten, was brushing the hearth, which the ashes from the grate, in which a blazing fire was now burning, had somewhat discolored, while Mary, who was two years younger, was reading. Charles, a little rogue of five, who had a smiling face, which could not help looking roguish, was stroking the cat the wrong way, much to the disturbance of poor Tabby, who had quietly settled herself down to pleasant dreams on the hearthrug.

All at once a loud knock was heard at the door.

"Emma," said the mother, "you may go to the door and see who it is, and invite the person in, for it is a cold day."

Emma immediately obeyed the mother's directions.

"Is Mr. Lowe at home?" inquired Henry Beaumont, for it was he.

"Yes, sir," said Emma; "please walk in and you may see her."

She ushered the old man into the comfortable sitting room, where Mrs. Lowe rose to receive him.

"I believe," he said, "I am not mistaken in thinking that your name before marriage was Anna Beaumont?"

"You are right; that was my name."

"And you have no recollection of an uncle that wandered away from home and friends, and from whom no tidings have come for many a long year?"

"Yes, sir, I remember him well—my uncle Henry—and I have many times wished I could hear something from him. Can you give me any information?"

"I can—for I am he."

"You my uncle?" said Mrs. Lowe, in surprise; "then you are indeed welcome. Emma, bring your uncle the arm-chair, and place it close to the fire; and, Mary, bring your father's slippers, for I am sure your dear uncle must long to get off those heavy boots. And now, uncle, when you are quite rested, I must demand a recital of your adventures."

"But your brother Alexander?" interrupted Mr. Beaumont; "let me first inquire about him. He lives in town now, does he not?"

A light cloud came over Mrs. Lowe's face.

"Yes," she said, "he does live in town; yet, strange as it may appear, I seldom or never see him. He has succeeded well, and is wealthy. But ever since he married a wife with a small property and greater pride he has kept aloof from us. I do not blame him so much as his wife, who is said to have great influence over him. I have called once, but she treated me so coldly that I have not felt a disposition to renew my visit."

"I can easily believe it, for I, too, have been repulsed."

"You repulsed? Did you give your name, and inform her of your relation to her husband?"

"I did; but she did not invite me to enter, and she was evidently impatient for me to be gone. I took the hint, and here I am."

"At least, uncle," said Mrs. Lowe, smilingly, "you need not be afraid of any repulse here."

"Of that I am quite sure," said the old man, looking affectionately into the face of his niece. But you have not told me of your husband. Let me know you have made a good match," he added playfully.

"That depends on what is meant by the term. If it implies a rich husband then I failed most certainly, for William's salary is only \$1000, and that is what we have to depend upon. But for all that I care not, for a kind, affectionate husband is worth far more than a magnificent house and the most costly furniture."

"You are right," said her uncle. "There must be something which your limited means will not permit you to obtain, but which would be desirable, is there not?"

"Yes," said Mrs. Lowe; "I am anxious to give Emma and Mary a musical education, but William's means will not allow of such extravagance as the purchase of a piano, so that is one of the things we must be content to deny ourselves."

Mr. Lowe then entered, and being informed of the character of his visitor he extended him a hearty welcome. A comfortable repast was soon spread, of which Mr. Beaumont readily partook. His spirits rose, and he seemed to grow younger as he saw the cheerful faces around him, and felt himself at home. Soon after the evening meal he rose to depart.

"Surely you are not going?" said his niece, "you must henceforth take up your abode with us."

"We will see about that, and if you don't think you will get tired of me perhaps I will come. But I have hired a lodging and must undoubtedly remain in it for a few days."

"But you will call in every day and make yourself perfectly at home, even before you come here to stay," persisted his niece.

"Be sure of that."

In accordance with his promise Mr. Beaumont made his appearance next day at 11 o'clock, and was received as cordially as before. He had hardly been in the house a few minutes when a rap was heard at the door. Mrs. Lowe beheld two men, who had just driven up in a wagon.

"Where is the piano to be put, ma'am?" they inquired.

"Piano! You have made a mistake. We have purchased no piano."

"It's all right," said a loud voice behind her.

She turned round in amazement.

"You know," continued the man, "that I am come to live with you, and I thought I would pay my board in advance, that is all. As you expressed a wish yesterday for a piano I thought it would be as acceptable a way as any."

"You, uncle? Why, excuse me, but I thought from—"

"You mean," said he, smiling, "that you thought from my appearance that I could not afford it, and I confess," said he, casting a glance at himself in the glass, "that my dress is not in the extreme of fashion; and, in fact, I was obliged to look some time when I called at the second hand clothing shop the other day before I could find these. However, as I have got all the service I wished out of them, I shall throw them aside to-morrow and appear more respectably clad."

"What, are you wealthy, Uncle?"

"Depend upon it, Anne, I didn't spend ten years in the East Indies for nothing," was the reply. "I had the mind, however, to put on the appearance of a poor man, and so test the affection and disinterestedness of my relations. One of them, however, I found not at home. I am happy to find myself at home with the other."

Let us return to the aristocratic Mrs. Beaumont, who a few days succeeding the events here recorded, was in her drawing-room receiving calls.

"By the way," said a fashionable visitor, "I am to have your relatives, the Lowes, for my next-door neighbors."

"Next door neighbors!" exclaimed Mrs. Beaumont, in amazement. "What do you mean?"

"Is it possible you have not heard of their good fortune? Mrs. Lowe's uncle has just returned from the East Indies with an immense fortune. He has taken a house in the same street with ours, and when they have moved into it he will take up his residence with them. Meanwhile he is stopping at the Clarendon hotel."

"What! Henry Beaumont?"

"The very same; but I thought you knew it."

When the visitor withdrew, Mrs. Beaumont ordered her carriage and immediately drove to the hotel where her husband's uncle was stopping. She sent up her card and requested an audience.

The servant soon returned with another card on which were traced the significant words, "Not at home."—*New York World.*

WOMAN'S GREATEST DANGER.—The great element of danger with woman's progress before the public lies in this fact that it takes women away from home who ought to be there and nowhere else. The public platform is no place for a mother who has either sons or daughters to educate. If woman's progress is going to tend in that direction, then the sooner that advancement stops the better. The first thought of a wife or a mother should be her home; all things, no matter how important, are secondary to that. No matter how rampant may become certain public evils, let her see to it that she keeps the evils out of her home, and she performs her greatest duty to her God, her family, and mankind.—*Ladies' Home Journal.*

## Lincoln's Fricassee Chicken.

Margaret Spencer writes to Mrs. Logan's *Home Magazine* this pathetic story of Lincoln at the White House:

From his humble home in the West, he brought into public life his notions of plain, frugal living, and to the day of his death adhered to them strictly. The discouraged steward complained bitterly of his utter lack of appreciation of his finest work, and never quite forgave him for saying to Mr. Lovejoy, who was dining with him one day, "None of this flummery goes to the tired spot." And once he was heard to say to his wife, "I do wonder why we do not get such good meat and potatoes in Washington as we need to have in Illinois! Do you know, Mary?"

During the latter years of his life, he ate so little and so irregularly that often noontime found his breakfast untouched, and Secretary Stanton one day remarked: "Mr. Lincoln, whose dinner is this, I wonder, covered up so nicely? It will be cold very soon!"

"Dinner? Why, that's my breakfast! What time is it, Stanton? I do feel kind of empty!"

Through the influence of Hon. Owen Lovejoy, Miss Alice Johnstone of Chicago was appointed to a desk in the postoffice. During her first winter in Washington, she slipped on an icy pavement, and for three months was confined to her room. Ill and discouraged, she determined to return to the West and give up her office. Mr. Lovejoy spoke to Mr. Lincoln of her sad condition, and said in his great-hearted way: "If I hadn't five girls of my own, I'd adopt Alice! My wife always has room for one more at home!"

"So here, Lovejoy, we need just such a girl! I'll speak to Mary at once."

So, "to make a long story short," Alice became a member of the President's family. Her capabilities were quickly discovered by all; her work admired and commended by guests and servants. She proved a "perfect comfort" to the lonely, sorrowful man, "weighed down with the nation's fate," and to the busy women, in the whirl of fashionable life, "a constant treasure."

Tad remarked to his father one day: "We are having better times since Alice came, because, you see, I can have all the boys I want to now. She don't mind our parties, and can get anything of the cook!"

Alice was deeply attached to the family, and especially impressed with the gentle domestic life of the President. She said:

Should I live to be one hundred years old, the kind, quiet good-mornings of the end-faced, tired man whom I saw every day will never cease to thrill my heart! I used to watch him standing with his arms folded, looking steadily from the South window, across the Potomac, toward the battle fields, so pale, not at all rested from the work of yesterday, and yet up since daybreak, looking over his maps, I longed to help him!

He grew more gaunt and worn as the year crept on. The servant went to Mrs. Lincoln with complaint; they served lunch upstairs to save his time, but hours afterward would find it untouched.

"Alice!" Mrs. Lincoln exclaimed one morning. "Do you know how to make an old-fashioned fricassee chicken? Not on toast, as we have it nowadays, but with small cream biscuits and thick cream gravy poured over them, all served on a large platter. I used to cook chicken that way when we were first married, and my husband would say: 'Mary, that is fit for a king!' Do you think you could do it exactly so?"

"Oh, let me try!" Alice said. "It would be so good to see Mr. Lincoln eat!"

She had no trouble with the entire force below stairs—the cook, steward, waiters and the use of the shining range combined to perfect the dish.

A table was laid in Mrs. Lincoln's private sitting-room. Old-fashioned pinks glorified the quaint meal; attendants and waiters were dismissed.

Little Tad was sent to the office for his father. Twice he came back with a long face. "Father says he is too busy. Secretary Stanton is there!" But the third imperative visit brought "father." Tad rushed in, dragging his father by the hand, and shouting: "I've got him—I've got him! Harry up the dinner!"

I would like to give Alice's own words as she sent them in a letter to Chicago:

"If you could have seen Mr. Lincoln's face! You could have cried! He stood in the doorway, silent, tired and abstracted. Tad tugged and pushed him along, while Mrs. Lincoln looked up to him and said: 'You will eat dinner with us to-day; we have something you like.'"

"The surprise and pleasure dawned slowly into his eyes. He sat down opposite his wife, with Tad between them. He seemed to understand it all—his little family, the old fashioned home dish, the loving attention. Before he ate one mouthful, he rose from his chair, walked around to his wife, laid his big hand on her shoulder, and said:

"Mary, I wish we were back in the old home, when you did the cooking and I helped with the chores! They were our best days."

"I hustled into the hall, almost choking to death, with lumps in my throat; and when I came back with a glass of milk for Tad, Mr. Lincoln was laughing and eating my chicken with all his might. His whole esophagus couldn't

have given me the pleasure and reward that his smile and good appetite did. 'He ate three helps, Alice, and more gravy than you and I and mother could, all put together!' said Tad. 'When he went out, Mr. Lincoln said: 'Wife, you and Alice will make me sick with such good dinners. I haven't tasted a meal like that since—since—well, Mary, I think it's safe to say, since you and I were the head cooks!'"

### Incidents in a Photograph Gallery.

One old gentleman often came to me to have his picture taken. He wore a white cravat about five inches in height, and he held his head above it. I always tried to get his head down, so as to obtain a view of his face without looking up his nostrils; but he never let me. As soon as I placed his head in a good position, he would say that that was not natural, and up would go his head. It was this gentleman who was told by a crazy woman on the Jersey ferry-boat that when he died it would not be much trouble to bury him, as he was already laid out.

A lady once brought her three children, a hobby-horse, a drum, and a doll. They were to be taken in a group. The size selected was three and one-fourth by four and one-half inches. The girl Angelina was to hold the doll; but the family had not decided whether Charles Agnustus was to ride the horse and William Henry hold the drum, or vice versa. They had agreed to let my superior judgment decide that momentous question. As both the boys wished to mount the horse, a decision was no easy matter. I then learned that the mother did not want the children close together, as all the "dog-ra-types" were taken. She wanted Angelina in the middle of the room, one of the boys by the "winder," and the other boy on the other side of the room. It was a brilliant idea; but how my camera was to reach them all, thus spread out, was more than I could see. I told her that it could not be done; I explained to her the capabilities of the lens, the concentration of the light, and so forth, but she did not understand me. She said that she had been told that I was disposed to be accommodating, but that I was just the same as the rest of the "dog-ra-type" men, for three others had refused to accommodate her in this way.

Another lady brought her three children to be taken in a group, and when I asked her if she wished them taken in any particular position, she showed her good sense by saying that she only asked that they should not look like three candles; she did not wish them all standing straight.

An old lady, after sitting about half the time required to have her picture taken, raised both hands and exclaimed, "Stop it! stop it! I winked!"

As an elegantly-dressed young lady was preparing to sit for her picture, she asked, "Where must I look?" and before I could answer, her escort, a very diminutive specimen of a man, stepped in front of the screen and said in a squeaking voice, "Look at me." The scene was so ludicrous that the lady burst into hearty laughter, and it was some minutes before she could control her features for a sitting. After that, "Look at me," *sotto voce*, was for some time a hy-word in the gallery.—"The Experiences of a Photographer," in *Lippincott's*.

### Chaff.

It is pleasant to hear the truth—about other people.

Women were made before mirrors, and have been before them ever since.

When a red-nosed man wanted his picture in a heroic attitude, the artist painted him in the act of refusing a drink.

"Don't you know, prisoner, that it's very wrong to steal a pig?" "I do now, your Honor. They make such a row."

A CORRESPONDENT wants to know if fits are hereditary. Any small boy compelled to wear out his father's old clothes could tell him they are not.

DAUGHTER—Why is it, ma, that a honeymoon is supposed to last only three months? Ma—At the end of three months the quarterly bills come in.

MABEL (relenting a little bit, but still a trifle angry)—Anything I have of yours I will return at once. Charlie (giving her a kiss)—Well, there's your opportunity.

FRED—I didn't mind Taylor's discharging me so much as I did the insult he subsequently offered me. Frank—What was that? Fred—He advertised for a boy to fill my place.

JIMSON—Ten years ago Smithson wronged me cruelly, and now my revenge is at hand. Thompson—What are you going to do? Jimson—To-morrow will be his tin wedding. I will bestow tin drums upon his twins and a tin whistle upon his oldest boy.

The particular Pat of this story had in some manner engaged himself to an American as a butler. One hot summer night his employer, oppressed by the temperature of the dining-room, turned to Pat and asked: "Is the window up, Pat?" "Tis, soor." "What makes it so awfully close in here, then?" "Oh think it must be th' windy's heln' up soor. It's shut up."

WHOPPER—Yes, sir, that cat of mine could spring fifty feet after a mouse, and—Breakley (who stutters)—Whew, what a l—l—l—Whopper—It is not a lie, and I'll knock you down if you don't take that back! Breakley (continuing calmly)—L—l—lively cat!

## YOUNG FOLKS' COLUMN.

### Wait.

[Written for the RURAL PRESS by GERTRUDE.]

Christians do not be discouraged,  
Though but slow your progress be;  
Slow of growth, too, is the acorn,  
Yet becomes a mighty tree.

We are liken unto children,  
And a day school is our life.  
Every day we have a lesson,  
Fitting us for every strife.

Courage, then, and wait upon Him,  
And thy strength He will renew;  
In His time send showers of blessing  
To distill like gentle dew.

Spirits are in order changed  
By His mighty power divine.  
Step by step rise higher, higher,  
While the branch clings to the vine.

Hights and depths there are unfathomed,  
And to seek is to attain.  
Oh! the glories that are hidden,  
Only knock and ye shall gain.

Be thou faithful, and the spirit  
Into all God's fulness lead.  
Faithful is He that hath promised,  
Who will do it, as we read.

Alameda, April, 1891.

### What the Boy Thought of Thunder.

A kind reader of the RURAL sends us the following as the conclusion of a Los Gatos boy aged four years, concerning an impressive natural phenomenon:

I forgot to tell you Robert's version of the thunderstorm we had a few weeks ago. He did not know what to make of it at first, and I told him it came from up in the clouds. I noticed him at the window looking up at the sky, and finally he turned to me and said: "Mamma, you know the Lord's house is up in the sky and some of the boards are tumbling down. That's what makes the noise."

Wasn't that pretty good?

### Tidy.

That was what we called her, though her real name was Elizabeth or some other name so much too large for her that I never heard it often enough to be sure what it was. She lived just across the road from the school-house, and though less than five years old, came to school because Clair, her brother—older—was too bashful to come alone.

Her parents were hard-working farmers, well known in the neighborhood as "John" and "Mollie" even by their own little ones, of whom there were five, Clair and Tidy being the oldest. It sounded strangely enough to hear Tidy ask to "go over to Mollie's to get a piece" at recess. I always sent them home as soon as I was through with them for the half-day, but one forenoon they came back at once, because, as Tidy explained, "Mollie's mopping."

As oldest daughter, little Tidy with her bright eyes and sweet baby face began to show some little, thoughtful, womanly ways. Once, when I called to see her mother, she was sitting on the floor amusing the baby; before I left he fell asleep leaning against her, and there she sat patiently waiting, with her arm around the little fellow to keep him from falling until her mother noticed them and put the baby in his crib.

As soon as she learned that she must not talk aloud in school, she never made me any trouble. She was so bright and active, so winning and pretty, too, that she was a great pet. She would flit from one big girl to another, as still as a mouse, and always sure of a welcome, never tiring of finding in their various books the letters she knew. I am sure it is a pleasure to them now, as it is to me, to think that we helped to fill her baby life with the petting and attention she must often have gone without in the crowded, busy home.

I had little time to spare to her, but used to let her come to me several times a day for a few minutes, with any book she chanced to have, as often a history or grammar as anything else, and sit on my lap and tell me what letters she could. Once when I offered to take her up as usual to read soon after recess, instead of springing to her place, she hung back, saying softly, "I guess I'd better stand down this time; my feet's muddy."

Sometimes she came to me with an old primer, whose simple lessons she partly read and partly repeated from memory so fast and so energetically that unless I watched her closely she would have the whole school laughing. She read the little piece that ends "The cat is on my new fur cap. Get off, old cat!" saying in her quick, eager way, "Get off'n that, you old cat!"

She would spring into my lap as lightly as a bird, and was so small and slight and sat so still that I scarcely felt her weight, and often held her when I could be seated at my work. She soon learned this, and when tired of the others would come to me and modestly ask, "Please may I sit on your lap a little bit?"

Perhaps these memories of her are made more tender and almost sacred because her little life ended so soon. I never saw her after that winter. The next summer she fell and broke her arm. Not long after it was well—and very patient she was while it was healing, they told

me—she with three others of the little brothers and sisters sickened with diphtheria, and died, one after another.

Although it seems very hard when we think of the poor, overworked mother in her loneliness, to me it seems more fitting and more pleasant too, to think of Tidy in her sweetness and baby beauty, taken away from all the hardships life must surely have brought her, growing still purer and fairer in another part of "Our Father's House."—Gazelle Stevens Sharp.

### What Ailed Beggar.

When "Beggar" was a handsome, playful plump two-months-old Maltese kitten, he was given to Ella Lyon, who carefully packed him in an airy, well-ventilated basket and took him into the parlor car. For the first few hours after his young mistress was comfortably settled in her chair, kitty "yowled" and growled disagreeably; but finding that no one heeded his lamentations, he finally dropped into a sweet cat sleep.

After 24 hours' journey he was released from his prison and introduced to the Lyon family, consisting of half a dozen boys and girls, with papa and mamma Lyon, who had just breakfasted in their cosy, sunny dining-room.

Kitty looked about deliberately for a few moments into the strange faces. "He's choosing his favorite," said Dick, gravely.

"Oh, I do hope he'll choose me," replied Blue Eyes, the six-year-old lassie. But kitty did not take to the "yongsters." With a graceful bound he leaped into Papa Lyon's lap, and began to purr coaxingly.

"Ob, papa, kitty likes you best," chorused the little people.

"Sensible pussy," said papa, laughingly. Pussy did like Mr. Lyon, and displayed his affection by lavishing upon him every cat-like handshaking he was master of.

There was trouble in finding a name for this velvet coated, graceful pussy. None of the names suggested seemed to fit him. Finally Papa Lyon settled the question, after hearing mamma call out one morning, while pounding the breakfast beefsteak:

"You are an incessant beggar."

"Beggar" was pussy's name thereafter, and he soon answered readily to a call for "Beggar," fortunately in blissful ignorance that his title wasn't at all complimentary to him.

He grew fast and attained a weight of fourteen pounds. Upon becoming portly he did not lose his playful ways. It really did seem grotesque when Beggar, wildly excited with a game of romps with the boys, essayed to nimbly jump about or use his ponderous paws in the old-time kittenish manner.

For a year or more Beggar's life was a play day, and he remained the "pet" and favorite, though not nearly so meek and patient as Tabby Velvet Toes, the excellent mouser but a very "homely" puss and rather dull in manner.

One morning Beggar evaded the attention of every member of the family. After breakfast a nice bone was given him on his plate, and shortly after a series of dismal "yeow-w-w's," varied by angry "s-s-s-s-s's" and hisses, disturbed the family peace. During the day Beggar continued his strange conduct.

"I really shall be obliged to kill the poor cat if he continues to act in this way. He must be going mad," said papa at tea time.

"Papa," said Dick, "I think his tooth aches. He puts his paws to his mouth."

Mr. Lyon got the chloroform bottle, poured a few drops upon a handkerchief, held it near Beggar until poor pussy was quiet enough to be handled, then looked into his mouth.

A tooth had been loosened from his jaw and the gum about it was much inflamed. Mr. Lyon hastily removed the tooth and Beggar was soon himself again.

Cats have been accused of having no affection or gratitude, but Beggar seemed to appreciate the kind treatment bestowed upon him by the Lyon family, and never formed the habit of "snooping" into eatables within his reach or stealing food.

There are few dumb animals that cannot be won with kindness, though, just as in the human race, they differ widely in disposition and degree of intelligence.

### Mother's Turn.

"It is mother's turn to be taken care of now." The speaker was a winsome young girl, whose bright eyes, fresh color and eager look told of light-hearted happiness. Just out of school, she had an air of culture, which is an added attraction to a blithe young face. It was mother's turn now. Did she know how my heart went out to her for her unselfish words?

Too many mothers, in their love for their daughters, entirely overlook the idea that they themselves need recreation. They do without all the easy, pretty and charming things, and say nothing about it; and the daughters do not think there is any self denial involved. Jenny gets a new dress and mother wears the old one, turned upside down and wrong side out. Lucy goes on the mountain trip, and mother stays at home and keeps house.

Emily is tired of study and must lie down in the afternoon; but mother though her back aches, has no time for such an indulgence.

Dear girls, take good care of your mothers. Coax them to let you relieve them of some of the harder duties, which for years they have patiently borne.—*Intelligencer*.

## DOMESTIC ECONOMY

### A Batch of Cookies.

The children are in school now, and there is no more desirable adjunct to the pantry when packing their lunch baskets than a well filled jar of cookies. They are by no means despised by older members of the family during the last stages of breakfast, and a little box of them may be given to a traveler starting on an unexpected journey, with the surety that they will be much nicer than anything he can obtain at a railway lunch counter.

Nice, plain, ginger cookies may be made as follows: Mix one egg, one cupful of sugar, one tablespoonful each of ginger and vinegar and a little salt. Put one teaspoonful of molasses in a basin and set it on the stove. When it boils, add one tablespoonful of soda, previously dissolved in a little boiling water. Stir the hot mixture into the cold and add flour enough to make a soft dough. Roll rather thin and bake in a quick oven.

**Ginger Snaps.**—One pint of sugar, one pint of molasses, three tablespoonfuls of sour milk, two tablespoonfuls of ginger, one tablespoonful of soda dissolved in the milk, one coffee-cup full of butter or lard; if the latter is used, add one teaspoonful of salt. Mix stiff and roll very thin.

**Fruit Snaps.**—One and one-half cupfuls of sugar, one cupful of butter, one-half cupful of molasses, three eggs, one teaspoonful of soda, one cupful of raisins, two cupfuls of currants, one tablespoon each of cloves, cinnamon and allspice. Mix as soft as they can be handled. These are said to keep for months, if under lock and key.

**Rich Molasses Cookies.**—One cupful of molasses, one cupful of soft sugar, one cupful of butter or lard, two teaspoonfuls of ginger, one teaspoonful of soda dissolved in half a cupful of boiling water. If lard is used, add a little salt. Mix very soft. These cookies may be varied by using other spices or combinations of spices.

**Cocoanut Jumbles.**—Five cupfuls of flour, two cupful of sugar, one cupful of butter, one cupful of grated cocoanut, one cupful sour milk, one nutmeg, one teaspoonful of soda dissolved in the milk. Mix rather hard and sprinkle each cookie, when out, with grated cocoanut.

**Cream Cookies.**—One and one-half cupfuls rich sour cream, two cupfuls soft sugar, one egg, one teaspoonful of soda, one teaspoonful of salt. Flavor with lemon. Mix very soft.

**Rich Cookies.**—Three cupfuls of sugar, one cupful of butter, one cupful of sour cream, four eggs, one teaspoonful of soda, Flavor to taste and mix stiff.

**Chocolate Cookies.**—One cupful of butter, two cupfuls of sugar, two eggs, one-half teaspoonful of soda dissolved in the milk, one cup of grated chocolate. Flavor with vanilla. After baking, drop a little white icing on the center of each cookie. The secret in having cookies perfect is in having a quick, even heat. Most cookies need no more flour than just enough to enable the cook to roll them out. More makes them hard and spoils them. Cookies are said to be improved by rubbing the butter with the flour as one does for biscuit or pie crust. When home-grown Amber Cane molasses is used for cookies, half the usual amount of sugar is all that is needed, and very good cookies may be made by using a second cup of molasses in the place of any sugar. In this case no water should be used.—*S. A. Little in R. N. Y.*

**NOVELTY LOG CABIN CAKE.**—Make the sponge the same as for soda cake (only double the amount), bake in pan 8 by 12 and 1 inch deep; build your cake 7 inches high; then to slope the roof cut off one-quarter inch lengthwise of each cake until the top cake will be 2 inches. Now the strips cut off, I build chimneys at each end. For frosting, take the whites of five eggs, three cups of pulverized sugar, put in earthen dish, set on stove and stir briskly until too hot to bear your finger, then season with lemon and stir until warm, then add seven cups of pulverized sugar. A knife dipped in cold water occasionally will aid in smoothing. Now for ornamenting! Take whites of two eggs, one-half cup red sugar and one-half of pulverized; cook same as above; when done, add enough pulverized sugar so it will work like dough. This I use to form designs—names, doors, windows and frosting for chimneys. If I want the trimming orange, I put in two yolks of eggs and one whole egg in place of red sugar. After frosting, sprinkle red granulated sugar between. This will take patience, but you will be well paid for your trouble.

**PLUM PUDDING.**—A writer in *Harper's Bazar* gives a recipe for genuine plum pudding from Virginia, as follows: A small loaf of bread soaked in a pint of new milk until soft enough to mash with a spoon, eight eggs, one pound of sugar, one pound of beef suet chopped fine, one pound of raisins stoned and out in small pieces, one pound of currants, half pound citron, half a nutmeg, one teaspoonful powdered allspice, a very little clove, and enough flour to hold the ingredients together, sifted in by degrees. A pint of flour is generally sufficient, and butter may be used in place of suet. Mix the pudding well, and boil either in a cloth or tin mold for eight hours, being careful to fill up the kettle with hot water, as fast as it boils away.

## The Week.

The weather has been favorable for growth in most parts of the State. The rather cool weather and dull skies have given the grain another week without exactions by extra heat or dry winds, and gratifying progress toward maturity has been made wherever the roots have found moisture enough. Each such week adds to the chance for plump grain later on.

The fruit men have had much to do with familiar pests and with enough new ones to assure them that the subject still calls for study and experiment. Still no great calamity has

occurred and the fruit outlook generally is still very satisfactory.

Announcements of schools closing and of the approach of the vacation season mark the progress of the year as clearly as does the progress of field crops. Plan for a vacation and a change of scene this summer if you can. If you have worked faithfully, you both need and deserve it.

## Late European Wheat Crop Advances.

Late mail advices received from England are confirmatory of previously published statements that the wheat crop prospects are unfavorable. From the April 25th number of *Money*, a leading financial and conservative English journal, we learn that the past winter was the coldest within the century. The winter began as early as October, when there was frost severer than had been known for half a century at the same date. December and January were unusually severe—severer, it is said, than in any corresponding months since 1813-14, and March and April have again been very cold. Not only had they this unusual protracted period of cold, but there was exceptional drought at the time. This resulted up to the last of April in vegetation being exceptionally backward and trees leafless. While this was the case in England, on the Continent—in Western and Central Europe—it was even worse. One of the peculiarities of the winter was that the south of Europe and the north of Africa suffered exceptionally. Heavy storms fell in many districts where snow had not been seen for half a century. Farmers, in consequence, became alarmed in France, Belgium, Germany, Holland, Spain and Italy.

*Money* says that unless there is an early complete change for the better in the weather, it is inevitable that the demand for Central and Western Europe for wheat will be exceptionally great. It is estimated by good judges, that if the present prospects are realized, the loss in wheat alone to France will hardly fall short of \$250,000,000. But if France, Spain, Italy, Belgium, Germany and England have all to import more wheat than usual, in consequence of deficient harvests, the rise in the price will continue. In this connection, it is noteworthy that the reports from Austria-Hungary, more particularly from Hungary, are unfavorable, while the reports from Russia are conflicting. Assuming that the present prospects are realized, and that both Austria-Hungary and Russia have not as large a surplus as usual to export, the main demand will have to be supplied by the United States. The most recent reports from Australia are to the effect that the Victorian harvest is very much shorter than the first reports represented it to be; and the returns of the Government of India likewise point to some disappointment respecting the Indian harvest. It appears that there have been excessive rains in the Punjab, and that in the low-lying districts, much damage has been done. In the Northwestern districts, hail has done damage, and in some other places, the crops have suffered seriously from drought. Therefore, according to the latest returns, the harvest, which is now being gathered, will not turn out as well as it promised a month or two ago.

**CALIFORNIA AT THE WORLD'S FAIR.**—There have been several meetings of the California World's Fair Commission during the last fortnight, and conferences have been had with California's representatives on the National Commission. It seems likely that there will be no trouble about the State having a building of its own and in it a representative exhibit of the resources and productions of the State as is contemplated by our State appropriation of \$300,000. There will also be exhibits of California manufactures and products in the several buildings, such entries being made by individuals in competition for the premiums offered. Thus the State and its individual enterprises may be fully set forth. The superintendence of the horticultural department of the fair has been given to Walter S. Maxwell of Los Angeles by appointment by Director-General Davis. The confirmation of the appointment is still to be had.

THE SONOMA PRESERVE COMPANY was incorporated at Petaluma last Saturday with a capital stock of \$50,000. The company will be ready for work as soon as vegetables suitable for packing have sufficient growth.

## Eastern Fruit Shipments.

The first carload of cherries from Vacaville on Tuesday of this week opens the overland shipment of deciduous fruits for 1891. The shipment was by the Earl Fruit Co., and comprised Black Tartarian and Gov. Wood cherries in splendid condition, from the orchards of Bassford Bros., Robinson Bros., and Garlische. The car was a refrigerator and will go by passenger train. The shipment is one week earlier than last year.

Present anticipations are for plenty of fruit of most kinds, and for an active shipment to the East. There is not the same shortage at the East this year, but the wider distribution which our fruit gets each year should call for large supplies, even though the local Eastern product is greater. There comes to hand, however, just as we go to press, the following telegram, which appeared in the *Philadelphia Press*:

WILMINGTON, DEL., May 6.—The hopes that Peninsula fruit-growers have so fondly cherished during the past four or five weeks for a big yield of peaches have been rudely dissipated by the present cold wave. Orchards which on Sunday last were a delightful phantasy of pink, white and green, were sadly despoiled by the frosts of Monday and Tuesday nights, the ice of last night and the snow of today.

Two weeks ago, Jack Frost left his blighting track through the lower section of the fruit belt, but hundreds of acres of trees escaped damage. To-day the bright bloom is a crumbled, blackened mass of dead hopes. There is no resurrection for the peach. It will not bloom again this year, and the farmers are in sore distress over their losses.

There is considerable activity among agents and buyers for Eastern fruit dealers, which is a promising indication so far as it goes. Senator Buck, manager of the Fruit Union, believes he has secured assurance that the railway service will be improved this year, and delays which were vexing and productive of much loss last year will be avoided as far as possible. It is certainly indispensable that this be done. Mr. Buck will open his office in Sacramento this week.

## The Stanford University.

Announcement is made by circular that the Stanford University will open for students October 1, 1891. For the first year, chairs will be established, and instruction will be given in the following lines of work: Mechanical engineering, civil engineering, mathematics, physics, chemistry, geology, botany, zoology, physiology, philosophy, ethics, history, political science, English language and literature, German, French, Latin and Greek.

The work of the University will begin with the freshman class. For admission to this class, the candidate must be at least 16 years of age, and must pass a satisfactory examination in the subjects specified in the circular, copies of which can be had by addressing President David S. Jordan, Menlo Park, Cal. The following announcement is made of expenses:

Tuition in all departments of the University will be free. Board will be offered at cost in the dormitories. The price fixed at present for board in Madrono Hall is \$3 per week. Rooms with light, heat and attendance, are offered at \$1.50 per week for each person, if two occupy one room; \$3 per week, if occupied by one person; but single occupancy will not be permitted if the rooms are needed by other students. Washing will be charged at cost. The expenses of the student in Madrono Hall need not exceed \$200 for the year, exclusive of clothing and railway fares. The accommodations for young women will, at the first, be limited, but an effort will be made to provide suitable rooms for those who may enter the University.

President Jordan is now at the East, but will be at Menlo Park after June 10.

## The Farmers' Institute at Auburn.

Concerning the Farmers' Institute which will be held in Auburn May 22d and 23d, under the auspices of the Auburn Horticultural Society, it may be said that full preparations are being made to ensure the success of the meetings. There will be a strawberry exhibition to which all small fruit-growers are invited to contribute their best work. Mr. Wickson will make an opening address concerning the history, methods and purposes of Institute Work, and thereafter it is expected that the time will be fully occupied with addresses and discussions. We have not seen a full list of those expected to address the meeting but L. W. Buck Manager of the Fruit Union and E. W. Maslin Manager

of the State Board of Trade are expected to be present. No doubt full details can be found in the county papers before the date of the meeting. The attendance should be large.

## Irrigation in New Mexico.

Robert S. Porter, Supt. of the Census has just issued a bulletin giving an outline of the results of inquiry into irrigation in New Mexico by F. H. Newell. The statements are interesting to residents of all irrigated countries as items of general irrigation practice. It is stated that in New Mexico crops were raised by irrigation in the census year ending June 30, 1890, on 91,745 acres, or 143.35 square miles, a little more than one-tenth of one per cent of the entire area of the territory. The aggregate number of farms was 4174 (not including those of the Pueblo Indians), and of these 3085, or nearly three-fourths, depended upon irrigation. The average size of irrigated farms, or rather of irrigated portions of farms, was 30 acres. The irrigated farms have been classified as follows: Three irrigated farms of 640 acres or upward, 14 of from 320 acres to 640 acres, and 46 of from 160 to 320 acres. These 63 farms contained an average of about 312 acres each, and had a total area of 19,676 acres, over one-fifth of the entire amount watered in the territory. The remaining 3022 farms, under 160 acres in size, comprised nearly four-fifths of the total irrigated area, and averaged 24 acres each; that is to say, two per cent of the farmers of the territory owned over one-fifth of the productive land excluding the non-irrigated areas, and the remaining 98 per cent of irrigators cultivated farms whose average size was 24 acres.

It is shown that the average first cost of water right is \$5.58 per acre, and the average cost of preparing the soil for cultivation, including the purchase price of the land, is \$12.96 per acre. The average present value of the irrigated land of the territory, including buildings, etc., is reported as \$50.98 per acre, showing an apparent profit, less cost of buildings, of \$32.44 per acre. The average annual cost of water is \$1.54 per acre, which, deducted from the average annual value of products per acre, leaves an average annual return of \$11.26 per acre.

Students of the cost and products of irrigation will be interested to see, the close agreement in these items between the two adjoining Territories of Arizona and New Mexico, as shown in the following table:

	Arizona.	New Mexico.
Total irrigated acreage in crop.....	65,821	91,745
Total number of irrigators.....	1,075	3,085
Average size of irrigated farms in acres.....	61	30
First cost of water right per acre.....	\$7.67	\$5.58
Annual cost of water per acre.....	\$1.55	\$1.54
First cost per acre of preparation for cultivation.....	\$8.60	\$11.71
Present value of irrigated land, buildings, etc., per acre.....	\$43.63	\$50.98
Annual value of products per acre.....	\$13.92	\$12.80

Concerning the ownership of water in New Mexico, the bulletin makes the following significant remarks:

Although in the Mexican methods of controlling water there is much to criticize, there is nevertheless one fact which is worthy of commendation, and that is that the control of water is in the hands of the farmers. The general appearance of shiftlessness and the lack of progress are due rather to climatic and race characteristics than to the defects of the agricultural system, and there is no doubt that the security of water right has been insured by this common ownership of the chief source of agricultural wealth, viz., the running water. From many of the localities where the irrigators do not control the water, there come complaints of the exactions of the corporations that own the great canals. Not only are the annual assessments declared to be unreasonably heavy, but expensive water rights are said to have failed to furnish the promised supply to the parched and withering crops.

## ENTOMOLOGIST AT THE EXPERIMENT STATION.

The Regents of the University have appointed Mr. C. W. Woodward entomologist of the Arkansas Experiment Station as assistant in entomology on the staff of Director Hildgard of the University Experiment Station at Berkeley. Mr. Woodward is a young man of marked attainments in his line of work. He is a graduate of the University of Illinois and afterward studied with Dr. Hagen, the noted entomologist at Harvard. He has made a good record in experimental work in economic entomology, a branch of applied science in which he has the fullest faith and pursues with energy and enthusiasm. He will find an excellent field for his chosen specialty in this State and will do his best to prove his value to California producers.

## A Beautiful California Garden.

There is probably no spot in Southern California which can equal the floral garden of Mrs. T. B. Shepherd of Ventura. Travelers who have visited it say they have never seen in any one spot so many choice plants of all kinds growing in the open air all the year—they have seen wonderful and choice collections in hot-houses and greenhouses—but nothing so varied outside.

The garden occupies the greater part of a block, just east of the Rose hotel, and nestles close up to the hill which rises behind it. On the east side of the garden is a row of pepper trees which shelter it from that direction and

many rare plants, found only in the tropics or in green-houses. It is a wonder, this garden; and the wonder grows upon being told that all this rare lot of exotics simply grew out of doors all the year.

There is one house which is covered with rose vines, in which are growing many fine varieties, another overrun with passion vines. In one part of the garden is a variety of tomato trees, with its ripe and palatable fruit, a novelty in its way.

She has raised a set of ten seedling, large flowering French cannas—all very distinct and beautiful in form, color and foliage. One we noticed, a magnificent deep shaded red with immense trusses of flowers, the individual flower measuring five inches across, petals  $1\frac{1}{2}$  to  $1\frac{3}{4}$  inches across. Another with branching spikes resembling a scarlet candelabra, each in

since she first commenced her work, securing her varieties by cross-fertilizing the flowers and saving the seed. She now has about 500 large bulbs in 15 or 20 varieties, and 2400 seedlings grown from these.

Among the new plants which originated in this garden is the General Vandever fuchsia, named for our fellow-townsmen and member of Congress. This is a magnificent plant with rich green foliage and immense single flowers in wonderful profusion, a rampant grower. Another variety, Ipomoea "Heavenly Blue," a cross between Ipomoea Lear and Mina Lobata. The foliage is very large, heart-shaped, thick and light-green; flowers  $4\frac{1}{2}$  to 5 inches across, in large, airy clusters and of that indescribable heavenly blue so rarely seen in flowers. The throat is yellow inside, spreading softly into the line. In the morning about 10 o'clock no

for the cut-flower trade and for decorating, and by fall will be able to ship them in large quantities.—*Ventura Free Press.*

## The Buffalo Pitts Traction Engine.

The season of special activity in traction engines is at hand. It seems likely from the many uses to which engines of this sort can be put in California that they will become an all-the-year resort for the large-scale California farmer, but at present their chief sphere is found in harvesting our great grain crops. We have illustrated several styles of these engines and the engraving on this page shows the Buffalo Pitts Traction straw-burning engine, as especially built for the California trade, conducted by Baker & Hamilton of this city and Sacramento. The engraving gives an excellent idea of the de-

BUFALO PITTS TRACTION STRAW-BURNER—FOR PLOWING AND PULLING COMBINED HARVESTERS.

save from that shelter, the garden lies wholly exposed to the full force of the weather.

Some five years ago, Mrs. Shepherd began, in a small way, the cultivation of flowers, looking after all the details herself. She now occupies the half-block of land to its full capacity, and has besides five acres of land in the country, and an additional lot near by in town. She employs two men constantly about the garden and makes a practice of starting every slip and potting every plant herself. There are five lath houses, in addition to one recently built 41x27 feet in size; also a glass house 24 feet long.

Mrs. Shepherd has all these houses filled to overflowing with plants and flowers of endless variety. Upon entering the garden a person is struck with the hedge of bellotrope which borders the front and with a magnificent row of gold and bronze-hued foliage geraniums just back of it. Here and there through the garden are magnificent specimens of Pinsetta with their long crimson blossoms, some of which are 18 inches across, while the plant itself rises 12 feet high. Here are rare begonias, orchids (30 sorts) stag-horn ferns, roses amaryllis, thymus lanifolia, with violet blue glaxina-shaped blossoms, asparagus plumosus nanns and

dividual flower started out distinct from the stem; in color a rich orange scarlet with a yellow throat. Mrs. Shepherd considers her new set very valuable, and expects to offer them to the Eastern trade as soon as her stock will admit.

She gives much attention to the growing of new varieties of plants, and is continually experimenting in the crossing of begonias, amaryllis, cannas, etc. She grows bulbs and seeds in large quantities for the wholesale trade East, taking contracts in the spring for fall delivery.

Mrs. Shepherd superintends all her work and business herself; has entire charge of her green house, with the growing of plants from cuttings and seeds; writes all her business letters, which average 800 or 1000 a year.

She has recently made great improvements and added to her facilities for work, and has an immense stock of everything for the retail trade. She issues this year her third retail catalogue and her fourth wholesale trade list of bulbs, seeds and plants. Her specialties are calla lily bulbs, smilax seeds and oanna roots and seeds. She is also preparing to sell cyclamen bulbs in large quantities next season. She has been working up a stock of amaryllis

lovelier sight can be imagined than this climber, which is completely covered with bloom, so much so as to almost cover the foliage. Every one who sees it for the first time is filled with delight at its beauty, exclaiming, "That is the loveliest thing I ever saw." Then a fine carnation claims one's attention—"Desdemona," a large, regular, perfectly shaped flower; a beautiful light cherry color, exquisitely fragrant, and, as Mrs. Shepherd informs us, a perpetual bloomer, especially valuable in winter and spring. It never hursts; has long stems and is very healthy.

Mrs. Shepherd says that Ventura is peculiarly adapted to flower culture, owing to its perfect location. The cold wind from the north or east is warded off by the hills in the rear of the town, while the proximity of the sea keeps the atmosphere at an extremely even temperature. To appreciate the beauties of flower culture and the magnificent varieties which can be raised in Ventura, the garden spot of the world, Mrs. Shepherd's floral park should be visited.

Mrs. Shepherd is preparing to go largely into the growing of roses, carnations, violets, and various other flowers, with ferns, English ivy, palm leaves, cypresses, papyrus, smilax, etc.,

sign of the machine, three-quarter view, as the photographer would say, and in an advertisement on another page of this issue may be seen a near view which exhibits many important mechanical details.

The Buffalo Pitts Traction engine has been in use for some time in California for pulling combined harvesters, plowing, etc., and the manufacturers in their circular make the following claims for it: 1st, that it will pull any horse combined harvester built; 2d, that it will pull twelve 12-inch plows or more, according to condition of soil; 3d, that straw, wood, or coal can be used for fuel, and full steam maintained with either kind of fuel; 4th, by reason of its large horsepower, is a perfect engine for road hauling.

The circular to which we refer gives a very full and satisfactory description of the engine in all its parts, and should be carefully read by all interested in this class of machinery.

THE FIRST WATER MILL ever built was erected on the River Tiber, at Rome, A. D. 50. Windmills were in original use in the twelfth century. Tide mills were operated in Venice about 1708. Sawmills are said to have been in use at Augsburg, Germany, about 1332.

# AGRICULTURAL NOTES.

## CALIFORNIA.

### Butte.

**PLANT BETWEEN TREES.**—Biggs *Argus*: From the fact that in Ventura and other counties orchardists raise paying crops of beans, potatoes and other vegetables between the rows of trees in their orchards, we are led to believe that our horticulturists are not as well up in the secret of making ends meet as their brethren of the south. Beans are always a paying crop and no soil of the State will raise better beans than Butte county land, and not only beans, but potatoes, onions, peas, melons, sweet potatoes, beets, etc., all produce well and meet with ready sale. It will require but little more work to cultivate with the vegetables growing, and the income will pay all expenses while the trees are maturing.

**PALERMO'S FRUITS.**—*Progress*, May 8: Evidence of our hazy climate are rapidly becoming visible. Luscious strawberries and juicy looking cherries are in the local markets, while other fruits give evidence of fast-approaching maturity. The deep-green foliage of the orange trees is relieved here and there by clusters of white, waxy blossoms, which by fall will have developed into golden fruit. Their fragrance in the evening after a warm day is something superb and delightful to those who happen near them.

### Colusa.

**THE COST OF A GARDEN.**—*Williams Farmer*: Anyone who doubts that this country will produce garden vegetables in abundance and without irrigation, has only to call on Mr. Nelk to have all these doubts removed. He has trusted only to the productiveness of the soil and the moisture in the ground. The work he has done at odd times would not amount to two days' work, while the outlay in money for seeds was but one dollar. It has and will furnish his family with vegetables all summer. He says his bill for vegetables through the summer has always been nearly \$75, but this summer it is only two days work and \$1 in cash, while the vegetables are always fresh and good, none of the wilted, tough variety usually sold by peddlers.

### Contra Costa.

**A WELL ORDERED RAIN.**—*Antioch Ledger*: Our farmers have been blessed with another very opportune rain this week. It has come just in the nick of time and in a manner to do the least damage and the most good. This has been the record of all the rain storms this season—they have come every single time just when most needed. Grain has just begun to show the need of rain, but farmers were afraid to have it come, because April and May showers, generally do more damage than good. On Tuesday night, however, it began to rain just as though it was ordered for the purpose. It was a gentle, misty shower, and the moisture went to the roots without breaking and damaging the stalks. It was a well ordered rain and no mistake.

### El Dorado.

**CROP AND STOCK NOTE.**—*Shingle Spring Cor. Democrat*, May 9: Grain and fruit crops promise fair here. Some of the farmers have commenced to make hay. Stock men will soon make preparations for starting to their mountain pastures, unless we have a storm within the next two weeks, which of course would prevent them from starting for a few days later.

### Glenn.

**COLONIZING A LARGE TRACT.**—*Willows Journal*, May 9: A party of capitalists have organized a grand colony of 60 families for the Mille Tract, which is 9 miles west of Willows. Mr. Wm. Humius, manager of the sugar factory at Grand Island, Neb.; Robert Mack, San Francisco; and Fred Van Keester, member of the press, Amsterdam, Holland, who made the arrangements to colonize, were all in town last week and made a visit of inspection to the tract. Besides a prospective sugar factory, there will be fruit to dry and can and pack.

### Kern.

**FRUIT NOTES AT MIRAMONTE.**—*Cor. Bakersfield Californian*: This has been a splendid season at Miramonte for trees and vines. Everything set out has developed finely and the percentage of failures will be on an average less than three per cent. More French prunes were set out this spring than of other varieties; next in number White Adriatic figs, next Muscat grapes, and a few peaches, apricots, neotaries, etc. Older trees are making a fine growth. One-year-old apple, plum and apricot trees on Mr. Raymond's place have made from three to four and a half feet of new wood already, many of them having a little fruit. Mr. Hatch has many Muscat set out last year that have from 40 to 50 well-developed bunches of grapes, and there are but few vines that have less than 12 to 20. Mr. Kolb's vines of the same age are heavily loaded. This is surely a grand country for fruit, and being so independent as we are in the water question, our artesian wells flowing so abundantly, this, in a few years, should be a very beautiful and prosperous country.

At J. E. Smith's place, on the Weed Patch, this year's growth of the two-year-old grape stocks is enormous. The tendrils reach up to a man's arm-pits and have the dark rich green color which betokens luscious growth. His orange trees set out only last year are all in blossom.

## Los Angeles.

**SUMMER-FALLOW VS. BROADCAST CROPS.** *Esperanza Cor. Times*: Crops in this vicinity are spotted, but there will be enough raised for seed and feed next year. The curious feature is that wheat put in as it has done best in former years has proved the poorest this season, summer-fallow being an entire failure, while the latest, sown broadcast on fresh plowing has done best.

**STRAWBERRY SHIPMENTS.**—*Covina Argus*, May 9: Strawberry growers are kept busy these days. Robt. Baldrige and C. Vaughn are shipping from 700 to 1000 pounds per day each, while numerous small planters sell the shipments to large proportions. The late hot weather has brought the berries on with a rush. Thos. Griswold and Penn Barnes each report big yields.

**ORANGE PROFIT THIS YEAR.**—*Covina Argus*: Mr. D. H. Turner, living between Covina and Gladstone, hands us the returns from one acre of seedling oranges for this year, and we wish to say that the following statement is no guess-work, but absolutely reliable figures, being the exact amount of money received in cash from the one acre, and the liberal allowance for all labor performed for the year:

Cash received for fruit	\$635.00
Cash paid for water	3.75
Labor irrigating three days	4.50
Cultivating five days	15.00
Total expense	23.25
Net cash returns	\$611.75

Mr. Turner's land in this orchard looks like a sand heap and gravel-bed, and takes less labor and water than heavier soils, but the secret of its productiveness lies in the fact that the soil is not what it seems, but just under the sand which forms a mulch to retain the moisture is many feet of the fine soil of this region.

### Monterey.

**TWO THOUSAND FIVE HUNDRED ACRES TO SUGAR BEETS.**—*Castroville Enterprise*, May 8: J. B. H. Cooper has leased to Claus Spreckels 2500 more acres of his ranch at this place. The tract just rented lays between Cooper's switch and the river, and running toward town. It will be planted to beets next year.

**CROP PROSPECTS.**—*Salinas Democrat*, May 9: The present crop outlook is decidedly cheering. Around this city and down as far as Moss Landing it will be the best harvested for several years. The average crop throughout the county, both of wheat and barley, will be considerably in excess of that of last year. *San Lucas Cor. Democrat*: While many of the farmers are blue as a whetstone, one would imagine the crops of the farmers of Long Valley and Freeman's Flat have been "sun-struck," for the heat of last week has left its mark quite visible, and many fields are suffering. Crops on the Trescony grant, while not as promising as in past years, will make a fair yield, providing the hot winds do not come.

### Orange.

**FRUIT PROSPECTS.**—*Blade*, May 7: The fruit prospects, as reported by reliable heads of different sections of the country, are given in the following terse statements: Apricots, scattering; crop will not be more than one-fourth as large as it was last year; peaches, plentiful; prunes, abundant; pears, immense; apples, too early to predict—not in bloom; strawberries, moderately plentiful; blackberries, millions of them.

### San Joaquin.

**LODI STRAWBERRIES.**—*Lodi Sentinel*, May 9: The shipment of strawberries from Lodi for the week ending Thursday amounted to about 5000 pounds. The quality of the Lodi berry is second to none in the State and the yield is remarkably large. Those who have raised berries this year will increase their acreage next season, and a large number have signified their intention of engaging in the business. Messrs. Peirano, Cliff and Mason are the principal shippers from this point.

### Sacramento.

**SWARMS OF GRASSHOPPERS OR LOCUSTS.**—*Record Union*, May 11: After an absence of several years, grasshoppers, or locusts, have again made their appearance in swarms in the eastern portion of the county. About seven or eight years ago, they devastated the farms in the vicinity of Cochrin's and White Rock, between Folsom and Lodi, and did considerable damage, as in this direction, at Brighton. About White Rock the locusts were so thick as to block up the doorways of the farm-houses by the drifting process, being piled up in some places to a height of several feet. When they died, the stench was almost unbearable. Out in the fields, they stripped the vegetation, including the trees, of everything green, causing the country to look as if a sirocco had swept over it. Referring to their appearance in that locality, the *Folsom Telegraph* says: "Millions of them are destroying everything they can get hold of, and considerable alarm is felt over their appearance and the result of their visit. They came too late to do any great damage to the hay crop, which is nearly all in. Other things will surely suffer loss unless they disappear. Those that are here are, from what we can learn, very small, but they are voracious and have done a great deal of damage already. A few years ago they visited the State and caused great damage. There was no way to combat them." The insects are also operating in the vicinity of Cosumnes, according to the *Galt Gazette*, which says: "Millions of grasshoppers have appeared on the ranches along the

rich bottom lands of the Cosumnes. The destructive pests are reported to be moving in a southwesterly direction, and are playing havoc with corn patches, fruit trees, vines, grain crops, garden truck, and in fact everything green that comes in the path of their destruction. Much uneasiness is felt by the farmers and fruitmen near Howell's, and there is no telling the extent of the damage, should the grasshoppers keep on multiplying as they have in the past week."

### San Luis Obispo.

**STOCK NOTES.**—*Creston*, May 8: The plains men are beginning to send their fat stock to market. Some large droves from the Carls country are moving toward shipping-points. J. V. Webster started quite a drove of hogs cityward the past week.

**GRAIN, FRUIT AND GARDEN NOTES AROUND CRESTON.**—*Cor. Tribune*, May 8: The grain crop throughout this county is looking fine. Taken as a whole it is by far the best crop ever seen here. The crop on summer-fallowed land is heading out in good shape. The way the wheat crop looks now, both in healthy growth and a fair price, the grain farmers stand quite a good show of making both ends meet. The prospect for a bountiful yield of fruit is good. Orchards and vineyards are in fine condition. Fruit trees and vines are healthy and making a vigorous growth. Thorough cultivation has been given by all our fruit men to their ground this season. The wide-awake men and women of this section believe in doing good work toward the advancement of the county. We notice that they do not stand on a little outlay and work, but put forth their money and efforts to help develop the hidden wealth there is in the country. On J. V. Webster's place you will not only see fields of grain, fruit trees and vines, but a fine vegetable garden, and also a splendid array of flowering plants. It is a good thing to have a helpmeet who believes in beautifying the home grounds with beautiful flower gardens. So while J. V. is on an endless round, swinging around the circle, caring for others' interests, his better half is putting forth her efforts in making the home attractive. At J. G. Schroeder's we see a splendid flower garden in which is an array of pinks, verbenas, and a host of other flowering plants that would rejoice the heart of a professional. A fine vegetable garden is to be seen here, which clearly demonstrates that no farmer on lands in this section need to forego himself the pleasure of being the possessor of both vegetables and flowers, if he will only put forth the necessary effort to obtain them. A little outlay on every farm, put into a system of irrigation from wells would add many a necessity and comfort to the home.

**LARGE PLANTING OF PEANUTS.**—*Campbell Cor. Mail*: E. B. Lewis of San Jose has planted five acres of peanuts on his ranch, just south of the village. This is a new enterprise for this section, but there is no reason why it should not be successful.

### Santa Barbara.

**BEAN PLANTING.**—*Carpinteria Cor. Star*: Beans, beans, everybody is planting the California staple, and those of this section who are entitled to know say that this year's crop will supersede the production of the past several years.

### Santa Clara.

**A NEW WORM FRUIT PEST.**—*San Francisco Alta*, May 12: Many of the orchardists in the Santa Clara valley are considerably alarmed at the depredations of a worm something like a caterpillar, which has recently appeared. In the Willows district, near San Jose, and off on the hills toward Saratoga the damage is worst. It is said that many trees look as though bird-shot had riddled the tops. The branches in places have been eaten entirely barren of leaves. The worms vary from one to one and a half inches in length. They are not sluggish in movement like the average caterpillar. Mild paris green sprays they do not seem to mind, and the only cure remedy practiced thus far is individual extinction. When the trees are shaken hard, the worms fall and then they are crushed. The news of the depredations has had the effect of making all prune-growers resolve to sign no contracts for the disposal of their crops until they see the full extent of the damage. It is reported that as high as three cents a pound has been offered some growers and refused. The worm has troubled apricot trees somewhat, but not to the extent it has prunes.

### Solano.

**EARLY SHIPMENT OF APRICOTS.**—*Vacaville Enterprise*, May 9: G. W. Hinkley of the Sky-high ranch shipped yesterday by express to Porter Bros. & Co., Chicago, a ten-pound box of Royal apricots, the first of the season. Last year Mr. Hinkley shipped apricots May 10, which were sold for 50 cents per pound.

### Sonoma.

**FORESTVILLE FARM AND ORCHARD NOTE.**—*Cor. Democrat*: The torrid wave that swept over this section last week has given way to cool, foggy weather, with mist that nearly amounts to rain. Grain is making a wonderful growth, and some are afraid that it will fall, which is very probable if this continues. Fruits of most kinds are doing well generally, but we are threatened by a large army of caterpillars that has appeared on Wm. Hill's ranch, occupied by Mr. Marsh. I have not seen them but am told that they literally cover the trees, and devour everything available. Mr. W. N. Gladden, the Healdsburg Commissioner of

Horticulture and fruit pest inspector, visited some of the orchards here last week, the object being to observe the effect of the different kinds of disinfectants used for the destruction of scale insects. Some have commenced to plant corn. Siphoning grapevines is in order now; this weather will develop mildew.

### Stanislaus.

**GRAIN CROP PROSPECTS.**—*Modesto Herald*, May 7: From interviews held with farmers from various parts of the county during the past week, we hear the cry that the grain crop has been seriously injured by the late hot dry weather. The early crop, in some localities, is reported to be out off at least one-half. It is to be hoped that later developments may prove that the damage to the crop is not so great as has been estimated.

### Sutter.

**AN OBNOXIOUS WEED.**—*Farmer*, May 8: We notice this season that many farmers are making an extra effort to get rid of the mustard in their fields. This weed is one of the worst enemies to growing grain and increases rapidly when allowed to go to seed. Many have employed large gangs of men to go into the fields and pull the mustard up by the roots, which destroys it at once. This seems to be the best plan when it is scattered through the fields, but where it is very thick some are using headers which cut off the tops of the weed and prevent it from seeding. Great care should be taken not to allow the weed to spread, as it destroys the growth of the grain and makes the product unsalable as seed. No one will buy wheat or barley for seed which contains any mustard. The mustard is now in full bloom and should be destroyed at once.

### Tulare.

**GRAIN CROP PROSPECTS.**—*Visalia Delta*, May 8: Grain crops in the south central are almost a total failure. In a few places only will it be possible to secure even a partial crop of grain. Several fields will produce a half crop of hay, and a larger number will return nothing to the farmer. The eastern part of the valley and the foothill region fare better, also the northern portion. In some localities, the yield will be large. On the West Side, with the exception of one or two small patches, the crops are a total failure. The north central part of the county will have fair crops, and in the Lucerne region, they are above the average. It is impossible to form an estimate of the probable yield at the present time, the crops being in most places more backward than usual at this season.

**WANTS THE BEE DECLARED A NUISANCE.**—*Visalia*, May 6: One hundred and twenty-three citizens of Lucerne township petitioned the Board of Supervisors, at its April term, to declare the honey bee a nuisance, claiming that the bee worked destruction to the raisin industry. As to whether honey bees do work an injury to the fruit and raisin industry, it is a question on which scientists and horticulturists have often differed, and the matter has never been clearly decided either in the negative or affirmative. There are men in this county, however, who in early times settled on land that later proved to contain too much alkali to be farmed with a profit, and it is on such lands that men have engaged in the bee industry, and thus maintained their families. These men cannot go to the hills, because the cattle men will not allow intruders to settle on their range.

**CATTLE FOR IDAHO.**—*Visalia Times*, May 7: Two trainloads of cattle left yesterday for Winnemucca, to be taken from that place to Idaho. One train had about 300 head belonging to Commodore Murray and R. H. Stevens. The second trainload and a portion of the first contained cattle belonging to Richard Chatten and Henry Fulgham, and consisted of about 800 head.

**SHORT HAY CROP.**—*Visalia Delta*, May 8: Haying has started in for the season, but there is very little hay to cut this year compared to former years, and the horse feed will no doubt go up.

### Yolo.

**CROP PROSPECTS.**—*Davisville Cor. Express*, May 9: The crops have been improving with the warm weather and showers. The rain this week has been a bountiful help. It will improve much of the winter-sown grain, which has been rather backward. There are some fine fields of grain as one would wish to see, but the great body of the winter-sown will not be extra in its yield. If grain continues to hold up and advance, there will be a shortage on hay, as the farmers will reserve every acre for grain that promises a reasonable yield.

### Yuba.

**COMPETING FOR EARLY HOPS.**—*Four Corners*: For the past two years Wheatland has made the first carload shipments of hops on the Pacific Coast, but Sacramento county has been the first with a few bales. This early movement of Sacramento was occasioned by a few vines which a grower had planted in an extra warm nook next to a levee. Wheatland will next year compete for the first bale as well as the first carload shipments, as one of our growers has planted in a fertile spot about a quarter of an acre of vines which are doing nicely. From indication, they will burr out inside of the next three weeks; if such is the case, the hops on the vines will be ready for picking two or three weeks before the yards.

**GRAIN SCARC.**—*Wheatland*, May 9: Barley is a very scarce article in this neighborhood. The Mill Company has been obliged to order several carloads from the San Joaquin valley.

## Microbes and Disease.

Pasteur was among the first to take up and study the subject of the germ origin of disease. His specialty was hydrophobia. He held that a certain kind of disease germ, when numerously developed in a dog, produced hydrophobia, and that such germ might be communicated by the saliva; but, contrary to the later observed action of microbes, the hydrophobia germs lost their power of communicating their particular disorder (rabies) on becoming dry.

Dr. Henry Gibbons, in a recent lecture at the Cooper Medical College in this city, when speaking of the origin of microbes, remarked that all dead animal and vegetable substances tend to decomposition, creating foul odors and gases and developing microbes. Some of the microbe germs and spores caused by putrefaction would survive boiling in water. Certain of these germs are so small that 28,000,000,000 of them are found in a single drop of water. A drop of water will contain more of these little animals than there are inhabitants on the globe. Enough of them would be germinated in a few days to fill the great oceans, if they all survived. Fortunately they die young.

False ideas prevail regarding antiseptics and disinfectants. Many of the popular liquids merely destroy bad smells by worse odors. Boiling water and heated moisture are among the best and cheapest disinfectants. Heat will destroy the germs of scarlet fever and small-pox. Spores when dried are exceedingly hard to kill. Some will survive boiling water.

ability of rendering the tissues unsuitable for the growth of organisms after their entrance into the system, he cautioned his audience not to be carried away too hastily by Koch's or Liebreich's methods of treatment for tuberculosis.

As a word of caution to accompany the above we give the following paragraph from the pen of a writer in a New York journal who, in commenting upon the report of the *Lancet*, says: "The remedy proposed for ordinary throat and nose diseases may be worthy the consideration of physicians who have cases of la grippe under their charge. It is a fact that the latter disease is very prevalent in a great many of our populous places, and that it seriously affects the nose, throat and respiratory organs, and it is not improbable that the cause may be produced by some form of bacteria which the remedy proposed may relieve. But persons should beware of the use of carbolic acid in the manner suggested, except under the direction of a skillful physician."

**CURIOUS ACCIDENTS.**—Mrs. Eliza Foster, 59 years, of Philadelphia, recently fractured a rib while trying on a pair of boots at a shoe store. As Mrs. Foster was pulling one of the boots on her foot a crack was heard, and she complained of great pain. She was taken to the hospital. Here, says the *Philadelphia Press*, is the 45th case of the kind known to the medical profession. Another remarkable case is reported of a needle which had found its way into the body of a Springfield, Mo., woman and which after a devious experience and travel of 35 years, came out through her side the other day. The needle had lost its temper and was as pliable as a piece of wire. Still another, a wonderful case, of a Pennsylvania woman, 79

## THE PUBLIC LANDS.

## Cutting Timber on Public Lands.

## It May Be Done for Certain Purposes.

Commissioner Carter of the General Land Office, with the approval of Secretary Noble, has issued to registrars and receivers an important circular letter of instructions which shall govern in carrying into effect the sections of the General Land Act of March 3, 1891, relating to the cutting of timber from public lands. These sections only apply to the States of Colorado, Montana, Idaho, North Dakota, Wyoming and Nevada, the Territory of Utah and the District of Alaska.

The important features of the circular are as follows: "Settlers upon public lands, miners, farmers and other bona fide residents in either of the States, District or Territory named in this Act, who have not a sufficient supply of timber on their own claims or lands for firewood, fencing or building purposes, or for necessary use in developing the mineral or other natural resources of the lands owned or occupied by them, are permitted to procure timber from the public lands strictly for the purposes enumerated in this section, but not for the sale or disposal or use on other lands or by other persons; but this section shall not be construed to give the right to cut timber on any appropriated or reserved public lands, and the Secretary of the Interior reserves the right to prescribe and revoke such privileges.

"Persons, firms or corporations who desire to cut timber from the public lands for the purposes of merchandise, or for any other use whatsoever other than as defined in sections

it has been officially granted by the Secretary of the Interior, will render the party so offending liable to prosecution for trespass and subject his application to rejection.

"Sawmill owners, lumber-dealers and others, who in any manner cause or procure timber to be cut or removed from any public lands in violation of law, or these rules and regulations, whether directly or by men in their employ, or indirectly through contract or by purchase, are equally guilty of trespass with individuals who actually cut or remove such timber and are alike liable to criminal prosecution."

## The Cruiser Monterey.

## Description of a New Floating Fort.

An engraving is given on this page of the new double-turreted, twin-screw, armored coast defense vessel *Monterey*, recently launched from the yard of the Union Iron Works, in the presence of President Harrison and party. Mrs. Harrison touched the electric button which released the vessel from the ways. The *Monterey* is a low-sided vessel, as her picture shows, but she is powerful and strong, being well equipped for coast and harbor defense.

The contract for the construction of the vessel was awarded to the Union Iron Works June 4, 1889, and she makes the third man-of-war of the new navy launched from the ways of that enterprising firm.

The general dimensions are as follows: Length over all, 261 feet; load water line, 256 feet; extreme breadth, 59 feet; mean draft, 14 feet 6 inches; displacement, 4000 tons; displacement in fighting time, 4486 tons; armor belt amidships, 13 inches thick; indicated horse power of engines, 5400, estimated speed, 16 knots. The *Monterey* is constructed entirely of

THE NEW ARMORED COAST DEFENSE VESSEL MONTEREY.

Enforced cleanliness and soap and water are a preventive, but beyond them powerful disinfectants are also necessary.

Modern research seems to show that nearly or quite every disease has its peculiar microbe, the germs of which may lay dormant in the system until some peculiar condition is present under which they may be developed. The same peculiar condition may also render the system susceptible to their entrance from without.

## The Relation of Microbes to Nose and Throat Diseases.

At a recent meeting of a British Medical Association, Dr. John MacIntyre, of Glasgow, Scotland, gave an interesting lecture on the relation of bacteriology, to diseases of the nose and throat. In the course of his lecture as reported in the *London Lancet* the doctor discussed the general facts concerning bacteriology, such as classification, vital phenomena, etc., and stated the arguments for and against the vitalistic theory of disease. He demonstrated a large number of specimens of well known forms of micro-organisms under the microscope, as well as numerous microphotographs on the screen, and made special reference to those of interest in throat and nose work. He showed several found in the mouth and nose of healthy people, which are apparently harmless, and others found in diseases where there is decomposing material such as in ozæna. He referred to the specific forms found in diseases of the lower part of the respiratory tract, as tubercle, lnpna, diphtheria, pneumonia, and suppurative diseases.

Lastly, he discussed the question how protection was to be got from the diseases associated with micro-organisms, noting the result of inoculation. He explained some interesting experiments recently made in Glasgow with reference to the hypodermic injection of chemically pure carbolic acid, which he thought bade fair to demonstrate the possibility of rendering the effects of certain micro-organisms inoperative within the body. In considering the pos-

years old, has recently been reported. The woman who had been bent double with rheumatism for many years, and was two-thirds of the time confined to her bed, is said to have been completely cured by the fright caused by discovering a snake in the chimney. She is now entirely free from pain and is as erect and agile as a woman of 20.

## The Tobacco Crop.

The Census Office has issued a statement of the acreage and yield of tobacco for the year 1889, showing an increase over the last census of 55,223 acres and 19,052,440 pounds. The amount produced in Kentucky has increased over 54,000,000 pounds, and there has also been a substantial increase in North Carolina, Tennessee, Ohio, New York and Wisconsin. On the other hand, there has been a more or less serious falling off in Virginia, Maryland, Connecticut, Massachusetts, Pennsylvania and Missouri. The figures are liable to slight modification in the final revision, which has yet to be made, their publication having been hastened in order that they may be of service to the tobacco planters of the country for the coming season. The statement is based on the returns sent in by enumerators, supplemented by an extensive correspondence and considerable field work, which has been conducted by Prof. Thos. N. Conrad, under the general supervision of Mr. John Hyde, Special Agent in charge of the Division of Agriculture "A." The total product of the United States for the years named is as follows:

	Acres.	Pounds.
1879	638,841	472,661,158
1889	694,064	491,713,598

The State of California is credited with 84 acres and 73,317 pounds in 1879; 26 acres and 12,909 pounds in 1889. Though a decrease is thus shown, there is perhaps a wider general interest in the crop, as the application for tobacco seed offered by the University last winter shows.

2, 3 and 4 of these regulations, must first submit an application therefor to the Secretary of the Interior, designating the lands by sections, township and range, if surveyed, and if not surveyed describing the land by natural boundaries, and the estimated number of acres therein. They must also define the character of the land and the kinds of trees or timber growing thereon, giving an estimate as to the quantity of each kind, stating which particular kind or kinds they desire authority to cut or remove, and the specified purpose or purposes for which the timber or product thereof are required. The application must be sworn to and witnessed by not less than four reliable and responsible citizens of the State, District or Territory in which the land is situated, and who reside in the locality of the particular land described. The petitioner or petitioners should also submit with the application such evidence as can be procured to conclusively show that the preservation of trees or timber on the land described is not required for the public good, but that its use as lumber or other produce, and for the purposes named in the application, is a public necessity, and if deemed for the public interest the desired permission will be granted.

"In order that farmers who desire to have forests preserved in the interest of a water supply for irrigation, and all others having adverse interests, may have due notice of such application, the parties making application shall cause to be published, at least once a week for three consecutive weeks, in a newspaper of general circulation in the State, District or Territory, and also in a newspaper in the county, or, where there is more than one county, in each of the counties wherein the lands are situated, and a printed copy of the published notices must be submitted with the application, together with the affidavits of the publisher or foreman of each newspaper attached thereto, showing the same was successively inserted the requisite number of times and the dates thereof.

"The cutting or removing of any timber from the public lands described in the application by or for the applicant, before his author-

steel and has a double bottom throughout, there being 110 water-tight compartments in her hull that can readily be filled with water, submerging the vessel until only about one foot of her sides shows above water.

The *Monterey* is the first ship of the United States Navy fitted with the Ward sectional boilers. They were found after exhaustive trials and experiments by the Navy Department to be the best type adapted for use on coast defense vessels. Much of their merit lies in the small space they occupy, together with speedy steam generation, economic consumption of fuel and the easy manner with which repairs can be made in case of accident.

The engines, boilers, and magazines, in fact all the machinery will be well protected by armor, 16 inches in thickness, rendering their safety almost certain from the inroads of hostile projectiles.

It will easily be seen that with the completion of "Cruiser No. 6," the "Oregon" and the double turreted monitor, "Monadnock," together with those already built and in commission, San Francisco will soon be able to turn out a fleet of war vessels, well able to protect herself and the California coast.

**INDIVIDUALIZING.**—Never, since the "world began" says a cotemporary, did the individual man do his own thinking, as he is now doing it. This may bring chaos for a time, for man in a new role does not always act wisely. The labor question is being pushed too rapidly, and disaster for a time may be the result. The manufacturers may be compelled to organize for self-protection as in Australia; then the laborer will suffer. The labor leader never required the wisdom that he does now, not only to gain the greatest benefit at the least cost for those he leads, but even for self-preservation. The day of the cheap politician is rapidly passing, and the voters are looking for men and not cheap clap-trap. They are not turning grindstones so much as they were, and the party leaders will be as helpless as a barrel in a whirlpool before 1892.

**D**ON'T think that you run any risk in sending to WEINSTOCK, LUBIN & Co. for anything you may need. Goods not as ordered are returnable at *their* expense. That is one reason why they try so hard to have things just right the first time.

**D**ON'T imagine that there is anything mysterious or bothersome about ordering goods by mail. It's as simple as A. B. C. Some few hints as to sending money, etc., will be found on page one of WEINSTOCK, LUBIN & Co's Catalogue. Free to any address.

## WEINSTOCK, LUBIN & Co.

## FLORIST AND GARDENER.

### Commercial Floriculture.

We have just received from Hon. Mortimer Whitehead, in charge of Division "B" of the census of 1890, a bulletin containing a most interesting and valuable report on Commercial Floriculture, from which we quote as follows:

While flowers and flowering plants were grown for sale to a very limited extent in this country 100 years ago, the business of the commercial florist has made the greater part of its development during the past 25 years, and the larger proportion of this business the past ten years.

After inquiry of every florist in the United States, the report indicates that there was but one commercial florist in the year 1800, and only three establishments started between 1810 and 1820; eight more were started in the next decade, 25 in the next, followed by 45 between 1840 and 1850, 96 between 1850 and 1860, 313 between 1860 and 1870, 998 between 1870 and 1880, and 1797 between 1880 and 1890.

The dates of establishment in business of 72 per cent of the florists have been traced, and judging from these it will be seen that 80 per cent of the whole business has been developed during the past 25 years. The business being of so comparatively recent development, and never before having been brought within the scope of census statistics, there have naturally been many obstacles in the way of making a complete report. The florists have generally responded with remarkable clearness, and while some have not given all the information desired, and a few have failed to respond even to many repeated requests, it is believed that the figures given fairly represent the business at the present time.

Floral establishments were found in every State and Territory except Idaho, Nevada, Indian Territory and Oklahoma, and while there is a possibility that there may be some small establishments in those places, the most careful inquiry has failed to find them thus far. In the United States there were 4659 floral establishments in the census year, 312 of which were owned and conducted by women. The total feet of glass in use in all these establishments was 38,823,247, and the establishments, including fixtures and heating apparatus, were valued at \$38,355,722.43. The value of tools and implements used was \$1,587,693.93. There were employed 16,847 men and 1958 women, the combined annual wages amounting to \$8,483,657. Fuel cost was \$1,160,152.66; 3,425,600 wholesale and 17,630,094 retail catalogues are annually issued, while \$767,438.21 was paid for postage, \$1,161,168.31 for advertising, \$534,221.86 for freight, and \$554,390.55 for express bills.

The total products were 49,056,253 roses, 38,380,872 hardy plants and shrubs, and 152,835,292 of all other plants, the value of which was \$12,036,477.76, and out flowers to the amount of \$14,175,328.01 were reported as sold.

The greatest area of glass in any one establishment reported was 150,000 square feet and the smallest 60 square feet, the latter a cozy attachment to the sitting-room of a New England farm-house, from which the lady of the house sells annually \$35 to \$50 worth of plants and flowers.

There are in the United States 965 State and local floral societies and clubs, besides the Society of American Florists, and to these and the more than 358 horticultural societies, combined with the educational influences of the agricultural and horticultural press, is largely due the rapidly growing taste for flowers and their culture, so plainly indicated by the figures of this report.

The statistics here given have been obtained direct from the florists themselves in answer to questions sent them on special schedules, by personal visitation and by combined efforts of some of the florists' clubs. The California State Floral Society went so far as to aid in the good work by appointing a special committee and making a careful canvass of the whole State, and the Census Office investigations fully corroborate the thoroughness of their work.

The following table shows, by States, the number of florists' establishments, number owned by women, largest and smallest greenhouse in each State, total square feet of glass, area of land cultivated, value of tools and implements, and total value of the establishments. New Jersey, situated as it is between the New York and Philadelphia city markets, makes the largest showing of any State in the Union in proportion to its size.

#### Statistics.

From the elaborate tables found in the census bulletin, we compile the following statement:

	U. S.	California.
No. florists' establishments.	4,659	150
Do. owned by women.	312	18
Square ft. of glass.	38,823,247	610,622
Acres cultivated.	12,161	423
Value tools, etc.	\$1,587,693	\$26,210
Value of establishments.	\$38,355,722	\$500,816
Men employed.	16,847	1,047
Wages paid men.	\$7,954,827	\$171,150
Women employed.	1,958	150
Wages paid women.	\$823,830	\$80,750
Roses propagated.	49,056,253	84,025
Hardy plants do.	38,380,872	3,665,300
All other plants do.	152,835,292	1,003,000
Plant sales.	\$12,036,477	\$1,548,883
Out flower sales.	\$14,175,328	\$150,000

#### Productions and Sales.

In this investigation it was found unadvisable to attempt to ascertain the number of plants propagated and sold of each variety, and therefore the inquiries were grouped under three heads: roses, hardy plants and shrubs, and all other plants, and under these heads most of the florists were able to furnish a complete statement of their business. Roses, both the plants and bloom, appear to be in the greatest demand. One firm making a specialty of rose propagation reports having sold 1,000,000 plants in 1889. Their plants were mostly small ones, grown in 2½-inch pots, sent out by mail all over the country, and delivered promptly and in good condition.

Other florists make a specialty of the rose for the production of cut flowers. Others, again, grow only carnations or violets, and wholesale their productions to the retail florists in cities. Still others grow a variety of both plants and cut flowers, and wholesale most of the entire product; and, in fact, this is the business of nearly all the large establishments, while the medium ones, of from 1500 to 5000 square feet of glass area, do mostly local business, largely at retail, of both plants and flowers. Many of these florists also do a considerable business in the spring season in the arrangement and planting of both public and private grounds, and especially is this the case with florists located near the summer resorts.

Of the plants sold the demand in the northern and eastern States is greatest for geraniums, coleus, roses, pansies, verbenas, heliotropes, carnations, chrysanthemums, palms, ferns, and fuchsias, nearly in the order named. In the south the demand is for roses, chrysanthemums, geraniums, coleus, palms and ferns, while California shows the demand to be largest for roses, carnations, chrysanthemums, geraniums, palms and pansies. There is also a very general and growing demand for aquatic plants, and specialists are giving marked attention to this branch of the business. Regarding cut-flower sales, reports show that, while there is a slight variation in the demands of the different markets, the greatest demand everywhere is for roses, followed closely by carnations. These two furnish about 65 per cent in value of all cut flowers sold. Violets, chrysanthemums, lilies, hyacinths, smilax, bonvardia, heliotropes, pansies and tulips, in the order named, supply 25 per cent more, while the other 10 per cent is made of orchids, tuberose, mignonette, primroses, camellias, daffodils, and many others cultivated in a small way to supply a special or local demand. In the final report it will be the endeavor to give a detailed statement regarding each class of production, insect enemies, remedies, etc. As to the profits in the business from the different classes of plants, 80 per cent of the reports mention roses as most profitable, carnations second, and violets third, while 20 per cent rank carnations first, roses second and violets third.

From the figures and statements contained in this bulletin it will be seen that this industry is in a healthy and prosperous condition, giving employment to thousands of persons and fair rewards for capital invested, in addition to which it is doing much toward the adornment of the homes and the elevation of the taste of people of all classes.

#### OF INTEREST TO BUTTER MAKERS.

The gold medal for the best butter at the Paris World's Exposition was awarded to Moulton Brothers, of West Randolph, Vt. In making this butter Wells, Richardson & Co's Improved Butter Color was used. This award has largely increased the sale of the Improved Butter Color, for every progressive dairyman wants to use the best. Don't let your dealer sell you other kinds on which he makes a larger profit.

No dairyman can afford to be without it, for it is unequalled in strength and natural June color. Send three 2ct. stamps to Wells, Richardson & Co., Burlington, Vt., for postage and packing of a sample bottle (to color 60 pounds), and see for yourselves how far ahead it is of ordinary butter color. If you never colored your butter, this article will increase its value several cents a pound.

#### TO CANE AND FRUIT GROWERS.

The attention of our readers is called to the two advertisements of the Blymer Iron Works Co., of Cincinnati, Ohio, which appear in this issue. Their Victor and Niles Mills and Cook Evaporators for Sugar Cane and Sorghum, have for many years been looked upon as Standard Machinery in all sections of the world where cane is grown. The "Zimmerman" Evaporators for Fruits and Vegetables have the same world-wide reputation. Parties in want of Cane or Fruit Machinery will do well to send for catalogue and prices.

#### ORANGE PLANTERS

Should read the advertisement of the Aloha Nurseries. The best varieties are offered at rates so low that no one need hesitate about planting for experiment, or for investment in places where the orange is known to thrive.

\$500,000

TO LOAN IN ANY AMOUNT AT THE VERY LOWEST market rate of interest on approved security in Farming Lands. A. SCHULLER, Room 8, 420 California St., San Francisco.

\$3,250,000

TO LOAN ON MORTGAGE ON RANCHES AND CITY real estate below market rates. HOWE & KIMBALL, 508 California St., S. F.

PLEASANTON seems a charming rural town. The Rose hotel, we understand, will accommodate many summer boarders, and at very reasonable rates.

Use "Suicide" Gopher Traps. They are the best. See advertisement in this paper.

## The Use Of

Harsh, drastic purgatives to relieve costiveness is a dangerous practice, and more liable to fasten the disease on the patient than to cure it. What is needed is a medicine that, in effectually opening the bowels, corrects the costive habit and establishes a natural daily action. Such an aperient is found in

### Ayer's Pills,

which, while thorough in action, strengthen as well as stimulate the bowels and excretory organs.

"For eight years I was afflicted with constipation, which at last became so bad that the doctors could do no more for me. Then I began to take Ayer's Pills, and soon the bowels became regular and natural in their movements. I am now in excellent health."—Wm. H. DeLancett, Dorset, Ont.

"When I feel the need of a cathartic, I take Ayer's Pills, and find them to be more

### Effective

than any other pill I ever took."—Mrs. B. C. Grubb, Burwellville, Va.

"For years I have been subject to constipation and nervous headaches, caused by derangement of the liver. After taking various remedies, I have become convinced that Ayer's Pills are the best. They have never failed to relieve my bilious attacks in a short time; and I am sure my system retains its tone longer after the use of these Pills, than has been the case with any other medicine I have tried."—H. S. Sledge, Weimar, Texas.

20,000 will be sold in '91

THESE FIGURES TELL THE STORY OF THE EVER-GROWING, EVER-GOING, EVERLASTING Steel AERMOTOR Where one goes others follow, and "WE TAKE THE COUNTRY"

This unprecedented success is due to:  
1st. To the fact that before commencing the manufacture, exhaustive scientific investigation and experiments were made by a skilled mechanical engineer, in which over 5,000 dynamometer tests were made on 81 different forms of wheels, propelled by artificial and therefore uniform wind, by which were settled definitely many questions relating to the proper speed of wheel, the best form, angle, curvature and amount of all surface the resistance of air to rotation, obstructions in the wheel, such as heavy wooden arms, obstructions before the wheel, as in the vaneless mill, and numerous other more abstruse, though not less important questions. These investigations proved that the power of the best wind wheel could be doubled, and the AERMOTOR daily demonstrates it has been done.  
2d. To the liberal policy of the Aermotor Company, that it fulfills its goods satisfactorily or pays freight both ways, and 3d. To the enormous output of its factory which has made possible a reduction of prices so that it fulfills the best article at less than the poorest is sold for.  
If you want a firm Fixed Tower made of Strong, Stiff Steel, and a Wheel that will last you less than wood, and last to times as long—IF YOU WANT THE TOWER YOU DON'T HAVE TO CLIMB THE TOWER, and THE WHEEL THAT RUNS when all others STAND STILL, or if you want a wheel that will churn, grind, cut feed, pump water, turn grindstone & saw wood, etc. A FIXED AERMOTOR THAT WILL DO THE WORK OF FOUR HORSES AT THE COST OF ONE (\$100) write for copiously illustrated printed matter, showing every conceivable phase of Windmill construction and work, to the AERMOTOR CO., Rockwell & Millard, San Francisco, Cal., U. S. A., or Branch, 12 Main St., San Francisco, Cal., U. S. A.

### "Neponset" Waterproof Paper. NEPONSET MILLS.

THESE PAPERS are guaranteed to be absolutely waterproof, all-weather and odorless. For sheathing and lining of buildings; for roofing of factories, storehouses and farm buildings. They are entirely unaffected by heat, cold, snow or rain.

"NEPONSET" SHEATHING (color black). NO. 1 "NEPONSET" ROPE ROOFING (color terra cotta). NO. 2 "NEPONSET" ROPE ROOFING (color terra cotta).

These papers are in rolls 36 inches wide, and they contain either 250 or 500 square feet per roll, and weigh about 20 or 40 pounds per roll, respectively.

Unquestionably the Best  
Mower and Reaper  
Sold on the Coast.

## CHAMPION RAKE.

WHY IT TAKES THE LEAD.

It has our patent tooth to PREVENT SCRATCHING.  
It has NO SPRINGS to get out of order.  
It RUNS BACKWARD as well as forward.  
It has NO JAR ON THE THILLS in dumping.  
Its thills work as freely as those on a carriage.  
It will NOT SCRATCH UP FINE SEEDING in harvest field.  
It is WORTH TEN TIMES THE EXTRA COST.

It costs more than Rakes with ordinary teeth, but is WORTH TEN TIMES THE EXTRA COST.  
It will run over trash lying on the ground, and leave it there.  
It will rake barley, rye, oats, Hungarian and millet free from dirt.  
It is so easily managed that a boy who can drive a horse can use it as well as a strong man.  
It can be held down to MAKE VERY LARGE WINDROWS, or bunch them up.  
It has an OSCILLATING CLEANER THAT KEEPS THE HAY FROM ROLLING and working out at both ends into the wheels.  
It will rake "scatterings" perfectly, because the cleaner keeps the hay from rolling.  
It is very easy to keep up the teeth after going over a windrow.  
It packs the windrow, leaving it in good shape for rolling up or pitching.  
It dumps DAMP PART OF WINDROW ON TOP, and saves use of hay tedder.  
It can rake the heaviest grass that grows, as soon as cut.  
It will give better satisfaction than any other rake sold in this country.

## Yolo and Solano Notes.

EDITORS PRESS:—Since my last communication from Woodland, I have visited other portions of Yolo county, and noted some of my observations.

I found a very hopeful feeling prevalent among the fruit-growers of the Capay district. The valley proper is about 20 miles long, will average one mile in width, and is drained by Cache creek. Outside of the level valley lands are a succession of rolling hills, equally as well adapted to fruit trees and vines, but most of which are yet used for grazing purposes. I had no opportunity to explore the valley at full length, but through the courtesy of Mr. J. R. Parker, whose ranch of 3000 acres extends into the foothills, I was furnished a horse to ride to the summit of a high hill, whence I could view the entire valley. The scene from this commanding position was one of rare beauty. The squares of waving grain, the meadows of rich emerald hue, the cultivated fields, fine orchards and vineyards, interspersed occasionally with neat cottages and some pretentious farm buildings, the whole set off with the tree-studded hills of the Coast Range for a background, was certainly pleasing to behold. From the progress being made by orchardists in the Capay district, another decade will scarcely elapse before its fame will be widely extended. It is claimed to be next to the earliest fruit region of the State, and equal to any in quality of its productions.

## The Tancard Colony.

It is said, planted 35,000 fruit trees this year. The Clear Lake & Vacaville R. R. extends to the head of the valley, affording settlers a means of speedy ingress and egress, and freight transit.

About the largest vineyard I visited is called the Orleans, situated three miles south of the village of Capay. From Mr. C. A. A. Silherstein, the manager, I learned that the estate consists of 1600 acres, 580 of which are in vines, and 80 acres planted with fruit trees, principally prunes, some oranges, lemons and olives. Arpad, Harazthy & Co. are the proprietors. Mr. Silherstein is of an investigating turn of mind, has made numerous experiments in fruit and vine culture and wine manufacture, and kindly promised to acquaint your readers with some of his more important deductions as occasion offers.

From Mr. G. W. Chapman, midway from Madison to Winters, I derived much information regarding the earlier history of this portion of the county. Some of these facts were made use of in a brief article on "Sheep-raising in Yolo County," published in your last issue. A visit to the estate of S. Wolfskill,

## Solano County.

Will prove interesting to some people. The original grant consisted of 17,555 acres located in the year 1848. On the portion of the grant occupied by Mrs. M. A. Wolfskill may be seen four date trees which it is said bore the first fruit of the palm in California. I was shown some fine specimens of the Eastern black walnut tree, remarkable for size according to age, the one being measured in my presence had a diameter of four and a half feet—said to have been planted in 1860. The place also contains many large olive trees. The soil tributary to Putah Creek on which the above farm is located has probably no superior in the State for tree growing, being a very deep alluvial deposit.

En route to Vacaville I had occasion to stop at Mrs. G. M. Blake's farm in Pleasant Valley. The place contains 200 acres in bearing orchard and is efficiently managed by L. McKinstry, who will probably favor the PRESS during the year with the result of his horticultural investigations.

Pleasant Valley is situated northwest of Vacaville, is six or eight miles in length, and is justly praised for its picturesqueness as well as the healthfulness of its home-like homes. A few years more of the present activity in orchard extension will serve to make the whole valley a solid orchard.

## Far-Famed Vacaville

Still claims the ribbon as the earliest fruit region of the State. Late ripe cherries at the orchard of W. W. Smith, Esq., on the 19th of April. It was my pleasure to partake of the hospitality of this gentleman and his family on that date. Mr. Smith's orchard consists of 200 acres, mostly cherries. I also tested oranges grown on the place that I venture to say would be hard to excel anywhere.

Among the principal and most successful fruit-growers of Vacaville, the Buok family figures conspicuously, and it is claimed they have done a fair share toward extending its horticultural fame; but as authority on the propagation of the cherry, about all seem ready to yield the palm to the Bassfords. Whether it is their hobby or not, one thing is certain, success has attended their efforts in producing one of the thriftiest and most productive orchards in the State. I remained over night with J. M. Bassford, Sr., whom I found to be ripe with practical experience and a most genial companion. In reference to cherry culture, I noted Mr. Bassford's experience taught him that the soil of Vacaville lacked sufficient iron for the cherry, and to supply which copperas strewn at the roots of the tree proves an effectual remedy.

I paid a flying visit to Birds Landing about the middle of April and was royally entertained at the homes of Messrs. A. Mason and

J. H. Bullard, both of whom are staunch friends of the RURAL PRESS. Its legal representatives, I was assured, will always find their latch-strings hanging on the outside.

F. B. L.

**ALLIGATOR AND CROCODILE.**—It is said that only five crocodiles have ever been captured in Florida, although alligators are numerous. One difference between the two is that the crocodile works his upper jaw, while the alligator snaps a man in two with his lower jaw.—*Ex.* The alligator and crocodile are both of the same family, which includes three genera, the *Gavialis*, *Crocodilus* and *Alligator*. The type of the first is the "gavial" of India, the second the "crocodile" of Egypt and the third the "alligator" of America. The last named is peculiar to this continent. It was first discovered by the early Spanish voyagers, and thought to be identical with the crocodile of the old world; but scientists have since found distinctions to exist which indicate generic differences. It may become an interesting question among scientists, if the crocodile of Egypt has been found in Florida—how did it get there? Is it a variation in nature, or has that particular specimen of the Sanrian family been recently transported from its native waters to those of Florida?

Since it is now a well-established fact that catarrh is a blood disease, medical men are quite generally prescribing Ayer's Sarsaparilla for that most loathsome complaint, and the result, in nearly every instance, proves the wisdom of their advice.

**SHARPENING EDGE TOOLS.**—A German scientific journal says: "It has long been known that the simplest method of sharpening a razor is to put it for half an hour in water to which has been added one-twentieth of its weight of muriatic or sulphuric acid, then lightly wipe it off, and after a few hours set it on a hone. The acid here supplies the place of a whetstone by corroding the whole surface evenly, so that nothing further than a smooth polish is necessary. The process never injures good blades, while badly hardened ones are generally improved by it, although the cause of improvement remains unexplained. At length this process has been applied to many other cutting implements. The workman, at the beginning of his noon spell, or when he leaves it in the evening, moistens the blades of his tools with water acidulated as above, the cost of which is almost nothing. This saves the consumption of time and labor in whetting."

## MIDDLEMEN'S PROFITS SAVED TO THE CONSUMER.

We sell direct to the consumer, and can save you 20 per cent on the Buggy. The "Complete Horse Book" tells how. Sent for 10 cents, silver or stamps. Pioneer Buggy Company, Columbus, O.

**ASBESTOS FOR THEATER CURTAINS.**—The building laws of most of our large cities now compel the use in all new theaters of fireproof drop curtains. The great weight of iron curtains has led the managers of many of the best theaters to adopt asbestos as the best fireproof material for the purpose. An asbestos curtain is light in weight and can be lowered or raised in a few seconds of time with little effort. It does not require a heavy rigging to hold in place. It is flexible and will fold or roll into small compass if necessary. In appearance it resembles cotton duck, and it can be painted or decorated. In use it completely protects the audience from any fire which might originate on the stage.

## NEWSPAPER AGENTS WANTED.

Extra inducements will be offered for a few active canvassers who will give their whole attention (for a while at least) to soliciting subscriptions and advertisements for this journal and other first-class popular newspapers. Apply soon, or address this office, giving address, age, experience and reference. Special inducements to old agents.

DEWEY & CO., Publishers,  
No. 220 Market St., S. F.

**SPIRAL SPRINGS.**—The proper way to use a spiral spring is under a state of compression, provided that the first coil of the spring can be taken care of properly, but when this is done there comes in another element that disturbs the proper working of the spring. The coil does not keep in perfect alignment while being compressed to its full extent, but sets off corner ways a trifle, and gives a hindrance as no ball-and-socket joint has been able to relieve. The proper way out of this difficulty is to adjust the spring to set in line while under about a two-thirds load, and let it take care of itself in all other positions.

## Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

The first horse car made its appearance in New York City in 1822. It was made by John Stephenson in the preceding year, with seats running lengthwise and had also seats on top.

## THE STABLE.

## An Early Mule Speculation.

J. J. Warner of Los Angeles county recently read an interesting paper before the California Historical Society on "Early Trapping Parties," in the course of which he gives the following account of an early overland trading expedition:

In the fall of 1830 Mr. Young, Mr. Honck and Wm. Wolfskill fitted out a trapping party, which left Taos, N. M., under the command of Mr. Wolfskill, to trap the valley of California. This party, consisting of about 30 men, proceeded westerly, crossing Green river above its junction with Grand river, and reached the Sierra Nevada, and while struggling to cross it the weather became so inclement and the obstacles in his way so great that his party became demoralized and insubordinate, and he was forced to abandon his proposed line of travel and proceed southerly along the eastern slope of the Sierra Nevada and the adjacent plains east of it and entered the settlements of California in February, 1831, through the Cajon Pass of San Bernardino. No trapping was done by this party west of the Colorado, unless it was a little on Virgin river, and it disbanded upon reaching Los Angeles. It was composed of discordant material, some being Americans, some Canadians and Missouri Frenchmen and a considerable number of New Mexicans of Spanish blood. Mr. Wolfskill settled in Los Angeles and became a prominent and wealthy citizen of that place. He married in California and raised a family of two sons and three daughters. A number of the New Mexicans who were of Wolfskill's party returned to Santa Fe, N. M., in August, 1831, taking with them a number of mules which they had acquired in California. They had obtained some and probably most of these mules in exchange for their blankets, made in New Mexico, and which they had brought with them to serve as bedding and overcoats and for trading with Indians. The large size and beauty of these California mules and the low price at which they were obtained excited the admiration not only of the New Mexican, but the foreigners in Santa Fe. Measures were soon adopted to take advantage of this newly discovered plan for obtaining mules. A company was soon formed composed of Americans, of which Mr. Waldo, subsequently American Governor of that Territory, was a member, which fitted out a party of eleven men, with capital to the amount 15,000 silver dollars, to proceed to California and invest the capital in mules.

This party, led by Mr. Jackson, one of the three partners comprising the company, left Santa Fe September 6, 1831, and reached the settlements of California the following November.

Edwin Young, the other member of the before-mentioned company, at the head of a trapping party of about 35 men, left Taos, N. M., about the same time that Jackson left Santa Fe, for the purpose of trapping the Gila river and its branches to its mouth and the Lower Colorado, and then proceed to the settlements of California, there to join Jackson. He reached Los Angeles about the end of March, 1832, when the parties were united. The intention of the company at the time of fitting out the two expeditions from Taos was that the two parties would be united into one here in California, and drive the mules proposed to be brought to Louisiana by the way of Texas. Jackson did not succeed in purchasing as many mules as had been anticipated, and Young's trapping expedition had proven a failure in consequence of a defect in the construction of the traps used. From these causes, the Louisiana market for the mules was abandoned, and in the month of May, Jackson left California, with the mules which had been purchased, for Santa Fe, by the same route which he had traveled in coming to California the preceding fall.

The New Mexican who came to California in Mr. Wolfskill's party, and returned back in the summer of 1831, reported the eagerness with which the Californians bought the highly colored blankets, of New Mexican manufacture, in such glowing terms that the inhabitants of that Territory set themselves to transforming their wool products more extensively into blankets, to be sent overland to California for sale and for the purchase of mules. This was the origin and commencement of the New Mexican blanket trade with California, which was profitably carried on for some time by yearly caravans between the two Territories. No intercourse, commercial or otherwise, had up to this time—1832—ever existed between New Mexico and California.

**MONKEYS IN FLORIDA.**—A colony of 200 or 300 monkeys is reported to exist in the everglades of Florida. They are supposed to owe their origin to the wreck of a vessel upon the coast having on board monkeys, which escaped into the forest.

FOR INFORMATION, our readers are referred to H. A. Denning, No. 124 Post St., S. F., a leading and well-established house, for paper patterns of plates illustrated in our present issue.

## Fashion Notes.

## Ladies' Costume.

FIGURE 1.—This illustrates a ladies' costume. As here made up the costume will be exquisite for afternoon teas, garden or lawn parties, receptions and similar occasions.

The material is light India silk figured with detached floral sprays. The skirt is in the regulation four-gored style and is trimmed at the foot with several narrow plaitings of silk; it is entirely concealed by a drapery or second skirt, that is softly but simply wrinkled across the front by small clustered plaits at the belt, and arranged to lie smoothly on the gores at the bottom and hang in free natural folds at the back from

plain and fancy crepe chiffon, net and all kinds of gauzes and tissues will make up exquisitely by the mode over silk, Bengaline, Surah, etc. All varieties of cottons and softly falling woollens are appropriate for costumes of this kind, and combinations are particularly effective.

The picturesque hat is of fine straw and is stylishly trimmed with ribbon and flowers.

## Misses' Dress.

FIG. 2.—This illustrates a misses' dress. A very dainty combination is here effected with figured challis and plain India silk. The dress is in the picturesque Marguerite style. The skirt is deeply hemmed at the bottom and gathered at the top to a belt from which it falls in graceful, natural folds.

dered at the top with passementerie, and the frills are caught up prettily at the inside of the arm.

For simplicity and dressiness the mode is admirable, and it will be a popular style for afternoon and dancing dresses. Crepe, flouncing, tissues, India and China silks and all sorts of sheer textures will be made up for such uses, with passementerie, ribbon, fancy braid, lace, etc., for garniture. More serviceable dresses will be developed in challis, nun's veiling, cashmere, sateen, gingham, serge and other seasonable fabrics. Combinations of colors or textures in the body are exceedingly attractive.

Crepe and ribbon stylishly trim the large straw hat.

Fig. 2—MISSSES' DRESS.

Fig. 1—LADIES' COSTUME.

gathers at the belt. A little above the lower edge of the drapery a large, simple scroll pattern is wrought with band passementerie, and the lower edge of the passementerie is followed nearly to the top of each scroll with sections of lace flouncing, thus producing a beautiful festoon garniture.

The bodice is a close fitting, pointed basque, with surplice fronts that cross in the regular way over the bust, and a full back that is deeply shirred at the neck and below the waist line. The right surplice front is trimmed diagonally with rows of band passementerie that are finished with a pretty fringe at the lower edge of the front; and the neck is cut in V shape and decorated with a turn-over frill of lace edging. The sleeves reach to the wrists and are full and high on the shoulders and close fitting below the elbow; and each sleeve is simply trimmed with a row of buttons arranged along the inside seam.

Mousseline de soie, embroidered, figured,

It is trimmed with two deep ruffles of the material, the upper ruffle being finished for a self-heading.

The body has a full front and full back that are gathered at the neck and plaited to a point at the center, the soft folds of the gathers and the flaring folds of the plaits being prettily displayed by the peasant bodice, which flares widely at the front and back. The flaring edges of the bodice are connected by straps of passementerie, and similar passementerie borders the neck and front edges. The full portions are arranged upon smooth linings, and the entire body is rendered close fitting by single bust darts and under-arm gores. A frill of lace finishes the neck in Directoire fashion, the standing collar of the pattern being omitted. Similar frills fall from the wrists of the full sleeves, which are made over smooth linings that extend with the effect of deep cuffs below the sleeves, the exposed portions of the linings are covered with cuff facings of silk bor-

**A WHOLE REDWOOD.**—J. H. Hegler proposes to send to Chicago to be set up in some of the parks around the World's Fair buildings the whole of a giant redwood tree, over 300 feet in height and upward of 25 feet in diameter at the base. He says he can put the tree as a whole in Chicago, providing the cost of shipping it be defrayed by the State, and have it set up there. Several persons who are interesting themselves in the California exhibit at the World's Fair have been seen by Mr. Hegler, and all agree that if it is possible to ship a whole tree to Chicago and put it together again when it reaches there so that it can stand the strain incident to the high winds, which sometimes prevail there, it would undoubtedly be one of the greatest of the exhibits.

**TO CUT GLASS VESSELS** neatly, fill the vessel the exact height you wish it to be cut with oil of any kind; then dip, very carefully, a red-hot iron in the oil. This will heat it all along the surface, and when the upper portion cracks all round, you can lift it clear off by the surface of the oil.

### MILK TESTERS

Test Your Cows. Poor Cows are Bad Investments and Should be Replaced at Once.  
Quality, not Quantity, Pays Best.

#### EDSON'S CREAM TESTER

A dairyman's practical invention. Consists of frame holding six test tubes graduated into hundredths to ascertain the per cent of cream in freshly drawn milk. The glasses are well protected and can be easily removed for cleaning. The frames are substantial, carefully graduated and varnished, large size holding about Reg'r Size, \$1; Postpaid, \$1 12 twice as much Large Size, \$2; " \$2.15 as other.

DIRECTIONS.—Fill the glasses with fresh drawn milk up to the line indicated by o. Set in cool place for 24 hours, when the separation of cream from the milk will be perfect and the figures will tell the per cent of cream in the milk.

Actual tests prove that common or grade cows give as good results in cream and butter, when pains have been taken in selection, as Jerseys, Holsteins, or other imported stock, but in order to do this, they must be bred from deep and rich milkers, the bull as well as the heifer, and the best authorities place more dependence on the bull than on the heifer, thus showing that we should take great care in the selection of cows to raise bulls from. Begin at once to test your milk, and note amount by weight, given by each cow. Then multiply the pounds of milk by the per cent shown by the tester and you know just what each cow is worth to the dairy. There is a great deal of money made by dairying, but it is all made from good cows. If you want to make money out of your dairy, rear your own cows and use only your best ones as mothers and breed them to a good bull.

WE ALSO CARRY A FULL LINE OF LATEST IMPROVED SCIENTIFIC CREAM AND BUTTER TESTS, Both Chemical and Mechanical, for Dairy and Creamery Use.

Curts Test Churns, Short's New Method, Farmer's Test Churn, Lactometer, Lacto-Butyrometer, Lactoscope, Peescope, etc., etc.

## FARMERS' INSTITUTES.

### The Fresno Farmers' Institute.

A meeting of the executive committee of the Fresno County Farmers' Institute was held on Saturday last. All the members of the committee were present, President O. P. Laird in the chair.

The date of holding the next quarterly institute was fixed for Thursday, July 8th, and the place of meeting is Malaga, conditionally, a committee having been appointed to confer with the people of that place, and, if favorable arrangements can be effected it will be so decided. The intention is to hold a day and evening session, a program of exercises having been arranged that will certainly prove attractive. Some speakers from abroad will be in attendance, as well as the best of our home talent, and practical subjects of interest to all will be ably discussed.

In this connection it may be well for me to add a few words of explanation regarding this organization. It seems a matter of regret that so few heard Professor Wickson's plain address on that subject at the Institute held here under the new act of the Legislature providing for the holding of such meetings.

To sum it up briefly: What the teachers' institutes have been to the educational cause, the farmers' institutes are intended to be to the agricultural cause. It might be said, to the industrial cause, since all classes of industry are intended to be benefited. It goes without saying that politics or religion have no more part in this organization than they have in the teachers' institutes. The policy of helping along county, State and national prosperity by combined and united efforts, and the religion of doing good that good may be done that underlies all the efforts of mankind toward improvement of conditions, are the motive powers of this movement.

The first meeting having been held in April, the next quarterly meeting falls in July. Malaga is selected as the place of meeting because of the fact that the County Alliance held there the 7th, will call a number of the farmers there that we hope will stay over for our meeting the following day, as they did here in April. The question as to this being "side issue" of the Farmers' Alliance can be answered once for all by this statement that I am authorized to make: "That, had there been no such organization in California as the Farmers' Alliance, the Institute, under the auspices of the Board of Regents of the State University, would have been held in Fresno in April, and would have resulted, as it did, in a permanent organization, having a brief code of laws that can be signed as a form of union to keep us in working order, and to make every one in Fresno county feel that it is 'our Institute,' and that one is equally responsible with another toward making it what it should be. Its prime object being the welfare of the people, thus far it is in unison with the various lodges, the Grange and the Farmers' Alliance, but that it is no more a part of them than it is of the several religious denominations or great political parties is certainly true."

Open to all; free to all; for the good of all, is the motto of the Fresno county Farmers' Institute.—Mrs. M. B. Stuart, Secretary in Central Californian.

FRESNO FARMERS' INSTITUTE.—C. I. R. P. McGilroy, of Campbell, has been invited to address the Fresno Farmers' Institute, to be held at Malaga, July 8th. The subject assigned to the Colonel is "Co-operation among Farmers," and no doubt he will treat the subject exhaustively, having seen the beneficial results of co-operation among the dairy farmers in the Eastern States, where he was engaged in Institute work for many years.

### Turkeys.

EDITORS PRESS:—Knowing that through your columns most every subject pertaining to the soil is discussed and light thrown thereon, I for the first time seek information. I am interested in poultry, and turkeys especially. Will some one of the many readers of your paper answer through its columns the following questions:

What breed is best and most profitable to raise? How many eggs do they lay before wanting to set, and will they lay again if weaned from setting or by being deprived of their brood? How are young turkeys affected by changeable weather? Do they easily become diseased? What is a sure cure or preventive for snob? At what age do turkeys lay and set best? What arrangements are best for their laying and setting departments? What kind of food is best for young turkeys? Can grown turkeys be fattened by penning and feeding? Can they be hatched and raised successfully by means of incubators? Any other points relating to this subject will be thankfully received. SUBSCRIBER.

Orland.

[Here is a splendid text for some turkey-growing readers to found letters upon. We would like to hear more about turkeys.—Eds. PRESS.]

## LAND WORTH LOOKING AFTER —AND— Likely to Double in Price Soon.

FINE VINEYARD  
CHOICE FRUIT  
RARE RAISIN  
AND ALFALFA LAND

### EXAMINE THIS RARE CHANCE.

A well-cultivated farm of 160 acres, with miles of fencing and cross fencing, good improvements, 7-room, two-story, hard-finished house, nearly new, plenty shade trees, large barn, blacksmith shop, milk house, grain house and other outbuildings; 7 acres of bearing orchard; 20 acres of alfalfa; large flowing artesian well of splendid water, and first-class surface wells of water; pleasantly located 7 miles from Tulare City; is offered for sale at about cost of improvements, on easy terms, by the owner, who is engaged in other business. Land sold, in lots, without improvements, at \$25 per acre. The readers of this journal are assured that this chance is worth looking after. Parties in San Francisco who know the property can be referred to. Some adjoining land can be secured at favorable rates if desired.

Address E. M. DEWEY, Porterville, Tulare Co., or A. T. DEWEY, 220 Market St., S. F.

## MUSHROOMS:

How To Grow Them. BY Wm. Falconer.

For home use fresh Mushrooms are a delicious, highly nutritious and wholesome delicacy; and for market they are less bulky than eggs, and, when properly handled, no crop is more remunerative. Any one who has an ordinary house cellar, woodshed or barn can grow Mushrooms. This is the most practical work on the subject ever written, and the only book on growing Mushrooms ever published in America. The whole subject is treated in detail, minutely and plainly, as only a practical man, actively engaged in Mushroom growing can handle it. The author describes how he himself grows Mushrooms, also how they are grown for profit by the leading market gardeners, and for home use by the most successful private growers. The book is amply and pointedly illustrated, with engravings drawn from nature expressly for this work. Is nicely printed and bound in cloth.

Price, postpaid, \$1.50.

Sold by DEWEY & CO.  
220 Market St., San Francisco, Cal.

## THE RAISIN INDUSTRY.

A Practical Treatise on the Raisin Grapes, Their History, Culture and Curing.

By GUSTAV EISEN.

This is a book of marked character. It is an attractive volume of more than 200 pages, printed on heavy paper, with wide margins, and is well illustrated and neatly bound. It has won the thoughtful attention of specialists, and called forth the hearty commendation of the newspaper press. Prof. E. W. Hilgard, of the University of California, says: "It is certainly a most timely work, and one that your training and experience have fitted you peculiarly to undertake. I congratulate you and the raisin industry upon the work, in which I recognize from the outset the Germanic thoroughness and a close adherence to facts that do not always characterize such publications." Prof. E. J. Wickson, of the same institution, writes: "I discern in the work a breadth of information and a faithfulness in details of practice which will constitute it the standard treatise on the raisin." Col. Forsyth says: "With your book in hand the inexperienced farmer or clerk can safely engage in raising-grapes with expectation of success from the very start." Says the Fresno Republican: "No work on a technical subject has ever been published that more thoroughly, completely and honestly discussed its specialty than does Dr. Gustav Eisen's work on 'The Raisin Industry.' This valuable book, just out, is published by the H. S. Crocker Company, San Francisco. It is just what it pretends to be, a practical treatise on the raisin grapes, their history, culture and curing." The Rural Press says: "Dr. Eisen's work is broad and scholarly, and yet compact and definite in the development of the subject. It should find a place on the book-shelves of all California horticulturists, and will no doubt go to the uttermost parts of the world." The California makes this reference to the book: "It is a clear, vigorous, fresh and logical treatise; learned, exhaustive, profound and yet extremely practical and useful." The Marquette Appeal says: "A very valuable contribution to the literature of horticulture is the volume on 'The Raisin Industry,' from the pen of Prof. Gustav Eisen. Among California raisin-growers Prof. Eisen has long been recognized as an authority upon everything relative to their industry." The San Francisco Chronicle says: "In this work the author has performed a much needed task, going into the details of every branch of what has become one of the foremost industries of California. No man better qualified for the enterprise could have been found." The State Horticultural Society, by its committee, reports as follows: "We find Dr. Eisen's work a most valuable treatise upon raisin production in all its branches, historically complete, broad and comprehensive in its scope, accurate in its details and a valuable guide in the practice of the growth of the raisin-grape vine and the preparation of its products for the market, and as such we earnestly commend it to the public." Price Three Dollars, postpaid. For sale by DEWEY & CO., 220 Market Street, San Francisco.

## New Books for Horticulturists.

A New Book on Propagation of Plants.—

"THE NURSERY BOOK," by Prof. L. H. Bailey, Editor of The American Gardener, has been prepared with the utmost pains. The book is absolutely devoid of theory and speculation. It has nothing to do with plant physiology, nor with any abstruse reasons of plant growth. It simply tells plainly and briefly what every one who sows a seed, makes a cutting, sets a graft, or crosses a flower wants to know. It is entirely new and original in method and matter. The cuts number almost 100, and are made especially for it, direct from nature. The book treats of all kinds of cultivated plants, fruits, vegetables, greenhouse plants, hardy herbs, ornamental trees and shrubs, and forest trees. A "nursery list" is the great feature of the book. It is an alphabetical list of over 2000 plants, with a short statement with each, telling which of the operations described in the first five chapters are employed in propagating them. About 300 pages, 16mo. Price, in library style, cloth, wide margins, \$1; pocket style, paper, narrow margins, 50 cts.

The New Potato Culture, by Elbert S. Carman.

Editor of the Rural New Yorker. For the past 15 years the author has given a part of his time to potato experimentation, in the hopes that he might throw some additional light upon the various questions involved in the central problem, "How to increase the yield without proportionately increasing the cost of production." The object of Mr. Carman's book is to show all who raise potatoes, whether for home use solely or for market as well, that the yield may be increased three-fold without a corresponding increase in the cost; to show that the little garden patch, of a fourth of an acre perhaps, may just as well yield ten bushels as three bushels; to induce farmers and gardeners to experiment with fertilizers, not only as to kind, that is to say, the constituents and their most effective proportions, but as to the most economical quantity to use. Price, cloth, 75 cts.; paper, 40 cts.

Address DEWEY & CO.,

220 Market Street, San Francisco, Cal.

## ORANGE CULTURE IN CALIFORNIA.

Now that the interest in the culture of the orange is extending so as to embrace nearly all parts of the State, a book giving the results of experience in parts of the State where the growth of the fruit has been longest pursued will be found of wide usefulness.

"Orange Culture in California" was written by Thos. A. Garcey of Los Angeles, after many years of practical experience and observation in the growth of the fruit. It is a well-printed hand-book of 227 pages, and treats of nursery practice, planting of orange orchards, cultivation and irrigation, pruning, estimates of cost of plantations, best varieties, etc.

The book is sent post-paid at the reduced price of 75 cents per copy, in cloth binding. Address DEWEY & CO., Publishers "Pacific Rural Press," 220 Market St., S. F.

## Death of California's Pioneer Wool Merchant.

A. T. Farish of this city died at San Diego on Sunday, May 10th, at the advanced age of 81 years. To a large number of the pioneer readers of the Press Mr. Farish was either known personally or by reputation, for his business connections brought him in contact with a large class of farmers. He was a person of remarkable vitality, energy and perseverance, all of which carried him successfully through the 65 years of active business that marked his life. Born in a rural district in North Carolina, his early life was spent among farmers, with whom he ever retained the warmest sympathy when wronged by monopolists or through the greed of corporations. Before 25 years of age he moved west into the (at that time) wilds of Tennessee, where he engaged in merchandising, and later on in cotton buying for New England, and also English manufacturers, which business he followed to the time of leaving for the Pacific Coast in 1848. Crossing the plains with the tide of immigration setting this way, he arrived in California in 1849. Mining not being congenial to his taste, he established himself in the mercantile business at Marysville in 1850. Like all pioneer merchants, he had several fortunes swept from him by floods and by fire while at Marysville. In 1860 he established in San Francisco the first wool house on the coast. In this business his training as a cotton buyer stood him well in hand, and his judgment on wool texture and fiber was sought by many. He built up a very large business, but by reason of a lawsuit over some lands at the Potrero, which he lost, he became embarrassed financially, but friends coming to his relief, he again prospered, retiring from business fairly well off. His ever restlessness would not allow him to remain in idleness, for each spring and fall he went into the country to buy wool; even at the time of his death he had arranged to buy wool in San Diego county.

When in the wool business he aided no little in helping breeders of fine wool sheep in importing the best blooded stock, which contributed largely to creating California's reputation for fine wools.

When the first cotton-mill in this State was erected at Oakland, about the year 1865, by a party from Oregon, he took quite an interest in the enterprise, and through him their supplies of raw cotton were first obtained. They tried to induce the planting of cotton by farmers in this State, but the heavy expense leaving no profit, it proved futile.

In his intercourse he was rather reserved, but at all times acted the gentleman. In his business relations he enjoyed the confidence of all with whom he had dealings, and was considered the personification of all that goes to constitute a thoroughly honorable and reliable merchant.

He leaves a family of seven children (his wife died about 19 years ago), five sons and two daughters. His sons, grown to manhood on this coast, are well known. Three are mining engineers, one Chief Deputy United States Marshal, and the other on the editorial staff of the PACIFIC RURAL PRESS. The two daughters are married to two brothers, G. A. and C. H. Reynolds, formerly bankers in Marysville, but at present engaged in the real estate business in this city. A. T. Farish was a Mason. In Tennessee he was largely instrumental in establishing a Masonic College in the town (Macon), where he was in business. Outside of the Masons he did not belong to any society except the Pioneers of this city. The body was brought to this city for interment in the Masonic cemetery.

**WORMS ON THE PRUNE TREES.**—Announcements are made of the prevalence of worms on the prune trees, which are said to be making sad havoc. The worms vary from one to one and a half inches in length. They are not sluggish in movement like the average caterpillar. Mild Paris green sprays they do not seem to mind, and the only sure remedy practiced thus far is individual extinction. When the trees are shaken hard, the worms fall and then they are crushed. The news of the depredations has had the effect of making all prune growers resolve to sign no contracts for the disposal of their crops until they see the full extent of the damage. It is reported that as high as three cents a pound has been offered some growers and refused. The worm has troubled apricot trees somewhat, but not to the extent it has prunes.

**THE COUNTY OF GLENN.**—The final act in the establishment of Glenn county was accomplished on Monday. The Board of Commissioners met, canvassed the returns and declared the result to be 924 in favor of and 651 against a separate county government. Officers were elected, sworn in and qualified. A joyous celebration meeting was held Monday evening at Willows.

## English Advices Favorable to Hop Growers.

In a review on the hop situation, a late English exchange says that hops have always borne a character for extreme fluctuations, and the big jump from about £4, which was the average price last year, to £12 at the present time is by no means an unheard-of occurrence. During the past half-century or so—it is a long time to look back upon, but it is all the better in that respect, because giving more ample corroboration—there have been some extremely wide fluctuations. For example, in 1837 the price of hops was about £7 7s. per cwt., while two years later it fell to £2 10s. The following year, namely, 1840, hops were so scarce that the enormous price of £20 and even £25 per cwt. was the market value. Coming to more recent years, the following extreme fluctuations have been recorded: In 1852 the price was about £15 per cwt., in 1854 about £20, in 1859 £2 10s., and in 1860 £20 per cwt. We are not forgetting that during these years a duty was imposed on hops. But in 1881 the price of hops was down to £4, and the following year (with no duty) the price was again as high as £20 to £30 per cwt. It will thus be seen that there is no certainty as regards the prices of hops, but that it is entirely a question of crops. Short crops, through blight or other causes, invariably cause dear prices. The hop crop last year was just as poor on the Continent as it was in England. What, however, renders the question of supply and demand abroad more pressing now than it was formerly is the enormous increase in the consumption of ale, and the different methods upon which the brewery trade is now carried on compared with those previously in vogue.

The following figures, taken from the English Board of Agriculture and the London Board of Trade returns, show the English crops and imports of hops for the past six years:

Crop 1885—550,000 cwt.; imports, 182,000 cwt.  
Crop 1886—600,000 cwt.; imports, 33,000 cwt.  
Crop 1887—457,000 cwt.; imports, 100,000 cwt.  
—1,922,000 cwt.  
Crop 1888—281,000 cwt.; imports, 166,000 cwt.  
Crop 1889—497,000 cwt.; imports, 141,000 cwt.  
Crop 1890—281,000 cwt.; imports to date, 115,000 cwt.  
—1,481,000 cwt.

The imports are reckoned from the 1st of September until the following 31st of August. It will be observed that the total crop and imports of the last three years fall short of a total for the three preceding years by 450,000 cwt.; the shortage in 1888 made a great inroad into the surplus stock of 1885 and 1886, and the few that now remain of those years will have to go into consumption to keep English breweries going until the next crop can be secured. The consumption of hops in Great Britain is 700,000 cwt., the number of barrels of beer on which duty was paid in the last brewing year was 32,000,000, which, if calculated at the low average of 2½ pounds of hops per barrel, would give 714,000 cwt. Now, as it is quite possible that substitutes are being used equal to displacement of 60,000 or 70,000 cwt. of hops, this would bring the actual consumption by the English brewer down to 650,000 cwt., to which has to be added exports, 20,000 cwt., and 30,000 cwt. used by yeast-makers and other purposes, which brings the total up to 700,000 cwt.

## Flax and Ramie.

**EDITORS PRESS:**—The State Board of Horticulture has ordered from Wm. Lichtenburg 666 boxes of ramie plants, 100 plants in each box. Some 408 letters have been received applying for the samples. If any farmer would like the plants for trial he can still apply but all will have to irrigate to make good growth. The Department of Agriculture at Washington has sent 100 pounds of samples of flax seed to the State Board of Agriculture at Sacramento for distribution, in 5lb lots, to farmers who will plant the seed and report results of the planting to the Cal. Cotton Mills. Wm. Rutherford, the superintendent, will work the sample stalks furnished him free of charge and have the fiber for a special fiber exhibit that is being worked up for the next State Fair.

W. H. MURRAY,  
State Supt. Ramie Culture.

321 Market St., S. F.

## Our Three Editions.

First, we print our REGULAR EDITION for general circulation, containing about one page of Grange matter, supposed to be of most interest and importance to all subscribers. It also contains a like selection of Farmers' Alliance reading.

SECOND, we print a GRANGE EDITION, containing several supplemental Grange pages.

THIRD, is issued the FARMERS' ALLIANCE EDITION containing several Alliance pages, in place of the supplemental Grange pages.

## Which Do You Want?

Subscribers can, at any time, change their subscription from one edition to another, without extra cost, by writing to the office. Be sure to give plainly your name, P. O., the edition now taken and the one preferred.

Clark's Cutaway Corn Cultivator.

The Higginum M'tg. Corporation of Higginum, Conn., have added to their line of celebrated Cutaway goods the Clark's Cutaway Corn or Cotton Cultivator as shown in our illustration.

The CCCC Cultivator has two gangs or five disks; three 16 inch and two 14-inch in each gang. The small disks are generally used on the ends to avoid cutting plant roots, but may be changed if desired.

These disks are attached to a gang plank; each disk has a cleaver.

These gangs are used either end out. The two branch beams are made adjustable so that the gangs may be placed in either adjustment, from two to sixteen inches apart.

These beams are attached to the outer ends of the gangs by a ball and socket joint. The inner ends of these gangs are connected to the branch beams by an adjustable stud so that the

inner ends of the gangs may be higher or lower as desired, and are also connected with the main braces by arm and foot levers, in such a manner that the relative angle of the two gangs can be changed and thus quickly send the machine to the right or left.

The hand lever on top of the pole, by its connecting arms, also affects the angle of the gangs so that they can instantly be made to dig hard or easy.

With these adjustments the gangs can be made to dig deep or shallow near the plants, or to carry the dirt to or from the plants in large or small quantities as desired. It is intended to straddle the row, and when so driven, the space between each row is cut twice over, thereby killing the weeds and thoroughly softening the soil. Its draught is very light. All the working parts are made of steel.

It will cultivate either flat or in ridges. It covers potatoes in drills nicely. It is not intended for general harrowing, but can be thus used. It is much used in vineyards.

## List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific Coast.

FOR WEEK ENDING MAY 5, 1891.

- 451,550.—SHEET METAL ROOFING—J. C. Bayer, Portland, Or.  
451,893.—LADDER—G. T. Campbell, S. F.  
451,648.—TRACTION ENGINE—N. L. Darling, Benicia, Cal.  
451,857.—CABLE GRIP—J. J. Graff, S. F.  
451,668.—NIPPERS—D. A. Hamilton, Heppner, Or.  
451,712.—WATCHMAKERS JEWEL SETTING CUTTER—A. Hartung, Nevada City, Cal.  
451,594.—BORING MACHINE. A. M. Jewell, S. F.  
451,595.—BORING MACHINE. A. M. Jewell, S. F.  
451,765.—VALVE GEAR FOR ORE STAMPS—C. Kendrick, Jr., Nevada City, Cal.  
451,608.—HORSE TAIL HOLDER—J. W. Lindsay, Fresno, Cal.  
451,839.—ANIMAL TRAP—John Picard, St. Paul, Or.  
451,530.—WASHING MACHINE—Z. W. Shields, Harrington, Wash.  
451,531.—NEUTRALIZING SULPHO-CHLORINATED OILS—A. Sommer, Berkeley, Cal.  
451,626.—STRATIFIED BRICK—L. A. Steiger, San Jose, Cal.  
451,783.—SHINGLE—R. P. Taylor, Gold Hill, Nev.  
451,655.—VETERINARY INHALER—H. T. Welch, San Jose, Cal.  
451,544.—RAILWAY RAIL COUPLING—J. T. Wicker, Sprague, Wash.  
451,586.—INSULATED ELECTRIC CONDUCTOR—J. B. Williams, Oakland, Cal.  
451,587.—INSULATED ELECTRIC CONDUCTOR—J. B. Williams, Oakland, Cal.

The following brief list by telegraph, for May 12, will appear more complete on receipt of mail devices:

California—San Francisco: Peter Bargion, street-railway rail and pavement; Nora M. Barrett, gas engine attachment; Charles E. Naylor, safety-grip brake for cable cars; Franz Smith, door manipulator. Oakland—James L. Crittenden, drain pipe for buildings; Frank A. Huntington, power street-paving machine; Jas. B. Williams, treating conductors. Nevada City—Amelia Fogeh, fruit-picker. Alameda—Adolph Lajeunesse, weather strip. Oregon—Portland: Craig H. Murray, bedstead, tablet. Washington—Seattle: Emma C. Hudson, household letter-box; Wm. R. Phillips, hydraulic air-compressor. Spokane Falls—John McKinnin, clothes-drier. Montessano—Michael Reilly, razor strop and driving calk.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail by telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

## The State Floral Show.

The spring exhibition of the State Floral Society, held in this city May 6th to 9th, was a gratifying success from all points of view. The exhibits were fine and varied. The hall of the Academy of Sciences, which was kindly granted for the exhibition, proved admirably adapted for the purpose, and was handsomely decorated. The attendance was excellent, and the patronage generous, so that the Society's treasury will be considerably inflated by the proceeds. The following awards were made:

Class A, cut flowers—Subdivision I, open to amateurs who do not employ skilled labor. Largest and best collection of roses—silver medal, H. T. Greenough, Berkeley; bronze

medal, Warren Cheney, Berkeley. Best 12 cut-bloom roses—certificate, Mrs. Fish, San Francisco, best general collection of cut flowers in society's glasses, each variety in a separate glass—silver cup, Mrs. W. H. Smyth, Berkeley; certificate, Mrs. R. Townsend, East Oakland.

Pansies—Bronze medal, Mrs. E. T. Crane, San Lorenzo; certificate, Mrs. G. C. Ross, San Francisco. Largest and best collection of cut bloom pelargoniums—\$3 prize, Mrs. W. H. Smyth, Berkeley. Twelve best cut-bloom pelargoniums, in 12 distinct varieties—\$2, Mrs. E. T. Crane, San Lorenzo. Largest and best collection of sweet peas—certificate, Mrs. G. C. Ross, San Francisco.

Subdivision II, open to amateurs who employ skilled labor: Best general collection of cut flowers—Silver cup, Timothy Hopkins, Menlo Park. Largest and best collection of cut-bloom roses, one specimen of each variety—Silver medal, California Nursery Company, Niles. Largest and best collection of pelargoniums—\$5, John Rock, Niles. Largest and best collection of clematis—Certificate, California Nursery Co., Niles.

Class B, plants: Best single fern—Certificate, Mrs. Helen Cross, San Francisco. Largest and best collection of flowering plants in bloom—Silver medal, Timothy Hopkins, Menlo Park. Largest and best collection of rare begonias—Certificate, T. G. Hodgkins, San Francisco.

Class C, open to all competitors: Largest and best collection of California wild flowers—\$10, Mrs. Vestey, San Francisco. Most meritorious general exhibit of foliage, flowering and decorative plants—First prize, \$25, Mrs. C. Hohwiesner, San Francisco; second prize, \$15, Mrs. L. O. Hodgkins, San Francisco.

Special premiums: For best twelve cut blooms of roses in 12 distinct varieties—First prize, 12 choice rosebushes, Mrs. W. H. Smyth, Berkeley; second prize, six choice rosebushes, Warren Cheney, Berkeley. For Japanese exhibit, collection of floral novelties—Silver medal, H. Suzuki, San Francisco. For Lady Adeline and ten other glaxias—Special certificate of merit, C. Pagh, Agricultural Department, University of California.

The judges were Emil Kellner, Charles B. Brigham, Emil Servan, John Pouyal and J. Holbrow.

## To Exchange.

A BEAUTIFUL VINEYARD HOMESTEAD.

For San Francisco, Oakland or Alameda property, 40 acres of good land one mile from St. Helena, Napa Co., on road to Rural Health Retreat; 16 acres in vines of best varieties, in full bearing, together with about 200 fruit trees; three acres of alfalfa; one acre of garden; remainder of land susceptible of cultivation, at present covered with timber; place well fenced and cross fenced. New two-story house of eight rooms and closets, hard finished. Good stone cellar under all, 43x23 feet, furnished with first-class cooperage, capacity 14,000 gallons, and all the implements for making wine. A stone dairy; large two-story barn (new), and all necessary farming implements; two wells of good water. A fine home. Price, \$8,000. Address "FARMER," at this office, or G. M., Box 52, St. Helena, Napa Co., Cal.

## Breeders' Directory.

Six lines or less in this Directory at 50c per line per month.

### HORSES AND CATTLE.

J. H. WHITE, Lakeville, Sonoma Co., Cal., breeder of Registered Holstein Cattle.

P. H. MURPHY, Perkins, Sac. Co., Cal., Importer and Breeder of Shorthorn Cattle and Poland China Hogs.

Short Horn Cattle and Draft Horses.

Catalogues and Prices on application to

ROBERT ASHBURNER,

Baden Station, - San Mateo Co., Cal.

DEWEY & CO., PATENT AGENTS, 220 Market St., San Francisco. Elevator, 12 Front St.

## IMPORTANT!

That the public should know that for the past Twenty-one Years our Sole Business has been, and now is importing (Over 100 Carloads) and breeding improved Live Stock—Horses, Jacks, Short Horns, Ayrshires, and Jerseys (or Alderneys) and their grades; also, all the varieties of breeding Sheep and Hogs. We can supply any and all good animals that may be wanted, and at very reasonable prices and on convenient terms. Write or call on us. PETER SAXE and HOMER P. SAXE. San Francisco, Cal., April 1, 1901. PETER SAXE & SON, Lick House, S. F.

### THE BEST FENCE YET!

Cheap, Durable, Portable and Safe.

THE SPALDING HUMANE WIRE FENCE is composed of eight No. 12 galvanized steel wires, woven into four cables of two wires each; interwoven every five feet is a corrugated iron stay or guard, and held in place by the cables, thereby holding the cables firmly in place, preventing them being spread apart and letting stock thrugh. The stays or guards are corrugated and an inch and three-quarters in width, making the fence as visible as a board fence, which is a very essential point. Write for circulars and prices. Address BIRD-TURNBULL MFG. CO., 105 La Salle St., Chicago.

## Walnut Grove Herd of Poland China Hogs

JOSEPH MELVIN,

Proprietor,

DAVISVILLE, CAL.

BREEDER

— OF —

Strictly Bred  
POLAND CHINA  
SWINE.

## Horse Liniment

Is certainly the best preparation of its kind in the market. Ranchers, Stock Raisers and Horse Owners of every description will tell you that it does good work every time.

Messrs. H. H. MOORE & SONS, Stockton, Cal.—GENTLEMEN: In answer to your inquiry, would state that I used your H. H. H. Liniment on my Holland prize-winning cow, "Lena Menio," for a wrenched shoulder, and it relieved her very much. She calved the next day, and while still suffering from the sprain gave the largest authenticated quantity of milk ever given on this coast (104 gallons per day), showing conclusively the great relief received from your remedy. I consider it a necessity in my stables, and when away from home feel perfectly safe, as inexperienced men can do no harm with it, as they can with the more powerful blisters. Respectfully yours, FRANK H. BURKE, Breeder of Registered Holsteins and Berkeires. Menlo Park, Cal., January 22d, 1889.

MANUFACTURED BY

H. H. MOORE & SONS, THE DRUGGISTS,

INVENTORS on the Pacific Coast will find it greatly to their advantage to consult this old, experienced, first-class  
Agency. We have able and trustworthy Associates and Agents in Washington and the capital cities of the principal  
nations of the world. In connection with our editorial, scientific and Patent Law Library, and record of original  
cases in our office, we have other advantages far beyond those which can be offered home inventors by other agencies  
the information accumulated through long and careful practice before the Office, and the frequent examination of  
patents already granted, for the purpose of determining the patentability of inventions brought before us, enables  
us often to give advice which will save inventors the expense of applying for Patents upon inventions which are not  
new. Circulars of advice sent free on receipt of postage Address DEWEY & CO., Patent Agents, 220 Market St., S. F.

## S. E. MARKET REPORT

## Market Review.

## DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, May 13, 1891.

Cool, cloudy weather the past week is bailed with unfeigned pleasure by farmers generally. Trade in farm products is restricted largely to fruits and vegetables owing to a scarcity of grains and feedstuff. Hay harvesting is becoming quite general which will soon be followed by the harvesting of grain. The season of 1891-92 promises to be the most prosperous ever before enjoyed. The Eastern and foreign wheat markets have fluctuated. The following is to-day's cablegram:

LIVERPOOL, May 13.—Wheat—Hardening. California spot lots, 8s 6d; off coast, 44s 3d; just shipped, 44s 3d; nearly due, 44s 3d; cargoes off coast and on passage, quiet; Mark Lane wheat, very quiet; French country markets, quiet, but not cheaper; weather in England, brilliant.

## Foreign Grain Review.

LONDON May 11.—The *Mark Lane Express*, in its review of the British grain trade during the past week, says: English wheats are low, excepting finer whites, which are quoted at 44s. In provincial markets flour lost 1/2d per sack, and in London 9d. Foreign wheats are depressed; prices fell 1/2d but subsequently recovered on the prospective reduction of the French wheat tariff. Corn, barley, and oats are weaker.

## Liverpool Wheat Market.

The following are the closing prices paid for wheat options per cwt. for the past week:

	May.	June.	July.	Aug.	Sept.	Oct.
Thursday.....	88 1/2	88 1/2	88 1/2	88 1/2	88 1/2	88 1/2
Friday.....	88 1/2	88 1/2	88 1/2	88 1/2	88 1/2	88 1/2
Saturday.....	88 1/2	88 1/2	88 1/2	88 1/2	88 1/2	88 1/2
Monday.....	88 1/2	88 1/2	88 1/2	88 1/2	88 1/2	88 1/2
Tuesday.....	88 1/2	88 1/2	88 1/2	88 1/2	88 1/2	88 1/2

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday.....	45 1/2	45 1/2	45 1/2	Steadier.
Friday.....	45 1/2	45 1/2	45 1/2	Easier.
Saturday.....	45 1/2	45 1/2	45 1/2	Quiet.
Monday.....	45 1/2	45 1/2	45 1/2	Inactive.
Tuesday.....	45 1/2	45 1/2	45 1/2	Buyers holding off.

## Eastern Grain Markets.

The following shows the closing prices of wheat at New York for the past week, per cental:

	May.	June.	July.	Aug.	Sept.	Dec.
Thursday.....	186	182 1/2	179	176	175	175
Friday.....	186 1/2	181 1/2	178 1/2	174 1/2	173 1/2	173 1/2
Saturday.....	186 1/2	181 1/2	178 1/2	174 1/2	173 1/2	173 1/2
Monday.....	186 1/2	181 1/2	178 1/2	174 1/2	173 1/2	173 1/2
Tuesday.....	186 1/2	181 1/2	178 1/2	174 1/2	173 1/2	173 1/2

The closing prices for wheat have been as follows at Chicago for the past week, per cental:

	May.	June.	July.	Sept.	Dec.
Thursday.....	185 1/2	181 1/2	178 1/2	174 1/2	173 1/2
Friday.....	185 1/2	181 1/2	178 1/2	174 1/2	173 1/2
Saturday.....	185 1/2	181 1/2	178 1/2	174 1/2	173 1/2
Monday.....	185 1/2	181 1/2	178 1/2	174 1/2	173 1/2
Tuesday.....	185 1/2	181 1/2	178 1/2	174 1/2	173 1/2

NEW YORK, May 13.—Wheat—\$1.14 1/2 for May, \$1.09 1/2 for July, \$1.05 1/2 for August, \$1.04 1/2 for September, and \$1.05 1/2 for December.

CHICAGO, May 13.—Wheat—\$1.02 1/2 for July, 98 for September and 99 1/2 for December.

## Eastern Wool Markets.

NEW YORK, May 8.—*Bradstreet's* will say: Trade in the leading wool markets has been dull during the week. The larger part of the sales which have been made were Australian wools. Buyers are taking only the very best lots of foreign wools. Inferior Australian wools, of which there is a large supply in this country, are as hard to sell as any poorer domestics. Dealers who have handled these wools this year for the first time have lost heavily on their speculations. Manufacturers have taken the foreign wools only because of their superior quality. They cannot use second-class foreign wools at prices as high as the finest domestic grades. Territories are still in strong demand, but owing to the scarcity of good lots few sales have been made. There has been some movement in Ohio and Michigan wools, but not sufficient to make values firm. Pulled wools are firm and dealers could dispose of a large quantity if they could secure them. Only small lots are coming forward, and it will be several weeks before there will be enough on the market to meet the demand. Carpet wools are reported quiet but firm.

## The Dried Fruit Trade.

NEW YORK, May 9.—The *Commercial Bulletin* says: The market for nearly everything in the line of dried fruits, California goods in particular, is in rather poor shape. The encouragement which holders were inclined to look for early in the week, when the weather conditions threatened to injure the Eastern crops more or less, seems to have passed like a fleeting shadow, now the temperature has risen and no very serious damage has been discovered. With no incentive to buying, except as immediate wants necessitate, jobbers act very indifferently and do nothing that would tend to relieve the depression.

## Hungarian Crops.

BUDA-PESTH, May 11.—The crop report to date shows that barley, oats and feeding stuffs throughout Hungary have suffered greatly, owing to the excessive heat which prevailed recently. The wheat crop is a fair average.

## Visible Supply of Grain.

NEW YORK, May 11.—The following is the statement of the visible supply of grain on Saturday, as compiled by the New York Produce Exchange: Wheat, 20,853,000 bushels, a decrease of 209,000; corn, 3,718,000 bushels, an increase of 503,000; oats, 2,629,000 bushels, a decrease of 210,000; barley, 650,000 bushels, an increase of 57,000.

## Local Markets.

## BARLEY.

	Buyer Season.	Seller 1891.	Buyer 1891.	Seller 1891.
Thursday.....	145	145	110 1/2	110 1/2
Friday.....	145	145	110 1/2	110 1/2
Saturday.....	145	145	110 1/2	110 1/2
Monday.....	145	145	110 1/2	110 1/2
Tuesday.....	145	145	110 1/2	110 1/2

\*After July. †After August.

	*Buyer 1891.	Buyer 1891.	Buyer Season.	Seller 1891.
Thursday.....	164 1/2	174	172 1/2	160
Friday.....	164 1/2	173 1/2	172 1/2	158 1/2
Saturday.....	164 1/2	173 1/2	172 1/2	158 1/2
Monday.....	164 1/2	173 1/2	172 1/2	158 1/2
Tuesday.....	164 1/2	173 1/2	172 1/2	158 1/2

\*After August.

BAGS—San Quentin bags are again in market. The price named is 7 cts. The new Warden appears to be desirous of getting all he can for bags over and above cost. Calcuttas are quoted at 7 1/2 cts.

BARLEY—The local market is quiet but strong, with the demand restricted to actual requirements. In futures trading has been light. The following are to-day's Call Board sales:

Morning Session: Seller 1891—100 tons, \$1.10 1/2; 300, \$1.10; 200, \$1.10 1/2. June—100 tons, \$1.18; 100, \$1.17 1/2 cts. Afternoon Session: Buyer season—300 tons, \$1.45 1/2 cts.

BUTTER—Receipts continue free. The demand is good for both packing and consumption. The prices East will not admit of shipments to this coast.

CHEESE—The market is heavy and easy under free receipts and buyers being offish.

EGGS—The tone of the market is strong and healthy under lighter receipts and a good demand. Prices are better at the East which will favorably affect our market.

FLOUR—The market is strong at full prices. The demand on Puget Sound from China and Japan owing to cheap freights, attracts about all of Oregon's and Washington's surplus to that point.

WHEAT—The market for sample parcels is very strong. On Call futures have been fairly active at slight fluctuations. The following are to-day's Call Board sales:

Morning Session: Buyer 1891, after August 1st—600 tons, \$1.65 1/2 cts. Afternoon Session: Buyer 1891—100 tons, \$1.73 1/2; 100, \$1.73 1/2. Seller 1891—1000 tons, \$1.60; 600, \$1.59 1/2; 100, \$1.59 1/2; 200, \$1.59 1/2. Buyer 1891, after August 1st—100 tons, \$1.66; 200, \$1.65 1/2 cts.

## Market Information.

## Produce Receipts.

Receipts of produce at this port for the week ending May 13th, were as follows:

## Cereals.

The local wheat market for sample parcels has held to strong prices under a growing scarcity of supplies and increased wants. As has been repeatedly shown in these columns and as stated would be the case as early as July and August of 1890, the available supply in this State is short of requirements up to new crop season, or when 1891 wheat would be sufficiently dry to export without the fear of its beating while in transit. The arrival of deep sea tonnage the past week was quite large, adding materially to the chartered wheat vessels in port. If charterers can by some kind of move best known to themselves, prevent the ships from discharging their inward cargoes until the last day of grace, and then not furnish wheat cargoes until just before the time expires for the vessels to be loaded, so as to save demurrage, then it is altogether likely that late arrived vessels will not have outward cargoes furnished before the new season is entered. But, on the other hand, it is an open secret that during the rise in wheat values in last month, many cargoes were sold in England for May-June shipments, which being the case, will undoubtedly call for all the available old wheat here before the end of next month. The tactics of the ship and wheat rings are evidently to keep the California wheat market down to as low figures as possible for futures on Call, so as to compel the entering of the season of 1891-92 on a low basis; whether they will succeed or not depends largely on farmers. If the latter from one cause or another offer their grain freely, then the rings will be successful, but if farmers are reserved in their offerings they are liable to have their well laid scheme go amiss. While the crop on this coast and east of the Rocky mountains promises to be largely in excess of last year's output, yet European requirements owing to well authenticated short crop prospects, will compel the buying of our surplus at good round figures. This will be particularly the case if the price of silver advances so as to make Indian and Russian wheat cost more laid down in the consumption markets of Europe. This is why wheat operators are such close students of the silver market, and also why well informed farmers, those who keep abreast of the times in information on the influences on the wheat markets of the world, are such strong advocates for the remonetizing of silver by this government.

Cool cloudy weather the past week has improved crop prospects. With its continuance for a fortnight or so, the grain will average plumper and heavier. The bear movements to depress barley have not been successful. The cooler weather of the past week has caused the necessity for early or forced harvesting to no longer exist, and therefore first crop consignments are not likely to come to hand for a fortnight. Many localities report "no barley on hand," and this is not all, for several of them will not harvest for the grain, for they have bar-

vested hay, owing to the high price of the latter and fears regarding the yield in grain. The crop in this State will, it is claimed, be about 50 per cent larger than last year's. In other words, the increased yield will about offset the quantity carried over from 1889-90 into the season of 1890-91. The quantity that will be carried over from 1890-91 into 1891-92 will be very small.

Oats have held firm at hull figures. Receipts have not equalled the demand, which compelled dealers to draw on the reserve stocks to meet the demand. Crop prospects are uniformly good. In Western Oregon most too much rain is reported.

Corn has made another up move, particularly white. The latter is taken in preference for shipping to Central American ports, and as the supply in the State is light, any marked demand is met by higher asking prices. The market is higher now than for many years past. Eastern markets are also higher.

Buckwheat and rye are unchanged.

## Feedstuff.

Ground feed has continued in fair demand, with an advance for feedmeal. Honolulu is drawing bran quite largely from this port and also from up north. The lower outward freights up north attract supplies from there, but all taken there is just so much less to come to this city.

Choice to extra choice old hay is wanted, with, in some instances, a slight advance obtainable. New hay is beginning to cut an important figure. Harvesting is under full headway in several localities. Many more fields than heretofore claimed have been cut for hay, yet it looks as if the outturn will not be in excess of requirements.

## Fruits.

First consignment of this season's blackberries came to hand yesterday (Tuesday). The shipment was made by S. W. Ralston of Courtland. They fetched \$1 a drawer.

Strawberries have eased off to still lower figures. Many consignments received the past week were in bad order, and had to be sold "as is" for the best obtainable prices.

The first carload of cherries for the East was sent forward to-day from Vacaville. It is said that for early maturing cherries, Eastern buyers are paying in the orchard 4c, per lb for Black Tartarians and 5 to 6c for choice white. A large buyer quotes to the writer the following prices for green fruits per ton: Apricots, \$20 to \$25; Egg plums, \$30 to \$40; canning peaches, \$30 to \$40; Bartlett pears, \$30 to \$45. The price depends largely on the locality and expense of getting the fruit when ready. Prunes are running from \$30 to \$40 a ton. It is very hard, as yet, to get reliable quotations, owing to the feverish condition of the market, caused by the uncertainty regarding Eastern crops.

Crop prospects continue favorable. The tenor of advices indicate that the yield of prunes will not be so large to the tree, but there will be more trees in bearing. The same remarks apply to apricots.

The dried fruit market is about cleaned up. For next season's fruit some contracts are reported to have been made within the past two weeks, but particulars are withheld.

Raisins continue to come forward in struggling parcels. It is claimed that all holdings will be closed out before the end of next month.

Oranges have come in quite freely, with the bulk of receipts poor to fair, and of course hard to sell. Cooler weather is against the local market. Choice to extra choice oranges are wanted and when of proper size fetch fair prices.

Orchardists will confer a favor by advising us what buyers are offering for fruit.

## LIVE-STOCK.

Bullocks and mutton sheep are barely steady. The offerings are largely from owners who wish to sell all they can before driving their stock to new pastures. It is claimed that better prices are liable to obtain soon. Hogs are weak at shaded prices. The weakness is not so much from increased selling offers, as it is to the lessened demand. Milch cows and horses are virtually unchanged.

The market for dressed cattle is quoted as follows (to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent):

HOGS—On foot, light grain fed, 5 1/2 cts @ lb; dressed, —@—c @ lb; heavy, 4 1/2 cts @ lb; dressed, —@—c @ lb. Stock hogs, 4 1/2 cts @ lb. BEEF—Stall fed, 6 1/2 cts @ lb; grass fed, extra, 6 1/2 cts @ lb; first quality, 5 1/2 cts @ lb; second quality 5 1/2 cts @ lb; third quality, 4 1/2 cts @ lb; bulls and thin cows, 2 1/2 cts @ lb. VEAL—Small, 6 1/2 cts @ lb; large, 5 1/2 cts @ lb. MUTTON—Wethers, 7 1/2 cts @ lb; ewes, 7 1/2 cts @ lb; spring lamb, 7 1/2 cts @ lb.

## Vegetables.

Garden truck is coming in quite freely. Peas are a glut. Cannons are now running on them. The quality averages well. String beans of the different varieties are coming in more freely and prices shading. From up north there is a fair demand. Summer squash are in increasing supply. Cucumbers are still backward. Tomatoes are scarce. Spring cabbage, celery and cauliflower are in fair supply.

New crop onions are coming in quite freely. The more matured meet with a quick demand, but the other kinds are slow and hard to place.

For old potatoes the market is demoralized, and correct quotations hard to give. After this week, quotations will probably be withdrawn. New potatoes continue to increase in quantity and also in quality. The trade is running more largely on them to the neglect of old. Shipments East by rail and up north are quite large. The crop is very large.

## Miscellaneous.

In poultry, turkeys, hens, roosters, broilers and fryers have made quite an advance under a growing scarcity and a good demand. Other fowls are stronger.

Beans are reported firm, but no higher. Crop prospects are uniformly good in this State. Eastern advices indicate a fair to good crop this year.

Old bops are about cleaned up. For new crop hops, 15 to 20 cts is said to be the contracting price. Many growers will not contract, preferring to take chances when their crop is ready for market.

While there is no change in the wool market, yet everything points to better prices. This is based on light supplies in manufacturers' hands and the goods market being cleaned up. But, better still,

the indications throughout the United States point to good crops and good prices, both of which bring prosperity and create a better demand for goods.

Honey is in light receipt. We saw a consignment the past week, which was either adulterated or the bees fed on very inferior and unpalatable flowers, or else the cans in which it was put were not properly cleaned. Great care should be exercised by shippers.

It is claimed by many that the almond crop will be short; be that as it may, the nut is now scarce and higher.

From reliable advices up to May 13th the following summary of tonnage movement is compiled:

On the way to	1891.	1890.
San Francisco.....	246,869	187,346
San Diego.....	16,497	13,495
San Pedro.....	7,632	10,167

The Farmers' Alliance in Kansas  
—AND—  
Its Great Paper, The Advocate.

To the Alliance Brothers and Sisters of California THE ADVOCATE desires to send greeting, and to say through the columns of the RURAL PRESS: Send for a sample copy of THE ADVOCATE and it will tell you how we are "Holding the Fort" here in Kansas and pushing the movement along with the same zeal and enthusiasm as the RURAL PRESS tells you are doing on the Pacific Coast. THE ADVOCATE has over 125,000 readers in Kansas and sister States. It contains 16 pages, 64 columns, and bears the proud distinction of having been the most potent factor in the glorious political victories of the Alliance in Kansas. We will send you sample copy free, and 52 copies, one year, for \$1. Yours Fraternally,  
ADVOCATE PUBLISHING CO.,  
Topeka, Kansas.

We will send the RURAL PRESS and the ADVOCATE one year for \$3 to any address in the United States.—PUBLISHERS PACIFIC RURAL PRESS.

Dewey & Co.'s Scientific Press  
Patent Agency.

OUR U. S. AND FOREIGN PATENT AGENCY presents many and important advantages as a Home Agency over all others, by reason of long establishment, great experience, thorough system, intimate acquaintance with the subjects of inventions in our own community, and our most extensive law and reference library, containing official American and foreign reports, files of scientific and mechanical publications, etc. All worthy inventions patented through our Agency will have the benefit of an illustration or a description in the MINING AND SCIENTIFIC PRESS. We transact every branch of Patent business, and obtain Patents in all countries which grant protection to inventors. The large majority of U. S. and Foreign Patents issued to inventors on the Pacific Coast have been obtained through our Agency. We can give the best and most reliable advice as to the patentability of new inventions. Our prices are as low as any first-class agencies in the Eastern States, while our advantages for Pacific Coast inventors are far superior. Advice and Circulars free.

California Ventilated Barrel

EXCELS ALL OTHERS!

IT IS LIGHTER, STRONGER, MORE DURABLE AND BETTER VENTILATED THAN ANY OTHER BARREL.

It weighs from five to seven pounds less than the ordinary barrel, making a material saving in freight charges.

It costs less than one-half for trimming, and does not require an experienced hand to cooper it.

It is the only thoroughly ventilated barrel made, a very important point.

The heads are warranted not to come out in transit, and no liners are required.

It is stronger and more durable than any other barrel.

Never varies in size, even to the extent of a quart.

The Cheapest and Best  
Barrel on the  
Market.

It is Made of the Best Quality of Spruce, Woven Together with Copper Wire,  
And can be furnished in any size desired.

THE CALIFORNIA BARREL IS ADAPTED TO SHIPPING THE FOLLOWING ARTICLES:

- Apples, Oranges, Onions, Potatoes,
  - Sweet Potatoes, Dried Meats, Bottled Goods,
  - Glassware, Canned Meats, Crockery,
  - Eggs, Poultry, Walnuts, Almonds,
- And Vegetables of All Descriptions.

A factory making these barrels is now in operation in San Francisco, with a capacity of 4000 barrels a day. The success of the barrel is almost unprecedented, and it is bound to become the package in a very short time. EVERY ONE USING IT IS ENTHUSIASTIC IN ITS PRAISE. IT HASN'T A FAULT. When shipped in knock-down form, about 2500 barrels can be placed in a single car. Special rates given on car lots. WRITE FOR PRICES AND PARTICULARS.

Gradina—A Digestive Ferment From the Fig.

In 1880, in a communication to the French Academy of Science, M. Bonchout reported that he had found the juice collected from the common fig tree (*Ficus carica*) to contain a powerful ferment capable of digesting albuminoid substances, thus confirming a belief of the ancients that the juice possesses digestive properties. This ferment is now the subject of a paper by Dr. Mussi, in which he reports its isolation, and describes its properties. Juice collected from the fruit and branches of the fig was filtered to remove the serous portion from the insoluble, the latter repeatedly washed with water, and the washings added to the filtrate. This liquid, which after repeated filtration, was obtained limpid, was distinctly acid in reaction, and when placed in contact with moist fibrin, digested it completely. It was evaporated to a small volume, again filtered, and treated with absolute alcohol, which threw down a plentiful white precipitate that dried, when exposed to the air, to a dark-yellow amorphous mass. This, when treated with water, swelled up and imparted a milky appearance to the liquid, but a clear filtrate from it, though it gave the reactions of vegetable albumen, had no digestive power. The residue, insoluble in water, dissolved readily upon the addition of a trace of acid or alkali, and the solution, placed in contact with moist fibrin, effected complete and true digestion. To the ferment thus isolated Dr. Mussi gives the name "gradina," from *krade*, the name given by the Greeks to the part of the fig with which they specially associated the digestive property. It contains nitrogen, and in the dry state it forms a friable, semi-transparent, dark-yellow, amorphous mass, yielding an amber-yellow powder. In water it swells, but does not dissolve, though upon being shaken it imparts to the liquid a milky appearance. When dissolved by the aid of alkali or acid a concentrated solution is dark-yellow, but becomes colorless upon being diluted. Gradina differs from pepsin in maintaining its digestive power in an alkaline liquor, and from papain or papayotin in being insoluble in water, not precipitated from solution by alcohol or lead acetate, and in its activity not being diminished in the presence of hydrochloric acid. In a neutral liquid it is devoid of digestive power and it has no reaction upon starch.—*Pharm. Journal*.

A SENSIBLE INNOVATION.—Railroad economy has at last attacked the brass ornamentation of the locomotives, and hereafter all the principal railroad companies in the country will use painted wrought iron and blued steel where formerly burnished brass reflected and multiplied the rays of the sun. The new departure will cause a material saving in the labor of the engineers, the number of extra wipers employed about the shops and the original cost of the locomotives. The late Franklin B. Gowen, while President of the Reading Co., was the first to appreciate the great waste in the profuse use of brass, and he greatly reduced the quantity on all new locomotives built. It is only recently, however, that the use of the metal has been almost entirely abolished, and where formerly a locomotive looked as if dressed out for a holiday, there is to-day nothing but sombre black, giving the machine a very business-like appearance. The Pennsylvania Railroad Co. has also built all its new engines without any conspicuous brass ornaments. Freight engines were the first to begin the economy, which has now extended to locomotives of all classes. One of the officials of the company, in speaking of the change recently, said: "The use of the brass was expensive in many ways. It increased the original cost of the locomotive, took up the time of the engineer and fireman to polish it, besides the work of a large force of wipers in the round-houses. These wipers are now done away with entirely, and the engineer and fireman can clean their engine with a few passes of waste. The new departure has been coming into operation gradually. Old engines were not altered, but they were replaced by better and more business-like machines."—*Philadelphia Record*.

THERE is a natural law relating to helting which is not generally known, but which is nevertheless of value in practice. The hug or adhesion of a belt is as the square of the number of degrees which it covers on the pulley. For example, a belt that covers two-thirds of the circumference of a pulley requires four times the power to make it slip as it does when it covers only one-third of the same pulley.

Never had a preparation a more appropriate name than Ayer's Hair Vigor. When the capillary glands become enfeebled by disease, age, or neglect, this dressing imparts renewed life to the scalp, so that the hair assumes much of its youthful fullness and beauty.

FOR SALE! PINOLITO OLIVE RANCH!!! FORTY-SIX ACRES OF HILL LAND In the Town of Auburn, Placer Co.

Red soil, superimposed upon upturned, friable, decomposing slate, yielding iron and alumina, thus furnishing a soil which, as Prof. Hilgard said after his analysis, will retain moisture, will not require irrigation, and will not allow the vegetable mold to leech away; thus suited to the growth of fruit trees, especially the olive, as has been demonstrated both by the remarkable growth of the tree and the yield and the quality of oil. It is situated only 15 minutes walk from Auburn Station—the C. P. R. R. passes along one side—and is a less distance from the Court House. Thirty acres improved and planted to olives, set at long distances for permanent growth, and other fruits planted between the rows for temporary profits, mostly peaches of three best varieties, ripening in succession; prunes, mostly Petite; plums of several varieties, as Kelsey, Japan, Shropshire Damsel, etc.; figs of several best varieties; a few apples, nectarines, blackberries, etc. Two acres of table and raisin grapes, never irrigated, the vines remarkably vigorous and in full bearing. The trees, especially the 1500 olive, have all been planted with regard to permanency. About one-half of them have an orchard growth of seven years; fruited last year 300 pounds, this year nearly one ton. They are mostly Mission and Picholine, with a few trees of other choice varieties. Two crops of the olives have been pressed. The yield has been, for the first press, 14 per cent of very clear delicious table oil, and four per cent from the second press—the Picholine yielding this, of a peculiarly clear, nutty oil. There is on the ranch a few acres of grain sown for hay; two acres of well-set alfalfa, below the Auburn ditch, which crosses one corner of the property; also a small house of four rooms and a kitchen; a well of good water; a small barn; a strong, permanent spring of soft, cold water, which wells up through the slate; a two-inch iron pipe connects the spring with an iron-bound 20,000-gallon tank, situated on a beautiful pine clad hill 40 feet above the spring, a point which overlooks the town and gives very charming distant views, and is one of the most lovely sites for a residence to be found. The water is pumped to the tank by a duplex pump; the power, a four-horse steam engine, which furnishes power sufficient to pump, saw wood, run an olive crusher and do all needed shop work. The land is all suited to fruit, excepting along a rocky ridge, which furnishes three very desirable residence sites, and the olive, set promiscuously, thrives finely among the rocks. The property can be conveniently divided along a sag which separates two of the high knobs, and water from the spring can be pumped to each of them. This desirable property is now offered for sale for less than the improvements cost. The land is fenced, the title good and unencumbered. It is connected by a roadway, which is one of the improvements made, with one of the principal streets of Auburn. The sale will convey the entire plant, furniture in the house, all utensils, etc. If sold before April 1st the sale will include the coming crop. If later, the crop will be reserved, unless otherwise by special agreement. If desired, one-half the purchase money can remain five years, secured by mortgage at eight per cent. For price and any further information desired, address A. H. AGARD, No. 1259 Alice Street, - - Oakland, Cal.

### Scenes in Oregon.

Our leading illustration this week presents a view of one of the great mountains of the Pacific Coast—Mt. Hood, situated 60 miles due east of Portland, Oregon. Of this grand elevation and its surroundings, C. S. Sprecher wrote in last month's *Golden Era*, as follows: Since the day that Bierstadt put Mt. Hood on canvas, hung in the mists of the cataracts of Columbia, Mt. Hood has been the world's ideal of a mountain—simple, plain, impressive; rising in bold pyramid form, its broad base resting in the dark forest—in those interminable woods where once "rolled the Oregon and heard no voice save the sound of his own dashings." Mt. Shasta is a higher elevation than Mt. Hood, and Mt. Whitney is higher than either of them; and yet Mt. Whitney has never come into the observation and admiration of the world. Mt. Whitney is out of the way—seldom visited by tourists. Per contra, Mt. Hood or Mt. Shasta are right under the eyes of the world. Mt. Hood is 60 miles due east of Portland City. Portland is on a slight elevation above sea level, and the wide valley of the Willamette lies between it and the mountain. It would be impossible to have a finer mountain view, and yet we are standing on the street of a city of 80,000 people. From any

MOUNT HOOD, SIXTY MILES EAST OF PORTLAND, OREGON.

street corner it seems you might reach out your hand and touch the white snow peak. From Portland there are seven snow peaks in full view. These are Mt. Hood, Mt. Adams, Mt. St. Helens, Mt. Jefferson, and the Three Sisters. These stand around the broad expanse of the Willamette and Columbia valleys, and Mt. Hood is the king of all. Such grand en-

vironment should be a constant inspiration to lofty thoughts and honorable deeds.

The following appreciative lines to Mt. Hood are from the pen of Charles Grissen:

Behold his glittering brow uplifted high!  
Like sail first seen upon the rolling main  
Appears his snowy head above the plain,  
Growing in grandeur in your beaming eye,  
Clear and distinct against the azure sky.  
Beneath him lies outspread a vast domain,  
O'er which by nature he seems placed to reign.  
A vain procession, passing ceaseless by,  
Looks up with wondering eye at his bright face:  
A moment only seeming in his sight  
They pause, then sink with the approaching night  
Into oblivion's tomb, race following race;  
But he despite decay and death, remains  
The proud and changeless monarch of the plains.

The development of the resources of Oregon is building up many wide awake towns in different parts of the State. We have had views of a number of them in previous issues of the *RURAL*. Upon this page is a view of Jacksonville, the chief town in the rich Rogue River Valley in Southern Oregon. For beauty of situation and desirability and productiveness of its outlying country as well as for its thrift and progressiveness it is a notable town.

A LARGE CITRUS PLANTING.—Oroville announces one of the largest land sales made in this section for some years for fruit purposes. Col. E. S. Weeden of Chicago has purchased 627 acres, which he will plant to oranges and lemons, intending to plant the whole tract to citrus fruits inside of 12 months.

JACKSONVILLE, IN ROGUE RIVER VALLEY, SOUTHERN OREGON.

## THE FIELD.

## Pacific Coast Hop Notes.

The Sacramento Bee of May 14th reports the hopaphis in that district as follows:

The hop-growers along the Sacramento river are somewhat alarmed over the appearance of great numbers of the destructive hop aphid or lice on the vines. The latter are, in most of the luxuriant fields south of the city, already grown to the top of the long poles. Hop men Tuesday brought in several vine shoots, the stalks of which were covered with the enemy of the hop species of vegetation and exhibited them under the microscope. The growers believe that the insect is the same that has been seen here in other years, but in nearly every instance it is much larger, and is so numerous as to threaten the destruction of whole fields of hops.

The pest seems to prey upon the young and tender shoots or stalks while ignoring the foliage, and works in such a way, if undisturbed, as to draw the vitality from the stalk.

The insect is believed to have been introduced in this section from roots brought here from Oregon and Washington. In these States it has wrought great havoc in past years.

A hop man said yesterday that he did not anticipate very much damage from aphid unless the damp weather continues. The pest cannot survive in dry weather and has doubtless attained its present unusual numbers and size through the favoring rains that followed one another during April. Not all the growers are so confident that the pest will succumb to the dry weather that may be expected to follow the present clouded skies. The aphid has already attained such formidable fatness that it may be able to withstand a drizzle long enough to destroy the hop vines. Specimens of the pest have been forwarded to Prof. Hilgard at the Agricultural Station, Berkeley.

ad field

## Rumors From the North.

The Anaconda Farmer (Washington) of May 8, has the following:

Horst Bros. of Tacoma filed four hop contracts as follows on May 1st: John Stephens Alderton, 8000 pounds at 15 cents, October delivery; James Knox and Harry E. McGowan, Puyallup, 10,000 pounds, at 15 cents; Frederick Balck, Lime Kiln Station, 4000 pounds at 15 cents; August Hammill, Lime Kiln Station, 10,000 pounds, at 15 cents.

G. J. Hanson of the Hanson Hop and Malt Co., of Milwaukee, arrived in Tacoma the other day, having made a tour of inspection of the California and Oregon hop fields. Mr. Hanson said: "I predict that a large portion of the hops of Washington will this year be destroyed by hop lice. The conditions seem favorable for a wholesale devastation of the Washington hop by that vermin. I think that our experience in Wisconsin will be repeated. There, the year previous to the season when the lice wiped out our crop, there were but few lice, and the following year there were millions of them. The prospects are that the California and Oregon hop yield will, this year, be much more of an average crop than the Washington yield." Mr. Hanson visited Puyallup and North Yakima. Last year his firm used 2500 bales of Washington hops.

Statements relative to the acreage and probable yield of hops this year are a little contradictory. Since the published statement, a few days ago, by a prominent hop man, that there will be an increased acreage in California and Washington, some of the King county growers have been seen and they opposed this view so far as it relates to King county. William Cochran of White River says that he has yet to learn of a single acre of new hops having been set out. On the contrary, the acreage is probably less, and the yield cannot be much over one-half or two-thirds of the acreage of the county, by reason of the action of the growers in keeping the vines down to one and two to a hill. The loose rears of last year has had the effect of making the King county growers cautious, and this year they are imitating a practice common elsewhere but new here, that is, to confine the runners in a hill to one and two, instead of three, four and five, and thus lessen the foliage. Spraying to kill the hop pest will, in this way, be easily done, but with the abundant foliage of the vines here, it has been found quite impossible to combat the lice. In consequence of this cutting back a better quality of hops will result, but greatly at the expense of the quantity produced. The yield here will probably be something like that in Europe and the Eastern States, 1100 or 1500 pounds to the acre, instead of 2000 and 3000 pounds, as is usually the case.

## Japanese Hop Pickers.

The Sacramento Bee has the following on the picking problem:

A great many Japanese are and have been working in the hop fields in Sacramento county. The Restriction Act has had the effect of transforming the meek and lowly Chinaman from an humble and submissive servant to a proud and imperious dictator. A whim is enough to throw a gang of him into a strike, and to cross his purpose is to invite his expensive displeasure. The Chinese on these occasions have the best of it, because to permit them to abandon a fruit or hop crop in the midst of the gathering is more costly than to yield to their demands.

Chinese labor is scarcer than it used to be, and the cunning Mongolians are taking advantage of their position. The hop-growers have had experiences with the Chinese last year and the year before, and flew to Plater, and this season to Japanese for relief.

Last summer the Chinese discovered that hops had advanced in price, and the coolies were quick to take advantage of the opportunity to boost their wages. It is something of a condescension nowadays for Chinese to work at all. In this condition of affairs the Japanese are dropping into the places that used to be filled by the coolies.

The Japs are a more docile and obedient lot. They are exceedingly polite, and greet the "hose" of mornings with doffed hat and a bow. They are quick to learn, diligent, and not very exacting in the requirements for their personal comfort. In fact, very little satisfies them. Where they work by the day they are paid \$1. but some of them contract in numbers at \$27 a month. In all cases the Japs pay for their own board. Unlike the Chinese, the Japanese readily adapt themselves to the customs of the country. They wear civilized clothing and buy their food of American grocers and butchers. Thus far they have been generally confined in their work to trailing and trimming the hop vines and similar work.

The hop men appear to be very well satisfied with the Japanese experiment, and say that they are unable to get white men to do the work that the Mikado's subjects are glad to do. It is not unlikely that the dollar-a-day feature of the matter has something to do with the aversion of the ordinary laborer to the hop fields, besides the fact that white men are rarely equipped with housekeeping utensils as the inferior races are, and they will not herd together like the latter.

## THE IRRIGATOR.

## Railroads in Irrigation Districts.

The Southern Pacific Railroad Company has filed a petition with the secretary of the Anaheim Irrigation district, praying that their property situated in the district be excluded therefrom. The property includes 7.75 miles of road-bed, telegraph lines, lands, etc., assessed last year at a total valuation of \$75,835, and taxed for \$379.18. The tax, however, has not been paid. The petition will be heard at the meeting of the board to be held on June 21 next. This very severe complication of our district's affairs deserves the careful consideration of every taxpayer in this community. The law, however, is very plain upon this point, and the Board of Directors may, in their discretion, refuse to grant the petition. Chapter 21 of the Wright Act provides for the exclusion of lands from irrigation districts. Let us look at it closely and see how the railroad stands. Sections 4 and 5 are as follows:

Sec. 4. The Board of Directors, at the time and place mentioned in the notice, or at the time or times to which the hearing of said petition may be adjourned, shall proceed to hear the petition and all objections thereto, presented in writing by any person showing cause as aforesaid why the prayer of said petition should not be granted. The failure of any person interested in said district to show cause in writing why the tract or tracts of land mentioned in said petition should not be excluded from said district, shall be deemed and taken as an assent by him to the exclusion of such tract or tracts of land, or any part thereof, from said district, and the filing of such petition with such board, as aforesaid, shall be deemed and taken as an assent by each and all of such petitioners to the exclusion from such district of the lands mentioned in the petition, or any part thereof.

Sec. 5. The Board of Directors, if they deem it not for the best interest of the district that the lands mentioned in the petition, or some portion thereof, should be excluded from said district, shall order that said petition be denied; but if they deem it for the best interests of the district that the lands mentioned in the petition, or some portion thereof, be excluded from the district, and if no person interested in the district show cause in writing why the said lands, or some portion thereof, should not be excluded from the district, or if, having shown cause, withdraws the same, and also, if there be no outstanding bonds of the district, then the board may order that the lands mentioned in the petition, or some defined portion thereof, be excluded from the district.

May our board grant the petition? Clearly, under the law, they would not be justified in so doing. The exclusion of the railroad would certainly not be for the best interests of the district. The district was formed by the sovereign will of the people, and it is but just that the railroad should bear its proportion of the expense. The irrigation districts of the State are being fought relentlessly by their enemies, and the fight has assumed many different aspects. Whether the railroad company may carry its case into the courts remains to be seen, but it is reasonable to predict the directors of the district will refuse to grant their petition. —Anaheim Gazette.

[It occurs to us that the railway companies should be the last to refuse to bear such assessment. Irrigation is, in many cases, not only

the key to the profit in their traffic, but fixes as well the value of their property as it does that of individuals. In most cases, it would be a better offer for the railway to pay double the regular assessment. We trust no issue will be made on this point. The public has had enough to try its patience with these corporations without adding this.—Eds. Press.]

## How Much Water is Needed?

E. S. Babcock, of Coronado, is authority for the following:

The experience of the Coronado Beach Co. for the past four years in watering some 40,000 trees, embracing orange, lemon, olive, figs, palm, pine, pepper, eucalyptus and other varieties, is that the amount used is so much smaller than what is usually considered necessary it is believed that if the facts as they actually exist are known a great deal of money can be saved to parties who use water, and a great deal of capital saved to those who invest in water plants for the purpose of irrigation.

It is popularly thought that one inch of water is necessary for the irrigation of from three to 20 acres of citrus fruits, according to the location. Our experience, and that of several others who have been placed in a position to know, rather leads to the idea that one inch of water properly applied through pipes or wooden flumes, without any waste, is sufficient to irrigate 60 acres of citrus fruits, and for the first three years sufficient for much more than this amount. It is believed that by far the greatest amount of water which is considered to equal one miner's inch is either not furnished or is wasted. We have been reliably informed that one district near Los Angeles which claims to give one inch of water to ten acres, has not in reality such a water supply, nor do they actually furnish more than one inch to every 40 acres. It is believed that if this element of waste can be saved, that the development of our country will be greatly hastened. It is further believed that the only true and proper way to sell water for irrigation or for any other purpose is by the 1000 gallons. Make the rate low per 1000 gallons, and get pay for all the water furnished, and do not ask the irrigator to pay for the water which, if impounded, never ran over his land, or ran through the irrigating ditch and was wasted. This may tend to cut down the revenue of irrigating companies just starting for the first four or five years, but that is the time parties planting trees need the most assistance, as their orchards are producing no revenue. After they come into bearing then the owners can afford to pay proportionately more than the rate per inch, provided they are saved an equal amount during the first five years of irrigation.

It is believed that within 15 miles of the coast if parties properly pipe their land so it can be irrigated without waste, water at 20 cents per 1,000 gallons is cheaper, for oranges, the first year of planting, than water at \$3.50 per acre, even though nothing is paid for the water right in the shape of bonus or increased price per acre to the land. It is believed that water at 15 cents per 1,000 gallons, for oranges, is cheaper than \$3.50 per acre the second year trees are planted. It is believed that water at 12 cents per 1,000 gallons, for oranges, is cheaper the third year of planting than water at \$3.50 per acre. And what may seem strange to those who have not investigated it, it is believed that water ranging from 15 cents down to probably seven cents per 1,000 gallons, for oranges, if applied as outlined, is cheaper under ordinary circumstances than water at \$3 per acre. One instance which will go to bear out this statement is: The Point Loma Land and Town company planted 20 acres of lemon trees last year which made a phenomenal growth, and yet they only received five buckets of water containing a little less than five gallons each, or 25 gallons per tree per annum, or say 2,500 gallons per year, which, at 20 cents per 1,000 gallons is 40 cents per acre.

J. C. Long, formerly general manager of the San Diego, Cuyamaca and Eastern Railway company, has been watering 400 orange trees, and had water sufficient for two horses, cow and household purposes, paying at the rate of 15 cents per 1,000 gallons, and his bill has at no time exceeded \$1 per month.

Dr. Cogswell, residing in the Cajon valley, states that he has watered from a windmill, that his orange trees are three years old—equalling any trees, and that he has not averaged more than 150 gallons per tree per year for the past three years. Allowing 80 trees per acre you have 12,000 gallons per acre, which at 25 cents per 1,000 gallons is only \$3 per acre; at 20 cents, \$2.40 per acre, and at 15 cents, \$1.80 per acre.

J. T. Gordon, of El Cajon valley, whose orange trees have been planted a little over two years, and from part of which he will gather a full carload of oranges this year, purchased water for the past two years at 10 cents per 1,000 gallons, and allowed the water to reach the trees by running over the surface, not having the orchard flumed or piped. His bill for the two seasons the trees have been irrigated under this arrangement was so small that the party furnishing objected to selling him more water at the rate he had been paying, 10 cents per 1,000 gallons, and has arranged to sell him water by the inch rather than continue the rate of 10 cents per 1,000 gallons.

These figures are not given for the purpose

of interfering with the revenue of irrigation of companies selling water by the inch, but to call to their attention as well as to your own, the enormous waste continually taking place, for which some one has to pay.

The writer is aware that the above statements will be probably assailed and ridiculed, but he believes it is to the interest of the community to know the facts as he understands them to exist, and if anyone who is in a position to make a thoroughly reliable estimate of the amount of water he has used on his trees will communicate with me that the facts may be gathered together we will satisfy the most incredulous. If the facts are proven to be as we think they are, it is evident that small communities can well afford to club together for irrigation purposes, spending what money they have to spare in preparing their land with wooden flume pipes for irrigation without waste, and can afford to make a contract with some one of their number to put up at the nearest locality a small steam pumping works which will do for their purposes for several years, until the demand will be such as to warrant gravity works being put in. Correspondence with all who can give data that will give light upon the subject earnestly solicited.

[We should like to have correspondence bearing upon Mr. Babcock's proposition. Eds. Press.]

## FRUIT MARKETING.

## Competition in Fruit Transportation.

The Daily Report of this city has the following interesting rumors concerning the overland shipment of California fruit:

The biggest combination of railways ever made in this State has just been effected for the purpose of breaking the fruit-carrying monopoly long enjoyed by the Southern Pacific, Union Pacific and Chicago & Northwestern people. Washington Porter, president of the Porter Bros. Fruit Company of Chicago, recently said, in an interview, that this was to be the greatest fruit year in the history of California. Railway men found the same thing out about that time and began to seek the business at once. The very first snag they ran into was the "California Fruit Line." This combination had had the monopoly of the California fruit-carrying trade for years, and with that advantage seemed to be securely ensconced in the position of master of the situation. Last year much of the fruit crop went to waste because of the scarcity of cars, and this year only meager arrangements had been made to handle the increased crop. In such circumstances, the Rio Grande, Santa Fe and Chicago, Milwaukee & St. Paul people got together and formulated a plan which breaks up the monopoly and gives the New combination the biggest part of the fruit-carrying business of the State.

The fruit mart in Chicago is alongside the river and the California Fruit line's auction shed is situated at the end of a spur of the Chicago & Northwestern, on South Water street, the other side of the river, approached by two tunnels and two bridges. The Chicago, Milwaukee & St. Paul has long had a siding to the neighborhood of the Chicago & Northwestern shed, but it was old and seldom used. This is now changed, and the siding has been relaid and a large auction shed, with twice the capacity of the Chicago & Northwestern shed, has been constructed. This gives the Chicago, Milwaukee & St. Paul a direct approach to the Chicago fruit market that is really more advantageous than the old California Fruit line's approach.

In the meantime the combination, which calls itself the Pacific Fast Fruit line, while securing this advantage, had its men out securing business and had given orders for the construction of new cars. These are completed. There are 200 fruit cars of the ordinary pattern—50 to be attached to passenger trains and 150 to freight trains. Besides, there have been constructed 350 fruit refrigerator cars of the latest improved pattern. The refrigerator cars of the California Fruit line are of the old style, while those of the Pacific Fruit line are of the pattern now generally used in the East. An ordinary fruit refrigerator car has the ice-chests on the top of the car, with pipes running down along the sides and bottom of the car to convey the cold thoroughly. The new refrigerator cars are different. They can be used either as a ventilated or refrigerator car, or as both at once. The ice-traps on the top of the car can be raised or lowered at the will of the engineer, and the space thus made or decreased is protected from the outside atmosphere entering too freely by wire gauze.

The agreement takes in all the San Joaquin and Sacramento valleys—in fact all of California north of Bakersfield. The Rio Grande Western people engineered the new combination, and the Santa Fe went into it with enthusiasm. It was a great stroke of work for them. The Santa Fe surrenders a long haul in order to effect its entrance into the fruit district of Chicago, for the Santa Fe, instead of sending the freight over its own line from Kansas City to Chicago, sends it over the Chicago, Milwaukee & St. Paul. The route is from California to Ogden, thence over the Rio Grande Western and the Atchison, Topeka & Santa Fe's Colorado Midland line to Denver. From Denver to Kansas City the haul is over

the Atchison, Topeka & Santa Fe main line, and at Kansas City the Chicago, Milwaukee & St. Paul takes hold, conveying the fruit freight thence direct to the market.

Fruit from points south of Bakersfield will go over the Santa Fe's Atlantic & Pacific line, by way of the Needles, as formerly. The southern part of the State is thus thoroughly covered, as is the north, and with this big combination working against the old monopoly, together with the Burlington & Rock Island people independently conducting a fight against the Northwestern; the Southern Pacific, Union Pacific Chicago & Northwestern fruit combination is placed completely on the defensive.

**A NEW FRUIT PACKAGE.**—A very ingenious and neatly arranged device for carrying fruit for Eastern shipment has been invented by T. S. Fitch of Alameda. With it fruit, like peaches, apricots, pears or oranges, can be kept firmly in place in the box, and, at the same time, each peach or pear is entirely by itself. The frame that accomplishes this is made of straw-board, eight frames, each holding six peaches, fitting in the ordinary sized peach box. In the bottom of each frame six holes are cut with a die, shaped like a \*, the length of the radiating points depending on the size of the fruit for which the frame is graded. The fruit—an orange or peach, for example—is pressed into each hole, the end cardboard points bending and binding so as to hold the fruit firmly in place.

By this method of gathering the crop from the tree and packing in the shipping box, but one handling is required; the picker takes his crate on his arm, mounts the stepladder and packs as fast as he picks, filling the crates ready for immediate covering, thus avoiding any exposure of the fruit to the hot sun, drying winds and gritty dust.—*Record-Union.*

FORESTRY.

Common Names for California Trees.

[Written for the Press by J. G. LEMMON]

There is much confusion in the use of common or vernacular names for our forest trees.

Our most familiar species have been given each a dozen or more names, while in many instances the same name is applied to a dozen or more species. These names conferred by the early settlers are often based upon some local feature or passing fancy, which, when the subject of them is better known, become totally inappropriate or viciously misleading. It is desirable to correct, if we may, this erratic treatment of our trees.

As long ago as 1878, when the distinguished botanists, Sir Joseph Hooker, Drs. Asa Gray, George Engelmann and C. C. Parry were making a hurried examination of the forests of the Northwest, the writer besought these great authorities to select from the host of names given locally, to our trees, one the most appropriate for each of our species, and to sanction its exclusive use thereafter.

One of the savants regarded the proposition as a good one; another promised that it should be done before they separated; a third thought they had not time then to perform so important a work, while the fourth declared that such a thing could never be accomplished. "The lumbermen, hunters and travelers," he said, "will always be giving names to objects however bad they may be in themselves, or misleading they might become."

Nothing came of my suggestion, and the confusion of names has increased apace, owing to the increased attention given to our trees by this visit of the Eastern scientists and by later publications.

In the extended articles of the Botanists' Reports, included in the 2d and 3d Biennial Reports of the California State Board of Forestry, an attempt is made while elaborating the great class of *Coniferae*, or cone-bearers, to bring order out of the confusion of names, by selecting the least objectionable name in common use; or, in a few instances, coining a new one for each of the kinds of trees, and then using this one habitually in subsequent discussions, hoping thereby to set the example of uniformity and precision.

This effort has been so much commended of late that I yield to an urgent request to publish abbreviated descriptions of our forest trees, just sufficient to bring out the characters upon which are based the vernacular names for the groups as well as species. The following descriptive list has been prepared for our largest family of trees—the pines. Later, it may be followed by a similar list of the rest of the cone bearing trees.

Descriptive List of Groups and Species of California Pines.

CLASS I. SMOOTH-CONED, SHORT LEAVED WHITE PINES.

Cones smooth, devoid of protuberances, prickles or hooks; seeds large, leaves in 5s. Wood usually lighter-colored, softer and less resinous than that of the other class. Four species in two groups of a pair each.

**GROUP 1. LONG CONED, LUMBER PINES.**—Cones long, narrow, cylindrical, 8 to 22 inches long and 1 to 4 inches thick, on long stems becoming pendent and breaking at maturity. Trees usually very large with grayish, finely

checked bark, large and long upper bearing limbs and light-green foliage.

No. 1—*Pinus Lambertiana*, Doug., "Great Sugar Pine."—Trees of the largest dimensions, 120 to 300, or, favorably situated, 250 to 300 feet high and 10 to 20 in diameter; scattered among other trees of the Coast and Sierra mountains at middle elevations. Cones very long, 10 to 22 inches long—the longest known.

No. 2—*Pinus monticola*, Doug., "Mountain Pine."—Smaller, lighter barked trees than the preceding in sub-alpine regions of the Sierra, but northward in Oregon and Washington found at lower elevations; cones narrow, 6 to 12 inches long; scales thin, weak, reflexed at maturity.

**GROUP 2. SHORT CONED, ALPINE PINES.**—Dwarfed, often depressed trees forming the upper fringes of the forests on the Rocky Mts. and the Sierra Nevada.

No. 3—*Pinus flexilis*, James., "Limb-twig Pine."—Small or depressed trees of the Rocky mountains and a few on the peaks of certain mountains in the Southern Sierra.

No. 4—*Pinus albicaulis*, Engel., "White-bark Pine."—Very white barked, often repressed trees forming the timber line on certain peaks of the Sierra. Cone globose, set close upon the short, stout, erect, white, annual stems.

CLASS II. ROUGH-CONED, DIVERSE-LEAVED, PITCH PINES.

Cones rough, armed with conspicuous knobs, prickles or hooks. Wood usually darker, harder, more resinous than that of the first class. Fourteen species in two sections of two groups each.

**SECTION A. SUB TERMINAL, MOSTLY DECIDUOUS-CONED PINES.**—Cones arising near the terminal leaf-bud, deciduous at maturity. Eight species in two very unequal groups.

**GROUP 3. COHERENT CONED, SHORT LEAVED, CLOSE-GRAINED PINES.**—Cones small, at maturity separating from the stem entirely. Three diverse pairs of species.

**1ST PAIR: OBLONG-CONED, PLUME PINES.**—Cones oblong, cylindrical, 3 to 5 inches long, pendent from the long, plume-like branchlets; leaves in 5s. Sub-alpine trees of the Rocky mountains, with a few trees only on the Sierra.

No. 5—*Pinus Balfouriana*, Jeff., "Fox-Tail Pine."—A few trees in sequestered nooks near Shasta and in the vicinity of Mt. Whitney. Cones with very small prickles.

No. 6—*Pinus aristata*, Engel., "Bristle-Cone Pine."—Similar but smaller trees on a few peaks of the Southern Sierra, but chiefly in Arizona, New Mexico and Colorado. Cones with long, conspicuous, bristle-like prickles.

**2ND PAIR. GLOBE-CONED, NUT PINES.**—Cones sub-globose  $\frac{1}{2}$  to 2 inches thick; scales few; very protuberant, without prickles, widely opening at maturity, loosely holding the large, delicious seeds.

No. 7—*Pinus monophylla*, Tor. and Frem., "Single-Leaf Pine."—Small, branching trees of the Great Basin, the eastern slopes of the Sierra, and the Tehachapi mountains; leaves solitary, terete, pungent-pointed; seeds, large, hard-shelled.

No. 8—*Pinus Parryana*, Engel., "Parry Pine."—Small trees in the peninsula of Lower California, with a few specimens extending into San Diego Co., California. Cones smaller than the preceding, with soft-shelled seeds; leaves in 5s.

**3D PAIR. THIMBLE-CONED, THIN-BARK PINES.**—Cone very small, 1 to 2 inches long, strongly declined; leaves in pairs. Trees with exceptionally thin bark and small cones.

No. 9—*Pinus contorta*, Dong., "Sorb Pine."—Very small, scrubby trees, on and near the northwest coast of California and Oregon, the very small cones often remaining on the trees for many years.

No. 10—*Pinus Murrayana*, Balf., "Tamarack Pine."—Tall, slender trees in wet, sub-alpine swamps of the Sierra and northward; also in the Rocky mountains. Cones ovate-conical,  $\frac{1}{2}$  to  $2\frac{1}{2}$  inches long. Trees usually discharging pitch or gum. Bark only one-fourth to one-half inch thick. Wood tough and light.

**GROUP 4. BROKEN-CONED, LUMBER PINES.**—Cones breaking away at maturity from the short stem by an irregular, transverse fracture within the base. They are of medium size, ovate-conical, 4 to 8 inches long, and half as broad at base; leaves in 3s, 5 to 8 inches long. Large trees, with thick, deeply fissured bark, and yielding lumber of great value. Trees widely distributed at middle altitudes.

No. 11—*Pinus ponderosa*, Dong., "Yellow Pine."—Trees of the largest size 200 to 300 feet in height; the largest often 250 to 300 feet high and 5 to 15 feet thick; bark in the typical form, yellowish or whitish, mostly very thick and deeply fissured into large plates; cones, conical-ovate, 2 to 5 inches long; male flowers, long and flexuous. The broken branchlets exhale an odor of turpentine.

Var. (a) *nigricans*, "Brown bark Pine."—Trees of medium size flourishing usually in milder situations than other forms and longer retaining their lower limbs; sap-wood usually of many layers; cones, largest of the species, 3 to 6 inches long.

Var. (b) *Benthaimona*, "Foothills Yellow Pine."—Medium-sized trees in the coast mountains and Western Sierra foothills, usually spire-shaped; cones, smaller and narrower than the preceding.

Var. (c) *brachyptera*, "Southern Yellow Pine."—Trees of Northern Arizona and New Mexico; cones, small, ovate, 2 to 4 inches long.

Var. (d) *scopularum*, "Rocky Mt. Yellow

Pine."—A small, spire-shaped tree of the Rocky Mts.; leaves often in pairs and remaining on the limbs several years.

No. 12—*Pinus Jeffreyi*, Mur., "Black Pine." Chiefly distinguished from the *ponderosa* species (with which it is often associated) by the trees affecting usually more elevated regions, and having darker, finer checked bark; the young branchlets and leaves are colored by a whitish powder; also when broken they exhale a pleasant, aromatic odor, not one of turpentine; cones, large, 6 to 10 inches long, ovate, with strong prickles.

Var. (a) *deflexa*, "Red-bark Pine."—This form constitutes one of the principal timber trees of the high Sierras, notably near Truckee. The bark is usually reddish-brown, thick, coarsely checked by many lines, especially toward the top of the tree; cones, large, 6 to 10 inches long.

Var. (b) *peninsularis*, "Peninsular Pine."—On the San Rafael mountains of Lower California; bark, grayish-brown, thick, deeply furrowed; cones, remarkably abundant and large, 6 to 8 inches long.

Var. (c) *ambigua*, "A tree of the lake region of Western Montana, "with purple cones and long glaucous foliage."

**SECTION B.—LATERAL, MOSTLY PERSISTENT-CONED, LONG-LEAVED PINES.**—Cones arising laterally, i. e. along the bearing stems, usually at some distance from the apex; mostly not falling at maturity, but persisting and, either becoming inclosed by the later layers of wood, or, the peduncle is stretched and at length broken by the enlargement of the tree, while the cone is often carried onward confined in the bark, leaving a channel behind it to the heart of the tree. Leaves large and long, 6 to 12 inches. Six species forming a pair of trios, or groups.

**GROUP 5. HEAVY, SPIKE CONED, LONG-LIMBED PINES.**—Cones of the heaviest, largest and hardest description on long, stout spreading peduncles, opening at maturity, but often remaining until forced off by the enlargement of the tree. Scales of the cone very large and thick, often terminating in long, stout, curved spines or hooks; seeds very large, black, thick-shelled. Leaves in 3s or 5s, very large and long, 8 to 14 inches. Picturesque trees remarkable for their usually divided trunk or very long limbs and for their heavy, spine-bearing cones.

No. 13—*Pinus Coulteri*, Don., "Big-Coned Pine."—Trees of medium size, with dark green, abundant three-leaved foliage; composed of the largest and longest pine leaves known, 8 to 14 inches long. Cones elongated, elliptical, of matchless size and weight, 15 to 20 inches long and often weighing five to eight pounds. The outer hooks are often two to four inches long, and curved like a nail grab. Trees of limited range in the Southern coast ranges and San Bernardino mountains.

No. 14—*Pinus Sabiniana*, Dong., "Gray-Leaf Pine."—Usually small, round-headed trees of the hot, sloping foot hills with divided trunks, and scant foliage of grayish color, all but the leaves of the season dropping downward, or early falling away. Cones broadly ovate, weighing 2 to 5 pounds, armed with stout, short hooks; seeds very large  $\frac{1}{2}$  to  $\frac{3}{4}$  inch long, with a thick, narrow wing. Leaves in 3s.

No. 15—*Pinus Torreyana*, Parry, "Torrey Pine."—A few small trees not to exceed a few hundred in all; buffeted, often prostrated by the ocean winds at Del Mar, San Diego Co., with a few on Santa Rosa Island. Leaves in 5s, very large and long, 8 to 12 inches. Cones broadly ovate, 4 to 6 inches long, weighing 1 to 2 pounds, and armed with short, stout spines.

**GROUP 6. CLOSE-CONED, SLENDER PINES.**—Cones in verticils or clusters, usually strongly declined, and gibbous; usually long persistent, and remaining long-closed, holding the seed. Small trees mostly crowded into dense groves, hence tall and slender; maturing fruit when quite young. Leaves in 3s or 2s.

No. 16—*Pinus insignis*, Dong., "Monterey Pine."—Beautiful trees on Point Pinos near Monterey, and abundant in cultivation. Leaves in threes.

Var. (a) *radiata* "Spreading-Cone Pines."—The large-coned form near Monterey hay.

Var. (b) *levigata*, "Nearly smooth cone Pine."—Cone small, nearly smooth. Trees on the outskirts of the forest farthest from the ocean.

No. 17—*Pinus tuberculata*, Gordon, "Knob-Coned Pine."—Usually small, early bearing, slender trees on sunny slopes of the Northern Sierra, and rarely on the coast ranges. Cones strongly declined, narrow and pointed, 3 to 7 inches long. Remaining on the trees and unopened for an indefinite number of years. Leaves in 3s.

No. 18—*Pinus Muricata*, Dcn., "Prickle-Coned Pine."—Small slender trees usually in swampy places along a limited portion of the coast range, mostly northward from San Francisco. Cones clustered, ovate, 2 to 3 inches long with small, sharp, persistent prickles. The cones have been known to remain unopened for 20 to 30 years, then to release good seeds. Leaves in pairs, usually long, 3 to 6 inches.

**AN IMMENSE MOUNTAIN BRIDGE.**—A bridge has recently been completed on a Peruvian Central Railway which spans a chasm with almost vertical sides and 235 feet in width. The bridge is of wrought iron and of the cantilever type, supported on two iron towers. Its total length is 575 feet, its suspended span being 105 feet long.

SHEEP AND WOOL.

Notable Decrease in the Wool Product.

The quantity of wool produced this year must be less than the yield last year, if the agricultural report of the number of sheep in the country January 1st is correct. That report indicated a loss of 904,000 sheep (and 11,000,000 pounds of wool), but this loss was mainly in a very few States. If only five States in which the change was greatest—Texas and Missouri, California, Nevada and Oregon—he omitted from the calculation, the yield in the remaining States would show a small increase, gains being rather more than losses.

The estimates of the yield per sheep which have been most commonly accepted in the trade are employed by Mr. Joseph E. Truitt in his statements for the Philadelphia Textile Association. These statements have been continued for several years, with general approval by persons having extensive knowledge and a large interest in the ascertainment of reliable data. Taking the same rate of yield per sheep for the current year, and the same number of sheep reported for January, 1891, by the Agricultural Department, the quantities of wool given in the first column are obtained, and Mr. Truitt's estimate for 1890 is given in the second:

Total yield.....	298,015,713	299,444,856

Further analysis of the figures shows that the States east of Pennsylvania generally lost, including a loss of over 900,000 pounds in New York, but Pennsylvania gained 633,000. In the Eastern section, as a whole, the loss was therefore not significant; but between the Pennsylvania border and the Mississippi, five Northern States gained in wool production more than 1,000,000 pounds. The five prairie States beyond them made no change worth notice, but again in the mountain region four States and three Territories gained over 1,000,000 pounds. Thus the older and the newer regions of fine fleece-growing, west of New York, increased in yield, while east, south and west of these regions there were losses. Delaware, Maryland and West Virginia showed slight gains, but most of the Southern States slight losses.

To the figures obtained from the number of sheep, Mr. Truitt and the Agricultural Department both added about 40,700,000 pounds as the probable yield of pulled wool from sheep sent to market lost by disease or disaster. There is no means of fixing the quantity thus obtained accurately, but there seems much reason to believe that it is somewhat larger than usual this year because of the losses of sheep in certain States. It may be expected that the supply of American wool will at all events not fall much short of 300,000,000 pounds this year.

## PATRONS OF HUSBANDRY.

## Our Grange Edition.

The Grange news of most general interest is given through all editions of our paper on this page. Several supplemental pages, devoted to Grange interests, are added in our Grange edition, which any subscriber can receive in lieu of the regular edition WITHOUT EXTRA COST, by addressing the publishers.

## The Master's Desk.

E. W. DAVIS, W. M. S. G. OF CALIFORNIA.

From all sections of the Union come the welcome tidings, "The Grange is growing." But why should not the Grange grow? An Order that constantly tries to better the condition of humanity is entitled to prosper. An Order that eschews all selfishness, all partisanship, all denominationalism, all attempt to punish even those who speak and write evil of it, is sure to prosper. The Grange knows what is right, what is fair, what is just, and knowing these things, it dares to maintain them. Hence the Grange grows—not in numbers alone, but in influence and in power—and the Order of Patrons of Husbandry will flourish while the grass grows, while the sun shines, while honest men and

with the silver thread of some one's friendship (to be found daily), keep them in the vase of your truest love (which ought to be constant) till the last flower fades (which in memory will never be). Thus you will have found a beautiful and pleasing companionship.

There will be more farmers in the next session of the Legislature than have been in any one session since this State was admitted into the sisterhood. Remember this prediction! It will not surprise some people if California sends two or three farmers to Congress in 1892. Why not? Tell us why the farmer is not the coming man?

A copy of the Journal of Proceedings of the Seventeenth Annual Session of the Colorado State Grange is at hand, thanks to Bro. J. A. Newcomb, Worthy Sec'y. It contains much interesting and instructive reading.

The pupil in school is frequently compelled to "review" the work just done. How about the older pupils? Do they "review" the work of the past now and then, just enough to get all the good out of the lessons which experience teaches? We don't ask you to thresh the old straw too often, but we do believe in getting

## Hon. Reuben P. Boise.

Hon. Reuben P. Boise has arrived at the mellow age of 81 years, honored by all for the many traits of character which create respect from all classes.

He was born in the year 1819 at Blandford, Mass. At 24 years of age he graduated from William's College and moved to Missouri, where he taught school for two years, when he returned to his native State and read law, and three years later was admitted to practice. In 1851 he emigrated to Oregon, settling at Portland, where he followed his chosen profession. In 1852 he was elected prosecuting attorney for the first and second districts. From that time on his life was a busy one, being elected at various times to offices of trust and position. In 1880 he was elected Judge of the Third Judicial District, which office he filled for over eight years. As a farmer he takes equally as high rank as that he secured in the other walks of life. His large ranch in Polk county attests this fact. For four successive terms he served as Master of the Oregon State Grange. It is perhaps not claiming too much when we say that no man in the Order has done more for its advancement. Many of the laws of Oregon in

able. A select literary program will be given; also addresses on leading questions of the day. Everybody invited to bring their baskets, their families, their sisters, their cousins and aunts, and meet their neighbors and friends in one day of recreation at least out of the year. All farmers are especially invited.

A. P. ROACHE.

## Pioneer and Grange Picnic.

The Pioneers of Washington, Eden, and Murray townships of Alameda county will join with Eden, Temescal, San Jose, and Danville Granges in a grand picnic, at Riverside Grove, at Alvarado Station on the narrow gauge railroad, Saturday, May 23d. The Pioneers of Alameda and Contra Costa counties, and all farmers and respectable citizens who wish to join in the rural festival, are invited to be present. A good band of music will be in attendance. Brief speeches will be made by able speakers, under the auspices of the Grange. Dancing, children's games and foot-racing will be conducted by the committee. Probably excursion tickets can be had from San Francisco, Oakland, San Jose, and way stations. Further

HON. REUBEN H. BOISE, P. M. OREGON STATE GRANGE.

H. E. HAYES, W. M. OREGON STATE GRANGE.

virtuous women till the soil, and while agriculture is recognized as an honorable and necessary calling of man.

As soon as our next census report is complete, we will know how many of the 63,000,000 people who live in the United States are farmers. In the meantime, it is safe to ask: What per cent of our public office-holders are farmers? What direct influence in political affairs does the farmer exercise? How long are these conditions to exist? Will the farmers stand together in matters that are common to them? How may we, as taxpayers and loyal citizens, best work for the good of our common country? These are thoughts that every person should consider very carefully. Don't allow some one else to think for you on these great questions. Solve them for yourself. Be sure you are right, then act.

Did you plant a tree, flower or vine this spring? If so, did it grow? Will you try to sit beneath its shade and eat the fruit thereof?

The sluggard is told to go to the ant for lessons of industry and wisdom. But really do you think a sluggard would profit by any teaching? What is your idea of a sluggard? May you deal most charitably with the sluggard, for surely he deserves the charity of the world. But truly, those who think themselves most industrious and most economic may profit by heeding the advice given to the sluggard.

Gather a bouquet of California's choicest flowers (now in full bloom), bind them together

the most of the grain out of the straw. Let us "review" our lives now and then. The soldier has to pass in "review" before his superior, and the fact that he has to do this causes him to polish his gun and all his accoutrements, as well as to put himself in presentable shape. The "review" has its lessons for all. Let's review the situation!

## Join the Grange.

Every farmer should join the Grange. It does not matter that he is a member of the League or the Alliance, he should be also a member of the Grange. This latter organization he needs for himself, for his wife and for his children as they approach maturity. Its educational value would be hard to overestimate. Its training is just what every farmer and farmer's son needs to fit him for active and efficient work among his fellows, and it is valuable also to the other sex in the same direction. One of its most valued features is the development of the social qualities and the field for social pleasures that it opens up to the isolated farmer's wife and family. We urge the Grange on all our readers. If you have no Grange in your neighborhood, go to work and organize one. You will never regret it; on the contrary, you will bless the day you entered its hospitable door.

PENCIL-SHARPENING.—We heard some loud wood and metal carving going on somewhere, and now we have it located in Tulare, viz.: I am sharpening my pencil for something to occupy valuable space in your paper by-and-by, for which forgive. Yours fraternally, J. W. M.

the interest of farmers were drawn up by him. In the National Grange his influence has at all times been recognized by his contemporaries.

## H. E. Hayes, W. M.

Probably no person exemplifies more fully the typical American than does Bro. H. E. Hayes. Worthy Master of Oregon State Grange. In 1849, at the early age of 17 years, he sought his fortunes in the gold mines of California. Two years later, he moved to Oregon, settling in the Willamette valley, where he has continued to live. In 1853, he left for his native State, Connecticut, where he married Miss S. L. Woodruff. After his marriage, he returned with his wife to Oregon. He has always been foremost in advancing the interest of this country, particularly of his own favored State. As a Granger, he has been keenly alive to the best interests of the Order, and as Lecturer of Oregon State Grange, his energy and activity of mind found full scope. During his six years as Lecturer, he canvassed the State in all directions, and succeeded in organizing 28 Granges, besides reorganizing 24. With his election in 1888 Worthy Master of the Oregon State Grange, he carried into the office the same spirit of progressiveness that characterized him in his other official positions.

## Watsonville Grange.

Watsonville Grange will hold its annual basket picnic, Saturday, June 6th, at Aptos. Music, singing, dancing and various other amusements will render the occasion pleasur-

information can be had of F. B. Granger, Alvarado, Cal., or A. T. Dawsey, Sec'y State Grange of Cal., 220 Market St., S. F. San Jose Grange is expected to act on this matter at its next meeting.

## Picnic Arrangements.

San Jose Grange has voted to join the Granges and Pioneers of Alameda and Contra Costa counties in a grand picnic at Alvarado, Saturday, May 23d. The Grangers will go and return by the regular narrow-gauge trains. Regular fare for round trip, \$2. If 50 or more purchase Grange excursion tickets at the San Jose or Santa Clara ticket offices, or of Cyrus Jones or other Grangers on the train, the rate will likely be from \$1.50 to \$1. Round-trip excursion ticket from S. F. or Oakland at the railroad ticket offices, or on the 8:15 A. M. train, 75 cents.

Major E. A. Sherman of the Mexican War veterans will deliver a patriotic opening speech. Hon. Philo Hersey of Santa Clara will make a Grange address. Dr. A. E. Mintie and wife will give a vocal duet, with instrumental accompaniment. Other brief exercises, with foot-racing, games, music and dancing will complete the program for a first pioneer and rural festival.

Returning trains leave Alvarado, P. M., for S. F. at 5:08; for San Jose, 3:52 and 5:55.

WATSONVILLE GRANGE will hold a special meeting at its hall on May 30th, for the purpose of observing memorial services.

FARMERS' ALLIANCE.

Alliance Edition.

Subscribers can receive our FARMERS' ALLIANCE EDITION WITHOUT EXTRA COST, by applying for the same. That edition contains several supplemental pages of Alliance matter, in addition to that which appears on this page through all editions.

The Secretary's Desk.

(C. W. PEDLAR, Gilroy, Sec'y Cal. State F. A. & I. U.)

To All Organizers.

Please be more careful of your rituals, and always instruct a newly organized Alliance to guard them sacredly. When not in use the President should always place them under lock and key. Frequent requests come to this office for a half dozen or a dozen copies to distribute among the members. Evidently they have not been properly instructed or they would not make such requests. No Alliance is entitled to have more than four rituals at one time, and these should be supplied from this office. If an organization is promptly and fully reported the supplies will reach the Secretary in time for the next meeting.

The Alliance Home must be sacredly guarded.

"We have 24 applicants for initiation at our next meeting, which will more than double our membership," writes D. L. Smith, the wide awake Secretary of Westside Alliance Stanislaus Co.

Bro. G. S. Moore, Secretary of Danville Alliance writes: "We are having initiations at nearly every meeting." And so the work goes on, and by no means the least part of it is the work of education. At no period in the world's history have the people been educated on any subject so rapidly and thoroughly as they are being to-day in the demands and principles of the Alliance which shall in the near future make this indeed "a government of the people, for the people and by the people," and usher in anew the glad tidings of "On earth peace, and good will to man."

The wisdom of the Supreme Council in devoting this year to the work of education is everywhere apparent even now, and will be more so, when the mighty host of determined souls shall come together in February of 1892, and with one mind and one voice proclaim: "The people of this fair land shall once more be free!"

C. W. PEDLAR, State Sec'y.

Let All Strike Together.

Address by William Pile, President of Roberts Island Farmers' Alliance.

Mr. Chairman, Ladies and Gentlemen: You are aware that there is a great feeling of discontent among the farmers of the United States, and there are thousands who do not know the cause, and there are thousands who do not complain, yet they are moved by a feeling that there is something wrong. They are beginning to feel that they have not had a fair chance in the struggle for existence.

You have seen within your own time great cities, fine mansions and grand structures built, thereby adding national wealth to the world. You see fine mansions and the surroundings of all the appliances pertaining to the comforts of life, and you ask yourself who are the owners of all this comfort. Is it those who labor in the field all their lives until their poor, decrepit hands are unable to perform the task before them, or is it those who can flip a jack from the bottom of a deck of cards or can figure the most difficult problem in interest, or who can speculate in wheat, thereby putting the price up or down? I ask you these questions and you can answer for yourselves.

The Injustice of Civilization

Is founded in the fact that the burdens are not equally distributed, nor benefits justly appropriated, and thus the injustice of modern civilization stands clearly revealed. The farmer and the laboring man to-day should share proportionately with the capitalist in the benefits derived from modern invention in the application of the forces of nature to the means of producing wealth. The monopoly of transportation and the distribution of the product of industry are some of the chief causes of injustice.

Now, farmers and laborers, we have bowed our heads long enough, and allowed trusts and capital to control the making of laws and the prices of our products. We do not intend to withdraw from this struggle. We are going to stand by our rights, and (as Gen. Jackson once said) "By the Eternal, we are going to have them."

Since having my attention drawn to an organization called the Farmers' Alliance, I have become impressed with its workings and purposes, and I feel justified in saying that I think it is a move in the right direction.

Capitalists, Speculators and Lawyers

Who are opposed to our organization say that we have taken too big a contract; that the farmers and working people have not the brains to carry on such a gigantic undertaking.

Oh, indeed! they are very willing for us to

stand behind the plow, or at the throttle, and guide the affairs of manual labor; but the affairs of State—that is a different thing. Not but they treat us with civility and respect, but they have become so accustomed to look down on those who toil for a living, no wonder they are surprised at our big undertaking. The more we look into the matter, the more injustice we discover.

I say it is high time the road should have a turn, and the footprints of the millionaire be turned back until they meet the footprints of the toiling masses.

I believe when the mud sills of the nation are once opened, and the light shines through, we can then demand equal justice and square dealing all around.

It is not possible for me to explain how this is to come about, but it is going to come, slow but sure, with power enough to carry it around the whole circumference of the earth.

Brothers, and those that have joined themselves in the interests of reform, I do implore you all to strike together, that we may be able to combat any and all obnoxious laws in favor of capital. "Let our motto be: Justice, Equity, Honesty, Charity and Brotherly Love for the whole nation."

A Cannon of Good Metal.

The Stanford Loan Bill, Etc.

Although the following accidentally escaped our publication at the time, it is none the less interesting and potent at this time. The resolutions of several Alliances, published weeks ago in the RURAL, supporting our able President, no doubt had partly reference to this matter.

President Cannon Heard From.

VENTURA CAL., April 8, '91.

Ed. San Miguel Messenger:—I see in your paper of April 3d another effusion of venom against the State President, coming this time from Oak Grove Alliance, in what purports to be a resolution by that body. I am loth to believe that the members endorsed that attack upon me. I had intended to take no notice of anything that might be said against me about the Stanford Land Loan Bill, saving my ammunition for the common enemy. But the man who wrote that article displays such dense ignorance that, for the good of the cause, I deem it absolutely necessary to set myself right before my brethren. When I denounced the land loan bill, I had reference entirely to what was known as the Stanford bill. I had a copy of it, and I honestly could not indorse it. I did not stop to give my reasons, but they were good and sufficient for me, and my position has since been fully vindicated by the Supreme Legislative Council, as well as by the National organ and the National Executive Board, and that there be no mistake about the bill we are talking about, I will quote from the resolution. The writer says: "Some argue that the bill cannot benefit the poor man, because the rich Mr. Stanford proposed it. Now, people who think or talk that way have, as a rule, been vaccinated for the old parties, but it never took either, the virus or the subject's head was too thin." Now, let us see whose "head is thin" on this bill? The *National Economist* of Feb. 21, 1891, first page, says: "There are now two bills before Congress relative to such loans, one introduced by Representative Featherston, the other by Senator Stanford. While the bill of Mr. Featherston is not perfect, it is not open to the many serious objections that are found in the measure proposed by Mr. Stanford. 'These objections are of such a character as to preclude the idea of ever being adopted or advocated by the Alliance. It neither meets the expressed nor implied demands of the Alliance, but runs counter to both.' Farther on, in the same article, he says: 'The general tenor of this bill seems to favor large holders of wild lands for speculation.' The railroads own such lands, and Stanford knows what he is doing. But a little further on the editor says: 'This proposed bill of Mr. Stanford's is a sidetrack for the honest intentions of the Alliance, and if permitted to become a law in its present shape will benefit the land speculators at the expense of the farmer.' Thank God we have such men on guard, men who cannot be deceived by an enemy in the disguise of a friend. Now, in conclusion, I will say that so long as I am at the head of the Order in this State, I will give warning of the approach of the enemy to the rank and file, and if they surrender I will go down with them with my face to the foe and the gun empty, and I will further say that I am in full accord with the National Legislative Council, of which body I am a member, and when I surrender the great trust committed to my hands, next October, I will feel that I have done my duty, if I have tramped on somebody's toes. Fraternally yours,

MARION CANNON,  
State President.

AN Iowa farmer writes as follows: The line is already drawn in Wall street that is separating the people of this nation. Now let us blot out that line at the ballot-box. "Equal rights to all and special privileges to none" must be our motto. But they say that the Alliance wants class legislation. I say it is false, let him who will utter it. All that we desire is equal legislation. If the banker is to get his money at one per cent without any security, we want the same rights, and are willing to give good, non-perishable security and higher interest. There comes in the bowl of "paternal government." What in the name of heaven is a government if it is not paternal? Every winter do not those we send to Washington legislate for the people, or try to and fail? The government must look after the people as well as parents after their children. It is the same principle only on a larger scale.

SECRETARY PEDLAR's column is improving, and should be read by all. This week it especially contains important matter.

From Our Nebraska Farm Boy.

MESSRS. EDITORS:—Arriving in Nevada county, I came directly to this lovely valley of Penn, lovely because of its wooded hills, beautiful scenery and fertile valleys. If I were to express my exact feelings I would say everything seems ancient and inspiring and sublime. Having been used to the life of the plains I felt cooped up between the hills that stood on either side covered with tall growths of pine and oak interspersed with the chaparral and manzanita shrubs.

Alighting from the stage that brought me from Grass Valley, I shouldered my grip and started up the road that led to the Horton Ranch. Arriving at the spot I knocked at the door of the cabin where my friend dwells in single blessedness, but no answer came save that of the small feline anxiously waiting the return of its mother. I entered, laid aside my grip, hung up my coat and after a short stroll about the ranch in search of the keeper, returned.

After looking over the papers that laid on the news-stand, I came across the last copy of the RURAL PRESS, and while happily engaged in reading the latest news, my friend returned to the house. I gave him a very warm reception, and in less than 30 minutes we were perfectly well acquainted. By the noon hour dinner was served, and I ate more than noon than I had any time previous for at least a week. Dinner over, we took a

Drive Around Through Penn Valley.

Announcing a meeting for the following evening. My ride through the country that afternoon was one of the most enjoyable trips that I have made since I left Summerland. On the quiet, wooded roads in the sunny afternoons where you get the cool, sweet breezes wafted from the hills and forests, away from all tumult, contentions and strife, with nothing in all the world but the soft whispers of nature, save now and then the low tinkle of a bell from some neighboring herd or flock to remind you that there is nothing in all the world beside, one is left to the calm, deep serenity of thought. I am afraid my friend considered that my zeal for the Alliance had abated, but it was only for a time. The next day we made another tour through the country, making two other appointments. That evening I organized the

Indian Springs Alliance

In the Penn Valley district with 13 charter members, all tried and true abettors of reform. The Alliance showed its respect to the idea of universal suffrage by selecting Mrs. M. B. Chubob as president—a lady whose zeal and ability make her the fit leader of a strong, progressive Alliance. The other officers of the Alliance are: V. P., T. J. Robinson; Sec., F. A. Horton; Treas., Mrs. T. J. Robinson; Chap., Mrs. Annie Melby; Lect., M. B. Chubob.

The following evening, accompanied by Bro. Horton, I organized an Alliance of 11 male members at Pleasant Valley. The following were the officers elected: Pres., Jas. R. Vineyard; V. P., Theodore Schwartz; Sec., Thos. Lake; Treas., Wm. Davy; Chap., N. A. Hartung; Lect., F. V. Miller.

The most intense interest was aroused in both meetings, and I predict for Indian Springs and Pleasant Valley Alliances a healthy and prosperous growth.

To-night, accompanied by Bro. Horton, I held a meeting at Rough and Ready.

To-morrow night, Bro. Robinson will accompany me to Markwell district and from there to Wheatland on Saturday morning. Inside of ten days I expect to report Nevada county organized with six or seven good, strong Alliances.

It has been threatening rain for several days, but looks now very much as though it were going to clear up. With the benediction, "God speed the Alliance," I will close. Fraternally yours, in the brotherhood of industrial workers,

BURDETTE CORNELL.

THE *Progressive Farmer* thinks that the Alliance men should address themselves afresh to the work of educating the people upon the great questions before the country. But there should be no spirit of intolerance manifested in this work of educating the people. There are good and true men in the Alliance, who have opinions of their own, and are honestly desirous of throwing all the light possible upon public questions, with a view to getting at the exact truth. Let no one read these men out of the Alliance because they dare to think for themselves. This Alliance movement has won its present position mainly by encouraging free discussion of public questions. Whenever the time comes that the Alliance shall throw the weight of its influence against the freedom of discussion, the end of its influence for good will not be distant. The free people of this country will not allow the voice of discussion to be stifled, we may be sure.

SONOMA CO. ALLIANCE WILL CELEBRATE.—Bro. C. A. Perry, Sec'y Sonoma Co. Alliance, writes from Santa Rosa, May 15: A committee of one from each Sub Alliance in the county will meet with a committee of five from the County Alliance, at Sebastopol, on Friday, May 22d, at 10 o'clock A. M., to make arrangements for a Fourth of July celebration, which I will report for the RURAL PRESS.

Sectionalism.

In all the broad field of our noble endeavor as an Order, there is no purpose grander in design, more patriotic in conception, or more beneficent in its possible results to the whole country and to posterity than the one in which we declare to the world that henceforth there shall be no sectional lines across Alliance territory. Falling in all else we may undertake as an organization, if we shall accomplish only a restoration of fraternity and unity, and obliterate the unnatural estrangement which has unfortunately so long divided the people of this country, the Alliance will have won for itself immortal glory and honor. In the spirit of a broad and liberal patriotism, it recognizes but one flag and one country. Confronted by a common danger—afflicted by a common evil—impelled by a common hope, the people of Kansas and Virginia, of Pennsylvania and Texas, of Michigan and South Carolina, make common cause in a common interest. It recognizes the important truth, that the evils which oppress the agricultural interests of the country are national in their character and that they cannot be corrected by sectional efforts or sectional remedies. It recognizes the fact that the war ended in 1865—that chattel slavery is gone, and that the prejudices and divisions, born of its existence, should go with it.

Community of interests between the great States of the middle, southern and western sections is the mighty natural force which will draw them together in solid array in the impending struggle between the people and plutocratic power.

The lines of sectionalism have been out in twain. The Alliance has planted its banner, on which is inscribed in characters of golden light—"Equal rights to all and special favors to none"—from the State of New York on the east to the Golden Gates of the Pacific on the west; from the Gulf on the south to the Great Lakes on the north, embracing within its territory the great staple crops of the country—the center of population and the center of political power.

We cannot fail to see the opportunity of the hour, and recognizing that opportunity we must not forget that it carries with it corresponding responsibilities. The opportunity is for the great conservative, law-abiding, patriotic masses to assert and establish a perpetual union between the people. The sequent obligation is that these great masses must discourage, discountenance and discard from their councils the wicked demagogical agitators, who, for the last 25 years, have sought to foster discord and dissensions that they themselves might thrive. Ordinarily they are the men—North and South—who were "invisible in war and have become invincible in peace.—Sutter Co. Farmer.

The Alliance Demands.

Under the above caption the Tallahassee Alliance says that in this the hour of threatened disaster, the weak and timid will fall victims to demoralization. "If we can't get all, better take a part of the loaf," they will reason and be disposed to so act. Against such a course we do now strenuously protest. If our cause is right, fight till death for its complete triumph.

We cannot compromise with the "money power." The fight is on, and there is no half way ground. It must be triumphant victory or an ignominious defeat. There can be no retreat except in submission and industrial slavery.

The masses of the people have temporized enough. They have been betrayed, robbed and plundered long enough. Conciliation means cowardice, and compromise means defeat. The people want no palliatives and nursery antidotes; nor do they want any milk and water leaders, men that are neither "fish, flesh or good herring." They want no half remedies, no mandarin reforms which patches but does not mend, no sugar-coated remedies which leaves the disease hidden but not cured.

But what they want and what they demand is a substantial reversal and a complete overthrow of the present tendency of our government to a centralized plutocracy and a return to that system of government "by the people and for the people."

The people demand justice and not charity; they ask not for alms but for their own. The remedy is a plain one, and is at hand when the people awake from a false and fatal repose and realize the dangers that confront them. Mistaken security is the open door to ruin.

If the people would be free, they cannot tamper with freedom nor toy with popular delusions as they are now doing over these painted homestead pre-emptions. When they rise to a full sense of the imminent danger and realize the iniquitous methods of the national banks, when they absolutely refuse to support candidates who stand in with these banks, and are pledged to represent their interests rather than the interests of the people, when by the power of the silent ballot, they crush out the life blood of political imperialism and make the industry of the nation the nation's business, then will they enjoy the inheritance bequeathed unto them through rivers of blood and mountains of treasure.

Jerry.

The Old Milkman.

(Written for the RURAL PRESS by LUPAH.)

Full forty years this silent man  
Had stood beside the pasture bars  
Each day, before the twilight came,  
With evening birds, and skies aflame,  
And clouds coquetting with the stars.

He thought—we know not what he thought,  
His quiet features gave no sign;  
The same to him seemed light and dark;  
His life seemed bounded by the mark,  
At morn and night, of half-past nine.

For that was "quitting time," you see,  
When, one by one, the cows had swung,  
With easy indolence, across  
The slanted bars, while curly Floss,  
The dainty poodle, yelped and sprung.

With frantic, unregarded haste,  
To be both first and last to pass;  
Then watched the sidewise moving jaws  
The drooping eyelids, and the pause  
That seemed a dream of dewy grass.

Within the shining pails, the milk,  
In ringing streams, beat cheerful time,  
Then rose in mounds of snowy foam  
As Jerry whistled "Home, Sweet Home,"  
And farm-yard bells rang drowsy chime.

Old Muley turned her head to draw  
Her rough tongue o'er his homely sleeve;  
The wildest bovine matron there  
Straightway grew gentle in his care,  
And stood or followed at his leave.

An uncrowned king this man has reigned,  
Since first he came in manhood's prime;  
And milked and milked seemed content,  
As generations came and went,  
For half-past nine was "quitting time."

And now within the quiet room  
He faintly hears the farm-yard chime,  
Awakens from a fitful sleep,  
And feels the night chill o'er him creep,  
Then murmurs "it is milking time."

They tell him of another world,  
Hoping his interest to arouse,  
Of flowery fields, a life of ease,  
Untroubled by such cares as these—  
He says, "Who then will milk the cows."

As one by one the stairway clock  
Tells off the hours, his life burns lower;  
Still life and duty seem entwined.  
The half-hour strikes—"Well, never mind,  
'Tis quitting time"—he breathes no more.

Yet, as we softly question space,  
We hear the tinkling farm-yard chime.  
His ears are closed, his lips are dumb,  
But, "Occupy until I come,"  
May mean to work till "quitting time."

## Unexplained.

## A Ghost Story.

"All ghost stories may be explained," said Mrs. Marchmont, smiling rather scornfully, and addressing a large circle of friends and neighbors who, one evening, were seated round her hospitable hearth.

"Ah! you think so? Pardon me, if I cannot agree with you," said Mr. Henniker, a well-known Dublin barrister, of burly frame and jovial countenance, famed for his wit and flow of anecdote.

The ladies of the party uttered exclamations in various keys, while the men looked attentive and interested. All that Mr. Henniker pleased to say was wont to command attention, in Dublin at least.

"So you think all ghost stories may be explained? What would Mrs. Marchmont say to our old woman in the black bonnet, Angela?" And the barrister turned to his quiet little wife who rarely opened her lips. She was eager enough now.

"I wish I could quite forget that old woman, John, dear," she said, with a shiver.

"Won't you tell us, dear Mrs. Henniker? Please—please do!" cried the ladies in chorus.

"Nay; John must tell that tale," said the wife, shrinking into herself as it were.

No one knew how it happened that the conversation had turned upon mesmerism, spiritualism and other themes trenching upon the supernatural. Perhaps the season, suggesting old-fashioned tales, had something to do with it; or maybe the whistling wind, mingling with the pattering of hail and rattle of oakh-wheels, led the mind to brood over uncanny legends. Anyhow, all the company spoke of ghosts; some to mock, others to speculate; and here was the witty lawyer prepared to tell a grave tale of his own experience.

His jovial face grew stern. Like the Ancient Mariner, he addressed himself to one in company, but all were silent and attentive.

"You say all ghost stories may be explained, Mrs. Marchmont. So would I have said a year ago; but since we last met at your hospitable fireside, my wife and I have gone through a very astonishing experience. We 'can a tale

unfold.' No man was better inclined to laugh at ghost stories than I.

"Well, to begin my true tale. We wished for a complete change of scene last February, and Angela thought she would like to reside in the same county as her sisters and cousins and aunt—"

"Dorsetshire, I believe, Mrs. Henniker?" interrupted the lady of the house.

Angela nodded.

"I intended to take a house for my family, leave them comfortably settled in it, and run backward and forward between Dorsetshire and Dublin. Well, it so happened that I did leave them for a single day during the three months of my tenancy of the Hall. I had seen a wonderful advertisement of a spacious dwelling—house, with offices, gardens, pleasure grounds—to be had for £50 per annum. I went to the agent to make inquiries.

"Is this flourishing advertisement correct?" asked I.

"Perfectly."

"What! so many advantages are to be had for £50 a year?"

"Most certainly. I advise you to go and see for yourself."

"I took the agent's advice, and Angela was enchanted with the description I was able to give her on my return. A charming little park, beautifully planted with rare shrubs and trees—a bowery, secluded spot, so shut in by noble elms as to seem remote from the world. The house—such a mansion as in Ireland would be called manor house or castle—large, lofty rooms, thoroughly furnished, every modern improvement. My wife, as surprised as myself that a place of the kind should be going for a mere song, begged me to see the agent again, and close with him. It was done at once. I would have taken the Hall for a year, but Mr. Harrold advised me not to do so. 'Take it by the quarter, or at least by the half-year,' he recommended.

"I replied that it appeared such a desirable bargain that I wished to take it by the year. His answer to this was a reiteration of his first advice. I can't tell you how he influenced me, for he really said no more than I tell you; but I yielded to his evident wish without knowing why I did so, and closed with him for six months, not a year."

"Glamour, Mr. Henniker!"

"It would seem so, Mrs. Marchmont. We went to the Hall, and Angela was delighted with it. The snowdrops lay in snowy masses about the grounds—the garden gave promise of beauty as the season advanced. How the children ran over the house! How charmed we were with every nook and corner of it! Our own bedroom was a comfortable, large room, opening into a very roomy dressing-room, in which my wife placed two cribs for our youngest boys, Hal and Jack—"

"Don't forget to say that our bedchamber opened from a sitting-room," interrupted Mrs. Henniker.

"Well, for three weeks we all slept the sleep of the just in our really splendid suite of apartments. Not a grumble from our servants—nothing but satisfaction with our rare bargain. I was on the eve of returning to dear, dirty Dublin and the Four Courts, when—"

"When? We are all attention, Mr. Henniker."

"Angela and I were sitting in the drawing-room under the bedchamber I have described, when a loud cry startled us, 'mother, mother, mother!'

"The little boys were in bed in the dressing-room. Angela dropped her tea-cup and dashed out of the room, forgetting that there was no light in the rooms above us.

"I caught up a candle and followed her quickly. We found the children sobbing wildly. Jack's arms were almost strangling his mother, while he cried in great excitement, 'Oh, the old woman in the black bonnet! The old woman in the black bonnet! Oh—Oh—Oh!'

"I thought a little fatherly correction would be beneficial, but Angela would not suffer me to interfere. She tried to soothe the little beggars, and in a few minutes they were coherent enough in their story. A frightful old woman, wearing a black bonnet, had been in the room. She came close to them and bent over their cribs, with her dreadful face near to theirs.

"How did you see her?" we asked. 'There was no candle here.'

"She had light about her, they said; at any rate they saw her quite well. An exhaustive search was made. No trace of a human being was to be found. I refrained from speaking to the other children, who slept in an upper story, though I softly entered their rooms and examined presses and wardrobes and peeped behind dark corners, laughing in my sleeve all the while. Of course we both believed that Hal had been frightened by a dream, and that his little brother had roared from sympathy.

"Don't breathe a word of this to the servants," whispered Mrs. Henniker. 'I'm not such a fool, my dear,' I replied. 'But pray search the lower regions, and see if Jane and Nancy have any visitor in the kitchen,' she continued. 'She came through your door, mother, from the sitting-room,' sobbed Hal, with eyes starting out of his head.

"Who, love?" asked his mother.

"The old woman in the black bonnet. Oh, don't go away, mother."

"So Angela had to spend the remainder of the evening between the children's cribs.

"What can we do to-morrow evening?" asked she. 'I have it! Lucy shall be put to

bed beside Jack.' Lucy was our youngest, aged two.

"All went well next night. There was no alarm to summon us from our papers and novels, and we went to bed at eleven, Angela remarking that the three orphans were sleeping beautifully, and that it had been a good move to let Lucy bear the other two company. I was roused out of sound sleep by wild shrieks from the three children.

"What! More bad dreams? This sort of thing must be put a stop to," I said; and I confess I was very angry with the young rascals. My wife was fumbling for the match-box. 'Hush!' she whispered, 'there is somebody in the room.' And I, too, at that instant, felt the presence of some creature besides ourselves and the children. The candle lighted and we again reconnoitered—nothing to be seen in dressing-room, bedroom, or the drawing-room beyond, the door of which was shut. But the curious sense of a presence near us, stronger than any feeling of the kind I had ever previously experienced, was gone. You have all felt the presence of another person unseen. You may be writing, you have not heard the door open, but though your back is toward the visitor, you know somehow that he has entered."

"Quite true, Mr. Henniker; but there is nothing unnatural or unpleasant in that sensation."

"Nothing, of course; I merely instance it to give you some idea of what we felt on that occasion. We were astonished to find the sitting-room untenanted. Meanwhile poor Hal, Jack and Lucy shrieked in chorus: 'Oh, the old woman in the black bonnet! Oh, take her away!'

"Poor Angela, trembling, hung over the cribs, trying to soothe the children. It was a good while before they could tell what happened. 'She came again,' said Hal, 'and she came close, close to me, and she put her cold face down near my cheek till she touched me, and I don't like her; oh, I don't like her, mother!'

"Did she go to Jack and Lucy, too?"

"Yes, yes; and she made them cry as well."

"Why do you not like her? Is it the black bonnet? You dreamed of a black bonnet last night, you know," said I, half puzzled, half provoked.

"She's so frightful," cried Hal.

"How could you see her? There was no candle."

"This question perplexed the little boys. They persisted that she had a light about her somewhere. I need hardly say that there was no comfort for us the rest of the night. 'If any one is trying to frighten us out of the place, I'll be even with him yet,' said I. My wife believed that a trick had been played upon the children, and she was most indignant.

"Next day the cribs were removed to the upper story, and Charlotte and Joanna, our daughters of twelve and fourteen, were put to sleep in the dressing-room. We predicted an end to the annoyance we had been suffering. The nurse was a quick-tempered woman, who would not stand any nonsense, and Hal's bad dreams would be sternly driven away. We settled ourselves to our comfortable light reading by the drawing-room fire. Suddenly there was a commotion overhead; an outcry—surprised more than terrified. It sounded to us. Angela laid her book down quickly and listened with all her ears. Fast-flying footsteps were heard above; the clapping of a door; then—scurry, scurry—the patter of bare feet down the staircase. We hurried across the hall, and saw Charlotte in her night-gown returning slowly up the kitchen stairs, with a puzzled expression on her honest face.

"What on earth are you doing, child?" cried Angela.

"I was giving chase to a hideous old woman in a black bonnet, who chose to intrude upon us," panted Charlotte. 'I saw her in our room; I jumped out of bed and pursued her through your room and the sitting-room. Then I saw her before me going downstairs, and I ran after her, but the door at the foot of the kitchen staircase was shut. She certainly could not have had time to open it, and I really don't know where she can have gone to.'

"This was Charlotte's explanation of her mad scurry downstairs. Her downright sensible face was puzzled and angry.

"So you see the little ones must have been tormented by that old wretch, whoever she is. They didn't dream it, father, as you thought. Wouldn't I like to punish her!'

"What a brave girl!" cried Mrs. Marchmont.

"Brave? Oh, Charlotte's as bold as a lion! She went back to bed; and when we followed her, in a couple of hours, she was sleeping soundly. But I can't say either of us slept so well. If a trick was being played upon us, it was carried out in so clever a manner as to baffle me completely. I need not say that I made a careful search of every oranny about the handsome house and offices; and if there was a secret passage or a door in the wall anywhere, it escaped me. We had peace for a fortnight, and then the annoyance recommenced.

"Angela's nerve was shaken at last, and she began to whisper, 'There are more things in heaven and earth, Horatio—'

"John, you are making a story," interrupted Mrs. Henniker.

"It is every word true. I am coming to an end. Angela, in spite of her disclaimer, did believe in a ghost in a black bonnet. Charlotte

believed in her, but did not care about her ghostship. The nurse and cook and housemaid declared they were meeting the horrible appearance constantly; and they were all three in a mortal funk. As to the children, they would not leave off clinging to their mother and fretting and trembling when evening came. The milkman, the baker and the butcher all told the servants that we would not be long at the Hall, for nobody ever remained more than a month or two. This was cheerful and encouraging for me."

"But you had never seen the charming old woman all this time?"

"No; but I saw her in the broad daylight. I had a good long look at her, and a more diabolical face I never saw—no, not even in the dock. I was writing a letter in the study about 12 o'clock one morning, when I suddenly looked up, to see the appearance that had excited such a turmoil in my family standing near the table. A frightful face—a short set woman dressed in black—gown, shawl, bonnet—this was the impression I received. But she looked quite human—quite everyday—there was nothing ghostly in her air, only the evil face oozed one's blood. I stared at her, and then I took up a folded newspaper and threw it at her. My motive in so doing was to frighten her who had frightened my wife so much. Courtesy, such a creature need not expect from me, being, as her villainous countenance proved, one of the criminal class. The newspaper fell upon the floor, after apparently going through the figure, and there was a vacuum where it had been. I was not much shaken, however, although my theory of a human trickster dressed like a woman seemed overturned."

"Did you tell Mrs. Henniker what you had seen?"

"Naturally I did. At this period we talked of nothing else. She saw the apparition twice herself. Once she entered our dressing-room and saw the figure bending over the sleeping child (it faded as she looked); another time she was with me in the drawing-room, when she laid down her book and whispered, 'see, see, near the door! There, sure enough, was the apparition that had visited me in the study in clear daylight. I did not make her out quite as distinctly now, because our candles did not light up that end of the long room, or my older eyes were not as good as Angela's.'

"What did Mrs. Henniker do?"

"She started up and ran to catch the old woman in the black bonnet."

"And did she catch her?"

"She caught a shiver—nothing more."

"After this I resolved to give up the Hall at once, sacrificing four months' rent for the sake of my wife and children, whose nerves would have soon become shattered had we remained. I went to Mr. Harrold and told him how disagreeable the place was to us. He was grave and very guarded in manner, confessing that no tenant stayed more than a couple of months at the Hall—that his client certainly made considerable loss consequently—that he had done his utmost to find out what was wrong with the house, but all in vain. Mr. J— would not speak about it, and when strenuously urged to explain, replied emphatically: 'I shall never tell you the story of that house.'

"We dismissed the servants with handsome presents at once on our return to Dublin, so desirous were we that the children should never be reminded of their terror. I think they have not heard the old woman in the black bonnet spoken of since we left the Hall, and the younger ones have probably forgotten her. As to us, we can only say that the mystery is unexplained."—*The Argosy*.

## Chaff.

THE faster a man runs in debt the less he is apt to get ahead.

A MAN'S heart is blamed for lots of things for which his liver is responsible.

THE difference between repartee and impudence is the size of the man who says it.

MOTHER—Bobby, what made you eat all that angel cake? Bobby—'Cause you told me to be a better boy.

HAD Napoleon ever seen a girl climb a barbed wire fence, he would have held the honours of Austerlitz as nothing.

IT is related of a famous cook that he prepared fish so exquisitely that they returned him admiring and grateful looks from the frying-pan.

"PAPA," said Mrs. Bankum, "here is that flannel shirt of yours. I washed it, and—well, I'm afraid its usefulness is over." "Oh, no, my dear, I can use it for a pen-wiper."

PEACEMAKER—I wouldn't fight, my good men. First combatant—He called me a liar, sir. Second combatant—An' he called me a lazy loafer. Peacemaker—Well, I wouldn't fight over a difference of opinion; you may both be right.

"Yes," said Sally, "I think Mark is in love with me. He hasn't told me so, but when Fred Acker escorted me home from the concert last night Mark looked awfully wild, and to-day he threw a brick at Fred's cat!"

PHYSICIAN (with ear to patient's chest)—There is a serious swelling over the region of the heart, sir, which must be reduced at once. Patient (anxiously)—That swelling is my pocket-book, doctor. Please don't reduce it too much.

## Death.

[Written for the RURAL PRESS by DAGMAR MARIAGER.]

I saw within my dream a picture strange;  
A group gazed on our final master, Death;  
While I, aside, and at a greater range,  
Studied each countenance with bated breath.

One was a man in middle life, I thought,  
And blest with wealth, "though care sat on his face;  
Calmly he bore the pang the spectre brought,  
And cried, "My son may now enjoy my place."

One was a youthful fair-haired lad, and he  
Could not conceal his chagrin at the sight;  
He cried in bitterness of high degree,  
"My day before its noon has reached its night!"

A youthful woman was the next in line,  
And her pale cheeks were stained with long-shed tears;  
Her eager haste I scarcely could define;  
She said, "I'll quit these custom-hamper'd years."

Then a poor child reluctantly advanced  
And reached its hand unto the monarch bold;  
And said, as up into his face he gazed,  
"Oh, Death, you are so aged and so cold!"

A gray-haired woman was the last of all;  
On her wan face peace restfully did rest;  
She knelt before gaunt Death at his first call,  
Saying, "Those within the grave are blest."  
Santa Barbara.

## A Minstrel of the Desert.

[Written for the RURAL PRESS by DAGMAR MARIAGER.]

The Mountain of the Bell, or Jabel Nakane, is 400 feet high, and stands three miles inland from the shore of the Gulf of Suez, in the wonderful land that witnessed for many years the wanderings of the Israelites, and where, overlooking the wide wastes of stone and sand, are the two giant sentinels Sinai and Horeb. The Desert Minstrel is composed of an irregularly conical mass of white, friable sandstone, and has sandy declivities on two sides. One of these is a bed of sand filling a deep hollow which reaches from the base almost to the apex. From this loose mass—the disintegrated sandstone—the music issues when by the wandering winds, or by the footfall of human or animal upon its borders, it is set in motion. Then the whole body of the sand, even far into its depths, and abroad to its farthest margins, receives the vibration, as when an autumn leaf drops upon a still sheet of water, it shocks the whole surface and sends a succession of rings and ripples far and wide. It is uncertain how long the motion continues after each disturbance, but it has, probably, when neither fanned by the winds, nor patted by the rains, and under like degree of shock, a nearly equal time for reaching perfect quiet, as the famous swinging lamp in the cathedral at Pisa, which Galileo set to oscillating 300 years ago, takes its two hours.

As the slowly crawling movement gathers force by increase of territory, each grain of sand clinking against its mates, as it elbows its way toward the plain below, progressing a hair's breadth with each fresh impulse, the music, which begins like the low tones of an Arabian harp, swells into undulating murmurs, from which it takes on regular pulsations, like strokes of a bell, alternately rising and falling, and scaling and beginning, slowly becoming more progressive and sonorous, until at length the earth seems to vibrate with the mysterious melody under the feet of the Arab's camel, as he halts his animal that he may the better listen and look about him in wonderment before proceeding on his journey over the arid tract.

The Arabians have a tradition that there exists supernaturally a convent with the Mountain of the Bell, and that the music which greets the passer-by issues from the *nakane*—a metallic ruler which is suspended horizontally therein, and which a priest strikes with a hammer in regular repetitions as a call to the monks to assemble for prayer.

The music becomes a more and more dissipated medley of tones, while the wondering traveler stalks back and forth through the deep sand at the base in a vain search for the cause of the phenomenon, and an equally vain attempt to find its exact locality, the leading notes of it the while mysteriously following his feet, its song accompanied by his whole surroundings. His amazement grows momentarily more intense, as do also the tones which have awakened it, and he wades laboriously on and on through the white mass buttressing the seemingly haunted desert monument, ignorant that he himself has given it its song; that he himself is aggravating it to more intense efforts; that he himself is giving the needed touch to the myriads of crystal strings in the harp which would otherwise be mute.

## Community Property.

A very important amendment to Section 172 of the Civil Code was passed by the last Legislature. As it directly affects the title of much real property, the section is printed below entire, the SMALL CAPITALS showing the added portion.

Sec. 172. The husband has the management and control of the community property, with the like absolute power of disposition, other than testamentary, as he has of his separate estate, PROVIDED, HOWEVER, THAT HE CANNOT MAKE A GIFT OF SUCH COMMUNITY PROPERTY, OR CONVEY THE SAME WITHOUT A VALUABLE CONSIDERATION, UNLESS THE WIFE IN WRITING CONSENTS THERETO.

## YOUNG FOLKS' COLUMN.

## The Strange Old Man.

[Written for the RURAL PRESS by LOUIS E. FRANCIS.]

"Sonp gone, beefsteak eaten, pndding all gone—burrah, girls! Papa is through now," so proclaimed Master Bert from the top of the stairs where he had been watching papa eat supper. With this information from their scout, down rushed the four children pell mell to have their "play spell" and frolic with papa before going to bed.

Papa was away busy working in an office all day, but when evening came he always spent an hour with his children, sometimes amusing them by telling a story, again teaching some fact in his own funny way, and again having a regular frolic. It was a dear hour to them all. Bert, Ethel, Roy and Annie had been waiting to-night with eager impatience, for it had been raining, and the day had been very long.

Papa threw himself into his easy-chair and the children were all over him in a moment. When they had quieted down he asked:

"What shall we have to-night, children? Now don't all speak at once."

"O dear papa, do tell us one of your stories, do, that's a good papa," pleaded Ethel.

"Do, do, do," chimed in all the rest.

"Now it is a fact but I have told you all the stories I ever knew or read."

"Tell them all again."

"No, papa!" argued Bert, "we will keep real still, and you mix up all the old stories and make a new one."

"I shall surely go to sleep if I keep still long and then I shall talk to you in my sleep, and you know I will be liable to say very strange things."

"O we won't let you, now just think hard while we keep real still."

Papa closed his eyes and they were all quiet for a moment, but as he commenced to nod his head and oough, little rills of laughter burst out which soon ceased, however, when papa began in a strange voice:

"There once lived a very queer old man with a stomach as big as a mountain, with arms so long that he wanted to hold everything and a body made of balls, doll, and jelly cake."

"Papa is surely talking in his sleep," said Annie for that isn't one bit like a wide awake story."

"Keep still sis" said Roy, "that is only Papa's fun. It sounds fine, like Arabian Nights, only much better. Go on papa."

"He lived on the wrong side of everybody's house and slept on a mince pie pillow."

"My! What was such a funny old man good for?" asked Bert.

"What he really was good for, I don't know, but I do know a great many things he was not good for."

"Now we are interrupting; go on with the story. It is so nice."

"He slept on a mince-pie pillow," prompted the attentive Ethel.

"Yes; he slept on a mince-pie pillow, which was as big as a wagon-wheel, and although it was a very fine pie, he would never let any one have a bite, though every one knew when it was real dark he used to go into his room, shut the door and take big bites off of it; but strange to say, the pie never grew less, his stomach only grew and grew bigger and bigger."

"What a funny pie and what a funny man," remarked Annie.

"Nobody ever saw this old man, but every body knew when he was around, for he had a strange way of creeping into boys' and girls' pockets, and when he was there he made them do strange and naughty things."

"But, papa, why did they not pull him out?"

"The trouble was, they could not see what he made them do was not nice, and when papa and mamma came he would kick and cry so that they could never succeed in getting him all out."

"Why didn't they get a stick and beat him?" asked Roy.

"They did sometimes, but even that did not seem to cure him of his tricks. He used to crawl into a little girl's apron, when she would be playing with her brothers and sisters. As long as he stayed, she wanted all the pie and cake and the nice oranges papa brought from town, and if mamma gave any to the other children, she would pout. If they wanted to look at her playthings, she would run and grab them all up in her apron. If a playmate wanted to look in one of her books, she would put her hands over the pictures so they could not see."

"Was not that very naughty?" inquired Annie, who had just a dim recollection of acting so herself on one or two occasions.

But Papa went on rehearsing his little girl's remark.

"The old man liked to steal into a boy's pocket in among his marbles. When he once got safely fixed he would commence whispering, 'I want a piece of cake and that big orange in the center of the glass dish.'"

No sooner would our boy eat it, than that stomach, big as a mountain of the old man, would prompt him again to whisper.

"Sister had a much larger piece of cake than you had, ask for another." Just then baby brother comes up and wants to taste. Now our boy would give him some instantly, but the old man again whispers, "You are hungry, keep it yourself."

"I wouldn't let the old man talk so to me," said Bert decisively.

"Maybe you could not help yourself," reasoned Annie, "you remember those long arms of his. I should be frightened to death."

"Pooh, I wouldn't one bit."

"Do keep quiet, you are interrupting again," said Ethel who was intently listening to every word.

"He always made his boy companion want to have his bat and ball all to himself, and as for his kite, why no one but himself was allowed to fly it. Boys never liked to go 'divies' with him because he always kept the largest share for himself. It was all the result of those long arms in the boy's pockets for they were ever stretching and sighing because they could not hold the whole wide world. Would you believe it when any one was carrying the old man around in his pocket you would see a frown and dark look on his face, so I think he must have made them unhappy."

"One day the old man was standing very near two boys, and he concluded that he would have a better time in two pockets than one, so he thrust his long arms in one boy's pocket and left the rest of his body in the other's. Now the boys did not know anything about it, one started for school, the other to go swimming. They separated and what do you suppose happened?"

"I can't think," said Annie meditatively.

"It would have served him right," said Roy "if he had broke his neck, but do tell us."

"Well, he just fell out on the ground and broke up into a thousand pieces, and each little piece flew away and hid in a human heart where it felt it would be safe for all future time. Do you know we see the trace of those pieces to day in people. The old man was the Father of Envy and Selfishness, and the pieces were seeds of selfishness. I do trust my dear ones will never allow such to find a resting place with them. Once let them enter your heart and true happiness leaves. The birds of joy cannot sing when envy and selfishness desire all for self. I want my little ones to grow up to be grand, noble men and women, and one of the first stepping stones on the way is to kill every trace of the old man with a stomach as big as a mountain."

Papa's eyes open wide, a loving kiss is given and then all are off for bed. A few whispered words are heard as the nighties are going on about papa's funny "sleep talk," and then four heads are curled on four pillows white.

## GOOD HEALTH.

HEALTH OF THE STATE.—The State Board of Health for April reports: Mortality from 67 cities, towns and localities, having a population of 674,830, show 1064 deaths to have occurred from all causes. This is a percentage of 1.57 per 1000 per month, or 18.84 per 1000 per annum. Consumption was the cause in 164 cases, pneumonia in 153, bronchitis in 40 and congestion of the lungs in 8. Diarrhoea and dysentery are assigned as the cause of 7 deaths, cholera infantum 3, and of other diseases of the stomach and bowels 51. Croup caused 21 deaths, scarlatina but 1, whooping cough 3, typhoid fever 14, malarial fever 3, cerebro-spinal fever 6, cancer 29, erysipelas 1, heart disease 63, alcoholism 13, and all other causes, not necessarily classified 436. Of this last number 14 grippe is responsible for 13 deaths, and there is a reasonable presumption that many fatal cases of lung disease are traceable directly to an attack of that disease. Diphtheria caused death in 48 cases, San Francisco furnishing 27. The deaths reported for cancer were 29, 16 of which occurred in San Francisco. It should be borne in mind that reports are received from only a little over one-half the population of the State. The only disease that maybe said to prevail extensively is la grippe, 363 cases being reported from different parts of the State with an accredited fatality of 13. San Francisco, Los Angeles, San Diego and other southern points of importance report none at all. Oakland, Alameda and San Jose are almost, if not altogether, exempt. The progress of this remarkable malady has been somewhat erratic, following no well-defined course and requiring no unusual local conditions for its development.

A SEED TAKING ROOT IN A STOMACH.—A New York paper vouches for the improbable story that a New York boy suffered such intense pain in his stomach that a surgical operation was decided upon to remove the cause. On opening that organ the trouble was found to proceed from an orange seed lodged at the junction of the large and small intestines. The seed was greatly swollen and had a sprout an inch long. The boy stood the operation well; but upon his return to consciousness, he asked to see the cause of his suffering, and said it did not look one-tenth as big as it felt, and even laughed feebly at the idea of "an orange tree starting to grow inside of him." He rested easily after that, and it was thought he would get well, but peritonitis set in and he died the next day.

HOW TO READ THE TONGUE.—The perfectly healthy tongue is clean, moist, lies loosely in the month, is round at the edge, and has no prominent papillae. The tongue may be furled from local causes or from sympathy with the stomach, intestines or liver. The dry tongue occurs most frequently in fever, and indicates

nervous prostration or depression. A white tongue is diagnostic simply of the feverish condition, with, perhaps, a sour stomach. When it is moist and yellowish-brown, it shows disordered digestion. Dry and brown indicates a low state of the system, possibly typhoid. When the tongue is dry and red and smooth, look out for inflammation, gastric or intestinal. When the papillae on the end of the tongue are raised and very red, we call it a strawberry tongue, and that means scarlet fever. Sharp, pointed, red tongue will hint of brain irritation or inflammation, and a yellow coating indicates liver derangement. When so much can be gained from examination of the tongue, how important it is that the youngest child should be taught to put it out so that it can be visible to the uttermost point in the throat.

## DOMESTIC ECONOMY.

## Setting the Table.

[Written for the RURAL PRESS by CARRIE E. ROBINSON.]

The setting of the table seems to follow so naturally after the dish-washing that we shall beg leave to follow after with such hints as may help one inexperienced, as knowledge in this direction does not spring spontaneously when needed. Observation of the tables of others is a good object-lesson, but somehow many are like a lady whom I heard reply to this remark the other day: "Did you notice how prettily Mrs. Lacy's tea-table was set yesterday?"

"Not how it was set, I know it looked pretty, but I'm sure I couldn't tell you a thing there was on it, except that there were flowers in the center." Such people as these never learn by observation; they must have rules to go by (and there are many such).

First, you must have a good, firm table, then good, if not so very fine, table linen, well ironed. A soft blanket, made of heavy cotton flannel, to put under the table-cloth, adds greatly to the rich look of the linen, and also serves to protect the table from the hot dishes. If any hot food is to be served by the master of the house, the plates, made warm in the hot closet of the stove, should be placed in a pile directly in front of his place, with the food arranged at the front of these. Lay the proper number of places, and if there are to be guests, arrange for them the most comfortable seats, both in relation to warmth and the legs of the table, which are always in somebody's way. Place the knife, fork and soup-spoon, with the drinking glass, at the right, the napkin at the left, and the butter-plate in front of the center of the plate, or where it will stand when served. If individual salts are used, these should stand by the tiny butter-plates. The tiny pats of butter, now made for this purpose, should be placed upon the table before the meal is called. That saves one troublesome dishing and passing during the meal; but there should be a dish of butter upon the table from which to replenish these. If the lady of the house is to pour the coffee or tea, the cups and saucers and teapot, with the sugar-bowl, cream-jug and spoon-holder, should occupy a tray set in front of her plate. Tea she should pour and pass clear, leaving each person to season his own. Coffee is so much better poured upon the cream and sugar, placed first in each cup, that it seems better to find out each person's taste before pouring it out. At one end of the table, should be placed a plate or tray, containing bread or rolls, with perhaps a second plate of brown bread. In the middle of one side, the dish of butter, with one of pickles and a small oyster. They have made us put aside our large, handsome oysters, to save for our grandchildren, I guess; but Dame Fashion says we mustn't use them any more at present, and we have had to obey. If there are alder dishes of vegetables to be dished, they should be placed with the small dishes beside the plate of the one who is to dish them, always keeping the balance of the arrangement symmetrical. This is an ordinary dinner-table we are discussing; with elaborate dinners, etc., of course the plans must be studied out on the spot. A pitcher of water with a small number of glasses on a tray may find room on the table, usually at the right of the master of the house, but on a small side-table is quite as appropriate. The soup should always be served and removed before the fruit and vegetables are brought on. Hot food should be served very hot, and cold food very cold. In waiting on table, pass the dishes over the right shoulder. After the meats and vegetables are done with, which is properly called the second course, if soup has been served, remove them and brush your table free from crumbs and soil before bringing the dessert or having it brought for the mistress of the house to serve from her place.

A well-trained waiter is a valuable possession in the line of help, but among the middle class, if so we dare to term those to whom these papers will prove most useful, these are seldom found, so that the house mistress usually must do these things herself, and she will likely find it easiest to dish her pie or pudding at the table, and send around the sauce in a boat, or the cheese daintily grated on a pretty dish, if the pie happen to be mince or apple. At a table of this sort it is always the proper thing to fold your napkin, and if you found it in a ring, to return it to the same, and to leave your fork or spoon lying on your plate.

## The Week.

Fruit is going eastward in increasing quantities, cherries and apricots comprising the shipments thus far. These are but the heralds of the fruits to come, and as Eastern reports are still of severe and untimely frosts, California may again serve the East well in supplying a varied diet.

There is a menace to some regions adjacent to the Sierra foothills in grasshopper visitation. Fortunately, this occasional evil does not usually cover great areas, but it produces grievous local losses. The mode of treatment described on page 514 of this issue, proved notably successful during the grasshopper raid of six years ago. All in threatened regions should make ready to apply it early.

The week has been windy and cool and somewhat threatening, but productive of showers

only in the extremities of the State, the central area having to be content with cool air and fleeting clouds.

## Cheap Sugar.

Wide-awake San Francisco merchants are to be credited with a movement for their own profit which fortunately has a wide bearing both upon the household economy of us all and upon the promotion of great industries in which the profitability of our growing fruit production is largely concerned. Readers will remember, no doubt, that although by the action of the McKinley law the duty on imported sugar was reduced from three cents to one-half cent per pound, the local sugar monopolists made no appreciable difference in the rates at which they dispensed the saccharine to their customers, but were quietly pocketing nearly all of the 2½ cents per pound of reduced duty. This might have gone on in this way indefinitely had it not been that our merchants, who are naturally restless under the impositions of the sugar monopolists, saw in this continued exaction a chance to run in sugar from various parts of the world, and it is now on its way to this port. The first arrival was about 1000 tons of high-quality Manila sugar refined in Hong Kong, which is reported to have cost 4½ cents per pound in that port. On its arrival the local refineries charged 6 cents per pound, and when the imported sugar was put on the market at 5½ cents they dropped to 5½ cents and 5 cents, but they are endeavoring to maintain their hold upon the chief part of the local consumption by binding the canners, wholesalers and candy men to purchase of no one but them. By so doing they hope still to control the trade of the coast.

How far they will succeed does not yet appear. Of course, the little lot of sugar from China does not count much; in fact, it is already reported mostly sold, nor will the importers from China say what their plans for the future are. It is altogether likely, however, that we shall have plenty of imported sugar, and in the face of it, the local refineries must drop their figures. How cheaply sugar ought to sell here is shown by the statements of one of our prominent canners to an interviewer as follows:

It is true that we have ordered a large amount of beet sugar from Germany—2000 barrels. We need about 400 tons a year. We can import beet sugar from Germany that is fully as good for our use as we can get here, and at a much less price than is offered us in this city. To hold the trade of this coast, the refineries will have to come down to 4½ cents, as sugar can be imported for that price. Sugar can be purchased for about three cents in Germany, and can be brought here by steamer and by rail via New Orleans for \$19 a ton, or 95 cents a 100 pounds, insurance and all, with an additional .6 of a cent a pound duty. By ships around Cape Horn, the sugar can be brought for \$10 a ton, or 50 cents a 100 pounds.

There are several other firms importing German sugar, and many other canners and candy manufacturers have large invoices of German beet sugar on the way. It is not expected, however, that importations will continue, for local refineries will be forced to drop their prices to meet the competition. This will be better, for the local enterprises should be patronized when they deal fairly; but it is extremely fortunate that there is a means by which they can be kept to such behavior.

The drop in values may make the local beet-sugar enterprises somewhat apprehensive of their profits, but they have, of course, the bounty, and they could hardly have counted on retaining the former sugar value plus the bounty when the duty is lower.

The importance of cheap sugar in the future of the enterprises, which we are striving to build up, can hardly be exaggerated. It is well understood all around. A San Francisco merchant thus pictures it:

This high price of sugar has been greatly injuring one of the leading industries of this country—the fruit industry. Why, I have on my table English jams and jellies. Most fruits are about the same price in England that they are here; sugar is about three cents a pound there, while it has been over double that here. English preserves can be landed in America at several cents less than it costs to make similar preserves in this country. This is greatly due to the high prices of sugar, and by this the sale of fruit is greatly decreased, whereas if the prices of sugar were the same here as in England, the demand would be beyond comparison. On account of the large amount of sugar used in putting up fruit, the slightest differ-

ence in price makes a great difference to the canners.

This is quite true. Cheap sugar is the key to much of our progress in fruit preservation and export. If we can produce it ourselves, so much the better. Until we do this our merchants who import and thus prevent extortion by local refiners, are doing a public service.

## Excessive Transportation Rates.

The struggle of the producers to secure something like fair rates for the transportation of their produce continues. It has been often shown that our local railroad freight rates are extortionate as compared with rates charged in other parts of the country where similar volume of traffic is to be had, but these showings do not avail much, nor do we have much faith in the success of Philip Barrows, who, in his own interest and in that of other grain-growers of the San Joaquin valley, has addressed a long letter to the Railroad Commission. He complains of grain rates, alleging that they are too high. The reduction of these rates in the East, he says, made the Vanderbilts rich, and while there it costs \$3 to move grain 1000 miles, here the Southern Pacific Charges \$4 to move the same quantity 200 miles. There is no doubt whatever about the extortionate prices charged here, but it is very doubtful if the argument that they can make more money by charging less will have any weight with the railway managers. They have been appealed to in that way before and data and arguments presented which would convince any business man of the desirability of a change in his policy, but the railway men cannot see it. They are much like the eastern fruit firms who did not like the idea of increasing the shipments and extending the distribution of California fruits. They preferred to make more money with less trouble. This policy worked until they found that it was bound to go and then they embraced the new movement. Whether we shall live long enough to see so much sense in railway management seems doubtful. They believe so much grain will be grown anyway and it must get to tide water, and there is no other way to get it there than at \$4 per ton for 200 miles. They will hold this view and policy until competition gets behind them or until we get railway regulation which serves the public rather than the railways and of the latter happy result, there does not seem to be any immediate prospect. However, it is wise to be doing something. Constant dropping wears away great stones. Keep at them in every honorable way. Educate the people on this subject. We are glad the San Joaquin grain growers are on the war path.

## Better Times for Farmers.

Hon. J. R. Dodge, the statistician of the Department of Agriculture, takes a hopeful view of the agricultural future. In his last bulletin, he notes that all indications point to positive improvement in rural prospects, and render practically certain a year of general agricultural prosperity. Western prices of corn are more than 100 per cent higher than in May of last year. The same may be said of oats. Wheat has advanced about 30 per cent, and the different classes of heaves in the Chicago market from 18 to 34 per cent. The export price of high-grade beef, relatively high in the worst of times, has advanced 10 per cent.

The wheat crop, so far, promises to be large. A few weeks will fix the relative rise of it. Ordinarily, a large crop would depress prices. This year the prospective reduction of foreign crops, which is assured, though not yet definitely ascertained in degrees, will certainly make a demand for any crop we are likely to produce at remunerative, if not relatively high prices. The exhaustion of the maize surplus will have its effect in sustaining corn prices during the year. The same is true of the oats crop. Of course a continuance of heavy crops will eventually reduce prices, and this should be avoided by a wise diversion to products needed, but not produced.

Lay down a method also for your reading, for which you allot a certain share of your mornings; let it be in a consistent and consecutive course, and not in that desultory manner in which many people read scraps of different authors upon different subjects.

## The Cannery Combine.

It seems that the canners' combine has become a fact. The thing took shape this week with the filing of articles of incorporation of the California Fruit Canneries, with a capital stock of \$2,000,000, to which only \$6500 was subscribed, with the general object of carrying on the canning industry in all its branches, and a directory composed of E. B. Beck, P. D. Code, A. D. Cutler, Isador Jacobs, H. A. Williams, A. B. Miner, W. H. Wright, M. J. Fontaine and E. L. Dawson.

It is claimed by a prominent packer that the proposition is all right and that it would not hurt the fruit-growers. He denied that any foreign capital was interested or that anything to fix a uniform rate for packing fruit was to be established, for the reason that the different canneries made individual contracts with the growers. "None of us," said he, "are doing business as profitably as we ought to, considering the amount of capital we have invested, and if we can put it on a better paying basis and raise the quality of our goods without damage to the local market, I can't see where any objection should come in."

It will be all right enough, no doubt, if it works that way, and if it does not, there are several remedies. In the first place, all attempts to combine canners have failed hitherto because of the irresistible disposition to get behind one another, or at least to attempt to. Whether the present arrangement has effectually closed all the back doors remains to be seen.

If it does, and an attempt is made to scale down fruit prices, it will only prove a temporary embarrassment, and in some cases not even that. The dry-log-tray is a deadly weapon when lifted up against a canner, and it is not necessary that all should lift it either. The refuge in dry-log only has to be sought by a portion of the growers to relieve the situation, and if the packer whom we quote is correct in saying that each canner still makes personal contracts with the growers, there is a very large hole in the back fence, through which many fruit crops will be pulled at good prices, as they have been heretofore.

But suppose it works like a charm and the combining canners pool all their losses and make a price which the grower does not like, what then? It will not be long before there are many growers' canneries, co-operative or otherwise. It does not cost as much to build and equip a cannery as it does to start a beet-sugar factory, nor is it difficult to master the processes. Every considerable producing district can have its cannery and can make it pay, but this is of course a last resort. It is a bother for a grower to work up such things. He is better off to sell at a fair price and let the other fellow do the worrying over sugar and tin and commissions. So long as a fair price—that is, a profitable price to the grower—is offered, we do not suppose any one cares about the canners' combine. We shall have to wait to see about that.

**CALCEOLARIA RUGOSA.**—C. H. Shinn would remind RURAL readers that it is not generally known that the very old and beautiful *calceolaria rugosa* is one of the best outdoor garden plants known. Several ladies at Niles have it in their gardens, bushes three feet high, and loaded with flowers. It is probable that there would be sale for out flowers at the florists. A lady recently met, had a basketful of large clusters of this fine calceolaria, and she said that the plant "grew like a weed, needing no care whatever." Unlike the delicate hybrid calceolarias, the *rugosa* is "half-hardy," or in other words, well suited to be an all the year plant in California.

**INTERSTATE COMMERCE HEARINGS.**—It is announced from Washington that Interstate Commerce Commissioners Morrison, Bragg, Veazey and Knapp will make a tour of the circuit to the Pacific Coast and return, hearing cases and making investigations at various points on the route. The Commissioners will be at the following places, probably, for the time set: Spokane Falls, May 26th until May 30th; Tacoma, May 31st until June 3d; Portland, June 4th and 5th; San Francisco, June 7th until June 9th; Salt Lake City and Denver, stopping en route for Topeka. A number of hearings have already been assigned.

## Secretary Rusk on California.

When Secretary Rusk of the Department of Agriculture was visiting San Francisco recently with the Presidential party, he promised at his first leisure to give the *Chronicle* his estimate of California as an agricultural and horticultural State. It was thought that his reputation as an expert farmer, as well as his position at the head of the Agricultural Department, would give value to these views. He has now fulfilled this promise by sending the following notes and conclusions of his trip:

No man can form anything like a correct estimate of the wonderful resources, the marvelous productiveness and the inexhaustible wealth of California, unless he visits this continent between the mountains and the sea, and investigates, sees, touches and tastes for himself. I, perhaps, as an officer of the Government, have had more material of an authentic nature, from which to form an idea of the mineral and agricultural wealth of California without seeing it, than almost any other man in the East during the past few years, and I am now ready to confess that with all the information at my command, my trip through the State has been a succession of great surprises.

I return from this visit, hurried as it is, wonderfully benefited, and prepared to intelligently meet and dispose of many vexed questions arising in the work of my department, having received knowledge applicable to the cases from your people. The Eastern man still looks upon California as the land of gold, for so long has California been associated in our minds with the production of the precious metals that even now her importance as an agricultural State is but little understood by most of our people; that it is the third State in the Union in wheat production; that it includes within its borders some of the most prosperous farmers in the United States; that it owes to agriculture the larger part of that wonderful increase in its taxable values, which bring them up at this time to the vast sum of more than \$300,000,000; that from San Francisco alone there is shipped abroad over 20 per cent of the total flour and wheat exports of the United States; that it is the second State in number of sheep, with an average annual wool export of 35,000,000 pounds; that last year over \$10,000,000 worth of fruits was shipped to the Eastern markets; that the value of its vineyards alone aggregates \$86,000,000, and that all this agricultural wealth is produced from a comparatively small portion of the State, a State in which the Land Office reports nearly 54,000 acres still open to settlement.

These facts, I say, are but little known to the majority of our people, and but few, even of those who know them, realize their full meaning. To the Eastern man who has tilled the farm of 20 or 40 acres that his father and his father's father tilled before him, the farms of this great State are as the legends of fairy land, and when told that with the same energy he expends on his 40 acres he can farm in California four times forty, he becomes incredulous.

Again the Eastern farmer, both from training, tradition and the nature of his environment, year after year raises the same crops and knows only the wheat, oats, rye, barley and potatoes, with a smattering of garden truck for his own use, and perhaps an acre of orchard, generally of pears, apples and cherries. He cannot imagine such farms as I have seen in this State.

The physical conformation of California, with 700 miles of seaboard to the west, a vast mountain chain on the east, and embracing between the mountains and the seaboard altitudes, combined with the ocean currents and winds, makes a wonderful variety of climatic conditions and renders possible almost every variety of production under the sun. The people have not been slow in taking advantage of the opportunities presented, and to-day California is sending into the world everything almost in the way of necessities and luxuries that man needs and that mother earth provides.

But Eden had its serpent, and so California has, otherwise it would be too perfect—a veritable paradise. Wherever fruit is grown we have to acknowledge, unfortunately, that fruit diseases are not long in making their appearance. The development of the fruit industry in the United States has been no exception to the rule, and hand in hand with fruit-growing it is found necessary to fight fruit diseases. The work of vegetable pathology, which, since my advent in office, has been erected into a special division, has, I am glad to say, attacked the latter phase of the fruit problem with both energy and skill.

A special investigation into the so-called California vine disease was inaugurated two years ago, and has been pushed forward as rapidly as possible. A report of the results is now in preparation. This disease has caused, alas! an aggregate loss of millions of dollars to the grape-growers of California. We are confident that the results of the report of the department, soon to be published, will enable the grape-growers to greatly diminish the ravages of this disease.

The department has always endeavored to assist the farmers and fruit-growers of California in the matter of suppressing insect pests. Ten years ago, the entomologist was sent out here to conduct a series of investigations upon the insects which were injuring your horticultural interests. Five years ago, two of the field agents of the Division of Entomology were stationed here, one at Los Angeles and one near San Francisco, and have since remained with you, working under the direction of the entomologist upon the problem of how to overcome your injurious insects.

Professor Riley made a special visit four years ago in connection with your orange pests, and, as a consequence, an agent was subsequently sent to Australia, and brought over the little beetle which has rid your trees of the white scale, saving hundreds of thousands of

## Dairy Pictures.

We give this week another group of dairy pictures from the *Overland*. The leading view, showing the interior of a calf-shed with the youngsters awaiting the arrival of their rations, may be suggestive to some of our readers who are prone to keep their calves in any out-of-the-way place which seems handy. It is a mistake not to give the calves a good, comfortable and wholesome habitation. People are apt to forget that these are the babies of the herd and their value as adults will depend to some extent upon their treatment as youngsters. The mortality, which is often alarming among calves, is often due to lack of care or proper shelter, or to improper food, or to good food

THE CREAM SEPARATOR AT JERSEY FARM.

dollars every year in this work. We are experimenting against the phylloxera in Sonoma valley, and we are working on the red scale and other fruit pests. The people of California have always been fully alive to the necessity for work in this direction, and the investigations of the department have been appreciated and seconded in an able manner by your State and County Horticultural and Agricultural Associations.

How much I have learned that will be of inestimable benefit to the agriculturists, horticulturists and floriculturists of this country, during my brief visit to California, I do not really know myself, but I am ready to say unreservedly that I consider my visit of untold value to me individually and as an officer of the Government. California is truly the poor man's paradise, and the day is not far distant when the whole world will realize it.

JEREMIAH RUSK.

BOSTON AND NEW YORK.—It is reported that New York's banking capital is \$2,000,000 less than that of Boston.

## California Products Summarized and Compared.

The following is from advance sheets furnished to the *RURAL PRESS* of a report prepared for the State Board of Trade by one of the most painstaking and careful students of California's industrial progress, Gen. N. P. Chipman of Red Bluff. The report will be found to contain valuable statistical information relating to our fruit industries, and to present the comparative value of our wheat and fruits, and also the comparative value of fruit products in North and South California. The results have never before been brought together, and will be found to contain data from which many important deductions can be drawn:

Eugene J. Gregory, President State Board of Trade:—After much investigation, and with as accurate data as are obtainable, I have prepared the following tables, showing:

Fruit exports for 1890.

Comparative values of fruit and wheat exports for 1890.

Comparative value of fruit exported from Northern California and Southern California in 1890.

These tables present results never before brought into comparison, and should prove of interest to the public, notably the comparative value of wheat and fruit exports, and the comparative value of fruit exports from North and South California. The value is taken at the farm or orchard, or first point of shipment.

Brandy.....	200,000 gals. = 90,000
Total.....	\$ 6,644,493

## Deductions from the Tables.

It will be noted that green deciduous fruits are nearly all shipped from the north; that

carelessly or irregularly dispensed. All these can be corrected, and if a dairyman will erect for his calves a habitation which he will be pleased to show to visitors, his care of the young animals will also be apt to be much better. Many times the calf pen or calf-shed is an outfit which has continually to be apologized for, and no wonder the calves die or grow up spindling and poor. The open shed shown in the engraving may, in the warmer parts of the State, serve as an all-the-year abode; but on the coast and in the colder parts of the State, a more perfect shelter will be required.

Another picture shows the De Laval cream separator as used at Jersey Farm, one of our leading dairies sending milk to the city. It is here run by water power, and the arrangement which is sketched is very neat and satisfactory. Another sketch shows one of the large milk-wagons used by Jersey Farm to convey milk from San Bruno to the city. It is a double-decker and carries two tiers of cans.

The smallest sketch of all shows a method of milking which is unusual, to say the least of it.

shipments of dried fruit from the north exceed the south over eleven million pounds; that five-eighths of the raisins go from the north; that nearly all the canned goods go from the north; that of the wine and brandy eight-ninths go from the north; that nearly all the nuts and practically all the oranges go from the south.

It will also be noted that the green deciduous fruits exported from the State about equal the value of oranges; that the dried fruits are more than four times the value of oranges; that our raisins have a value of nearly one million dollars more than oranges, and our canned goods over half a million more than oranges; that our wines and brandy have a value to the producer of over one and a quarter million dollars more than oranges. Also, that the exports of deciduous fruits and nuts exceed exports of oranges by seventeen million dollars.

It will also be noted that the value of the dried fruit shipped from the south is about double the value of her oranges; that the raisins of the south equal half the value of the oranges, and that the orange crop of the south is only about one-fourth in value of her whole fruit crop.

It is a significant fact that while our wheat output has not materially increased from 1880 to 1890, our fruit output has increased more than 30 times, and is growing with great rapidity.

While the showing here made still keeps California in the front rank of wheat-growing States, it demonstrates the great advantages of the State as a fruit-producing country.

In 1890, our exports of fruit brought us probably at the rate I now figure the farm value of fruit, about \$700,000, while they now amount to about \$20,000,000. This wonderful result has brought with it what is above all computation, to wit, the demonstration that fruit-growing in this State is very profitable, and is almost absolutely safe from frosts and other drawbacks.

Ten years have taught us also that we may resort to lands for fruit-growing, and quadruple our output, and still retain our primacy as a wheat and barley and wool producing State.

In closing, I desire to say that my data as to fruit shipments are given by the transportation companies, and the points of shipment I could not change; but they are misleading in this, that they are terminal points and do not give place of production. For example, Fresno does not show as a point of shipment, and yet it is the chief raisin-producing region; nor does Riverside, and it is the center of citrus fruits.

My data as to wines and brandy are furnished by Mr. Clarence S. Wetmore of the State Board of Viticulture. The wine and brandy output I give as a whole, not being able to obtain exports separately.

My data as to wheat I get from the San Francisco Produce Exchange, and as to average price from Mr. G. W. McNear.

The wheat exports I am satisfied included grain of previous years, because the whole of 1890 was only two million bushels more than the exports, and that would not furnish bread and seed.

My prices given to fruit are based upon my own experience and that of others in the business. They may be a little above or below, but as a whole they cannot be shaken much. The tables furnish valuable data for reflection and thought.

The disproportion of fruit products North and South on its face is encouraging to the North, but let us not deceive ourselves or our patrons. Eight counties south, with a population of 223,836, received \$6,444,493, or about \$29.68 per capita; while the balance of the State, with 948,284 population, received \$13,213,333, or about \$13.45 per capita.

### The Coming State Fair.

Our RURAL representative, who has traveled quite extensively over the State, notices an unusual interest taken in the coming State Fair. By an interview with Mr. Edwin F. Smith, Secretary of the State Board of Agriculture, he learns that there has been more applications for space up to this date than for any preceding year. The extra appropriation made by the last Legislature, and the general prosperity all over our State, warrants us in predicting a fair of unusual interest and large proportions.

The system inaugurated of having rivalry and competition between counties has been a step in the right direction, and already several counties are making preparations and laying out plans to make a large exhibit as a county.

Several large firms in San Francisco, who have heretofore confined themselves to exhibitions in the Mechanics' Fair, will this year exhibit at the State Fair also.

The State Board of Agriculture, in anticipation of a large exhibit of stock of various kinds, has made preparation to make provisions to accommodate them. The program of races has been prepared with a great deal of care and consideration, and it is expected both at the agricultural park and at the pavilion, that the exhibit of fine stock and mechanism will be from one-fourth to one-third larger than it has been in preceding years.

PENNSYLVANIA COAL sells in Italy cheaper than Welsh coal. The Illinois Central Railroad Co. is to build fast steamers to run between New Orleans, La., and Central and South American ports to attract trade that now goes to New York.

## AGRICULTURAL NOTES.

### CALIFORNIA.

#### Butte.

**INCREASING ATTENTION TO STRAWBERRIES.**—Wheatland Four-Corners: Strawberries are attracting the attention of our farmers. We understand that about 8 or 10 acres of berries will be planted by different parties next spring. The land generally selected is either red land or creek bottom. One of the parties intends to procure a shipman engine and a pump to irrigate the vines with. Strawberries, when properly handled, yield a profit of from \$100 to \$300 per acre, while on the other hand it is a crop that is absolutely worthless, if not properly attended to.

**A CHANGED CONDITION IN SIX WEEKS.**—Oroville Mercury: Rancho Golden Grove, property of Col. McLaughlin, in Thermalito, is a revelation to people who come to Oroville by way of Chico or Biggs. Six weeks ago all the land between the Cherokee road and the river and east of the Oroville and Chico road was covered with small oaks and the remains of an old reservoir. Now it is in a beautiful state of cultivation and will soon have a neat fence and a sidewalk around it.

**PALERMO FRUIT PROSPECTS.**—Cor. Mercury: Palermo is alive with men and teams cultivating the broad stretch of orchards, groves and vineyards. If the budded groves are permitted to bear, Palermo will have a nice little crop of fine oranges this year. Next year the crop will be counted by the carloads. Grapes, figs and olives seem to do as well there as the orange.

**RANCHO CHICO FRUIT CROP SOLD.**—Chico Chronicle-Record: The Rancho Chico crops of the orchards and vineyards have been sold to W. W. Cozzens of San Jose. The terms of the sale are much the same as those upon which Loese, Kuhn & Langer bought the fruit last year. The fruit will be picked, packed and turned over to the firm from San Jose. E. P. Scott is agent here for Mr. Cozzens, and is now receiving the cherries at the packing-house. The sale includes all the fruit of Rancho Chico except the berries and nuts.

#### El Dorado.

**FRUIT BUYING IN EL DORADO.**—Republican, May 14: A number of Los Angeles fruit-buyers were in Placerville, and completed arrangements by which they will purchase fruit here during the season, beginning about the 1st of July. Mr. Barnett states that he expects to ship 150 carloads of fruit from the depot during the season from what he has seen of the crop.

#### Kern.

**FRENCH PRUNES—EXPERIMENTAL PLANTING.** Bakersfield Californian: This industry is new in this valley as yet, and it is interesting to note down the experiences of a careful observer. B. L. Bundage has set out several acres this season, six and one-half of which had to be made by filling in an old slough, and, to begin with, the trees in the made ground are the hardiest and thriftiest of all. From yearling stocks set out last February, there is already a growth of from 15 to 34 inches, and all of the foliage is of that rich, dark green which betokens sturdy, healthy growth. Of 1800 trees set out, one has been lost, killed by a gopher, which ate off the tap-root and also peeled the bark off of the tree above the surface of the ground. One other stock has not leaved out, but the buds are green and it promises to grow. Three of the stocks laid out in the sun for three days, but then they were heeled and revived by lying in damp ground, for ten days, and are now doing well. The strongest growth thus far appears to be on the south—the sunny, side. Some of the trees have already blossomed and set to young prunes, probably from last year's buds, but these have all been snipped off. The best, thriftiest and hardiest trees so far are those which were budded upon peach roots. Next in vigor of growth come those upon apricot stocks, followed in order by almond, and last of all, by those budded upon the Myrabolan, or wild plum. As an experiment, a number of peach stocks, considered at the time to be of little value, were set in a streak of white sand which runs through the place, and, to the surprise of the owner, they are growing fast and well.

**THOROUGH CULTIVATION INSURES CROPS.**—Delano Courier: The great value of thorough cultivation is noticeable in many places this season. Lands that have had a thorough plowing for a few years past appear to retain more moisture, and the crops on these lands are in much better condition than that on shallow plowed fields. The grain on the Italiane ranches north of town yet looks thrifty, which is but the reward for good cultivation.

**GRASSHOPPERS—HOW TO FIGHT THEM.**—Bakersfield Californian: When once very prevalent in Colorado, a man whose fields were overrun, took the axes and wheels of a hay rake, made a high hood of sheet iron, and beneath it a sort of table, which sloped gradually as he to end very near the ground. Upon this table were some troughs, in which rags soaked in kerosene were placed and set on fire. One horse pushed the machine on the fields. The grasshopper would rise, be caught by the hood, and flutter down into the fire. In this way millions were destroyed. The next year a little red parasite appeared in that region, which fed on grasshoppers, and effectually routed them. The best plan for eradicating them, however, is by using the following receipt: Forty pounds of bran, fifteen of mid-

dlings, two gallons cheap syrup, twenty pounds of arsenic, mix soft with water, and place a tablespoonful beside each tree or vine. Mr. C. J. Barry of Tulare placed a board-walk four feet wide around his orchard, inside the fence, and upon that placed any obtainable kind of green leaves, each sprinkled with a mixture of strychnine, flour and molasses. The arsenical preparation is considered the most effective; and by feeding the hoppers before they get their wings the work of extermination may be confined to smaller spaces. If clover and weeds are sprayed with one ounce of Paris green to five gallons of water, or as strong as it can be used without burning the leaves, feeding upon the sprayed leaves will kill the grasshoppers.

**LARGE GRAIN CROPS.**—Bakersfield Echo: In Tehachapi valley there are now planted in grain 25 sections or 16,000 acres; Cumming's valley 16,000 acres; Brita's valley 3200; Bear valley 3200; in the canyon adjacent to these valleys including Oak creek, say 1600 acres more, making an aggregate of 40,000 acres upon which there is now growing a most promising crop of wheat and barley.

#### Los Angeles.

**HONEY YIELD.**—L. A. Express, May 11th: The honey crop of our mesa and foothill apiaries promises to be the largest for many years.

**HAYING.**—Pasadena Star, May 13: Haying is in progress throughout the valley, and yet there are hundreds of acres not yet ripe enough for the mowing machine. One of the prettiest sights in this season of beautiful outdoor views is that of a field of newly formed hay-cocks seen through the heavy foliage of deciduous and citrus orchards.

#### San Luis Obispo.

**BEAN CLEANING MACHINE.**—Arroyo Grande Herald: At work in the Southern mill and warehouse at the depot is a machine for cleaning small white beans, which is the outgrowth of the inventive power of F. H. Wheelan, manager of the company. The machine consists of a revolving wheel or disk, and as the beans are evenly poured upon the revolving disk, a series of tin screens help to separate the dirt and broken beans from the good. So successfully does it separate the good from the bad that the beans come out in perfect order and absolutely free of dirt or other objectionable substance. The machine is a perfect success and works about four tons a day. It is the intention of the company to build a machine on a much larger scale and of greater power to operate it. Something to clean beans has long been needed, as the dirty condition in which they have frequently gone upon the market has militated against the price and made them a matter of almost sale, but with freedom from dirt it will assist very materially in elevating the price.

**CREAMERY AND CROP NOTES.**—Downey Champion: The Cerritos Ranch Dairy and Creamery, C. E. Mitchell lessee, is at present milking 225 cows. On this ranch, a large acreage of corn, barley, alfalfa and root crop is in the finest condition for a bountiful yield. The barley looks particularly fine. The growth is heavy and the heads large and well filled. The cool, cloudy weather for the past month has been of great benefit to the small grain in this vicinity.

**EXPERIMENTAL STATION TREE PLANTING.**—Pomona, May 14: At the Experimental Station, there have been planted two of every variety of trees, 50 varieties of pears, 21 of olives, 10 of cherries, 14 of prunes, 16 of nectarines, 43 of peaches, 8 of Japan plums, 20 of figs, 75 of grapes, 17 of oranges, 3 of lemons, and 75 of plums. The trees and plants are all doing nicely. The dates are also making a magnificent growth.

#### Placer.

**COUNTY FAIR.**—Auburn, May 14: At a meeting of the County Fair Directors held in Auburn on Tuesday, May 12th, it was moved by Mr. Lardner, and carried, that all premiums not claimed by the first of December, after the fair, shall be declared forfeited and the amount set to the credit of the general fund. The time for opening the next fair was fixed for Tuesday, September 1st, the week previous to the State Fair.

#### San Diego.

**STRAWBERRY RAISING AT SAN JACINTO.** Register, May 14: Strawberries raised in the light, sandy loam composing the soil of this valley grow readily with little care and a moderate amount of water, often bearing profusely the first year. In color, most of the varieties grown here are a bright crimson, the right color of strawberries as we remember the ideal ones of our youth, and not a sickly-looking fruit half ripened. The flavor, which is as a natural consequence contained within this brilliant-hued fruit, is rich and sweet, with the strong indescribable "strawberry flavor."

#### Santa Barbara.

**CROPS AND HELP.**—Santa Maria Cor. Star: The prospect for a glorious hay, wheat, barley and fruit harvest in Santa Maria valley was never better. We hear farmers complaining of the scarcity of help to take care of the coming crops. Young men who, in other localities, or anywhere east of the Rockies, are out of employment, would no doubt do well to make tracks for this section of the golden clime.

**BEAN PLANTING** is carried on in the country round about Guadalupe. In whatever direction we travel we may see broad level fields, almost as smooth as a floor, and in some of the fields a thrifty husbandman driving over it mounted on a bean-planter.—Cor. Graphic.

#### Santa Clara.

**FRUIT PESTS INVESTIGATION.**—S. J. Mercury, May 17: Alexander Crow, Quarantine Officer for the State Board of Horticulture, has been investigating the canker worms and caterpillars which infest some of the orchards, and makes the following statement: The State Board of Horticulture was notified three days ago of the injury to the prune, cherry and apple trees by the canker worm, a species of *anisopteryx*, and a caterpillar, that made their appearance in several orchards three years ago. I made several experiments with washes, etc., but if prompt and effective methods are adopted by the orchardists in infested districts, the worms can be stamped out, as we have a very cheap and effective remedy in Paris green in the proportion of one pound to 200 gallons of water. If two or three pounds of common laundry soap be dissolved by boiling, and added to the solution, it will assist materially in holding the Paris green in suspension. To be effective, the mixture must be constantly stirred in the tank while applying. If this is not attended to, the result will be that some trees will get an overdose and be injured, and others will receive the clear water. Use the best Paris green, and see that all the trees are thoroughly sprayed, and in three or four days the worms will begin to drop. Beating the branches with poles, or throwing dirt over the trees to dislodge the worms is only time wasted, for enough are left in each tree to stock the orchard next season. Three men with a tank, holding from 100 to 200 gallons, carried upon a wagon—one man to pump and two to do the spraying—will treat from 300 to 600 bearing trees per day. If the trees had been treated three weeks ago, the worms would have succumbed more readily to the poison, and considerable damage would have been prevented. Mr. Crow stated in addition that no time should be lost in this matter, as it is very important that the work be done at once, and so effectively that the pests will be completely wiped out of existence.

**A FRUIT COMPANY.**—At the recent meeting of the Directors of the Fairview Farm Evaporating and Canning Company, Col. R. P. McGlinchey of Campbell was elected president; F. Dexter of Saratoga, vice-president; E. Le Queene of Saratoga, secretary; and the Commercial Bank of Los Gatos, treasurer. The drying establishment, owned and operated by the growers, is located in the foothills between Los Gatos and Saratoga.

**AN EASTERN FRUIT-PEST BORER.**—Campbell Cor. Los Gatos Mail: The fruit-growers are being much disturbed by the presence of canker worms in their orchards. This pest is new to this region, and promises to make things lively for us. They are shaken from the trees, and various devices have been contrived to prevent their climbing up the trees again. Some alarm has also been created by the knowledge that some Eastern trees have been planted in the vicinity, which contain Eastern borers, unlike our ordinary borers, and supposed to be more difficult to destroy. This new pest bores into the wood of the tree, and is not as easily found, and is more destructive to the life of the tree. Mr. Preston agreed to examine carefully his Eastern trees and report. A committee was appointed by the Horticultural Society to advise with the County Board of Supervisors as to the best method of destroying these borers before they spread into the orchards. It is to be hoped that active measures will be taken for this purpose.

#### Solano.

**GRATIFYING CROP PROSPECTS.**—Suisun Republican: The crop prospect is indeed gratifying, and farmers are making preparations to garner the same. The prospect for a good yield and fair prices has brought courage to the soul of the Granger. Each day the streets are lined with teams, and large loads of lumber, furniture, machinery, etc., are seen going out in every direction. Things in business circles are resuming their old-time jingle, and everybody looking forward to a prosperous and happy future.

**BEES ON THE RAMPAGE.**—Davisville Cor. Tribune, May 16: The bees, unable to find suitable quarters in the absence of forest trees, are taking possession of chimneys and the openings between the ceiling and siding of dwellings. There are several residences in this neighborhood whose owners are compelled to abandon the use of their fireplaces. In one case, four chimneys are completely blocked, and the puzzled proprietor is at his wits' end. In another case, they have found an entrance beneath the siding, and seven or eight colonies now combine to resent any intrusion upon their right.

#### Stanislaus.

**CROP PROSPECTS.**—Oakdale Leader, May 15: The grain crops are still looking well in this section. The absence of rain during the past month has not had a very good effect on the late-sown grain, but the injury is not very marked. The early-sown and summer-fallowed both look promising, and if the weather continues cool, the yield will be immense.

#### Sutter.

**LARGE WHEAT PLANT.**—Marysville Democrat, May 14: Thomas Clyma, a pioneer farmer of Sutter county, brought in a sample of growing wheat from his ranch at North Butte, and we feel safe in saying that its equal was never produced in that county. The sample was of the Royal Australian variety, and by actual measurement stood six feet and five inches in height. Mr. Clyma says the sample is an aver-

## FLORIST AND GARDENER.

### Flowers.

EDITORS PRESS:—Flora among the Romans was the name of the goddess of flowers and of spring. The worship of Flora was one of the oldest manifestations of the Roman religious feeling.

The Floralia, or festivities, in honor of the Goddess were first instituted in 238 B. C., and were celebrated by the women, they being given when the wheat fields were in blossom and were conducted with much beautiful display peculiar to the season of flowers; and at the present day there are but few gatherings in which flowers do not bear an important part. They brighten the beauty of the bride, come like a ray of sunshine into the chamber of the invalid, telling of green fields, blue skies and singing birds, and even death is robbed of part of its terror when loved ones are laid to rest beneath a covering of flowers. To the dweller in the towns a tiny bunch of buttercups or violets comes like a message from heaven, recalling scenes almost forgotten—a low, old-fashioned farmhouse with wide-spreading meadows, orchards that are laden with snowy blossoms, filling the air with sweetest perfume. But in no other State can there be found such a wealth of flowers as grow in this land of the Golden West. Roses (queens of the floral world) that would rival those of Damascus, dahlias and fuchsias that their Mexican ancestors would fall to recognize, while our chrysanthemums would put to shame those of Japan, so much have flowers been improved by cultivation that in the heart-ease, lady's slippers and touch-me-nots, of our grandmothers' day, we scarcely can see any resemblance to the lovely paucity, asters and halsams to be found in our gardens now.

Of wild flowers, there is the buttercup, the children's favorite, which blooms with us some seasons as early as January, and so universal is it, from Maine to California, that it deserves some claim to recognition as a national flower.

Through March and April, the poppy, our State flower, rears its beautiful golden head from among the green, while away to the south more tropical flowers and delicate ferns are to be found, and up in the extreme northern part of our State, among the eternal snows, the snow-flower puts forth its scarlet crest.

No more opportune time could have been chosen by the President to visit us than at this high tide of the California year, but never again will he walk on a bed of roses. With vines and flowers, the humblest cottage is made beautiful, and in this almost tropical climate, they so well repay a little time and trouble.

Flowers are the petted darlings of the vegetable world; they were made to be loved for their beauty alone, and all we ask in return for the love and care we give them is that they be as beautiful as possible. "They toil not, neither do they spin; yet Solomon, in all his glory, was not arrayed like one of these." And flowers are not without their uses, for in the beautiful words of Mary Howitt—

"God might have bade the earth bring forth  
Enough for great and small,  
The oak tree and the cedar tree,  
Without a flower at all,  
We might have had enough, enough,  
For every want of ours,  
For luxury, medicine and toil,  
And yet have had no flowers.

"Then wherefore, wherefore, were they made,  
All dyed with rainbow light,  
All fashioned with supremest grace,  
Upspringing day and night;  
Springing in valleys green and low,  
And on the mountains high,  
And in the silent wilderness  
Where no man passes by?

"Our outward life requires them not—  
Then wherefore had they birth?  
To minister delight to man,  
To beautify the earth;  
To comfort man, to whisper hope,  
Where'er his faith is dim,  
For whose care the flowers  
Will care much more for Him."

Sacramento. FLORENCE DUDEN.

### Artificially Colored Flowers.

[Read by EMORY E. SMITH before California State Floral Society.]

Every now and then some one starts a story of having seen flowers of unusual colors, such as blue roses, red calla-lilies, green violets, etc. These seeming freaks are always a seven days' wonder to those who are not familiar with the method by which they are obtained. For many years it has been a well-known fact that flowers when dipped in certain chemicals would rapidly change colors to such a degree as to be almost unrecognizable as the same variety. The public in general has known but little of the methods employed. Mr. Filpol, a distinguished savant, recently exhibited to the Scientific Association in Paris the results obtained by subjecting flowers to the influence of a mixture of sulphuric ether and ammonia. A quantity of ether is poured into a glass and to this is added a small quantity of liquid ammonia, say one-tenth of the volume. The flowers are then plunged into the fluid and with the most sur-

prising results. Those which are naturally red or violet in color take upon themselves a bright green tint. Flowers, the colors of which are variegated, assume as many different shades; for instance, the upper petal of the sweet pea would become dark blue, while the lower petals would turn to a bright green. White flowers usually assume a yellow color. Red geraniums turn blue and red snap-dragons become brown. Yellow is seemingly the only color which the solution does not affect. The action of the liquid is very rapid, and colored spots can be procured upon the flowers by pouring here and there a drop of the solution. Flowers which are many-colored are sometimes changed to the most remarkable novelties that it would be possible to imagine. After the flowers have been subjected to the liquid they should be plunged in pure water, when they will retain their new tints for several hours, but will gradually assume their natural colors.

### The Gloxinia.

[Read by EMIL KELLNER before California State Floral Society.]

The Gloxinia was named in honor of Benjamin Petrus Gloxin of Colmar (Alsace), formerly belonging to France, now within the boundaries of the German Empire. Monsieur Gloxin was a writer on botanical subjects. It is a genus containing seven species of elegant stove plants, all natives of tropical America. The flowers are variously colored, sometimes rightly belonging to the genus Sinningia, and most of them derived from Gloxinia species.

The Gloxinia is propagated by seed, cuttings of the stem and leaves. Cuttings of shoots may be secured from the old bulbs; leaf cuttings, when the plants are ripened. Artificial manure and liquid manure is beneficial.

The roots should be stored away until spring. The soil to be used should be one part leaf-mold, one part cow-dung (well rotted), one part common soil with some sand. Pulverized charcoal mixed with the soil is an antidote against souring of the soil.

From the commencement of the growing plants, do not water too much; they want, after awhile, plenty of heat and water. Water with tepid water; also take care not to get much water on the leaves of the plant, otherwise they will rot.

Among the varieties mentioned, there are: Gloxinia diversifolia, Gloxinia gesneroides, Gloxinia glabra (erect stems), Gloxinia maculata, Gloxinia multiflora, Gloxinia pallidiflora (pale flower) and Gloxinia speciosa.

### Influence of the Walnut on Neighboring Trees.

EDITORS PRESS:—In your issue of May 9th, I notice you ask for opinions concerning the influence of the walnut on neighboring trees, and as I have seen walnuts and other trees growing in close proximity for more than 20 years, I will say that I have never seen any injury arising to any such trees from any reasons connected with the walnut. It is a common practice here to set out other fruit trees between the rows of walnuts, while young, and after they have borne several crops, and the walnuts have arrived at a profitable age, to remove them and give the space all to the walnut. Trees set this way have never, to my knowledge, shown any had results attributable to the walnut.

Carpinteria. L. B. CADWELL.

Dyspepsia has driven to an early and even suicidal grave many a man who, if he had tried the virtues of Ayer's Sarsaparilla, would be alive to-day and in the enjoyment of health and competence. Sufferer, be warned in season, and don't allow the system to run down.

THE CANADIAN PACIFIC was the first railway company on this continent to control and operate a through transcontinental line from ocean to ocean. It is now the first of the lines to the Pacific Coast to secure an entrance to New York City. The effect of this new route for freight traffic to the Northwest remains to be seen. As it has direct and short water communication between its western terminals and this city and Oregon, it goes without saying that it cannot fail, under existing custom-house regulations, to interfere more or less with the legitimate business with our own roads. A road built almost exclusively by Government aid and run in the interest of its Government must prove a most successful rival to any road built and operated by individuals.

### A PEORIA POINTER.

Mr. J. G. Reuter, prominent Merchant, Peoria, Ill., writes: "The trial box Quin's Ointment has cured Curb ten weeks standing. Send one bottle your valuable preparation." Splints, Spavins, Windpufts, Bunche, wonderful results. Trial box 25 cents, silver or stamps. Regular size \$1.50 delivered. Address W. B. Eddy & Co., Whitehall, N. Y.

AN ordinary transparent glass globe absorbs about 10 per cent of the light passing through it; ground glass absorbs 30 to 45 per cent, and opal glass from 50 to 60 per cent.

### ORANGE PLANTERS

Should read the advertisement of the Aloha Nurseries. The best varieties are offered at rates so low that no one need hesitate about planting for experiment, or for investment in places where the orange is known to thrive.

THE San Francisco and San Mateo Railroad Company has let a contract for 16 miles of steel rails to the Pacific Rolling Mills of this city.

## TO SHIPPERS!

## California Ventilated Barrel

EXCELS ALL OTHERS!

IT IS LIGHTER, STRONGER, MORE DURABLE AND BETTER VENTILATED THAN ANY OTHER BARREL.

This engraving of the CALIFORNIA VENTILATED BARREL makes plain to the practical shipper its points of superiority over the common barrel, which may be enumerated as follows:

It weighs from five to seven pounds less than the ordinary barrel, making a material saving in freight charges.

It costs less than one-half for trimming, and does not require an experienced hand to cooper it.

It is the only thoroughly ventilated barrel made, a very important point.

The heads are warranted not to come out in transit, and no liners are required.

It is stronger and more durable than any other barrel.

Never varies in size, even to the extent of a quart.

—ALTOGETHER MAKING IT—

The Cheapest and Best Barrel on the Market.

It is Made of the Best Quality of Spruce, Woven Together with Copper Wire, And can be furnished in any size desired.

THE CALIFORNIA BARREL IS ADAPTED TO SHIPPING THE FOLLOWING ARTICLES:

Apples,  
Oranges,  
Onions,  
Potatoes,

Sweet Potatoes,  
Dried Meats,  
Bottled Goods,

Glassware,  
Canned Meats,  
Crockery,

Eggs,  
Poultry,  
Walnuts,  
Almonds,

And Vegetables of All Descriptions.

A factory making these barrels is now in operation in San Francisco, with a capacity of 4000 barrels a day. The success of the barrel is almost unprecedented, and it is bound to become the package in a very short time. EVERY ONE USING IT IS ENTHUSIASTIC IN ITS PRAISE. IT HASN'T A FAULT. When shipped in knock-down form, about 2500 barrels can be placed in a single car. Special rates given on car lots. WRITE FOR PRICES AND PARTICULARS.

California Ventilated Barrel Co.,

No. 403 MARKET STREET, - - - SAN FRANCISCO, CAL.

FACTORY: N. W. Cor. Powell and North Point Streets.

## The Harvest Queen COMBINED HARVESTER.

The Lightest Draft Harvester in the Market.

ENDORSED BY ALL FARMERS AND RANCHERS. SATISFACTION GUARANTEED. NONE EVER RETURNED.

### POINTS OF MERIT:

FIRST—Having two pivot wheels on the ground enables it to turn square corners like a mowing machine.  
SECOND—All of the frame work about the cylinder is the best of oak lined with sheet steel and put on with screws. Other parts built of the best of material and painted inside and out.  
THIRD—The driver is NOT isolated by a ladder from the machine, but is safely seated on the separator where he can hear and see the working of the machine and drive to suit.  
FOURTH—The new cleaner put on last season works perfectly.  
FIFTH—The machine is so geared that the cleaner, separator or header can be started independently of each other.  
SIXTH—The header is portable. By the use of our supplemental truck we can pass a 16-foot header through a 12-foot gate.  
SEVENTH—The shaftings are all made of steel.

SIZES, 10 TO 16 FEET.

Send for Price List.

With all our Machines we furnish Straw Dump and Header Truck separate from Machine. Machines delivered on board cars or b'at.

including Best's Peerless Grain Cleaner.

All sizes made to order, from 14 to 40 feet.

As a Steam Traction Harvester, Straw, Wood or Coal can be  
used for fuel.

These Steam and Horse Power Combined Harvesters were  
run successfully all last harvest, giving entire satisfaction in all  
ways in grain in every condition.

SEND FOR NEW CIRCULAR. For further informa-  
tion, prices, etc., address

DANIEL BEST, San Leandro, Cal.

## THE ORNITHOLOGIST.

## Song Birds from Japan.

Of the beautiful bird known as the Japanese nightingale, Eastern sun-bird, or Persian bulb, the author of the "Book on Birds" remarks that it is an inhabitant of the Oriental countries, where large flocks dart among the trees of the groves and forests. They are favorite birds even in their own countries for their delightful, mellow calls, dashing movements and flashing colors. The Eastern countries are noted for breeding gorgeously-hued birds, but no bird imported from there combines the attractive qualities of this universal little favorite.

This nightingale is about five inches and a half in length. The upper parts of the body are brownish olive; the breast and throat are a brilliant shade of orange; the wing feathers are bronzed-colored, tipped with orange; the tail feathers black barred with white feathers; the beak is long and slender and of the same brilliant color as the breast; the eyes are large, black and very expressive, and surrounded by a ring of white.

The song is a curious combination of sprightly, mellow notes, which are uttered with such precision and in such clear tones that the hearer thinks he is listening to a chorus of wild songsters, each pouring forth his best songs in his endeavors to outdo all others. The song can be described partially by saying it combines the beautiful, plaintive tone of the English nightingale and the sprightly notes of the bobolink. His joyous warble is heard at all hours of the day and never becomes monotonous.

Insectivorous in its habits and affectionate in its nature, this bird loves to build its nest near the habitations of man and can be easily tamed and become a household companion. A few days before he died John F. Swift wrote me from Tokio, Japan, expressing his delight that there was under consideration the introduction of singing birds into California, and suggesting that perhaps it might be well to import some from Japan, more especially recommending a species of nightingale said to be identical with the bulb of Persia, easily obtained and susceptible of being trained in its song.

This letter I gave to the press. It was very favorably commented on editorially by several journals, and the Japan Gazette expressed a hope that the suggestion of Mr. Swift would be adopted, and "the songs of birds serve to keep ever green his memory."

Soon after the receipt of the letter an order was sent to Japan for a supply of the birds, and the last steamer brought the news that 50 pairs have been secured and would be shipped so as to arrive here within a few days. The whole of the first importation of these useful and beautiful birds will soon after their arrival be sent to various places in the interior, there to be let loose, with the hope that the good wishes of the editor in Japan be fulfilled and that this gift to California be considered as a tribute to the memory of John F. Swift by his friend.

The writer suggests that if other Pacific Coast papers copy the above they make the request that the birds shall be unmolested for a year or two.—H. F. C., in Evening Bulletin.

## ENTOMOLOGICAL

## Summer Wash for San Jose Scale, Red Spider, Fungus, Etc.

The Sutter County Board of Horticultural Commissioners recommend the whale-oil soap and sulphide of potash wash for the summer spraying of deciduous trees infested with the San Jose scale, red spider, yellow mite, etc. The following is Prof. Hilgard's formula, and is used throughout the State, being not only cheap, but easily mixed and quite effective for summer spraying. To accomplish the best results, this wash should be applied after the scale are hatched and while they are crawling on the tree. It is impossible to state the date when this occurs, as it varies according to the season and weather, but it is usually about the first of May in this part of the State. All infected trees should be often examined, and when, with the aid of a magnifying glass, the young scale can be seen crawling on the tree, no time should be lost in applying the remedy.

WHALE-OIL SOAP AND SULPHIDE OF POTASH REMEDY.  
Whale-oil soap (80 per cent strength).....20 pounds  
Sulphur.....3 pounds  
Caustic soda (93 per cent strength).....1 pound  
Commercial potash.....1 pound  
Water to make 100 gallons.

Place the sulphur, caustic soda and potash together in about two gallons of water and boil for at least an hour, or until thoroughly dissolved. Dissolve the soap in the water by boiling; mix the two and boil them for a short time; use at 130 degrees F. in vessel.

Prof. Hilgard recommends, in bad cases of scale and in fighting red spider, an addition of kerosene in the form of an emulsion to the above wash:

KEROSENE EMULSION.  
Kerosene.....1 gallon  
Whale-oil soap.....1 pound  
Water.....1 gallon

Dissolve the soap in the water, and when

boiling hot add the kerosene. Churn the mixture for five or ten minutes with a hand spray pump until it forms an emulsion. If the emulsion is perfect, it will be of a creamy nature, no oil appearing on the surface. Add this to the 100 gallons of spraying material.

The sulphide of potash and the kerosene emulsion are often made up in large quantities and the proper amount added to the whale-oil soap, as required. Keep this wash well stirred when using.

It is very important that the whale-oil soap used should be at least of 80 per cent strength. To test the soap, spread five or ten ounces of it on a tin plate counterpoised on a pair of upright scales reading to ounces, and then dry the whole by setting it on top of a pot of boiling water. The loss in drying will indicate the amount of water in the soap. Thus, if five ounces were taken and one ounce was lost in drying, the soap would be of 80 per cent strength.

R. C. KELLS,

J. C. GRAY.

H. P. STABLER.

Horticultural Commissioners Sutter Co.

## Grasshopper Poison.

EDITORS PRESS:—I have had to give the grasshopper poison recipe quite often of late. A correspondent of the RURAL PRESS July 11, 1885 gives the following:

"Take five pounds middlings, which mix thoroughly with one pound arsenic; then dilute one-half pint molasses with one gallon water and moisten the middlings and arsenic with this, but do not make it too wet, as otherwise it is more likely to bake and harden in the sun. This mixture we drop on small pieces of boards, shingles or shakes, and deposit these along our roads and avenues, preferring this method to dropping a spoonful under each vine, in order to keep the mixture as far away from the vines as possible and as it will draw the hoppers for quite a long distance it is just as effective. We have used the above remedy for about three weeks, and have found it sure death to any hopper that has eaten of it. Wherever we have used it dead hoppers are lying around in all directions."

All of which I know to be true. I notice in the last RURAL PRESS that several neighbor-hoods are threatened with this fearful pest. In those who do not know or have forgotten the above recipe it will be worth more than one year's subscription of your paper. Bran will do nearly as well as middlings. J. W. MACKIE, Tulare, Cal.

BERKSHIRE SALES.—Phil M. Springer, Secretary American Berkshire Association, Springfield, Illinois, sends the following transfers of recorded Berkshires: Radwood Jack 25 993 and Carrie C. 25,994, Andrew Smith, Radwood City, Cal. to C. O. Pendleton, Red Bluff, Cal.; Diamond of Eden 25,770, Henry P. Mohr, Mount Eden, Cal. to A. L. Graham, Haywards, Cal.; Beauty of Eden 26,042, Henry P. Mohr to Daniel Culo, Haywards, Cal.; Captain Cattle 26,039, J. E. Pleasants, Santa Ana, Cal. to J. A. Scarritt, Orange, Cal.; Conqueror 26,047, S. W. Renfro, Collinsville, Ill. to Harry Eniton, Flagstaff, Arizona.

## GOOD BUTTER.

What is the first thing that impresses the buyer when a lot of butter is offered for sale? Its appearance. If one tub is white and lardy-looking, another red, and a third streaked, that butter will bring a low price. The best butter makers use Wells, Richardson & Co.'s Improved Butter Color, and their product is of a uniform June yellow. Give it a trial and you will never be without it.

Gen. L. F. Ross, Proprietor of Mt. Prospect farm, near Iowa City, Iowa, and breeder of Red Polled Cattle, finds Wells, Richardson & Co.'s Improved, the only satisfactory butter color. He writes: "We are using Wells, Richardson & Co.'s Improved Butter Color, and are well satisfied of its merits. After trying many different kinds, we have adopted this as our standard. Our experience goes to show that it is the only color that can always be relied upon to produce a perfectly natural shade."

YEARS ago competition in the way of swift ocean passages was between sailing vessels instead of between steamships. Then it was the "Yankee" clipper beat the world, and the recent passage of the clipper Saint Paul from Queensland to New York in 16 days shows that the making and handling of sailing vessels is not among the lost arts.

## WHY THE BUGGY BROKE.

Owing to poor material in construction, and employment of cheap labor. The "Complete Horse Book" tells where to buy the best Buggy made for the money. Sent for 10 cents, silver or stamps. Pioneer Buggy Co., Columbus, O.

## MANILLA ROOFING

FOR FAY'S WATER-PROOF Manilla Roofing, Siding, Ceiling, Sheathing, &c., send 2c for illustrated Catalogues and Samples. J. F. WYMAN, General Agent for Pacific Coast, 204 Market St., San Francisco.

## FOR DYSPEPSIA, Ayer's Sarsaparilla

Is an effective remedy, as numerous testimonials conclusively prove. "For two years I was a constant sufferer from dyspepsia and liver complaint. I doctored a long time and the medicines prescribed, in nearly every case, only aggravated the disease. An apothecary advised me to use Ayer's Sarsaparilla. I did so, and was cured at a cost of \$5. Since that time it has been my family medicine, and sickness has become a stranger to our household. I believe it to be the best medicine on earth." —P. F. McNulty, Hackmau, 29 Summer st., Lowell, Mass.

## FOR DEBILITY, Ayer's Sarsaparilla

Is a certain cure, when the complaint originates in impoverished blood. "I was a great sufferer from a low condition of the blood and general debility, becoming finally, so reduced that I was unfit for work. Nothing that I did for the complaint helped me so much as Ayer's Sarsaparilla, a few bottles of which restored me to health and strength. I take every opportunity to recommend this medicine in similar cases." —C. Evick, 14 E. Main st., Chillicothe, Ohio.

## FOR ERUPTIONS

And all disorders originating in impurity of the blood, such as boils, carbuncles, pimples, blotches, salt-rheum, scald-head, scrofulous sores, and the like, take only

## THE STOCK YARD.

### Preparations for the World's Fair.

Mr. W. I. Buchanan, Chief of the Department of Agriculture of the World's Columbian Exposition, in speaking of the arrangements being made in the way of buildings by the Local Directory for the live-stock and agricultural interests, says that the most ample facilities possible are being planned to accommodate all the various live-stock and agricultural interests in a manner that cannot fail to be pleasing and satisfactory alike to visitors and exhibitors in these departments.

Mr. Buchanan says: "One of the most desirable and interesting features of the Exposition will be the proposed Live-stock and Agricultural Assembly Hall, the erection of which is now assured. This building will probably connect Machinery Hall with the Agricultural Building, fronting on the main court of the Exposition grounds, and will be conveniently near one of the stations of the elevated railroad. It will be a very handsome building and will undoubtedly be the common meeting point for all persons interested in live-stock and agricultural pursuits.

On the first floor, near the main entrance of the building, will be located a Bureau of Information, in charge of attendants, who will furnish visitors with all necessary information in regard to the Assembly Hall and the main Agricultural Building, as well as other features of the Exposition. The first floor will also contain suitable committee and other rooms for the different live-stock associations of every character, where such associations can meet and have their secretaries in constant attendance, thus affording this important industry ample headquarters near the live-stock exhibit and the Agricultural Buildings.

On this floor there will also be large and handsomely equipped waiting-rooms, with fire-places for ladies, lounging-rooms for gentlemen and ample toilet facilities. Broad stairways will lead from the first floor into the Assembly room, which will have a seating capacity of about 15 hundred. This Assembly room will furnish facilities for lectures, which will be delivered by gentlemen eminent in their special fields of work, embracing every interest connected with live-stock, agriculture and its allied industries. When one considers that in this room almost daily there will be lectures delivered, papers read, and discussions had, conducted by eminent specialists from all parts of the world, the importance of such a building for educational purposes is apparent. Taken in connection with the exhibits, this feature will make that part of the Exposition devoted to live-stock, agriculture, and horticulture a complete gathering together of all that an advanced civilization is capable of producing. In the Assembly room the most approved theories will be advanced and explained. On the grounds and in the agricultural and horticultural buildings will be the best illustrations of what can be accomplished when these theories are put into practice. Men who have made the dairy business, for instance, a life-study, will read papers and deliver lectures on matters connected with the dairy; and close at hand, in full operation, it is hoped to have a working dairy, affording a practical object lesson of the improved methods, which have been applied to this industry. And so through all the branches of agriculture and horticulture, the Exposition as an educational means will be both theoretical and practical.

The entire second floor of the Assembly building is given up to committee-rooms and rooms for headquarters for each and all of the different farmers' organizations in existence in this country. It will furnish a definite and pleasant home for all such organizations during the entire time of the Exposition, where each may have its secretary, or other official, constantly in attendance to furnish information and transact other business, and where the members can hold such consultations as they may desire.

Such a building was never erected at any Exposition, and its construction here will show that the Board of Directors purpose affording every facility that they can furnish to aid the great live-stock and agricultural interests of the country. It is confidently believed that this building will present a very busy scene every day the Exposition is open, and that it will prove an immense benefit to the interests it is designed to serve."

The entering wedge of a complaint that may prove fatal is often a slight cold, which a dose or two of Ayer's Cherry Pectoral might have cured at the commencement. It would be well, therefore, to keep the remedy within reach at all times.

#### Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

## THE RAISIN INDUSTRY.

### A Practical Treatise on the Raisin Grapes, Their History, Culture and Curing.

By GUSTAV EISEN.

This is a book of marked character. It is an attractive volume of more than 200 pages, printed on heavy paper, with wide margins, and is well illustrated and neatly bound. It has won the thoughtful attention of specialists, and called forth the hearty commendation of the newspaper press. Prof. E. W. Hilgard, of the University of California, says: "It is certainly a most timely work, and one that your training and experience have fitted you peculiarly to undertake. I congratulate you and the raisin industry upon the work, in which I recognize from the outset the Germanic thoroughness and a close adherence to facts that do not always characterize such publications." Prof. E. J. Wickson, of the same institution, writes: "I discern in the work a breadth of information and a faithfulness in details of practice which will constitute it the standard treatise on the raisin." Col. Forsyth says: "With your book in hand the inexperienced farmer or clerk can safely engage in raisin-growing with expectation of success from the very start." Says the Fresno Republican: "No work on a technical subject has ever been published that more thoroughly, completely and honestly discussed its specialty than does Dr. Gustav Eisen's work on 'The Raisin Industry.' This valuable book, just out, is published by the H. S. Crocker Company, San Francisco. It is just what it pretends to be, a practical treatise on the raisin grapes, their history, culture and curing." The Rural Press says: "Dr. Eisen's work is broad and scholarly, and yet compact and definite in the development of the subject. It should find a place on the book-shelves of all California horticulturists, and will no doubt go to the uttermost parts of the world." The California makes this reference to the book: "It is a clear, vigorous, free and logical treatise; learned, exhaustive, profound and yet extremely practical and useful." The Marysville Appeal says: "A very valuable contribution to the literature of horticulture is the volume on 'The Raisin Industry,' from the pen of Prof. Gustav Eisen. Among California raisin-growers Prof. Eisen has long been recognized as an authority upon everything relative to their industry." The San Francisco Chronicle says: "In this work the author has performed a much needed task, going into the details of every branch of what has become one of the foremost industries of California. No man better qualified for the enterprise could have been found." The State Horticultural Society, by its committee, reports as follows: "We find Dr. Eisen's work a most valuable treatise upon raisin production in all its branches, historically complete, broad and comprehensive in its scope, accurate in its details and a valuable guide in the practice of the growth of the raisin-grape vine and the preparation of its products for the market, and as such we earnestly commend it to the public." Price Three Dollars, postpaid. For sale by DEWEY & CO., 220 Market Street, San Francisco.

## FOR SALE.

Forty Acres of good land one mile from St. Helena, Napa County, on road to Rural Health Retreat. ### Agricultural Notes.

(Continued from page 510)

age from his 200-acre field. He has also 100 acres of club wheat on the Dowell place which is almost in as good condition. The heads are large, and are beginning to fill nicely with fine, plump grain.

#### San Bernardino.

**FRUIT CROP PROSPECTS.**—Radland *Citrograph* May 16: Interviews with the following orchardists give a fair idea of the fruit crop prospects in this county. J. B. Grover: "Both the apricot and peach crop promises to be better than last year. Seven and eight year old trees that bore heavily last year will bear equally well this year. Older trees that were broken down by the heavy crop last year will have two-thirds of a crop this year. Royal apricots promise to be unusually fine." Dr. Wm. Craig: "Apricots and peaches will give a heavy crop, with the exception of the Moorpark apricot, which will be very light. Nectarines promise well, and the plum trees are full of bloom. In a general way, I should say, the outlook for deciduous fruits is good. G. H. Crafts: "Apricots promise to be a little short; some varieties will bear well, and others will be scant. The peach apricot, that bore lightly last year, will give a heavy yield this year. The peach prospect is No. 1; there has been no onr leaf, and the season such as to insure an extraordinary crop. Prunes have bloomed well, but it is too early to say what the crop will be." J. C. Canterbury: "Apricots in the Highland section will be good, but peaches will not be so good as last year. In San Timoteo the apricot crop will be small. The seedling peaches, that did poorly last year will have a fair yield." James Bloch: "The prospect is good for both apples and cherries, although the trees were about ten days later in blossoming than usual. The first cherry blossoms this year appeared on March 18th and the first apple blossoms on April 20th. There was a two inch fall of snow on my ranch on April 18th, but the thermometer behaved itself and no damage was done. Cherries promise especially well." W. E. Shiley: "The apple and cherry crop will be fine—the prospects are good. My trees are young; in fact, I have just begun planting, but the older orchards will give a splendid crop." O. R. Paine: "Royal and peach apricots will be too good, while Moorpark apricots will be poor. Peaches promise a good crop. I can not say about prunes, as I have not noticed the trees. Orange trees were never fuller of bloom than this year." Byron O. Clark: "I can't say as to the crop in this section, but in the San Gabriel valley peaches are looking well and apricots and prunes will give a good yield. Deciduous trees blossomed nearly a month later than usual. If the weather is warm the fruit will ripen at the usual time, though if the season should be cool the crop will come into market late."

#### Tulare.

**FRUIT PEST.**—Hanford *Journal*, May 12: N. W. Motheral has returned from a trip to Bakersfield. While on the train coming back, he learned that the orchards and vineyards in the vicinity of Poso were suffering very much from an attack of bugs. A large black bug is doing great damage there to vines and trees, eating off the leaves and branches. Grasshoppers and squirrels are also very destructive, so that between the three pests the horticulturists of Poso are having a hard time of it. Mr. Motheral has requested parties to send him samples of the bug, so he can give a close investigation to his appearance and habits.

The grain crop all around Exeter is looking very well, considering the dry weather. It is filling well, and with reasonably cool weather will make from four to ten sacks per acre on all land that has been well plowed, and the farmers are putting their machinery in order and otherwise getting ready for the harvest. Most of the young orchards planted the past winter have started nicely, and are making a vigorous growth. The exception is where parties sent to other parts of the State for their trees, and from some cause (probably not properly packed and become too dry en route) only a part of them have started to grow. Orchardists should avoid that mistake in the future as much as possible, and patronize home production. —*Exeter Cor. Times*.

**SMOKED HIS APRICOTS.**—*Visalia Times*: The apricot trees in the Briggs orchard are so heavily laden with fruit that it is breaking the limbs. The Canty Bros., who have a lease on the orchard, took the trouble of smoking the orchard on frosty nights, which was done at small cost, and are now to be rewarded with a good crop of fruit that will command top prices, as apricots will be scarce this season. There will be a larger crop of all kinds of fruit in the Briggs orchard this season than was harvested last year.

#### Yolo.

**SUGAR BEET PLANTING.**—*Esparto Independent*, May 14: Half a dozen persons in this vicinity have already procured sugar beet seed and have either planted it or intend to do so in a few days. While this will probably be sufficient basis upon which to predicate an opinion (considering the lateness of the season), it would be better to have more seed planted, so that the different quarters of this valley may be tested and full justice done its various soils and conditions.

**RECLAIMING BOTTOM LAND.**—*Wheatland Four Corners*: In the years past, acres of rich bottom land were covered with trees and brush, and the farmer satisfied himself with farming

but a portion of his ranch. Even such portions as they put in crops were not attended to properly; rank grass and weeds were allowed to grow along the roadside and fences, and too much land was left uncultivated in corners and out-of-the-way places. Now everything is different; the patches of willows have been removed and the weeds by the fences and roadsides are carefully kept down; every available foot of land is planted, and as a consequence, the bottom presents an appearance of thrift and cleanliness. As the result of more careful planting and unstinted cultivation, the crops present a far thriftier appearance, and the farmer, too, seems to take more pleasure in his work. We do not hesitate to say that the crops will be greater this year than any year previous.

#### NEVADA.

**CATTLE NOTES.**—*Reno Journal*, May 12: Beef cattle seem to be in demand throughout the country. Those shipped to Chicago from Lovelocks by Sibbald and Savage netted over \$45 per head, and there is a market for all that may be shipped. Bees are scarce in Washington, too, and George Wright is here from Puget Sound, buying all the fat cattle that are for sale. Mr. Wright bought eight carloads from G. W. Mapes and ten carloads from F. J. Frey for shipment to Puget Sound, and he went to Lovelocks to buy all the fat cattle Captain Marzen has for sale. It is a relief to cattle men to know that they are no longer dependent upon the San Francisco market, and that they can ship their heaves north to Portland or Puget Sound or east to Omaha and Chicago and get better prices for them than in San Francisco. Mr. Wright is paying 6½ for good cattle delivered at Reno.

The following brief list, by telegraph, for May 19 will appear more complete upon receipt of mail advices: California—Ulrich Bachmann, San Francisco; apparatus for impregnating liquid with gas; Conrad Boller, San Francisco, folding bed; Charles H. Coffin, San Francisco, three-wheeled vehicle; Charles C. Davis, Los Angeles, portable burglar alarm; Henry R. Elliott and E. L. Bemis, Los Angeles, suspenders; William R. Finch, Eureka, breech-loading gun; Adam W. Gillfillan, steam boiler alarm; August Harding, Oakland, explosive engine; Charles P. Harris, San Francisco, game puzzle; Mary C. C. Hartman, Redding, steamer; Byron Jennings, San Jose, assignor of one-half to J. Brusie, Oakland, electric insulator; Byron Jennings, assignor of one-half to J. Brusie, Oakland, insulator holder for electric railways; Joseph F. Menlray, assignor of one-fourth to J. T. Delaney, San Francisco, desk and seat support; William A. McFarlane and S. A. Barrett, San Bernardino, water gauge; Austin D. Moore and A. K. Green, San Francisco, faucet; J. J. Pfister, San Francisco, athletes' supporter; George H. Tietjen, San Francisco, stenciling machine; Walter R. Webster, Pine Grove, closing device for water-closet lids; Walter R. Webster, Pine Grove, spring hinge; Joseph S. Whitcomb, San Francisco, excavating apparatus; Alfred L. White and D. L. Miller, Suisun, automatic pumping apparatus; James B. Williams, Oakland, insulated electric conductor; John J. Spelker, Sacramento, remedy for rheumatism, neuralgia and headache.

Oregon—Frank Vatter, Marshfield, apparatus for preserving pils.

Washington—Edward W. Mitchell, Spokane Falls, assignor of one-fourth to R. Parker, J. H. Stearns and B. F. Sutton, Brooklyn, N. Y., conductor for electric railways.

**ACKNOWLEDGEMENT.**—We are indebted to the Oregon Immigration Board for the view of Mount Hood presented in this number. This Board is maintained by the business men of the city of Portland. It is composed of ten commissioners chosen from among, and is supplied with funds by regular monthly contributions from the business men of the city. It has no lands for sale and does not act as agent in the purchase or sale in any kind of property, the procuring of situations or the floating of any kind of enterprises. Its sole object is the giving of reliable information as to the city of Portland and the Pacific Northwest. Information will be furnished free of charge to all applicants.

#### Unitarian Literature

Sent free by the CHANNING AUXILIARY of the First Unitarian Church, cor. Geary and Franklin Sts., San Francisco. Address Mrs. B. F. Giddings as above.

[From the Marin County Journal.]

#### Present to the President.

San Rafael did not get a visit from President Harrison, but, through one of her most prominent citizens, she got his ear. Saturday evening, May 2d, Mr. William L. Oge was introduced by Hon. W. W. Morrow, and presented the President with two elegant *satin de Luze* sections of "Picturesque California," and a portfolio of *satin duplicates* of full-page plates in the work, which were received by him with expressions of the highest appreciation. Mr. Oge happily voiced the sentiments of our people in his presentation remarks, which were as follows:

**Mr. President:**—It seems to me a grand tribute to the genius of American Government that a man may come, as I now come, simply as a citizen of this great commonwealth, with any proper message, to you, the highest dignitary of the greatest nation on the face of the globe. Though I come only in the name of one mercantile house, I'm sure I represent in spirit thousands of business men, when I say, we are glad and thankful for your visit.

Since you set out from Washington, it has been the prayer of all hearts that your tour of inspection and friendly visitation might be a great blessing, especially to the South and to this far-Western shore, and to the official and personal good of yourself. You will pardon the suggestion here, in your presence and that of your Cabinet officers and of these Congressmen, and let me venture the query: "Why should not such visitation at suitable intervals be made a part of the official duty of the Chief Executive of this great country?" How else may the head of the nation so accurately know the various parts of the vast domain, how so surely catch the spirit of the people? You have so many times been told, "We're glad you came," that, although, as you facetiously said at the banquet last night, "Californians are averse to telling the truth," I fancy you begin to believe us, at least in this one refrain.

It has occurred to my business associates and myself that selections from an art work published by us, entitled *Picturesque California*, may prove a not unwelcome souvenir of your most welcome visit among us. Its theme is California and the Pacific Slope, as portrayed by our foremost landscape artists and most effective writers, in whom and whose work I know you are deeply interested. I refer to our own part in the work only to say that from first to last it has been a labor of love. And, although a business enterprise, we beg to say it is also an expression of patriotic devotion on the part of artists and writers as well as on our part—a tribute of loyalty and love for California. In this little offering to you we have chosen such parts of the work as represent portions of the State and coast which the rapid flight of your journey has deprived you of seeing.

Permit me to say, in conclusion, that I believe in California; in the California of to-day, and in the California of the future. With such material resources as make it easy to gain ample livelihood and still have time for culture; with climate and surroundings inviting to outdoor life and tending to perfect health of body and vigor of mind; with the grandeur of mountains and the sublimity of ocean forever before the eyes of all who will see; with crystal lakes away up toward heaven, reflecting Italian skies; with flashing rivers and roaring cataracts; with glorious forests and smiling valleys; with endless profusion and variety of fruits and flowers all the year—their beauty inspiring the æsthetic sense; with such wealth of beauty and wonder and majesty—so much to quicken the mind and fire the spirit and broaden the heart and life of man—with all these influences, it seems to me that if we Californians prove in any sense worthy of our fair heritage, we should achieve a supremacy in literature and art and song like that of Greece in the days of Pericles! Why should there not be developed here as grand a civilization as theirs?—aye, better; better by so much as Christianity is better than Paganism; grander because of 19 centuries of enlightened progress!

We beg, Mr. President, that you will accept our little offering with our sincere and loyal regard.

#### Scientific and Educational Lectures.

The following is a partial list of subjects which Rev. John Dickinson, of University P. O., Los Angeles Co., is prepared to treat:

1. A Hurried Glance at Mother Earth.
2. A Closer Look at the Earth's Crust.
3. Minerals—Their Chemistry and Geometry.
4. The Moon.
5. The Geology of the Stars.
6. Evolution—What, Whence, Whither?
7. Some Readings from Nature's Great Stone Book.
8. A Winter in the West Indies.
9. Science Teaching in Schools.
10. Literature Teaching in Schools.
11. Biology. (One, two, three or four lectures.)
12. Physical Conditions of Success in Teaching.
13. Psychology as Related to Physiology.
14. Botany in the High School.
15. Zoology in the High School.

The first eight numbers are better adapted for evening public lectures, and are of general interest. The remainder are more suitable for special institute work.

Knowing Mr. Dickinson (who is a brother of the celebrated lecturer, Anna E. Dickinson,) long and well, we would recommend county or city school superintendents, lecture committees, Chautau-

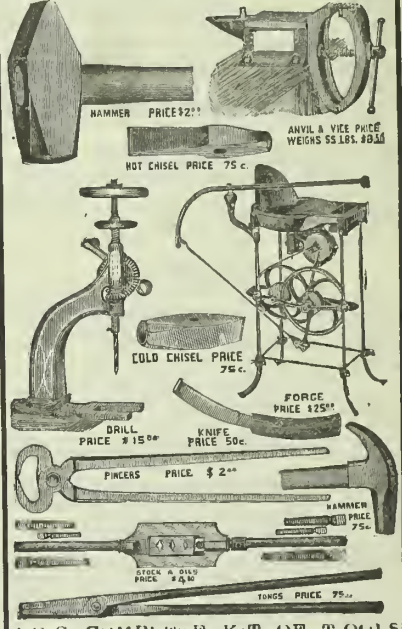

qua Circles, or other persons who may desire single lectures or courses of lectures on scientific subjects, to correspond with him for further information.

#### Remarkable Springs.

Among the most beautiful and healthful summer resorts in California, Anderson Springs stands at a high notch. They have been kept without change of proprietors or conductors probably longer than any similar establishment in Central or Northern California. We have often visited them and enjoyed their comfortable, wholesome resort, which we consider unsurpassed in California for homelike table and kind attentions. The magnificent natural park aromatic puffing steam baths, hot and pure and cool water, large and beautiful brook which rushes past the hotel, swimming baths, and other desirable connections with this charming and most desirable place, make it one of the best resorts we know of.

**CREAM-SEPARATOR AGENCY.**—Mr. A. J. Van Dyke, 203 Fremont St., this city, succeeds E. D. Sharples as agent for the Improved Sharples Cream Separator. Orders for Separators, parts, fittings, etc., will meet with prompt attention. Circulars and all information will be sent upon application.

**MARRIED.**—George L. Everett of this city, commercial editor of the *Alta*, was married, on Thursday last, to Miss Jennie C. Baldwin of Danville, Contra Costa county. The newly wedded pair will reside in their new home on Twenty-third street in this city. —*Oakland Enquirer*.

THIS COMPLETE KIT OF TOOLS  
Only \$25.  
Send for No. 16 Illustrated Catalogue.

## H. H. H. Horse Liniment

Is certainly the best preparation of its kind in the market. Ranchers, Stock Raisers and Horse Owners of every description will tell you that it does good work every time.

MESSES. H. H. MOORE & SONS, Stockton, Cal.—GENTLEMEN: In answer to your inquiry, would state that I used your H. H. H. Liniment on my Holland prize-winning cow, "Lena Menlo," for a wrenched shoulder, and it relieved her very much. She calved the next day, and while still suffering from the sprain gave the largest authenticated quantity of milk ever given on this coast (104 gallons per day), showing conclusively the great relief received from your remedy. I consider it a necessity in my stables, and when away from home feel perfectly safe, as inexperienced men can do no harm with it, as they can with the more powerful blisters. Respectfully yours, FRANK H. BURKE, Breeder of Registered Holsteins and Berkshires. Menlo Park, Cal., January 22d, 1889.

MANUFACTURED BY

H. H. MOORE & SONS, THE DRUGGISTS,

248 MAIN STREET,

STOCKTON, CAL.

## SWEET'S PATENT Kicking Preventive.

SURE PREVENTIVE AGAINST KICKING.

Simple, Easy to Apply, Practical. THE VERY WORST KNOWN KICKERS permanently cured with this device. KEEPS THE ANIMAL FROM STEPPING ABOUT. This Harness is a Grand Success for BREAKING IN HEIFERS and renders them perfectly docile. Will GUARANTEE SATISFACTION or Money Refunded. Price of Harness Complete for Use, \$3.00. Write for testimonials from users.

## SILVER MILKING TUBES.

For Sore and Obstructed Teats and Hard Milking Cows.

An Entire Success

For the Relief and Permanent Cure of Garget or Stoppage of Milk, or when from any cause the teat cannot be handled in the usual way. Cows' teats are frequently injured by being stepped on in the stable, or torn in the pasture; they are also liable to be troubled with cracked teats when first turned out in the spring, making milking a very painful operation; and injurious experiments are too frequently resorted to, from the results of which many valuable animals are rendered worthless, because their owners have not the means at hand to give the needed relief. The article which we offer is a simple instrument and can be applied by any person. Will quickly give relief and permanent cure in all cases without the slightest injury to the animal. A single Tube can be made to answer for an entire herd and is the cheapest insurance possible against loss. Don't be caught without one; order it at once. Single Tube, postpaid, 75c. Set of four, postpaid, \$2.00.

Also SURGICAL INSTRUMENTS FOR DAIRY USE.

## S. H. MARKET REPORT

## Market Review.

## DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, May 20, 1891.

Cool weather the past week was in favor of maturing grain crops, and it also tended to keep fruits from ripening too rapidly. Market prices for farm products in general have been well maintained. The local money market has ruled fairly easy. In cereals trade is only restricted by light supplies. In the East and Europe the wheat markets have fluctuated, changing daily according to the weather. The following is to-day's cablegram:

LIVERPOOL, May 20.—Wheat—Steady. California spot lots, 8s 7d; off coast, 44s 3d; just shipped, 44s 6d; nearly due, 44s; cargoes off coast and on passage, turn dearer; Mark Lane wheat, firmer, weather in England, showery.

## LIVERPOOL WHEAT MARKET.

The following are the closing prices paid for wheat options per cwt. for the past week:

	May.	June.	July.	Aug.	Sept.	Oct.
Thursday.....	86 1/2	86 1/2	86 1/2	87 1/2	87 1/2	87 1/2
Friday.....	86 1/2	86 1/2	86 1/2	87 1/2	87 1/2	87 1/2
Saturday.....	86 1/2	86 1/2	86 1/2	87 1/2	87 1/2	87 1/2

## EASTERN GRAIN MARKETS.

The following shows the closing prices of wheat at New York for the past week, per cental:

	Day.	May.	June.	July.	Aug.	Sept.	Dec.
Thursday.....	190 1/2	188	181 1/2	176	176 1/2	176 1/2	176 1/2
Friday.....	190 1/2	188	181 1/2	176	176 1/2	176 1/2	176 1/2
Saturday.....	190 1/2	188	181 1/2	176	176 1/2	176 1/2	176 1/2
Sunday.....	190 1/2	188	181 1/2	176	176 1/2	176 1/2	176 1/2
Tuesday.....	190 1/2	188	181 1/2	176	176 1/2	176 1/2	176 1/2

The closing prices for wheat have been as follows at Chicago for the past week, per cental:

	Day.	June.	July.	Sept.	Dec.
Thursday.....	100 1/2	100 1/2	100 1/2	102	102
Friday.....	100 1/2	100 1/2	100 1/2	102	102
Saturday.....	100 1/2	100 1/2	100 1/2	102	102
Sunday.....	100 1/2	100 1/2	100 1/2	102	102
Tuesday.....	100 1/2	100 1/2	100 1/2	102	102

NEW YORK, May 20.—Wheat—\$1.14 for May, \$1.12 for June, \$1.09 for July, \$1.05 for August, \$1.04 for September, and \$1.05 for December.

CHICAGO, May 20.—Wheat—\$1.00 for July, 96c for September and 97 1/2c for December.

## HOPS.

NEW YORK, May 18.—Hops, choice, are held stiff at 32@33 1/2; good to prime, 27@31c. The small wants of brewers are supplied from the latter qualities; olds, 5@12c; London is using old hops freely and don't want to bend to our prices.

## DRIED FRUITS.

NEW YORK, May 8.—Plums are quoted at 10@12c, with some pie bakers' call. Peaches are slow; 10c for sacks and 11c for boxes. Apricots are losing tone, and are down to 10@11c for bags and 13@14c for boxes.

The bulk of Pacific owned Prunes is now released from the lock-up, and a more animated feeling prevails. It is unusual to see Californians quoted so near to Turkish casks. For new owners paid 7 1/2c, offering to trade at 8@9c for good to selected.

## EASTERN WOOL MARKETS.

NEW YORK, May 15.—Domestic fleece, 34@37c lb.

NEW YORK, May 15.—Bradstreet's will say: Manufacturers have bought more freely of choice wools than during the preceding week. Sales of Australian wools have been much larger. Dealers are more interested at present in the prices paid for the new clip than in the values ruling in the Eastern markets. The slow movement in woolen goods is forcing manufacturers to delay in taking stock. It is thought by some dealers that the high prices asked by growers will induce freer buying of foreign wools next fall than has prevailed during the past year. The demand for pulled wools has been very strong and stocks are well reduced. Sales of Territories are restricted on account of the light supply. Other domestic grades are quiet and values are weak. Carpet wools are selling slowly. Dealers are firm in their demands, on account of a recent decision relating to the sorting clause which makes it very uncertain as to the values at which stocks can be replaced. It is said that 900 bales were secured at the recent London sales for American account. In Boston, the wool sales for the week were larger than for the preceding week, particularly foreign wools. In the Philadelphia wool market no improvement is reported, although prices have not weakened.

NEW YORK, May 18.—With the small stock of wools here producers regard any hint of weakness as a mere "bluff" and make the most of the statistical situation in naming high home prices. Meantime buyers are rigid in the opinion that from the present outlook wools that will exceed 65 cents to clean are beyond general trading figures. There were some opening sales of California at Boston. Territorial and others will be in better order than last season. Woolen goods are fairly steady, and the omission of some auction sales this year lends some strength. The Delaine mills still use Australian stock freely.

## VISIBLE SUPPLY OF GRAIN.

NEW YORK, May 18.—The following is the statement of the visible supply of grain on Saturday, as compiled by the New York Produce Exchange: Wheat, 19,243,000 bushels, a decrease of 1,611,000; corn, 3,481,000 bushels, a decrease of 237,000; oats, 3,072,000 bushels, an increase of 482,000; barley, a decrease of 99,000 bushels.

## FOREIGN GRAIN REVIEW.

LONDON, May 18.—The Mark Lane Express, in its review of the British grain trade for the past week, says: English wheats have declined 1s. Foreign wheats are less depressed, and have shown a fractional improvement. Corn, steady. Oats and barley, dull.

## LOCAL MARKETS.

	Buyer Season.	Seller Season.	Buyer 1891.	Seller 1891.
Thursday.....	146 1/2	146 1/2	110	108 1/2
Friday.....	146 1/2	146 1/2	108 1/2	108 1/2
Saturday.....	146 1/2	146 1/2	108 1/2	108 1/2
Sunday.....	146 1/2	146 1/2	108 1/2	108 1/2
Tuesday.....	146 1/2	146 1/2	108 1/2	108 1/2

\*After July. †After August.

## WHEAT.

	Buyer	Seller	Buyer	Seller
Thursday.....	1891	1891.	1891	1891
Friday.....	1891	1891.	1891	1891
Saturday.....	1891	1891.	1891	1891
Sunday.....	1891	1891.	1891	1891
Tuesday.....	1891	1891.	1891	1891

\*After August. †After July. ‡After August.

BAGS—The market is without any particular change to note. The range is given at 7@7 1/2c.

BARLEY—The sample market is strong at an advance. In futures trading has been only fair. The following are the sales reported on to-day's call:

Morning Session: Seller 1891—100 tons, \$1.09 1/2; 100, \$1.09 1/2; 100, \$1.08 1/2. Buyer 1891, after July 1st—100 tons, \$1.18 1/2. No. 1 Brewing, hayer season—100 tons, \$1.54 1/2. Buyer season—100 tons, \$1.52. May—200 tons, \$1.52. Spot—100 tons, \$1.54. Buyer 1891, after August 1st—100 tons, \$1.16 1/2 cwt.

BUTTER.—The market is stronger with a slight advance obtainable. Packers say if higher prices rule they will stop packing until the market shades off again.

CHEESE.—The market is over-supplied, causing easy prices and some shading.

EGGS.—The market has a strong tone at a slight advance. The improvement is due to lighter receipts and a good demand.

FLOUR.—The market continues to hold to full prices.

WHEAT—The sample market is very strong with very little offering for sale. In futures dealings have been fair at slight fluctuations. The following are to-day's call board sales:

Morning Session: Buyer 1891—100 tons, \$1.73 1/2; 100, \$1.74; 1000, \$1.74 1/2. Buyer season—100 tons, \$1.74. Buyer 1891, after August 1st—200 tons, \$1.67 1/2; 100, \$1.67 1/2; 800, \$1.68 1/2 cwt. Afternoon Session: Buyer 1891—300 tons, \$1.73 1/2; 100, \$1.74. Seller 1891—100 tons, \$1.61 1/2; 500, \$1.61 1/2; 700, \$1.61 1/2 cwt.

## Market Information.

## CEREALS.

London Agricultural Gazette, May 4: At this time last year the wheats were not very forward for the season, being considerably more backward than other things, but it was remarked of them in this column, May 5th, that the stand was above an average and promising a big crop if climatic conditions continued favorable, which they did, on the whole, and a big crop was harvested. At the present time the wheats are very backward, more so than they were even in 1887, but the plant could not show better habit under the circumstances, being of perfect form and of perfect color, owing to the dryness of the land; and there is, once again, the making of a good crop of wheat in the stand for first week in May, although it has more the appearance of that of second week in March.

The local wheat market has held to strong prices, with an advance obtainable for round parcels. A decline in spot charters, better prices for wheat abroad and light supplies here, are the favorable influences. There is less wheat now held on this coast than ever before in the month of May. Cables received yesterday (Tuesday) from Liverpool report the crop prospects not so encouraging as heretofore advised. To this is undoubtedly attributed the advance in the European wheat markets and not to the McKinley high tariff bill, as the rings or monopolists would like to have persons believe. By reference to movements of tonnage, it will be seen that the tonnage on the way has increased the past week. It is now larger than at the like date for several years past. Our large crop prospects will not only require all that is on the way, but considerably more.

Advices from the growing crops are still favorable. The cool weather has been of great benefit. At this writing it looks as if we will have warmer weather which if realized will force crops to maturity.

Barley has made another step upward, under a large demand and light supplies. Orchardists are large buyers, but they always are during fruit season or when cultivating, for they use large numbers of draft horses. Oregon and Washington report the supply about exhausted.

Oats are stronger, with a slight advance obtainable. The stock here and supply to draw from is quite light not only in California, but also up north.

Corn continues to maintain the strong tone heretofore noted. The higher prices tend to restrict the demand, but the light supply favors sellers. Rye is nominally unchanged.

## FEEDSTUFF.

Ground feed is strong and slightly higher. The receipts are barely enough to meet current requirements. Shortening pastures are favorable to still higher prices.

New hay is making a better showing. Prices opened higher than for many years, and it looks as if good prices will obtain throughout the year. For new hay the following prices rule: Wheat and oats, \$16.50@17.50; wild oats \$13@16, and alfalfa, \$8.50@9.75. Old hay is selling for more money under a good demand and light supplies.

## MAY WHEAT REPORT.

Statistician J. R. Dodge, Department of Agriculture says:

The exceptionally high returns of April have been duplicated by the May return of wheat. The favorable meteorological conditions which were noted last month as having prevailed throughout the season, from preparation of seed bed to beginning of spring growth, have continued, and present condition is reported even higher than in April. The general average, from the consolidated returns of county correspondents, 97.9, approaches full condition more closely than in any other May report, with a single exception, during the history of crop reporting by this Department. The advance during the month was due to improvement in weather conditions in New York which advanced the State average by 5 points, and to a continuation of favorable conditions in the heavy districts of Western production. Quite as striking as the high general average is the uniformity of the returns for different States. No State falls as much as five points below the general average, and none exceed it by two. The variation of returns within county lines is quite as remarkable, showing that not only every State, but almost every section of each State participates in the remarkably favorable prospect for this crop. The conditions which have been so extremely favorable to growing grain and to grass lands, abundance of moisture accompanied with high temperatures, have very much retarded the ordinary spring work of the farm. The proportion of spring plowing already accomplished is reported at 68.8 per cent. The average of several previous years has been about 77 per cent done on May 1st. The Eastern and Middle States report favorable conditions for spring work, and fair progress to date. In all the Southern States it has been delayed by heavy rains, and later by drought, which has rendered plowing difficult and imperfect. In the Ohio Valley excess of moisture delayed plowing through March and intertered with its progress in some places during the first two weeks of April. The work has progressed rapidly since, and germination has generally been prompt. In the Northwest the season has been favorable, spring work is well advanced, and spring grain coming up and growing finely.

## FRUIT AND CANNED GOODS.

The shipments of fruit and canned goods to the East by rail in April were as follows:

	Canned Goods.	Dried Fruit.	Citrus Fruit.
From—			
San Francisco, lbs.....	605,080	440,530	4,311,210
Los Angeles.....	54,600	22,300	—
Sacramento.....	56,800	34,680	—
San Jose.....	194,780	131,280	—
Marysville.....	103,950	640	—
Colton.....	—	—	4,458,110
Stockton.....	30,450	300	—
Totals.....	1,109,720	630,370	8,769,320
January.....	1,564,890	2,007,410	965,610
February.....	833,380	953,510	1,778,510
March.....	1,009,450	663,650	7,421,230
Four months.....	4,568,890	4,254,940	18,935,790

The shipment of raisins from the State in the past month were as follows: San Francisco, 259,980 lbs; Sacramento, 244,010; Stockton, 832,590; Los Angeles, 45,840; Colton, 20,070; total, 1,402,490 lbs, as against 1,329,740 in January, 481,330 in February and 983,530 in March, or 4,197,090 lbs since January 1st.

## LIVE STOCK.

The selling offers are fair only, as most of the stock has been or is being driven to summer pastures. Mutton sheep are fairly firm, but they always bring good prices during summer months. Hogs are barely steady. The consumption of all kinds of meats is only fair, owing to increasing supplies of fruits and vegetables.

The market for dressed cattle is quoted as follows (to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent):

HOGS—On foot, light grain fed, 5@5 1/2c lb; dressed, —@—c lb; heavy, 4 1/2@5c lb; BEEF—Stall fed, 6 1/2@—c lb; grass fed, extra, 6@—c lb; first quality, 5 1/2@—c lb; second quality 5@—c lb; third quality, 4@—c lb; bulls and thin cows, 2@3c lb; VEAL—Small, 6@7 1/2c lb; large, 5@6 1/2c; MUTTON—Wethers, 7 1/2@8c lb; ewes, 7@7 1/2c lb; spring lamb, 7 1/2@9c lb.

## FRUITS.

The first consignments of this season's raspberries were received on yesterday by Wetmore Bros. H. Neilson of San Lorenzo was the shipper. They fetched 50c a basket.

Cherries are coming in very freely and sell for a shade less prices. Strawberries are unchanged. With continued warm weather all kinds of early fruits will be in oversupply for table use. Canners are taking a few strawberries that come within their views. Australian apples (over 3500 bxs.) came in the past week. Some are very choice.

Eastern fruit crop advices are conflicting. The general tenor of advices indicate that the crops will not be as large as the outlook warranted about a fortnight ago, but whether the shortage will be made good by an increase in the number of trees coming into bearing is an open question. We are still unable to obtain thoroughly reliable quotations from canners and driers further than those given last week. It is claimed that in some instances higher prices are paid than we think quoted for outside figures.

Dried fruits are about cleaned up. Raisins continue to come in sparingly. The market does not show any noticeable change in prices.

Under freer receipts, stronger selling and freer receipts of deciduous fruits, oranges are weak at lower prices. Our outside quotations are obtainable only in exceptional cases. The bulk of receipts are more

or less coarse grain or else corky, while many are insipid. It is the off fruit that weakens the market for other kinds.

Under freer imports and stronger selling, Mexican limes are unsettled and lower.

## VEGETABLES.

Garden truck is coming in quite freely and shows a steady improvement. Peas are being taken by canners. Rhubarb and asparagus are unchanged. Summer squash is tending down. Tomatoes are scarce and very high. String beans are in freer receipt. Early York Cabbage is in good supply.

New onions are not coming in quite so freely, owing to low prices. The quality is improving.

New potatoes are in free supply. Well matured, suitable for shipping, are in fair demand. Old potatoes, except choice to extra choice Burbank seedlings, are in oversupply and demoralized.

## MISCELLANEOUS.

From reliable advices up to May 13th the following summary of tonnage movement is compiled:

On the way to	1891.	1890.
San Francisco.....	310,123	195,183
San Diego.....	16,470	14,652
San Pedro.....	11,110	11,259
Oregon.....	34,383	24,712
Puget Sound.....	38,305	21,432
Totals.....	410,391	267,240

In port at

San Francisco, disengaged.....	15,741	8,384
" engaged for wheat.....	43,085	33,165
San Diego.....	2,581	—
San Pedro.....	2,009	14,997
Columbia River.....	11,151	—
Puget Sound.....	—	—

Totals..... 74,577 56,468

Under increasing supplies and a falling off in the demand, poultry is a shade lower.

Beans are steady. The demand is in a small way, but then the supply is light.

Honey is unchanged. Choice desirable consignments are readily placed. The crop is larger than estimated.

In hops there is nothing new to report. Both buyers and growers appear disposed to await crop developments in the United States and also abroad.

Wool has a stronger tone. Buyers are doing all they can to keep prices down. At the East, manufacturers appear to be buying in a hand to mouth way.

The Southern Pacific railroad reports the following shipments, in pounds, in last month: Beans, 1,890,590; brandy, 447,850; mustard, 31,480; nuts, 22,330; potatoes, 6,784,790; vegetables, 2,160,440; wine, 6,625,580; Honey; 2680; hops, 75,370; wool, grease, 2,010,380. pulled, 109,320, scoured, 233,270.

## DOMESTIC PRODUCE.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations. WEDNESDAY, May 20, 1891.

Price, Berlin Company.

The card of the above firm will be found on the last page of this paper, and we think it would well pay all Farmers, Fruit Growers and other Producers to cut it out and paste it up in some prominent place, so your neighbors can see what kind of a house the above firm is.

We have known the senior member of this firm, Mr. Price, for the last sixteen years personally, hence we can cheerfully recommend the above house to all of our subscribers and their friends, who may have Grain, Dried Fruit or Produce of any kind to dispose of.

Their business has grown to such an extent that they have lately moved to the large brick stores, 519 and 521 Front Street, between Washington and Jackson, where they are much better prepared to do a general produce business than ever before.

Mr. F. A. Berlin, the President of this Company, is a lawyer and business man well known in the business community of this Coast. In addition to his large and lucrative law practice, he has a large interest in real estate, both in this city and the country, is President of the Lundy Furniture Company of this city, has large interests in the Blue Lake Water Company, is a stockholder in the American Bank and Trust Company, and is interested in several other business enterprises. Naturally a man who has so many interests to look after and positions of Trust to fill must be one possessed of great and varied business ability and habits of industry.

Their Mr. Robertson, who devotes his entire time to the Grain and Bran business of the firm, is a gentleman who is well known on the floor of the Produce Exchange and who has had years of solid and practical experience in handling the above articles.

Their large capital enables them to be ready at all times to make liberal advances on consignments of any size.

We bespeak a large and prosperous business for this firm the coming season, and know if you entrust your produce to them to sell, you will never regret it.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription, paid in advance, 5 mos, \$1; 10 mos., \$2; 15 mos., \$3. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

NEWSPAPER AGENTS WANTED.

Extra inducements will be offered for a few active canvassers who will give their whole attention (for a while at least) to soliciting subscriptions and advertisements for this journal and other first-class popular newspapers. Apply soon, or address this office, giving address, age, experience and reference. Special inducements to old agents.

DEWEY & Co., Publishers,

Dewey & Co.'s Scientific Press Patent Agency.

OUR U. S. AND FOREIGN PATENT AGENCY presents many and important advantages as a Home Agency over all others, by reason of long establishment, great experience, thorough system, intimate acquaintance with the subjects of inventions in our own community, and our most extensive law and reference library, containing official American and foreign reports, files of scientific and mechanical publications, etc. All worthy inventions patented through our Agency will have the benefit of an illustration or a description in the MINING AND SCIENTIFIC PRESS. We transact every branch of Patent business, and obtain Patents in all countries which grant protection to inventors. The large majority of U. S. and Foreign Patents issued to inventors on the Pacific Coast have been obtained through our Agency. We can give the best and most reliable advice as to the patentability of new inventions. Our prices are as low as any first-class agencies in the Eastern States, while our advantages for Pacific Coast inventors are far superior. Advice and Circulars free.

20,000 will be sold in '91

THESE FIGURES TELL THE STORY OF THE EVER-GROWING, EVER-LASTING Steel AERMOTOR. Where one goes others follow, and "WE TAKE THE COUNTRY". This unprecedented success is due to the fact that before commencing the manufacture, exhaustive scientific investigation and experiments were made by a skilled mechanical engineer, in which over 5,000 dynamometric tests were made on 61 different forms of wheels, propelled by artificial and therefore uniform wind, by which were settled definitely many questions relating to the proper speed of wheel, the best form, angle, curvature and amount of sail surface, the resistance of air to rotation, obstructions in the wheel, such as heavy wooden arms, obstructions before the wheel, as in the vanesless mill, and numerous other more abstract, though not less important questions. These investigations proved that the power of the best wind wheels could be doubled, and the AERMOTOR daily demonstrates it has been done. To the liberal policy of the Aermotor Company, that guarantees its goods satisfactory or pays freight both ways, and 54. To the enormous output of the factory which has made possible a reduction of prices so that it furnishes the best article at less than the poorest is sold for. If you want a firm Fixed Tower made of Strong, Stiff Steel, and a Wheel that will cost you less than wood, and last 10 times as long—IF YOU WANT THE TOWER YOU DON'T HAVE TO CLIMB (The Tilting Tower) and THE WHEEL THAT RUNS when all others STAND STILL, or if you want a wheel that will churn, grind, cut feed, pump water, turn grindstone & saw wood, i.e., A GEARED AERMOTOR THAT WILL DO THE WORK OF FOUR HORSES AT THE COST OF ONE (\$100) write for copiously illustrated printed matter, showing every conceivable phase of Windmill construction and work, to the AERMOTOR CO., Rockwell & Fillmore Sts., Chicago, Ill., U. S. A., or Branch, 12 Main St., San Francisco, Cal., U. S. A.

fence colored RED by boiling in a chemical solution that preserves the wood. Address JUDSON MANUFACTURING COMPANY, 14 and 16 Fremont Street, San Francisco.

CHEAPER and BETTER than Ever. Their 2-ft. high 3-cable fence has taken the trade. Farmers put barbed wire above it and have the CHEAPEST GOOD Fence that can be made in ANY WAY. Rabbits cannot get through. Hogs cannot break it and Horses or Cattle cannot get over it. All our

# HILL'S IMPROVED LIGHTNING BALER.

Capacity, 32 Tons per Day.

AWARDED FIRST PREMIUM BY THE CALIFORNIA STATE AGRICULTURAL SOCIETY FOR 1890.

**MULES  
VERSUS  
MEN.**

**CALIFORNIA'S  
TRIUMPH.**

No tramping. No forking from the stack. No cutting of stacks necessary. You can sit at a hundred-foot stack and bale it without a move. It makes the best bale in the market. You can put ten tons in a car. The forking from the stack is all done by the horses. The Baler can turn out more hay in less time and better style than any other Press. Here is one of the recent endorsements of this wonderful machine:

J. F. HILL—Dear Sir: We baled on James Ryan's Ranch on the Cosumnes, one mile from the Slough House, 277 bales of alfalfa h. y., that weighed 32 tons and 35 pounds, with one of your Lightning hay presses on the 21st day of July, 1890. Yours respectfully,

CONNOR & ANDERSON.

Grain of All Kinds, Wool, Hay, Beans, Potatoes, Comb and Extracted Honey,  
Green and Dried Fruit, Butter, Cheese, Eggs, Live and Dressed Poultry,  
Broom Corn, Live Stock, Hides, Pelts, Tallow, Etc., Etc.

As our business has increased so rapidly, we found that our old location was entirely too small for our growing trade, so we have leased the large brick stores, 519 and 521 Front Street, between Washington and Jackson, and are now much better prepared to do a general produce commission business than ever before.

Our Mr. B. C. Robertson, formerly Mr. H. Dutard's grain salesman, will devote his entire time, energy and ability to the advancement of the interests of our grain, hay, bean and potato shippers. In this department of our business we know we can safely guarantee satisfaction. Parties having grain, beans or dried fruit to sell, will find it to their advantage to send us samples of the same before disposing of it elsewhere.

**CAPITAL STOCK, 250,000.00.**

**Consignments and Correspondence Solicited.**

72362 Cal State Library 21.30  
ing the fact that the Poultry, Egg and Butter business on this Coast is only in its infancy, and with the fact that we will increase each year, we have secured the services of Mr. E. Claresy, who has had over 20 years' practical experience in selling the above article in the San Francisco market. Hence, in sending us your shipments of Poultry, Eggs and Butter, you can feel assured that you will receive the highest possible market price for your shipments, and that your empties will be returned promptly. We would urgently advise and encourage the raising of more poultry all over the entire Pacific Coast, as nothing will pay better.

Our Mr. W. C. Price will pay special attention to our growing Dried Fruit business, and with his 16 years' practical experience in the general produce business, you can rest assured that your shipments of Dried Fruit and other produce will sell for the highest possible market prices.

We stand ready at all times to make liberal advances on all consignments, render account sales daily, and send the money with each account sales.

**PROMPTNESS, ABOVE ALL OTHER MATTERS, IS OUR MOTTO.**

We would be pleased to have you give us a trial shipment at our new store, and when you come to the city don't fail to call and see us. Shipping tags and stencils furnished on application. Consign all your shipments of produce to PRICE, BERLIN COMPANY, San Francisco.

THOMSON'S IMPROVED NAVEL ORANGE.

## An Improved Navel.

We give on this page an exterior and sectional view of a Navel orange which has recently occasioned much discussion in Southern California. It was brought out by A. C. Thomson of Duarte, Los Angeles County, as the result of a method of propagation of which he does not desire to give a full account, but which, so far as we can learn, proceeds upon the claim of influence of stock upon scion. Such claim is still a matter of controversy among pomologists; but with the orange-growers of California, there is perhaps more reason for belief in the formative influence of the stock upon the fruit of the scion than in other lines of fruit. The influence of the China lemon and of all lemon stock upon the fruit of orange varieties budded into it is perhaps the

most significant evidence of change. The influence of different kinds of orange stock is not so well established, but it has been firmly maintained by some, though others just as firmly hold that no such change occurs. Mr. Thomson seems to rest his case largely at least upon such influence, for in an account in the *Azusa Pomotrophic*, which we understand he does not repudiate, the following genealogy is given of the fruit which our engravings show:

Mr. Thomson does not claim to have originated a new variety. He does, however, claim to have perfected the Navel orange beyond anything that has been seen, and in this way: He put a Washington Navel into a St. Michael stock. After this grew and matured, a bud was taken from it and put into a Mediterranean Sweet stock. Following up the plan, a bud was taken from the product of this and inserted into a seedling root and the fruit exhibited is the result. It is not a hybrid in the ordinary

sense. Thompson claims that the St. Michael and Mediterranean parents modified whatever grosser propensities the original Navel possessed and brought forth the perfect fruit.

In a letter to us, Mr. Thomson says he regrets that he "even partially gave away the process by which this wonderful orange came about;" so we infer that he holds some secret in the process not disclosed above. What it is is of interest, but it does not out much of a figure in the present estimation of the fruit. Of its character, including some points of which the photo-engraving clearly speaks for itself, the judgment of the *Pomotrophic* is as follows: "In an experience of several years at citrus fairs, the writer has never seen anything to approach the external perfection of this new orange. For thinness of skin, compactness of fiber, smoothness, color, size, shape and all the outside qualities that mark the perfect orange, it exceeds all specimens examined so far, that there is no comparison whatever. There is no difference of opinion on the beauty and perfection of this new orange."

The questions involved in this fruit are of interest, and will probably be fully discussed in the future. Mr. Thomson says he has no trees

for sale at present, in fact he has orders which will cover all he can propagate this year. The future must determine whether Mr. Thomson has secured a variety which is acknowledged to have distinctive excellence by his method of propagation, or whether it has been produced by other influences, also whether the characters which are now admired will be permanent in all favorable situations. Time will prove these things.

A UNIQUE EXHIBIT.—Mrs. Wearman had a striking exhibit at the Marysville Fair. It was a plane of oranges, ten feet wide, with citrus buttresses at either end, and "Wearman" in crimson apples across its face, slanted from the floor back and upward to a shelf, waist high, where a gigantic swan seemed resting on a lake of lemons. The breast of the great bird was of oranges and lemons imbedded in cotton; its wings and back of figs, black and white in alternate bands, and shaded with dried fruit; and the snow-white neck and head of rice and sugar. The whole figure was set off by a green hacking of cedar sprigs, in a frame of arborescent oranges.

AN ORANGE EXHIBIT AT MARYSVILLE.

## CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

## New Englanders on the Pacific Coast.

EDITORS PRESS:—I see my friend Dr. Matteson wishes me to discuss the causes of those "abandoned New England farms." I beg to be excused. The paper which I commended in the short communication which drew the doctor's attention was, I think, plain enough, in giving what I believe true causes of many of those farms being left vacant, to satisfy any mind open to conviction, and a repetition would be largely thrashing over old straw, to which operation the name of the writer would add no importance.

I do not wish a controversy with my friend Dr. Matteson, but in order to illustrate the causes which I alluded to, as leading New England energy to seek better fields for the application of its labor than to continue on the rocky hillsides of its birthplaces, I will mention a few names.

Right here at Salem we have one of the soundest hanks on the Pacific Coast. The joint owners are of New England birth, sons of farmers. They are both rich men. The richest one, reputed to be worth more than twenty millions, started his business life by renting 17 acres of the paternal farm, took a younger brother into partnership with him, and the two youths nearly killed themselves gathering the stone off the lot in preparation for plowing. After one season's trial, this Yankee boy set out for the Pacific Coast, and we next hear of him at Portland as a merchant's clerk. By close attention to business and natural evolution, so to say, he grew to a merchant and a banker, and for many years has been owner of more farms of richer land than he ever could have attained by the profits of New England farming; and these farms are so conducted, under his direction, and chiefly because "he loves the land," that they furnish good homes to men who have heretofore not been able to profitably direct their own labors upon their own lands, as there is ample opportunity under our homestead law to do.

The movement of New England youth toward the wide and wealthy West has been going on with accelerated momentum since "the days of forty-nine," without regard to tariff laws; and if Dr. Matteson will make candid examination into the personal history of many men of wealth and influence in Oregon, he will find they left their New England homes with hope, since realized, that their share of the general development of the almost boundless resources of the Pacific Slope would be greater than they could reasonably hope to attain by cultivating the sterile New England hillsides. To write of men like W. S. Ladd, Asahel Bush, R. P. Beale, E. M. Waite and others I might mention as "moneyed aristocrats," savors of envy more than of reason. If Dr. M. and my poor self have failed to be members of the aristocracy camp, the cause is probably more in ourselves than in tariff laws or "McKinley prices." It was, to my mind, a blemish on Mr. Matteson's paper on "Strawberries" for him to throw into it his allusion to "McKinley prices." It is a kind of clap-trap which I think is often indulged in to the detriment of sober reason, and my allusion to it in connection with Dr. M.'s article was intended simply to indicate that view. Wishing it understood that I take the affirmative on all the points in regard to which my friend wants to be enlightened, and that the McKinley law is in direct line with the purposes of the Grange, and is operating to the advantage of the farmer's interest in more ways than any similar law has ever before done, I close this paper by asking Dr. Matteson what he means by McKinley prices?

I notice free-trade advocates always seem to find their illustrations away from home. They of New England are mourning over the deplorable condition of the Western farmer, snowed under mortgages. They of the West mourn over the abandonment of New England farms. I have never seen any allusion to the extensive abandonment of worn-out tobacco lands which took place between 1846 and 1860, under the free-trade tariff. No allusions are made to condition of old English farmers under free trade.

Salem, Oregon.

O. O.

## Santa Barbara County Notes.

Bean-planting is being vigorously prosecuted. Many beans are already up. The present foggy weather occasions some fear lest a rain may come which would be injurious to beans in the ground and would also make many weeds to kill with cultivator and hoe. The hay crop is being cut. It will be of good quality and generally abundant in quantity. Foxtail is injuring the alfalfa fields, rendering the fruit crops of little value. Some fields have been plowed up, and beans and corn planted instead on account of the foxtail.

Fruit promises to be plentiful except that apricots and peaches are a failure in some instances. Apricots are being contracted for at one cent per pound, contracts to run three years. Grapes look as if they will do well. Sulphuring has to be resorted to here to get grapes, as the closeness to the ocean makes the air too damp and foggy for the vines. Many walnut trees have been set out this winter and spring. Mr. Higgins has set out 1500 lemon trees on

his place in Carpinteria. He irrigates them with artesian water, having bored several wells on his place.

Prospecting for oil still goes on. Preparations for boring on Mr. Rhodes' place, north of Carpinteria, are being made. The oil runs out of several springs on that place, and indications are very good for the success of the enterprise. The Occidental well continues to flow about 25 gallons per day, which is conveyed to Smith's wharf in pipes. Matters are quiet at the Summerland gas wells, but the town continues to grow.

## Hogs and Foxtail.

To those who are raising hogs and have any pasture for them containing the grass called foxtail, I will warn not to let the hogs run in the grass after the foxtail heads out, as it will get in the hogs' eyes, and cause blindness, if not soon removed. Myself and neighbors having had trouble of this kind leads me to give this warning in the hopes of benefiting others.

A fishing company is engaged in catching crawfish in the ocean off Carpinteria, which they ship to San Francisco by steamer.

Carpinteria May 11 '91. L. B. CADWELL.

## THE PUBLIC LANDS.

## The New Land Laws.

General Land Agent Sheehan has received an important communication from the Department of the Interior in the shape of an interpretation of the recently enacted Timber Culture Act.

Attention is first called to the section of the new law prohibiting the further entry of public lands for timber culture unless the right to make such entry had accrued or was accruing at the date of this Act, March 3, 1891.

In dealing with existing entries the right is extended to persons having the following qualifications to commute their entries in certain cases at the rate of \$1.25 an acre: The person shall have in good faith complied with the provisions of the Timber Culture laws for four years; he shall be an actual bona fide resident of the State or Territory in which said land is located.

Final proof for the commutation of timber culture entries shall be made as other final timber-culture proof is made, and shall satisfactorily exhibit the facts necessary to make purchase. Returns will be made as in commuted homestead entries under existing practice, but with proper annotations to indicate the transaction as a commutation of timber culture entry under this Act.

The new Act amends the Desert Land law of March 3, 1877, in the following particulars: At the time of filing declaration a map of the land exhibiting a plan showing the mode of contemplated irrigation, which shall be sufficient to thoroughly irrigate and reclaim the land and prepare it to raise ordinary agricultural crops, and the source of the water to be used must also be filed.

Entrymen shall expend, for purposes stated, at least \$3 an acre—\$1 an acre each year for three years—and shall file proof thereof each year, the proof to consist of the affidavit of two or more witnesses, showing that the full sum has been expended and the manner in which expended, and at the expiration of the third year a map or plan showing the character and extent of improvements. Failure to file proof during any year shall cause the land to revert to the United States, the money to be forfeited and the entry canceled.

The limit for making proof is four years from date of filing declaration. The proof must show the citizenship of the party offering it, and the cultivation of one-eighth of the land in addition to the reclamation. Final entry may be made and patent received at any time prior to expiration of four years, when all required proofs, as stated, have been made.

Entries made under the old law may be perfected under either the old or new law, at the option of the claimant.

Assignments are recognized, but the amount of land that may be thus held, prior to issue of patent, is restricted to 320 acres. Assignees must prove their assignments by filing in the local Land Office an affidavit and certified copy of the instrument under which they claim, and make affidavit of the amount of land held. The provisions of the original Act and the amendments are extended to Colorado.

The right to make desert-land entry is restricted to resident citizens of the State or Territory in which the land is located.

The new Act extends its provisions to settlers under other settlement laws, in addition to the pre-emption and homestead laws, and admits of transfers for right of way for canals or ditches for irrigation or drainage, church, cemetery or school purposes, or for the right of way of railroads.

The new Act repeals all laws allowing pre-emption of public lands by individuals, but provides for perfecting claims previously initiated, according to the laws under which they were initiated.

A person already the proprietor of more than 160 acres of land in any State or Territory cannot acquire a right under the homestead law.

Those proposing to commute their homestead entries to cash must make proof of settlement and of residence and cultivation of the land for 14 months from the date of entry.

## THE FIELD.

## California Products and the Census.

The Census Office has been quite freely criticized for some of its statements concerning California. Gen. R. P. Porter, Superintendent of the Census has addressed the following letter to the *Chronicle* stating the criticisms and the answers he makes to them. We republish the letter as follows:

In the *Chronicle* of April 9th appeared an article criticizing the work of the Census Office in California, especially in connection with the collection of statistics on viticulture and truck farming, the preliminary reports on which are contained in Census Bulletins 38 and 41.

As the statements made in the article referred to might mislead persons not conversant with the methods adopted by the Census Office in the collection of these statistics or the scope of the inquiries, I desire to correct some of the errors into which the writer has fallen.

In the first place, the bulletin on truck farming contains, as stated in it, no statistics of vegetables grown as farm crops or in market gardens, but is strictly confined to the products of what is known as truck farming, which is thus defined in the bulletin itself.

Truck farming, although it also consists in the production of green vegetables for market, is distinguished from market gardening by the fact that, while the market gardener lives near a market and delivers his products with his own teams, usually producing a general variety of vegetables, the truck farmer lives remote from market, is dependent upon transportation companies and commission men for the delivery and sale of his products, and usually devotes himself to such specialties as are best suited to his soil and climate.

When this is borne in mind it will be seen that great injustice is done to the Census Office by attacking the figures of the bulletin giving acreage, product, etc., of truck farms on the assumption that they give the total acreage and product of each of the vegetables named. For example, the writer of the article in question quotes the figures giving the acreage of potatoes and characterizes them as far below the truth. He, however, fails to quote the note at the foot of the page, which fully explains why the table does not show the total acreage in potatoes, which figures will be given in a later bulletin or in the final report on agriculture. The note says:

The fact must not be lost sight of that in making up this report no account has been taken of sweet or Irish potatoes or onions grown as great staple farm crops, or of any vegetables growing in market gardens.

If the farmers of California gave the proper figures to the census enumerators last June, they may rest assured that every acre of potato growth in the State in the census year will be accounted for in the final reports.

The article professes to give the table of the bulletin showing acreage of leading vegetables on the Pacific Coast, but leaves out entirely the column headed miscellaneous, thus making it appear that the total truck farming acreage shown by the bulletin is 5903, whereas it is really, as plainly printed in the table, 14,357, there being 8454 acres entered under the head of miscellaneous. This was made necessary for the reason that the growers failed to respond on the special schedules sent to them to the questions as to what varieties of vegetables these truck farms produced. The fact that considerably more than half the truck farm acreage had to be entered as miscellaneous accounts for the apparently small showing of each particular variety. If the farmers of California had only answered the schedule questions, the acreage now given as miscellaneous would without doubt have shown the extra acreage of asparagus, celery, beets, etc., claimed. At the same time it should be noted that the aggregate truck farming acreage of the Pacific Coast is correctly given, although it was impossible to distribute it exactly among the different varieties of vegetables.

It is important also to bear in mind that the crop figures of all farm crops of the United States are those of the crops grown in the year 1889, and not those of 1890 or 1891. The 11th census does not deal with the largely increased acreage of 1890 and 1891, as reported on many farm crops.

The statement is made that 3000 carloads of vegetables went out of California last year (1890), but as these consisted largely of potatoes grown as "staple farm crops" in Los Angeles, Orange and San Bernardino counties, and of dried Lima beans from Ventura and other coast counties, they were not considered in this bulletin, but will be duly accounted for in the regular agricultural statistics when California, as well as every other State, will get due credit for all products of 1889.

The criticisms made on the viticulture bulletin are equally unjustified by the facts. In speaking of the vineyard acreage, as shown by the bulletin, the following statement is made in the article:

California, for instance, is credited with a total area of 155,000 acres of vineyards in bearing. These are the same figures that have done duty for some seven or eight years in every article that has been written about our viticultural industry.

I need simply say, in reply to this, that according to the record of the California State Board of Viticulture—which must certainly be considered competent authority—the number

of acres of vineyards in the State in 1888, not seven or eight years ago, is 144,281. The Census Office figures for 1889, the uncensused year, give 155,277 acres, or an increase of 10,996 acres in one year over the official return of the State Board of Viticulture.

Special reference is made in the article to the vineyard acreage of Fresno county, as given in the bulletin, 19,750 acres, and it is stated that, according to a newspaper published at Fresno, there are over 50,000 acres of vineyards in this county. And yet, according to the State Viticultural Commission, this county had, in 1888, but one year before, only 15,000 acres in vines. It should be remembered that the Census Office figures are for the year 1889, and do not pretend to show the present acreage in vineyards. Fresno county now has a greatly increased acreage, stimulated by the profits of her raisin industry, and this fact is mentioned on page 10 of the bulletin as follows:

Fresno county has, at this time (July, 1890) some 25,000 acres of bearing vines and 15,000 acres of new plantings, the larger portion of which is grown for raisins.

The bulletin gives the average yield of grapes per acre in California, for the year 1889, as 1.77 tons. In characterizing these figures as far below the actual yield, the writer of the article has again lost sight of the fact that these statistics were collected for 1889, and not for any other year. This low average is explained in a foot note (c), on page 4, which reads as follows:

The average yield of grapes per acre for California was, in the year 1889 (the Census crop), considerably reduced by the heavy rains in October, coming a month sooner than usual, and destroying a large percentage of the crop. The usual yield of grapes per acre in California is from 1½ to 10 tons, the latter figure being for raisin grapes, of which two and sometimes three crops are harvested from the same vines in one season.

In reference to the statements concerning the values of grapes and wines, as given in the bulletin, it is only necessary to state that the figures were furnished by the growers themselves, and do not, as the writer supposes, refer to retail prices, but to the prices received by the producer at home. This is distinctly stated in the bulletin, note a, page 4, as follows:

The price of wine, as given for the various divisions and States in the tables of this bulletin, is that of the producer, being the home or farm value, and not the export or commercial price, after it may have passed through several hands.

The comparison made in the article between the prices given for California and those of Georgia is very misleading. While Georgia is making rapid progress in the production of grapes, she makes little, if any claim, as a wine-producing State. The prices of her wines, as given by those who produce them, the same as in California, average \$1.15 per gallon. She only produced in the Census year a little over 100,000 gallons, as compared with California's nearly 15,000,000 gallons. It is well known that any product grown in a small way and retailed out, even by the producer, always brings a larger price than when grown in very large quantities. The grapes raised in Georgia are largely sold for table purposes, reaching the Northern markets very early in the season, and, therefore, bringing the larger price as compared with the grapes of California, by far the greater proportion of which are made into wine.

This answers all the statements based upon actual figures from the bulletin, which is the only feature of the article referred to which the Census Office can properly deal with.

The facts and figures used in the preparation of both these bulletins were obtained primarily from the producers themselves, supplemented, in case of failure to respond to the census inquiries, by special agents who were carefully selected for their expert knowledge concerning these industries, and it is believed by the Census Office that the results published are as accurate as it is possible to make them.

ROBERT P. PORTER,  
Superintendent of Census.

Washington May 2 1891.

## TACK AND HARM.

## The Trotting Horse as an Agricultural Factor.

In some localities (and may they ever grow less) there is an erroneous idea that the "American Trotter" is a horse wholly unfitted and unsuited for the average farmer to breed or use, and this class of breeders, while they are continually crying down the "trotter," are striving to breed something possessing his good qualities which shall be known by some other name; hence they are ever parading some foreign importation and attempting to show his superiority over the American trotting horse for the average farmer to use.

The foreign breeds don't suit the average farmer, and the American trotter he thinks beyond him and unsuited for him to breed profitably or for his use—a specialty with which he has no business. To show that this is an erroneous and mistaken idea is one object of this article. Americans are credited with a great amount of patriotism and love of everything American, hence their great appreciation and love of the American trotter, the youngest of all the roadster breeds and de-

oidedly the best and most profitable for the average farmer to raise. The growth and development of this young and superior breed is one of the wonders of the century, and the strides forward made by this young giant are nothing short of the marvelous; and yet the breed is in its infancy only, and the farmer, generally wide-awake on most subjects, who allows this breed to grow and develop beyond him without availing himself of the opportunity which he now has, soon will find himself of the Rip Van Winkle style of breeder, and when he wakes up he will find that the procession has passed by. If every agricultural factor were treated in the same indifferent, careless manner, and with the same lack of knowledge and information by the average farmer that he displays in the breeding of horses, it would be a wonder indeed to find one possessed of earning capacity sufficient to keep himself in shoes alone. It is an admitted fact beyond oavil that scrub stock is unprofitable and a waste of time in raising, and no farmer is rich enough to afford to keep poor and inferior stock of any kind. The best, the very best, is the only profitable kind. No farmer denies this in the breeding of cattle, sheep and hogs. Then why for a moment continue to breed scrub horses? It won't pay, it don't pay, and every farmer knows it, and yet for the few dollars saved in the amount of service fee a great many who are awake and alive to the needs and demands of the time in farming generally, pass this greatest of all agricultural factors by with neglect, apparently satisfied with the lowest-priced sire within reach, the horse and his blood lines being a secondary matter. It is claimed, and not disputed, that no industry to-day in America has the amount of capital invested in it that the breeding of the American trotter has, and yet a large part of the capital so invested is by wealthy men, who hire and employ every part and detail of it. They are informed and well read on every theoretical part connected with the enterprise; everything that money can buy is added to the venture. That such enterprises and ventures are conducted on anything but an economical plan goes almost without saying, and yet, with the exception of rare instances, they have proven unsuccessful and good paying investments for their owners. Most of their establishments are engaged in breeding the trotter solely for the greatest flight of speed possible to be attained, bending all their thoughts and energies in that one direction, and toward the accomplishment of that end or object only, and to them the same will have been reached when that result alone can be accomplished.

I can see no place where a breeder has any per cent over the average farmer of good sound horse sense in breeding the American roadster, nor where he has any more than an even chance with him. The farmer has time and opportunity for being as well posted in blood lines, and is possessed of as good sound sense as the average breeder for applying them, with the additional advantage of being on the ground and having the practical knowledge which every day oversight, care and inspection gives him over the theorist who trusts almost entirely to others. That the average farmer can compete successfully in breeding the trotter as a racing machine only, and in educating him for the track, is very doubtful indeed, and it would be better judgment not to try it; but in breeding the trotter for practical use, he is situated so as to compete successfully with all competitors, and to no breed can be turned with the same assurance of success attending his efforts as to the trotting bred horse. In addition to being the superior of all the breeds asking him for patronage to-day, there is the factor of speed, which is not possessed by any others, and which is by no means to be overlooked, because not made a specialty. To find out which are the promising ones, with very little outlay and expense, and without sending the youngsters away from home, can be easily done. There are very few farms indeed, upon which a miniature track cannot be constructed at a nominal cost, and during the least busy season the colts educated and developed sufficiently to give an idea of what their quality is. Experienced trainers—not theorists, but men with years of every-day life and experience with colts—have written books giving general rules for breaking and handling the colts. These publications are within the reach of every farmer, and possessed of this knowledge, and with ordinary common sense and a good command over yourself, the average farmer can succeed in educating the colt enough to convince himself of the fact whether he is also breeding some speed with the other qualities aimed at. There is no danger of flooding the market with good ones. The trotting-bred horse of good size and style, smooth in conformation, sound and gentle, will always command a good market, and bring better prices than any other breed, because he is more generally useful, and the demand will always be for the best. For general farm use, for road use, and for the market, no breed can compare with the trotter.

It is a mistaken idea to suppose that beauty of form and elegance of style and finish are incompatible with the trotter. Some of the very fastest performers are horses that even the average farmer would call handsome, extremely so, showing conclusively that there is no inconsistency in a horse being possessed of beauty of form, fine size and style, and also of extreme trotting speed.

The trotting horse is capable of possessing something more than mere speed, of being

something more than a fast trotter, booted and weighted, and so balanced that he can, perhaps, on a smooth track show a wonderful burst of speed. He possesses all the qualities required by the farmer breeder, a good solid color, 16 hands high—not less than 15.3 hands—good mane and tail, a bold and trappy gait, free from boots and weights, round, smooth and symmetrical form, a type of horse that will always command a large price.

I know of no better, nor can I think or believe there is any better factor in agriculture than the breeding of the trotting-bred horse of good size, style, conformation and action. What factor of equal value will compare in earning capacity with that of a given number of brood mares, richly bred in trotting lines all of uniform color, style, conformation and action, descended from carefully selected ancestors for generations enough to have fixed the type. There is nothing improbable nor impossible in fixing the type, so that the produce will be uniform in horses more than in the breeding of other animals. While the farmer carefully selects and crosses time and again in the breeding of cattle, hogs and other stock, yet in the breeding of horses, he generally expects to reach the acme in the first cross, and in the event of failure to realize all he expected, he very often is so disappointed that he neglects to follow the object he sought to attain any further. If "like begets like, or the likeness of some ancestor," and we want the perfect roadster, then we must be sure and properly use the law of selection, use a little of the same judgment that you use in other breeding ventures; see that the mare possesses form, size, style and good action.

Then select a stallion possessing all the qualities that you desire to breed for, as it is within your power to do. See that his ancestors were possessed of all the qualities that you desire to obtain. The writer has been so situated for the past seven years that he has yearly been brought in contact with from 75 to 100 farmers who were looking for stallions for breeding purposes, and in no one instance do I now recall that one ever asked regarding the conformation, size, etc., of the ancestors of the stallion examined. Remember that there is no distinct breed of horses in existence to-day formed by accidental mixture, but only by continued cultivation; that while men frequently allow themselves to indorse mistakes, nature never does.

The standard registered lines are decidedly the more desirable to use and follow; in fact, the only ones that can successfully and profitably be used. There is no doubt or question regarding the breeding of a standard registered animal, his ancestry can be traced readily and surely. It shows that he springs from ancestry possessing breeding sufficient to transmit to him standard rank, and that they were possessed of certain qualities requisite, which enabled them to be registered.

The breeding and raising of the grandest breed of roadsters ever known, combining uniformity of size, style and finish, is within the reach of the average farmer, and promising a momentary return far in excess of that of any other known agricultural factor. The handwriting on the wall is plain.—"Auburn" in *Wallace's Monthly*.

## METEOROLOGICAL.

### Additional Information from the Signal Service.

EDITORS PRESS:—It has been ascertained by careful study and investigation that the storms which enter the Pacific Coast near Vancouver's Island pass directly eastward into the interior of the country, and thence to the Atlantic Ocean. The weather on the Pacific Coast is not only dependent on these storms during their passage over that region, but it is also influenced by them during their movement eastward to and beyond the Rocky Mountains. It is therefore necessary that this office should be in possession of information concerning the weather conditions which prevail over the entire country west of the Mississippi Valley. Efforts which have been made for some time to secure the necessary telegraphic reports have finally been partially successful, and this office is now in daily receipt of the general weather conditions which prevail west of the 90th meridian. It is desired that the public generally, in California, and especially those engaged in the great fruit industry of the State, shall benefit by the additional information now collected at this office. It may be made useful as follows: (1) To shippers of perishable goods between San Francisco and eastern cities. (2) To tourists and others who may be desirous of obtaining information as to probable weather changes between San Francisco and the Mississippi Valley. (3) To those interested in the occurrence of early rains in Southern California. More reports however, are needed for this purpose which it is hoped may be obtained before the appearance of these rains.

Application may be made to this office for the desired information in any way most convenient to those making the inquiry. The office is connected by telephone and telegraph with all parts of California. Please give the information contained in this communication publicity.

JNO. P. FINLEY.

2nd. Lieut. 19th Inf'ty A. S. O. In charge, San Francisco, May 15.

## POULTRY YARD.

### Poultry Literature.

EDITORS PRESS:—In the matter of poultry literature as in that of cows, horses, etc., or in that of any other kind of stock which one treats of separately and alone, there would seem to be very little margin for variety or for matters in any great or diversified quantity, and of a nature to interest and at the same time to instruct the world be poultry breeder. In fact to do this, one has to almost confine himself (or herself as the case may be) to the relation of certain facts, or rather the laying down of certain rules, precautions and modes of procedure in cases that sooner or later present themselves to any one engaged in the raising of poultry and the keeping of hens for profit in eggs, or meat, or both. As in commercial practice, or in the practice of any of the professions, one needs to continually refresh his memory to be enabled to keep up in the knowledge necessary to conduct his business successfully and make it pleasant as well as profitable. In the

A Handsome Poultry House.

keeping of fowls there is constant necessity for this refreshing of the memory, the renewing or recalling of the knowledge once had, but lost because not called into practice, as the keeping of poultry seems to be subject to more and more varied conditions than the keeping of any other one kind of stock. It pays one abundantly to take a reliable poultry journal, or a thorough going agricultural paper which treats of matters of interest and value to one in his business in a clear and practical way, and one such matter of interest may alone be worth to a person many times the subscription price of his paper, as it happens to convey first the information he needs to extricate him from a dilemma in which he has found himself, and enables him to at once put in practice the necessary means to overcome his difficulty and save himself from, it may be, severe loss.

As so much has been said of the keeping of poultry from a purely utilitarian standpoint, it would perhaps not be amiss to consider it in the light of an ornamentation and a recreation as well as for profit. I have been led to this consideration of the matter by having seen that they may be combined to very good purpose. Passing not long since by a fine, well appointed and expensive residence with beautiful grounds and an extensive and well kept lawn, my attention was called to the presence of a score or so of fowls of brilliant plumage dotting the lawn here and there, and adding by their presence a still further and finished charm to the beauty of the whole. Indeed it seemed to me that had the birds been taken away, it would have been shorn of half its charming effect. The fowls were of the kind known as the Silver Spangled Poland than which no variety is more beautiful both in its plumage and general presence, and there are many beautiful varieties as the Gold or Silver Spangled Hamburg, White Crested Black Poland, Gold Laced Poland, Gold Spangled Wyandotte—a large fine looking owl of rich plumage and majestic carriage.

Of these varieties the Hamburg is the smallest, but bright and animated in its ways and of brilliant plumage. The ground color of the plumage of the Silver Spangled Poland should be of silver white with well-defined, horseshoe-shaped black spangles. In the cock the hackle feathers are white, edged and tipped with black. In the hen each hackle feather has a spangle on the end, tail feathers clear white with spangles on the end. The spangles on the wing coverts are large and regular in both sexes so as to form two well-defined bars across each wing. The proper spangle on the breast is all important. The crest should be full and regular; feathers black at the base and tip with white between. A few white feathers frequently appear after the second molt in the very best hens. Ear lobes small and white; no wattles, they being usually replaced by a black or spangled beard. The weight of the cock is from six to seven pounds; that of the hen from four to five pounds. Besides the moon-shaped spangles many of the birds are shown with laced feathers, that is, with an edging of black on the outline of the feathers, but thicker on the end. This marking when perfect is very beautiful, and they cer-

tainly rank among the very choicest and most beautiful of fowls whether considered for their beauty or their variety. The newly hatched chicks of this variety are pretty, creamy-white little fellows interspersed with slaty dim on the back, head and neck marked with longitudinal stripes down the back, black eyes, light lead colored legs, and a swelling of the down on the crown of the head indicative of the future top-knot which is exactly the color of a powdered wig. At a very early age they acquire their peculiar distinctive features, and are then the most elegant little miniature fowls it is possible to imagine. The distinction of sex is not very manifest till they are nearly full grown, and as I have said, although there are many beautiful varieties desirable as ornaments to a lawn, there are none in my view superior to the Silver Spangled Poland, and the dotting of the velvety surface of the well-kept lawn was pleasing and beautiful in the extreme, pleasing and beautiful to the eye, and satisfying one's sense of what constitutes a proper combination of the beautiful with the useful, useful because forming a pleasant source of recreation, and because also of the undoubtedly fresh laid eggs they give, and which are always fresher and nicer because one's own fowls lay them.

While looking at this picture and wondering how I could make the acquaintance of the fowls and learn more about them, a gentleman passed along the walk and entered the gate, and to my intense gratification I recognized in him an old time friend whom I had not seen for some years, and who at the time of my losing sight of him, was engaged in prospecting extensively and persistently for quartz leads, and who as he afterwards informed me had finally "struck it rich" and sold out for a good figure and was now enjoying life as he had always wished and intended to, should fortune favor him. I congratulated him on his good fortune and could not forbear commending his taste in the "building up of his home."

Passing with him into the house, I renewed my acquaintance with his "good lady," and after a few minutes spent in recalling of old times and pleasant chat, I took my leave, promising myself many future visits.

Passing out into the grounds and telling him how beautiful I thought them and how much of beauty the birds added, he replied: "Yes, I would not take any money for my beauties. I think everything of them and spend lots of time petting them and talking to them, and they know me and as soon as they see me they huddle around me to see what I've got for them"—and in fact as soon as we got where they were they all flocked around us, at first somewhat timidly and with many suspicious inquiring glances at me, but finally concluded that it was all right and pressed around singing, and even perching on his shoulder and head with perfect confidence while he talked to them and stroked their glossy feathers.

"Why," he said, "my wife is just a little bit jealous of them and says she believes I think more of them than I do of her; and now, as you have seen the fowls, if you have time, come and see where they live," pointing as he spoke to a neat, tasty structure flanking the lawn and forming with the trees and vines in which it nestled a very pretty background. The building was octagonal in shape, placed on piles in order to prevent the encroachment of rats and other animals destructive to eggs and fowls. It was about 10 feet in diameter and 6 or 7 feet high at the eaves, the sills of four by four joists; the plates of three by four halved and nailed together at the joints and the standing of two by four joists and covered with rustic; the floor and roofing of tongued and grooved spruce. An eight-square frame supported the tops of the rafters, leaving an opening of about ten inches in diameter on which was placed an octagon chimney for a ventilator and which made a very pretty finish. The piles or piers on which the building was placed were about two feet high and placed on flat stones or cement. Besides the door, there were four oval windows latticed and an entrance hole at the bottom of the house with a landing and a ladder leading to it from the ground. A portion of the interior was occupied by roosts extending from an upright in the center to the side of the house spirally, the first one about two feet from the floor and the others rising gradually to six feet from the floor and 18 inches apart, having under them a platform or floor at an angle of about 45 degrees to catch and carry down the droppings of the fowls, rendering it easy and more convenient to clean out the manure.

The space beneath this platform or floor was appropriated to nests 15 inches square and one foot high, the front of the platform being latticed in order to give an appearance of secretiveness and admit of a free circulation of air to the nests, and the whole thing struck me as being very neat, very practical and very tasty. The building was painted in two colors on the outside and the inside neatly white-washed. The chimney or ventilator was not sided up solidly but with slats placed at an angle to admit of free passage of air.

"And now you have seen it all," he said, "and I want you to come some morning and breakfast with us and taste some fresh-laid eggs that are fresh-laid and as nice as they have them. Why," said he, "they give us all we can possibly use, and we are great egg-eaters, besides lots to sell, paying all expenses of feed, giving us our own eggs free and a handsome profit besides, almost equal to a 'quartz lead.'"

L. B. GEFFROY.

Lodi, May 10th.

## PATRONS OF HUSBANDRY.

## Our Grange Edition.

The Grange news of most general interest is given through all editions of our paper on this page. Several supplemental pages, devoted to Grange interests, are added in our Grange edition, which any subscriber can receive in lieu of the regular edition WITHOUT EXTRA COST, by addressing the publishers.

## The Master's Desk.

R. W. DAVIS, W. M. S. G. OF CALIFORNIA.

An important matter, one on which each subordinate Grange ought to take action, is the one which requests the Government to furnish daily telegraphic bulletins of the agricultural outlook. For the amount of money to be expended, there is no investment in which Uncle Sam could do more good to a great number of people than by furnishing such data as will enable the producers of grains, fruits, vegetables and meats to know something reliable and recent of the outlook for their business. Nor will the benefit be confined to the producers alone. The consumers will thus be informed of the condition of growing crops, and will the better know what to buy and in what quantities to buy. Let each subordinate Grange consider this subject, and if favorably inclined, let them pass resolutions calling on the Government to furnish the desired information. Send these resolutions, *under seal*, properly attested, to Hon. J. M. Rusk, Secretary of Agriculture, Washington, D. C.

Santa Rosa Grange is making an effort to buy a piano.

The harvest will soon be over, and then Worthy Ceres will ask you to join with her in celebrating the event. Keep an open eye for the date, and begin to prepare your program. Ceres, in each subordinate, should assume the leadership, and make the occasion a joyful one.

Let your boy whistle; it don't hurt you, and it does him much good.

If mothers want to keep sons out of saloons, let them make home the most cheerful place on earth.

Let your heart overflow now and then. If with joy the better, but if filled with sorrow, let some one know it. Go to the Grange and speak from the fullness of the heart.

How many persons have you made happy during the year, now half gone? Be happy, and be sure to share that happiness.

This is the season of Memorial Days. Next Saturday the people of this Union will join in decorating graves, in singing loyal songs and in listening to orators tell of patriotism and valor. Next to the love of God and family comes the love of native land. Let us, one and all, without regard to sex, age, color or geographic section, join with those who wore the blue and those who wore the gray in commemorating the valor, loyalty and manhood of men who have been faithful to the Land of the Stars and Stripes. Our Order, too, has its Memorial Days. We should not forget those of our fraternity who have fought the good fight, who have kept the faith and who have gone before. Let their last resting-place be decorated with flowers! Let those of our sturdy band who yet remain see to it, that once in each year the graves of departed Patrons be appropriately covered with bouquets of ferns, grasses and sweetest flowers; and to this work of love and remembrance the attention of each subordinate Grange is hereby most respectfully directed. In many sections the Grange might join with the Grand Army of the Republic in this most beautiful and loyal ceremony of decorating graves of departed comrades.

Farmers' Institutes in California seem to be growing very fast, both in numbers as well as in popularity and good results. This is as it should be. Let those who till the soil know not only more of their business, but also of one another. Mutual understanding will bring mutual profit. There is no danger in knowing too much, provided that knowledge is honestly and fairly acquired and used.

The first wheat of the crop of 1891 is reported from Kern county, which reminds us that we ought to have several Granges in that fertile county. Won't some of Kern's thrifty farmers who read these lines take the matter in hand? Surely, the Grange-seed will grow in soil that produces and matures wheat as early as the 18th of May. But the Grange sheaves ought to be found in Kern! Who will see that they are? Farmers of Kern, call for a Deputy or for any desired information concerning the Grange, and let the Order of Patrons of Husbandry have a home in your blessed and fruitful county!

The political "whoop-up" is already to be heard in the distance, but there is one thing very apparent to a person almost blind. It is this feeling of great unrest among the professional men about the situation in 1892. They seem to want the office, but dread the chances which the coming campaign appears to be offering. One thing is now pretty well settled, to wit: Both of the old parties will have more bona fide farmers on their tickets than they

have had for many years past. Farmers must not forget, however, that this may be merely policy play, done to entrap them, and not done with good intent. Look well to the situation, fellow-farmers! Don't be in too big a hurry. Time is a great pulverizer. Even in politics wonders are sometimes unexpectedly wrought. Stand by your guns!

Don't forget that the next Legislature will be called upon to give the farmers a Mutual Insurance law. Vote for no man who is not in favor of such a law. We need it and need it badly enough.

A well prepared copy of the printed proceedings of the Eighteenth Annual Session of the New York State Grange is just at hand. It is replete with good thoughts, well said. Truly, it is remarkable how much the Grange has added to the literature of the day. If you think there are no elegant writers or attractive speakers connected with the Order of Patrons of Husbandry, the mistake is yours.

No words can fully express the regret which the writer feels at not being able to attend the sessions of the Oregon and Washington State Granges, to both of which, very polite and fraternal invitations had been received. But the long season of Grange work in California, together with a business much in need of personal supervision, and an aged father in need of care and companionship, render it impossible for the trip to be made. The hope is indulged that another year may offer the expected opportunity. In the mean time, brothers and sisters, know we are in full accord and working with you.

## New Grange at Glen Ellen.

EDITORS PRESS:—As per agreement with the farmers of Glen Ellen, I went there on Saturday, May 23d, and succeeded in organizing a Grange at that place with a charter list of fourteen. Owing to sickness, some of those whose names I had previously secured were not present, hence the small charter list.

The following is a list of their officers: Master, J. M. Zane; O., J. V. Miner; L., W. I. Williams; S., John M. Hendley; Ass't S., Martin Peter; Chap., L. Knight; Treas., C. H. W. Brunning; Sec'y, Robt. P. Hill; G. K., O. A. Kennedy; Pomona, Mrs. M. A. Miner; Flora, Mrs. M. A. Zane; Ceres, Mrs. Anna M. Williams; L. A. S., Miss Minnie Brunning; Trustees—Robt. P. Hill, 3 years; Mrs. Anna M. Williams, 2 years; John M. Hendley, 1 year.

Assisted by Bro. J. P. Whitaker, W. M., Bennett Valley Grange, I duly installed their officers. Bro. Whitaker also instructed them in the unwritten work in a clear and concise manner. Much interest was taken in the election of officers, and all seemed pleased with the bright prospects for a prosperous Grange.

On the second Saturday of June as many as possible from this new Grange will visit Bennett Valley Grange, at which time the third and fourth degrees will be conferred upon a class of five, with the usual harvest feast. On account of the lateness of the hour, I did not have time to carry out the full initiatory work, consequently their meeting with Bennett Valley Grange will be of much interest to them.

Bros. J. P. Whitaker, G. N. Whitaker, Holman Talbot, Sisters G. N. and J. P. Whitaker of Bennett Valley Grange, and Sister E. M. Hudson of Santa Rosa Grange kindly assisted in the work of organizing the new Grange.

Don Mills.  
Santa Rosa, May 24.

## What the Grange Has Done

We acknowledge receipt of the proceedings of the 18th annual session of the West Virginia Grange. From its well filled pages of useful information we excerpt the following:

Through the influence of the Grange upon the National Legislature the extension of the patents on sewing machines was prevented, saving to the people fully 50 per cent in the prices, amounting to millions of dollars annually. Through what is known as Grange legislation transportation companies have been brought under the control of law, bringing out the decision of the Supreme Court of the United States that the creature cannot be greater than the creator; that transportation companies are subject to the control of the Government.

Through the influence of the Grange the national oleomargarine law was passed, controlling and restricting the sale of adulterated butter; requiring oleomargarine, butterine and suine to be branded and sold as such, thus protecting the consumer as well as producer. Also the State oleomargarine law which prohibits the manufacture and sale of oleomargarine in this commonwealth.

Through the influence of the Grange, legislation has been secured, driving out from this country alien landlords; reserving American lands for actual settlers, and preserving our public domain for American homes.

Through the influence of the Grange the Inter-State commerce law was passed, which will, in due time, bring the entire transportation facilities under national control, protecting the people as well as the transportation companies.

Through the influence of the Grange the Agricultural Department was created, presided over by a Secretary of Agriculture in the

President's Cabinet, thus giving the farmers a voice in the policy of the National Government as it affects the agricultural interests.

It was through the influence of the Grange that a direct, co-operative trade system has been established, through which the farmers can purchase direct from the manufacturers and importers.

It was through the Grange that the farmer's social and political influence has been enlarged, and his knowledge of public affairs advanced, and it will be through the Grange that the tariff and currency questions will finally be settled on a just and equitable basis.

## Reforms Breed Opposition.

[Read by SISTER M. F. MERRILL at Lockeford Grange Picnic.]

There is nothing that strikes the student as more significant than the opposition which has always been encountered by great reforms. From the beginning of historical record there has been no effort aiming at the advancement of the human race; there has been no scheme of progress, however pure in its conception and strong in its ultimate aim, but has met bitter opponents, not only among those whom passion, interest or prejudice might naturally array against it, but also among those to whom we might reasonably look to support whatever is for the best interests of the human race; therefore, in considering the history of any reform, we must make our observations from more than one standpoint. We must imagine ourselves looking at it from the darkness of its past with the clouds of ignorance and prejudice obscuring the clear light of justice and reason. Then what a mighty difference when we consider it an established fact with the fogs and mists of selfish passion swept away. How weak and childish and easily answered seem all the arguments against an accomplished reform. We wonder how any mind, however weak, could have been deceived by them, and yet with what assurance and bitterness they were once advanced.

When the clear light of the future is thrown upon the opinions of the present, it will bring out in strong relief the difference between the opponents and the supporters of any of the great progressive movements of to-day. Then how selfish and culpably blind will appear the one—how noble and far-seeing the other!

## Legitimate Reforms Never Go Backward.

Any man who places himself in opposition to a reform should look well to the situation. Such movements never go backward, and the time will come when his error will be brought home to him.

I see a man looking over a united land, freed from the black curse of slavery. He gazes upon a new South rising into a grander life from the rivers of a hideous system which he would have perpetuated; he listens to his descendant singing songs of thanksgiving for their deliverance from a usage which he would have fastened upon them forever; he turns away from the beautiful picture, and reads through blinding tears the history of his country, one page of which he has helped to redder with fraternal blood, and upon which his name can never be written with honor; he gazes upon the enduring monument of his country's fame, one grand stone of which he never helped to put in place, and he turns away, murmuring sadly, I was mistaken.

Yes, you were mistaken, and hundreds of thousands of brave men perished upon the battle-field! You were mistaken, and widows' tears bedewed the land. You were mistaken, and orphans' walls sounded like a mighty minor strain from shore to shore! You were mistaken, and your mistake goes echoing down the corridors of time forever! Any man who places himself

## A Bar in the Way of Human Progress.

Should read history carefully, and profit by the reading. He should reflect calmly and dispassionately upon his responsibility in the matter, and he should remember that such responsibility is to be measured only by the extent of his influence; and he may be certain that whatever good that influence has prevented, that whatever evil that influence has, perhaps unconsciously nurtured, he may be certain that however blind he now is, he will one day see, and gazing at the mighty onward sweep of the great world he has so punily endeavored to retard, shut out forever from the honor and glory of having helped to attain the grand result, he, too, will sadly turn and say: "I was mistaken."

May we, as Patrons of Husbandry, be ever endowed with the clear foresight which will enable us to look at the questions of to-day from the standpoint of to-morrow. May we be able to cast aside all the selfish passions and stubborn prejudices of the hour, and when we are called upon to make a decision upon any point at issue, may we make it as though the question were one already definitely settled in a way calculated to advance the best interests of humanity. May we be pure, unselfish, far-seeing patriots, as well as Patrons, ever ready to assist our nation and our race in the upward and onward struggle. May we be broad-minded and liberal enough to claim "the world for our country, and so good as our religion." Then could we, with the hero of Bellamy's "Looking Backward," project ourselves into futurity, we would find our names inscribed on the mighty records of the past as being ever on the side of justice and of progress.

## The Grange and Partisan Politics.

Bro. Mortimer Whitehead, National Grange Lecturer, writes: From my point of view, Grange work is moving on solidly, safely and surely on the good, progressive and yet conservative lines of our Order. While we are carefully avoiding mixing up in third party, or taking any other partisan action, I know that we never had so many independent voters in our Order as at this time, and the influence of this Grange education is being felt outside of the Grange in all parties, and never so much as right now. The following clipping from Washington Post of yesterday (May 19th) places our Order properly before the public:

EDITOR POST:—We notice in your account of the convention about to be held in Cincinnati, as found in your issue of to-day, that you again make the mistake of confusing the National organization of farmers, known as the Patrons of Husbandry, or the Grange, with other farmers' associations, and by so doing place it in a wrong position before the public. In the article alluded to, it states: "A great many of the Southern Grangers are kicking," etc. Now, the facts are, that the Grange will not be represented as such at the Cincinnati convention. However much it may sympathize with any movement looking to the betterment of the agricultural interests of our country, as an organization, it cannot take part in political contentions of any kind; and, as quoted in our communication of January 24th last, which you favored us by printing, the National Grange has kindly but firmly declined to take part in conventions or conferences looking to direct partisan action. We desire to reaffirm our statements then made, in order that our organization may be properly understood, and that it may neither receive credit nor blame when either is not justly due. Very respectfully, JOHN TRIMBLE, Secretary of the National Grange, P. of H.

MORTIMER WHITEHEAD, Lecturer of the National Grange, P. of H.

## Death of Sister Wilcox.

Many readers will hear with sadness of the death of Sister Wilcox of San Jose Grange, wife of Hon. I. A. Wilcox, a well-known pioneer Patron and Past Master of the same Grange. Sister Wilcox was a lady of exceptional refinement of mind and heart qualities, which won esteem and endeared her to those who came within the circle of her acquaintance.

She was very bright, active and energetic in good words and works, and her death at the early age of 53 plunges her family in deep bereavement, and finds many sincere mourners beyond this privileged circle.

Mrs. Wilcox was born in Buffalo, N. Y., and came to this State with her family at an early day, locating at Fruitvale in Alameda county, where her father had a nursery for a number of years. It was here that she met and married her future husband. About 24 years ago Mr. and Mrs. Wilcox removed to their fine property near Santa Clara, and developed it in fruit lines until it became one of the best known places in the fine valley in which it is located. She was the faithful helpmeet of her husband, and has always been a potent factor in the many successes which he has attained in horticulture and public affairs. Here, too, they reared their family of five children, the youngest now in his eleventh year.

Mrs. Wilcox died, after a very short illness, on May 13. The funeral services were conducted both at the home in Santa Clara and in the cemetery at Oakland by Rev. Mr. Newell, Presbyterian minister at Santa Clara. The bearers included near friends from Santa Clara and Oakland. She was laid to rest in the beautiful Mountain View burial place where only a few months ago Mrs. Abbott, her mother, sought her final resting-place, after a long and useful life of 80 years.

## Bro. Mortimer Whitehead in Census Work.

BRO. DEWEY:—So little work has been done in the past for horticulture in a U. S. Census, that I made it one of my specialties, and we are getting together many valuable facts and figures. Agriculture always does have a rough time of it, and the Census is no exception. I sent you a bulletin on "Floriculture," some days ago, and we are now nearly ready to give out the official figures on horses, mules, and (for the first time separate from mule) asses, or "burros," etc. "Live Stock on Ranges" is nearly ready, and I am now giving special attention to "Live Stock Not on Farms," horses, cattle, etc., in cities, villages, etc., (never taken in Census before). Yours fraternally, MORTIMER WHITEHEAD.

Washington, D. C., May 20.

[A full abstract of the valuable bulletin on "Floriculture," to which Bro. Whitehead alludes was given on page 486 of the RURAL of May 16. We shall be glad to see the results of the live-stock work, and to give our readers the benefit thereof.—EDS. PRESS.]

WATSONVILLE GRANGE PICNIC.—The annual basket picnic of the Watsonville Grange will be held at Aptos on June 6th. Singing, dancing and various other amusements will render the occasion pleasurable. A select literary program, including addresses on the leading questions of the day, will also be given. Everybody is invited to bring their baskets, their families, their sisters, their cousins and their aunts, and meet their neighbors and friends in one day of recreation at least, in the year. All farmers are especially invited.—Rustler.

## FARMERS' ALLIANCE.

## Alliance Edition.

Subscribers can receive our FARMERS' ALLIANCE EDITION WITHOUT EXTRA COST, by applying for the same. That edition contains several supplemental pages of Alliance matter, in addition to that which appears on this page through all editions.

## President Cannon on the Sub-Treasury or Land-Loan Bills.

Mr. Edward Berwick—DEAR SIR: I received letter and clipping, and while I do not feel called upon to explain the workings of the Sub-Treasury or Land-Loan bills demanded by the Alliance; still, there are many who are honestly seeking after light on this subject, like Mr. Berwick, and a few points may be of interest to them. Mr. Berwick evidently has not learned his A B C's yet in Alliance principles. He says, "I don't see how a Government can borrow money at 3 per cent and loan it to the farmers at 2 per cent." My dear sir, no sensible man can see how that can be done. Putting the Alliance demands in that light is to make it ridiculous, and no well-informed person in the United States will put it so. The time is past when such statements will pass current.

Farmers demand that more money be put in circulation by the Government. This demand is admitted to be a necessity by the best men in the nation. The machinery to get this increased volume into the hands of the people is the question to be decided. Stanford has a scheme, Featherstone has a scheme, the Alliance has one; none of this machinery is yet perfected, but it will be before long.

Mr. Berwick says, "It would be nice for me to mortgage my farm for \$10,000 at 2 per cent, and loan it to the other fellow at 7 per cent." But would not the "other fellow" be a fool to pay you 7 per cent when he could borrow also for 2 per cent? One of the greatest benefits the people will derive from this Government loan will be the fixing of the rate of interest by such loans in all the business of the country, and

## Will Break Down the Great Money Syndicates

In the country, which are sapping the lifeblood of all industries by the enormous rates of interest they demand of the wealth-producers. There are some who seem to think that such a scheme would destroy the value of money; there would be such a demand for it that the country would be flooded. This, I think, is a mistake. It would force the money now in the banks, or under the control of the great corporations and syndicates and trusts, to go to the people at the Government rate of interest, or lay idle in their vaults. When money can be borrowed at home for the rate of interest the Government charges, the business of the country will use the home money, and will cease to borrow from the Government. In this respect, it is flexible and will adjust itself to the demands of business. When your business will not justify your holding the loan, you will return the money to the Government and cancel your mortgage.

This scheme will not only fix the rate of interest, but will create an immense revenue to the Government, paid by the borrowers to it, instead of to the Shylocks as at present. This interest money will help to pay the expenses of the Government, and to that extent will relieve the people of taxation.

It is now claimed that we have two thousand millions of money in the United States. If that be so, we should have ten thousand million to do the business of the country, and should the Government loan that amount at 2 per cent, it would have an income from that source of \$200,000,000 per year, which, while it would save that amount of taxes to the people, would also save to the people the difference in interest between 2 per cent and 10 per cent, which would be about \$800,000,000 per annum. Don't you think such a saving to the hardy sons of toil worth a struggle?

Who opposes this great reform of the money system? The great money power of England and Germany, as well as that of the United States; and the Alliance expects to meet them all and determine once for all whether the almighty dollar or the almighty man rules the United States, and in that struggle we expect and will receive the support of all true lovers of liberty, justice, and the brotherhood of man. Yours respectfully, MARION CANNON, Ventura, May 21. State President.

PRESIDENT MARION CANNON of the Farmers' Alliance and Industrial Union, California, is winning golden opinions by his superb work for the Order. He is carrying on the work with a master hand. Thoughtful, industrious, independent, fearless and absolutely honest, he will make his administration long be remembered by the farmers of the State. When California is represented by Alliance members at Washington, and when every county in the State has been redeemed, President Cannon's leadership will be still more warmly appreciated.—Alliance Farmer.

PRES. CANNON'S ruling on questions submitted to him, are published in the Alliance edition of the RURAL PRESS. Any subscriber to the PRESS can have his name changed to the Alliance edition without extra cost, by sending us word to that effect. They get all there is in the regular edition besides four pages of Alliance news.

## Timely Words and Hints.

[By a State Organizer]

Various things affect the course of an organization, and make it successful or unsuccessful; but its methods are one of the most important of these things. Other things being equal, that society—that business organization—will succeed best which has the best methods.

The problems before us are how to get goods at the lowest possible prices without reducing the wages of the laborers engaged in their production; to economize in the matter of freight rates, and to reach the best markets. All these advantages can be secured more successfully by union, and, in fact, cannot be secured to any degree only by some sort of organization.

I trust it shall not be deemed improper for me to say here, parenthetically, that I am not one of those who believe that any great advance in prices can be secured by a union of farmers, to hold products off the market in the sense of the ordinary trust, or for any great length of time, but I think much can be done by an organization at once complete, accurate and secret, which shall gather and transmit to members of the Alliance only, statistics regarding acreage, prospects, product, the state of various markets, and prices, by which system, and the knowledge which it brings of what is being done in other sections and markets, (now, not "planting and marketing might be regulated," that is what I don't want to say, but by which) individuals could, should they choose each one for himself, voluntarily regulate his planting and marketing, and by which voluntary local or county co-operation to the same end might be guided. Such a system would never reach in practice the perfection which it does in imagination, but it would be an advance on the present state of things and would, naturally, grow in perfection with the increasing knowledge of those engaged in it. It is possible that it might be

## Desirable to Form Organizations

Within the Alliance for greater business security, making departments of information as the entirely different but excellently managed W. C. T. U. does. The California Fruit Union and the Unions of Orange Growers at Riverside and elsewhere are partial efforts in the direction I have indicated, confining their attention mostly to marketing, however.

But to resume. We desire to secure lower purchasing prices, better freight rates, and higher selling prices. We desire to do this by the simplest method and yet effective, one that requires the least capital and the most easily understood, and involves only a small, known, and fixed liability instead of the expensive and often large and ruinous assessments. Now let us look at the

## F. A. &amp; I. U. System in this State

For each State system of business co-operation is independent. The State Alliance selects a Business Agent. He is paid a fixed salary. He gives bonds, approved by the State Alliance or Executive Committee, fixed now in this State at \$25,000, but the amount of which may be raised by the Executive Committee whenever, in their judgment, they think it the interest of the Order. The agent is able to secure goods for members of the Order at wholesale prices, because the aggregate of the purchases made by him from the wholesale dealers and manufacturers entitles him to such prices. He stands, so far as volume of trade is concerned, to the wholesaler and manufacturer as any retail dealer. It is no matter what his (the State Business Agent's) relations to members of the Order may be. That is his personal lookout. It does not touch the principle upon which prices (wholesale prices) are given, unless retail merchants make it a pretext upon which to demand that the wholesalers shall discriminate against the Alliance. The State Business Agent sends to members of the Order lists of the goods he can furnish and the prices at which they may be had. These lists, self-interest requires, shall be kept secret.

The State agent does not buy goods in advance. He buys only upon orders from members, accompanied by the cash. These orders are usually placed in the hands of the Secretary, at subordinate Alliance meetings, to be sent together under seal. The expenses of the State business agent's office may be met in three ways. In some States, they are met entirely by a commission, varying from five per cent to say one per cent, figured upon the list prices and paid by the member when he sends in his order, which is in addition to the list prices. In other States, the expenses are paid out of the State Alliance treasury, out of the portion of the fees and dues remitted to it; in still other States, by a combination of both methods. In this State, the commission feature was adopted for this year from necessity, and was justified by the limited finances of new organization. There is some disposition to continue it, to some degree, permanently; but the membership of the Order is divided on the question of the wisdom of such a course. A decision, for at least the year then to ensue, will be given by the State Alliance, which is to meet at Los Angeles in next November. Those in favor of continuing the commission feature say that those who reap the direct benefit of the business co-operation should bear all the expense of it, while those opposed to the commission feature point out that the business co-operation, by bringing down prices generally, indirectly benefits many who do not get direct benefits; that therefore they should help to

hear its expenses (which should come entirely out of the fees and dues by warrant on the State Alliance treasury), and that this policy would have a tendency to solidify the Order. It is a subject which may be profitably discussed in a spirit of courtesy. Improved methods, sometimes new in their nature, are always possible.

## The Simplicity of the System

Of business co-operation herein outlined challenges admiration. The system requires no capital save the dues and the commission, which is regulated by the character and amount of the purchase. When a man has paid his dues, his financial responsibility in the absence of any "commission" is done, save possibly on local expenses of an unusual nature. There is no stock; there can be no assessments. The trouble, risk and capital necessary to store-keeping is left in the hands of men brought up to such business, and willing to shoulder its responsibilities. The benefits of the co-operation are not confined or monopolized mainly by a few stockholders or directors. Stock juggling is impossible; each member keeps his own accounts. The system is capable of indefinitely wide extension. It brings its benefits to the masses; it offers them on equal terms to all.

FRANK P. COOK.

## Alliance County Notes.

## Humboldt.

A large number of members of the Grizzly Bluff and Port Kenyon Alliances visited Centerville Alliance at their meeting on May 16th. A very good time was had and important subjects thoroughly discussed, visiting members taking part and introducing subjects for discussion and consideration. Meeting closed with a general good feeling of being benefited by the exchange of ideas and that such joint meetings cannot be held too frequently. They are both interesting and beneficial.—Western Watchman.

## San Luis Obispo.

The Grange and Alliance have appointed a joint committee to get up a dramatic entertainment for the purpose of raising funds to buy an organ. The entertainment is set for the 23d of next month at the big hall. The committee has decided upon the "District School," to be followed by a short farce and a fine musical program.—Arroyo Grande Herald.

## Santa Cruz.

The Farmers' Alliance of San Juan has appointed a committee to confer with the Pajaro Valley Railway Co., in regard to extending the railway to San Juan from Moss Landing. It will require but 12 miles of track, with the road already built. The line will run up the Carrero valley. The road will be easily built, the route offering no engineering difficulties. It is claimed that the transportation of this year's bountiful harvest will repay them for the construction of the line.—Surf.

At the last regular semi-monthly meeting of Scotts Valley Sub. Alliance, No. 314, a set of by-laws was adopted, and it was decided also to initiate only on the last meeting of each month. Five members were initiated, three were elected, and three applications for membership were received. The Committee on Entertainment reported that arrangements had been made for a public meeting to be held at the schoolhouse next Friday evening, May 22d. J. W. Hines of San Jose, State Organizer at Large of the Order, will address the meeting. The principles of reform advocated by the Alliance will then be open for free discussion to all. The floor will then be cleared for dancing. Admission to the speaking, free.

## Sutter.

W. W. Stewart, Sutter Co. Organizer, writes from Yuba City, May 24: I have just returned from a visit to Brittain Alliance of Sutter city, where I was royally treated by those wide awake, progressive brothers and sisters who are initiating new members at each meeting. Live Oak, Orange and other Alliances in this county are not to be forgotten in their steady and gallant advance, and although the hay season is at hand, there is no decline in the Alliance movement in old Sutter. May "God speed the light."—Alliance Light.

At the regular meeting of Orange Alliance, Yuba City, there was quite a large attendance, several being present from Live Oak Alliance. Two persons were initiated members of the Alliance and five others accepted who will become members at the next meeting. W. W. Stewart, the local Organizer, stated that the membership is increasing gradually throughout the county and members received at each meeting.—Marysville Democrat.

The Alliances in this county are gaining membership steadily and holding interesting meetings. Citrus Alliance held a meeting at the Barry schoolhouse, at which time a number of applicants joined the Order.—Farmer.

## Tulare.

The Armona Alliance was not behindhand at the Union Alliance picnic in the Hanford Grove last Friday. They were well represented in the procession from Creasy's corner, a good majority of the 80 members falling in line at the right time, ably conducted by their marshal, A. F. Jewett. Their banner is well worthy the general praise it received. It is made of white satin 18 by 22 inches, trimmed with gold fringe and hline silk cord and tassels. The Committee on Design were Myrtle Shay and Lizzie Smalley. Through their efforts Mrs. Irwin, of the Alliance, embroidered in

blue silk, "Armona Alliance, No. 4," on the reverse side. Miss Jennie Doyle beautifully reproduced in gold paint the badge inscription "F. A. & I. U." with the plow shield above.—Cor. Hanford Journal.

## Keep the Pot Boiling.

[From the State Lecturer.]

We are highly gratified with the interest and untiring energy Bro. Dawey is expending with the Alliance columns of the RURAL PRESS.

Personally, our time has been so occupied with correspondence, on the farm and in the lecture field, that we have been unable to even devote as much time to the official organ as should be devoted by the average member. Until recently, our brothers and sisters have contributed but little; but as time passes, and the smoke of the great battle can be seen in the distance, we are proud to see members taking a greater interest.

Contributions are being sent in more freely, public and private meetings are being "written up," the subscription list is swelling, and as a natural result, the Fraternal Edition has become more interesting and more satisfactory to the Order, and is exerting a far greater influence on the minds of those who are without our folds. But the end is not yet. Duty and a love of our great work both

## Demand that We Press Forward.

A public journal to be well conducted and really worth having must be well patronized. No person with ordinary financial ability can long afford to expend money to champion our cause without receiving a reasonable return. The least we can reasonably do is to see that the Fraternal Edition of the RURAL PRESS is in every Alliance and Grange household in the State; that an abundant supply of interesting material is furnished for publication; and last, but not least, that these subscriptions are paid for.

A large part of the public press seems to be waiting to see which way the "oat is going to jump," a small part is acting in support of the righteous demands of the great industrial classes, and another small part may be said to be acting in opposition.

How many of us are lending our support to the opposition press to defeat the ends of justice and the welfare of the masses? and by so doing we put a club in the hands of our common foe.

Of course to patronize that part of the public press that maintains the right is well and good, but particular attention is called to the fact that

## Our Official Organ

Should receive our hearty and abundant patronage. Its success and usefulness rests with us and it depends almost entirely on the liberal spirit with which we endorse and maintain it.

The National Economist is probably the best and ablest reform journal in the land, yet if the official organ of our own State was equally well patronized it would be equally as good.

To furnish an able and spirited journal without ample support and to slight a journal that is well supported are propositions equally unreasonable.

Value received is, or should be, the rule in all branches of business. This is the principle for which we so loudly clamor.

Brothers and sisters, let us support our official organ. This appeal is entirely devoid of selfish interest, as we have no personal aspiration and no financial concern to be subserved; and while we are endeavoring to do our duty to our State organ, let us not forget our national organ and our several faithful county organs. G.

## Conference with Interstate R. R. Commission.

Oakland Alliance, May 23d, proposed a conference with the Interstate R. R. Commissioners (now about to visit California) by resolution substantially as follows:

Resolved, That President Marion Cannon or the Executive Committee of California State Farmers' Alliance, if feasible, arrange for a meeting of conference and exchange of information (on behalf of the people on this coast interested in the regulation of transcontinental rates of freights and fares) with the U. S. Interstate R. R. Commissioners while they are visiting our State.

GIVE US THE RAILROADS.—The Chicago Sentinel thinks that one item like the following is sufficient answer to whole libraries of books by the Atkinsons, Sumners, Denbows, Guntons and other sakers who carry favor with rich monopolists by deriding all the efforts of the people to free themselves: "In Australia the Government owns the railroads. It only costs a person \$6.50 to ride 1000 miles there. Commutation rates for local service are still lower. A workman can ride to and from his work, a distance of six miles, for two cents a trip; 12 miles for 4 cents; 18 miles for 6 cents; 24 miles for 8 cents; 30 miles for 10 cents. Yearly tickets, good for 30-mile trips, are sold for \$17.40. This is the kind of centralization we need in this country. It centralizes bread and meat into the mouths of the workman's children and clothes on their backs." And yet, low as these rates seem to be, we are fully assured that there is a fair profit in the business. Statistics prove this beyond dispute.—Garden City Alliance.

### The Opening of the California Poppies.

To west and below where the snow summit looms,  
Stood an army of pike-pointed lances of green,  
So slenderly fashioned they scarce could be seen;  
How could they—such lilliput lances of green—  
The plains and the foothills were spotted all over  
With pinks of blue cammas and "purple-top"  
plumes,  
And blushes of bloom of the clover,  
And smelled sweet as bee bread;  
But the meadow lark laughed in his ripple of tune,  
For the meadow lark guessed what would happen at  
noon.

There were stamens of gold and petals of flame,  
Rolled up in each cute little conical cap,  
That slowly slipped up, and slipped up till it came  
Off chuck at the top with a snap;  
And its petals unrolled, flame, orange and gold,  
And airy, fairly swung on the stem,  
Till the land was afire with the color of them.

—Madge Morris in *Golden Era*.

### George McCarden's Back Channel.

George McCarden was a Virginia Scotchman, who migrated to California with thousands of other men from all parts of the world, in 1849. He traveled northward, and in 1852-53 became a successful miner on Indian creek, in Siskiyou county. In miners' phrase, he was "lucky," while the great majority of his associates were decidedly "unlucky" as miners. At one time he commanded at least \$40,000. This he lost in unsuccessful mining, and then poor George had nothing left but the golden memory of his more prosperous days.

If this was all there is to say, I might stop here and have recorded nothing but what befell many besides George McCarden. But a strangeness connected with his fate calls for the rest of the story.

Sometimes a heavy landslide on the side of the mountain completely fills up all the small water-courses in its track. These buried water-courses are called channels. A stream soon makes its way through and around the obstruction, and forms its channel anew. In streams where there is gold, the slides will of course cover it all up. If a miner comes to such a place, where he thinks there is gold, he is compelled to drift from the newer channel or some more convenient point to where he supposes the covered channel to be. This is called drifting to a back channel.

When George McCarden lost his fortune he was of middle age. He was a bachelor, and lived with his brother Peter, who had several children. It now became the dream of his life to make another fortune for Peter's children. He prospected the rich quartz ledges of the various branches of the Klamath river. After half a dozen years of hard work, in which he scarcely earned enough to pay his board, he fixed, as it turned out, his whole soul upon the belief that by drifting to a back channel at a certain place he would find much gold.

At some distance below this point, gold had been taken out, but never so high up. He asked no advice, and took none; but set himself to work with a faith as sublime and an endurance as great as were shown by Columbus.

The exact location that had so strange an attraction for him is about five or six miles from Oro Fino, on the Shackleford creek, which flows into Scott river. He built a cabin not far from the spot he had selected for the month of his tunnel, and began to dig. In about a week, he left the cabin one morning to visit his brother's family. When he met his brother he exclaimed:

"Well, Pete, the ground is broken. There is a fortune in that hill, and your children are going to get it, you know."

"I care very little whether they get it or not," his brother answered; "but I don't like to see you throw your time away in that mountain. It seems to me and to every one that speaks of it that every blow you strike is a hopeless waste of energy."

"Brother Pete," returned George, "if anybody knows where to find gold, that fellow is old George McCarden."

His little four-year-old niece Mary, who came up just then, took his attention. Lifting her on his knee, he stroked her flaxen curls tenderly, saying, "How would Mary like to ride in a fine carriage, drive gay horses, and live in grand style?"

"It would be very, very nice, Uncle George," replied the child. "But papa is too poor."

"What if he is poor?" said her uncle. "I am poor, too; but haven't I been rich? Well, I shall be rich again, pet."

"But, Uncle George," insisted the little girl, "papa and lots of folks say there is no gold in that mountain."

"Don't you listen to what any one says about my back channel but myself," said the miner. "Uncle George knows that there is gold in that mountain, and he's going to find it, too. Then my pet shall be a fine lady."

"Wouldn't that be lovely!" exclaimed the

charmed child, clasping her hands in ecstasy.

Thus did the old miner feed the minds of his brother's children with expectation, while he toiled patiently away in his tunnel. Slowly the work proceeded, for he was alone, and was not so strong as he had been. Foot by foot he burrowed into the ground, bending round and under innumerable huge, smooth-washed boulders.

Week after week and month after month sped away, and still the patient man worked away alone in the silent earth. The time of his labor extended to years. The boy's smile of its beginning had settled into the sedateness of a fixed purpose.

The early inquiries concerning his success had given place to pitying glances of toleration; for could a man work for years as George had done—never finding a speck of gold, still persisting in the labor—without being wrong in his mind? People began to fear the worst. They shook their heads and said, "Poor George!"

It must not be thought that McCarden was daunt. His mind was as clear and unshaken as ever, and it continued to be so till the day of his death. He believed where others doubted. That was all.

Six years of futile burrowing had passed. It was Sunday morning. The family had just finished their breakfast of ham and eggs. The brothers had lighted their pipes and gone out under a locust tree.

"George," said Peter, as they sat down on the ground, "are you going to move up to Yreka with us this week?"

"Why, I'll go up with you, but I can't stay," responded George.

"That is exactly what I'd like to have you do."

"Couldn't leave the tunnel, Pete."

The back channel had been the cause of many disputes between the brothers; but it had not been mentioned by either for a long time. Peter McCarden had kept a miners' boarding house for years, being no miner himself. He had just received some office requiring his residence at the county seat—whether by appointment or election I cannot say.

His utmost persuasion could not induce George to leave the mine. For several years the miner visited his brother occasionally, and frequently at such times carried flour or bacon on his back on his return to his tunnel, a distance of thirty miles or thereabout; but Peter sent over most of his provisions.

About five years passed in this way. At last, out of employment and nearly at the point of starvation himself, Peter refused to help his brother at the tunnel any longer. He might stay with him, he said, as long as he had a roof over his head and a bite to eat.

Eleven years after the fatal tunnel was begun, Peter moved his family to Linkville, Oregon. George accompanied him and stayed all winter; however, as soon as spring came, he stole away and returned to Shackleford.

He appeared there one evening, at a farmhouse a few miles from his old cabin, tired, hungry, ragged. Tom Jones, the farmer, took him in and learned his situation. Early next morning, Jones left the house, saying to his wife, "Poor George mustn't starve."

He saw several of his neighbors, went to Oro Fino, and returning, took George to his cabin and gave him a good stock of food.

This generous farmer succeeded so well in making others also feel that "Poor George mustn't starve," that he was supported at his labor for five more weary years.

Some time after the kind-hearted farmers had reinstated the old miner, the news was brought to one of them that little Mary McCarden was dead, and that Peter and his wife implored George to come and live with them again. Upon this mission, several farmers and an old miner or two went up to see McCarden.

They were obliged to leave their horses some distance below, and go up across the Shackleford, to the cabin, afoot. It was a bright Sunday morning in autumn, and they took with them a letter to George from his brother. They found the old man sitting in the sunlight, smoking.

After shaking hands and arranging themselves about, Jones, the spokesman, began, "Well, George, we've come to take you home."

The old miner, taking his pipe in his hand, gazed in affright from one to the other of the party.

"Oh, not without your consent, of course," explained Jones.

"Thank you! Thank you!" said McCarden, smiling faintly and replacing his pipe.

"We have brought you a letter from Pete," added Jones, handing it to him.

The lonely old man put on his spectacles, eyed the letter over, slowly broke it open, and began to read. The letter had lain in the office several days, and every one of the party knew the important news that it contained.

A painful stillness reigned among them, all eyes being upon old McCarden as he slowly followed the lines. He was oblivious of all but that which the letter contained. He turned to the inside. His hand began to shake. His eyes were widely strained. He could scarcely read. The letter was not long, and he was near the end; but it dropped upon the ground, and the old man's face was buried in his hands.

After a pause of some moments, Jones and the others rose and stood around him. They told him that his brother wanted him to come home, and that they had come to take him.

He started and looked up. The same soared

look came over his face that was there when he was told that before.

"To take me where?" he asked.

"To take you nowhere," replied Jones, "unless you want to go. But it will be so much better for you to go to your brother."

McCarden straightened himself up, looked each man in the face, and remarked:

"Gentlemen, you have all been kind to me—very kind. But you don't know what you ask me to do. Brother Peter has all he can do to live, without me. I am a miner; I cannot live out of the ground. I suppose this very tunnel of mine will be my grave. It is pleasanter to think of dying here alone, than of seeing Peter's family again. How can I ever go back there, boys? You know that little Mary was my heart's core. There's nothing left on earth for me."

At this point, his utterance entirely failed him. As he held both hands up and cast an appealing look heavenward, his hearers all broke completely down. Jones went off to the rear of the cabin, where he was soon joined by his coadjutors. A brief council resulted in the determination to keep George in his cabin as long as he wanted to stay. One farmer said he would keep him a year at his own expense. Another declared he would rather keep him two years than to have his feelings hurt so again.

So it came about that old George McCarden was the special charge of the farmers of Shackleford Creek, and the charge was well kept. He went in and out among them for nearly five years, and not a mother but spoke to him kindly, nor a child but greeted him familiarly. When the cold, raw weather of fall and winter came on, some one was sure to send him some dainty, or induce him to come out of the cabin for a few weeks.

Rheumatism had troubled him for years. It grew worse. He spent nearly the whole of the fourth winter among his farmer friends.

With the warm weather, he returned to his cabin; but his digging went on much more slowly than usual. He was old and weak, yet his faith in that back channel was not abated one jot.

Instead of clearing the dirt from the tunnel as before, he now left it midway. This slowly filled up the inner part of it. Obligated to crawl back and forth through this choked and narrow passage, animal-like, he still burrowed away. It became a question of a short time when he should dig no more. Strength and space failing at the same time, would he not then give up? Was he not conscious that both were to end at the same time?

Coming down from the cabin one day to get a little provision, he returned after dark with a lantern. Friends offered to go up with him. In his stubborn old way he refused help, with evident marks of resentment. On he plodded, cane in one hand, lantern in the other, and a few pounds of food upon his back.

He proceeded without more difficulty than was due to age, rheumatism and the ascent of the hill, until he came to the narrow plank across the creek. It seemed much narrower than usual, much harder to cross. The snow was melting on the mountains, and the water ran nearly to the plank. He started out upon it. "Pshaw!" he thought, "I have crossed here hundreds of times. But what ails my head?"

He edged slowly along till he was half-way over. Did he get across? Yes; but not on the plank. He fell into the water, and became so chilled that it was with great difficulty that he crawled to the cabin.

Two or three days later, some of his friends found him in his bunk, in a very low, feverish condition. He was removed to the county hospital, but died before his brother and wife, who were off camping, could get to him.

Sixteen tedious years he had toiled in his tunnel, without finding a speck of gold. The hole he made, no man would enter except from curiosity. Did he succeed?

"Succeed!" you say. "Why, he was after gold, and never found the color of it, poor, crazy fellow!"

I begin to reply that every one who seeks after gold merely is crazy, or worse; that there are things to be sought after that are infinitely better than gold. But that is not preaching the reader cares to accept. Let me go on, and say that poor George McCarden was not altogether a failure. He gave us a touching picture of rustic charity in the Shackleford. And he is to me a type and a lesson—a type of humanity's ages of burrowing and contriving to get back to simple truth and purity through false creeds and false practices; a lesson of dogged patience, that we might use in working back to our better selves through the landslide of our lower nature that has overwhelmed it. If we longed as much for right thinking, right living, pure hope, honor, as George McCarden did for the fortune he believed lay behind that slide. It is not valueless to have seen demonstrated the possibility of such fidelity and undiminished persistence in human nature, sublime in bent to its best end.—S. C. Garrison in *Overland Monthly*.

"GRACIOUS, Miss Bickton," exclaimed young Spriggins, who is a lingerer. "I hope you won't cough again in that way. You made me start." "Perhaps," she murmured, "I may be convinced that even coughs were not made in vain!"

It is the blackest ingratitude to accept the best of any one's endeavors to please you and repay it with indifference.

### Libraries in County Towns.

On this interesting subject Hugh Baker Sec'y Oakdale Alliance writes the *Oakdale Graphic* a good article. It is too lengthy for our space and we quote the closing paragraphs, viz:

I think any one can see the practical working of the proposed plan. The public school library thrown open to all furnishes the foundation. It is an idea in which all citizens are equally interested without regard to special motives, which have usually in small towns acted as a hindrance. It establishes this, one of the best of public institutions, upon the ground that it is a natural right. Nevertheless its benefits would soon be appreciated. Talk as we like about books being cheap, there are but a limited number of homes in which libraries of sufficient variety and extent are found to meet the wants of parents and children; however cheap books may be, they cannot be purchased by those who do not have even the small amount necessary for their purchase to spare. The State has undertaken to

### Educate the Prospective Citizen

depending upon the knowledge and training the child gains for its loyalty and usefulness in its mature years, but has forgotten the man and woman who exert such an important influence upon its character and destiny, at least so far as State educational endeavors are concerned. When the child is grown he becomes the property of society in its heterogeneous make up to educate and influence. To what extent the State should and is able to interfere in this matter is a grave question. But one thing is certain the State should have its hand upon every citizen and should aid in providing educational influences for those who from their circumstances cannot or will not provide them for themselves.

In America we glory in our public institutions. The free library is a characteristic, but it is confined to the cities, which furnish it by municipal government usually, while people living in the country are deprived of this great blessing. Now I maintain that if the State can aid in spreading the free library idea it is its duty to do so.

Should the plan meet with acceptance, the citizen in town or country can provide just such literature for himself and family and others as he may deem necessary or important. If our wealthy citizens desire, this would furnish the best opportunity for public benefaction.

The reading-room should be a feature in every such library. We get in the magazines the highest class of literary productions; in the agricultural, political and secular papers we get information which should be in the possession of all. The farmer depends upon the scientific methods for his success, but he must gain that knowledge through the various periodicals published in his interest.

### Money Required.

Perhaps it would be of interest to know how much money it would be necessary to raise. The expense of opening and maintaining a library and reading-room is a matter governed largely by circumstances. While this might prove the greatest expense, it need not be a very great hindrance, for it is expected that citizens in general would contribute. Nor would such expense be confined to those living in town, for the union of town and country districts would be a distinguishing feature. If we take as an example Oakdale and vicinity, the districts united would cover a large territory and represent a class of people who would be glad of an opportunity to contribute the funds necessary for all expenses; but the running expenses need not be large. Suppose Oakdale should desire such a library. There might be built Oakdale, Booth, Hor's Ranch, Langworth and Robinson school districts. To these were appropriated for the library fund the sum of \$108.65 at the last apportionment. Say that the law required an equal amount to be raised by the citizens. Certainly these expenses would not be too large to deprive any community from the benefits of the law, while \$200 would go a long way toward providing a number and variety of books which would satisfy any reasonable demands for yearly expenditures. Even if nothing further were provided, this would be appreciated by any farming community; but above this there is the important item of placing Government reports in the hands of the public. These are very valuable and the Government would gladly supply them to its citizens; but as it is now they reach the hands of but a limited number. These reports are so numerous that they would amount to quite a library in themselves. They should include the printed speeches made in Congress on proposed laws.

WARMTH IN AMERICAN HOUSES.—Mrs. Rlder Haggard has been heard to complain that American women kept their houses too warm. This complaint cannot be made of English women. If there is an uncomfortable spot in all Christendom it is the average English home in cold weather. The average English house is ill-constructed; it is damp and draughty; it is provided with very few comforts. This may account for that domestic infelicity which jeopardizes the family in England. English husbands are notoriously bad husbands; they might be much better if their homes were comfortable. When a man shivers he pines for warmth, and he will get it. If he doesn't find it at home he will find it at the groggeries or at other in-

famous resorts. The home instinct has been pretty nearly all chilled out of the Englishman. He is a famous wanderer; but mark you, he never wanders northward! He heads southward; he is cold; he has been frozen all his life. As soon as he can get away from his damp, draughty and cheerless home he makes his way where he is assured of the warmth which his shivering body demands. The American women know, fortunately, that the surest way to keep their husbands at home and to attach their children to home is to make the home comfortable, bright, cheerful. It is the pursuance of these tactics that has insured to American women the most loyal husbands and children, who regard no human sentiment more tenderly sacred than that which attaches to home, with its myriad of sweet, persuasive, holy influences. *Chicago News.*

### Dare to Do.

What he dares to dream of, dare to do.

There is philosophy teaching by example. "Dare to do." That is the ultimatum in all theoretical calculation involving the possibility of a valuable consideration. The *National View* says that it is something practical, expedient and conclusive. It is sniting the action to the word, and thereby results follow which can be realized in no other way.

"Dare to do." Act up to the requirements of the situation. Do not stop to whistle away the time in vain and aimless speculation, but shoulder the responsibility at once and march up to the line of action with fixed determination to secure the prize, whatever it may be. Away with that sniveling, whiffling sort of policy which hodes no good when "bread and butter are at stake." Remember that any good, honest business in any contingency, is noble and praiseworthy far nobler than to sit down and whine and snarl at fate. While fortune may favor, it does not control events or direct the men of mind, who break down obstacles and plant the flag of victory.

The consciousness of strength lies in the trial of the arm that lays low the obstructions that crowd the path over which we travel. Once need, we know its power. We measure its full strength and confidently march on to repeat its strokes. We become satisfied that there is something to achieve. We believe in its possibility and put our hand to the wheel, well assured of its accomplishment.

Genius is a very good thing to work on, but it must be directed by intelligence and good sense in order to advance and master the situation. Alone and unhelped it would waste its sweetness on the desert air, but harnessed to the latter it may give hope to destiny and become the savior of the world.

### Chaff.

A FLIRT is the girl who takes desperate chances of becoming an old maid.

GIVE work rather than alms to the poor. The former drives out indolence, the latter industry.

TEACHER:—Don't you know it's wrong to fight? Small Boy:—Yes'm, when I'm getting licked.

ECONOMY is wealth, but it is a kind of wealth that the rich man finds it hard to transfer to his son.

TIMELY ADVICE—He:—I feel completely prostrated. I wish I were dead. She:—Well, why don't you let me send for a doctor!

If people could only do things themselves as well as they can tell other people how they should be done how blissful everything would be.

TEACHER:—Tommy, can you give me a sentence in which but is a conjunction? Tommy:—See the goat butt the boy. But is a conjunction and connects the boy with the goat.—*Brooklyn Eagle.*

THE Arabs have no "Hello!" in their language. The nearest they come to it is to throw a stone and hit a man in the back, and then ask him as he turns around—"Does it please Heaven to give you good health this morning?"

MOTHER:—When the new minister calls, Tommy, you mustn't make any remarks about his clothes. Tommy (after the minister is seated):—Ma told me not to say anything about your clothes. I don't see anything the matter with them.

"WHERE have you been, Rex?" remarked Miss Flossie to her mastiff; and as the noble animal winked cheerfully and laid a portion of Charles Henry's Sunday trousers at her feet she continued "You had doggie, I'm afraid you've been off on another tear!"

JONES had a bad habit of snoring on the slightest provocation. "Where is your papa?" asked a visitor one day of Jones' youthful son and heir. "He's in his study asleep." "How do you know that he's asleep, my little man?" "I heard him; my papa sleeps out loud."

"WHY am I like a pin?" asked Mr. Jones, triumphantly, of his wife. He expected she was going to say, "Because you are so sharp," and he was simply paralyzed when she responded, "Because if you should get lost I wouldn't be worth while to spend time looking for you."

EDITOR (to Miss Oldgirl, aged about 40)—Your work shows promise, madam; but do you know that good literary work is seldom done by a woman until she is 30 or 35? Several years hence you will be able to write available articles. Miss Oldgirl (as she leaves)—That was the most delightful man I ever met.

## YOUNG FOLKS' COLUMN.

### The Parson's Daughter and Her Ride After the Colt Gypsy.

[Written for the RURAL PRESS by KATHERINA BRYANT NOLAN.]

Ethel Henderson was not the minister's "truly" daughter, as the children expressed it, but they were truly fond of her, and her advent in Milbury was hailed with joy by the rollicking sons and daughters of the Granite State, for they quickly recognized a kindred spirit.

Now Parson Henderson was the soul of dignity. He recognized the sacredness of his calling and was greatly given to the expounding of scripture and the ansterely good deacons never failed to congratulate each other on their choice of Parson Henderson whenever they met, somewhat as the children rejoiced in Ethel as a good play-fellow.

Sunday after Sunday the people, big and little, staid and gay, assembled in the old-fashioned, squarely-huilt, meeting-house and listened to doctrines wise and doctrines grave with becoming patience. It was a hard day for Ethel. She sat at the head of the parson's pew, for Mrs. Henderson was dead, and her small figure was thus directly in line with the deacon's eyes, and if she moved or "witched" some one was sure to speak about it, which always made her very angry, especially at the word "witched."

However the good dames of the parish were not to be restrained especially when they found the deacons did not understand the gravity of the situation. They "held" that the minister's daughter should in all good faith, be a paragon of virtue and an example for the guidance of youth who lacked her privileges, and at times they disturbed the serenity of Ethel's father by proposing that she be reminded of her responsibilities. These estimable plotters had many methods to propose and no two agreed, so it came to pass that Parson Henderson never knew exactly what to do about Ethel, and consequently did nothing at all unless it was to expound the Gospel with greater vehemence. He had a lively affection for the little one whom his wife had adopted when she was a mere baby done up in flannel, and perhaps he thought there were not many little girls who were even as good as she was.

When Ethel was twelve years old, the young people rejoiced more than ever for that summer was a brilliant one and rich with gayety. Harry Goodnow, the minister's nephew, refreshed himself after a tedious illness with the life-giving breath of the mountains of Milbury, and all sorts of expeditions were planned and carried out to entertain this visitor in a suitable style. Hardly a day passed but a troop of youngsters appeared with tin pails and red cheeks and laughing eyes whose destination was a mystery. The ringleaders knew where they were going, and the rest followed obediently over hill and hollow, across green fields and through rustling woods. The pails held luncheon and sometimes returned full of luscious berries and sometimes they came back quite empty, but there was one frolic that Ethel and Harry had to themselves at home, that neither of them ever forgot or told.

One cloudy and sultry Saturday afternoon, the parson sat in his study among his books and papers writing his Sunday sermon. His hair stood on end, for he frequently ran his fingers through it in a vain effort to recall some vague idea to the tip of his pen for the pleasure and enlightenment of the good deacons, and one wisp of hair stood up very prominently, as if it held the idea and was challenging the minister to a personal encounter. Ethel and Harry were on their way to the pasture behind the barn. Gypsy, the two-year-old colt, was impatiently calling for apples and put her nose over the bars in a beseeching way.

"Oh, Harry, just look at pa's hair," said Ethel softly as they passed the study window. She sat down then and began to laugh under her breath as if afraid of disturbing her father's meditation.

"I don't see anything to laugh at," he answered stolidly as he stalked on toward Gypsy. This made Ethel laugh harder than ever, and she ran after him saying as she flew by:

"Boys are stupid creatures."

"Girls are silly things," he retorted.

Ethel assumed a dignified manner at this speech and gave all her attention to Gypsy; but she was concocting a plan to prove that all girls were not silly.

"It is high time that this colt was harnessed and broken in," she said at length. "You let down the harness and go shut the big barn doors and I will lead Gypsy in."

"Uncle will be very angry if you fool with the colt. He thinks a lot of her and he won't want her spoiled with fooling," answered Harry.

"Nonsense," said Ethel, "I'm not going to hurt her. I know a thing or two about colts. Don't you be afraid."

Harry subsided at this. He lived in the city, and his knowledge of colts was really limited to the frolicsome Gypsy, and so he took down the bars. Ethel followed after, clinging to the colt's short mane with desperation until Harry had the doors shut fast, and then she began to prepare her for her initiation into the duties of a well-regulated horse that obeys the lightest

touch of the rein and hears the word of his master quickly.

"She always comes to me when I call her, why won't she go when I tell her to?" asked Ethel.

Harry could not answer this conundrum, so he put his hands into his pockets and said nothing. Ethel's harness was an ingenious arrangement of numerous hits of leather, long and short pieces of rope and Gypsy seemed to enjoy it, and acted just as if she knew all about that sort of fun herself and wanted Ethel to understand it.

She rolled her eyes until the whites shone as she looked backward, first on one side of herself and then on the other. Every other minute the dancing Ethel received a sly nip and Gypsy lifted her feet daintily from time to time.

"See there! Oh, she'll go!" said Ethel, "I tell you, but this Gypsy is no common colt!"

At last everything was ready and Ethel took her seat on the rough sled she had fastened behind, holding the reins of rope jauntily, as became a good horsewoman, and Harry opened the big barn doors, and away went Gypsy.

The parson heard a clatter of hoofs as the harness creaked on their hinges, and he came out of the house on to the back steps and looked over the top of his glasses in a bewildered way. The colt was flying down the village street, and the old sled danced and swayed at her heels. Faster and faster she flew with Harry in hot pursuit. The parson pushed up his specs and gazed down the road in amazement. Suddenly he seemed to realize what had occurred; and he cried:

"The colt! The colt! She will be ruined! I wouldn't have taken a hundred dollars for that colt." Ethel knew that one hundred dollars meant a great deal to Parson Henderson, and she ducked her head a little so as to look between the rails of the fence, in the hope that Harry was catching up with the runaway.

She sat among the chips of the woodyard, where Gypsy had landed her, just as if she had been shot there. Little chips and big chips clung to her stockings and stuck in her hair; but she had no mind for chips.

"It's that boy," declared her father with increasing wrath. "I might have known as much. The colt will be ruined—utterly ruined!"

"But, papa—"

"I'll send that boy straight home."

"But, papa—"

"One hundred dollars? No; I wouldn't have taken two hundred," declared the parson, the value of the colt increasing in his mental eye as her heels disappeared in the distance down the crooked village street.

"But, papa—" Ethel choked down a sob that arose in her throat as her father turned and went into the house.

This was dreadful. Perhaps Gypsy was ruined, and it was her fault, although she could not make her father listen to her. She poked the chips from off her stockings and ran after Harry. There were numerous inquiries from the neighbors in the doorways, the children standing on the fences and riding on the gates, but she only shook her head and ran the faster. She waited at the cross-road quite a long time, until Harry came back with the wild Gypsy, who seemed not one whit the worse for her escapade, and then she fell silently into the calvacade, which gathered numbers as it advanced, and the minister's colt retired like a hero from the wars.

The parson met them, looked Gypsy over carefully, and then turned her out to pasture without one word of comment.

The children scampered back to their homes without understanding who had harnessed Gypsy, and Ethel ate her supper silently, which was an unusual performance.

After tea, she sat down on the stoop and looked at the mountains until the crimson clouds above them lost all their glory, and the stars began to grow brighter and brighter.

"I guess girls are foolish sometimes," she whispered with a sigh, as she toiled upstairs to her little room under the eaves. Before she went to sleep, she laughed to herself at the recollection of Gypsy's heels tearing down the street. When she awoke, the sun was shining, so she dressed herself hastily and ran down to the study. Her father sat at his desk, and she said softly:

"Papa, I want to speak to you." He opened his arms and she ran to him and said:

"I did it, papa. It was not Harry. He told me not to. I am sorry, papa."

Parson Henderson held his daughter off at arm's length, and looked at her over his glasses quite severely.

"You harnessed the colt? How came you to think of doing such a thing as that, Ethel?"

"I thought she ought to be broken, papa. She comes when I call her, and I thought she'd go when I told her to."

Parson Henderson took off his glasses and wiped them carefully. When he began to rub, he began to smile, and as he put them on and took up his book again, he shook with laughter.

"You were quite right, Ethel. She certainly went at a very good gait."

Ethel ran out of the room so as not to be laughed at, but her father considered the joke so good a one, that he often made it allusions to it, and in fact he has not forgotten it yet.

Ethel became a model young lady, a good wife and mother, and even to this day the deacons wives take great pride in her and point

her out to the rising generation as a pattern of excellence. They have forgotten that she ever "witched" and Ethel thanks her lucky stars and Harry Goodnow and Parson Henderson that they never found out about her ride after Gypsy the colt.

## DOMESTIC ECONOMY

### Cake Making.

"Cake makers are born, not educated," was one of grandmother's pet sayings.

And there seems to be some truth in it, judging from the small number of first-class cake makers we find among intelligent women.

To make cake successfully something more than a mere rule is required. Rules mean that all ingredients shall be in the same condition and of uniform quantity, else there is no absolute certainty of uniform results. This is practically impossible. Flour and sugar will be more or less damp, and fruit varies in a thousand ways. "Eggs are eggs," it is said, but there is such a difference in their size that one might dispute at least one sense of the statement. The successful cake baker must have an instinct for conditions, must know by the feel of the batter when it is just right. Until this branch of education is fully mastered, and only practice and close observation will assure it, the best rules must be followed, and the varying qualities and conditions of the ingredients must be carefully studied.

To secure success, only the best materials must be used. Better go without cake than make it with a strong or rank-flavored butter or eggs which are unfit for table use. Either will detract from the flavor of the cake, and although heat is a great purifier, it does not always remove the objectionable taste of inferior materials. This is a point on which inexperienced cooks go wrong. So-called cooking butter is unfit for a fastidious taste.

If the yolks of the eggs are used, they should be beaten to a cream with the butter and the sugar. The whites of the eggs, the flour and the milk may be put in at the same time, and the whole must then be thoroughly mixed. Add baking powder just before the batter is ready for the tins, and heat vigorously for half a minute; then put in tins lined with buttered paper, and bake in a moderately quick oven.—*N. Y. Ledger.*

VANILLA ICE CREAM.—One quart milk, one cup sugar, two tablespoons flour one saltspoon salt, three eggs (whites), one pint cream, two tablespoons vanilla. Boil the milk. Mix the sugar, flour and salt, add the boiling milk, and cook 20 minutes in a double boiler. Stir as it thickens and until it is smooth. Beat the whites to a foam, but not stiff, and stir the hot mixture into them. When cool, add the cream, using more if you have it, and sugar to taste. Strain, and add the flavoring.

BREAD OMELET.—Line a buttered scallop dish with thin slices of cold lamb or veal. Soak one cup of soft bread crumbs in one cup of hot milk. Add one tablespoon of butter, one teaspoon of chopped parsley, and one teaspoon of fine chopped onion, a little salt and pepper and two eggs well beaten. Pour this over the meat and bake about 15 minutes or until brown. Serve at once in the dish in which it is baked.

BOILED ONIONS.—Peel them, and boil them in equal parts of milk and water. When they are tender, take them up, drain them, and add salt, pepper and butter to the taste. Do not put salt in the water they are boiled in, as that will curdle the milk, and cause a scum to settle on the onions.

CHEESE WAFERS.—Rub a tablespoonful of butter to a cream, and stir in two tablespoonfuls of grated English cheese. Spread this mixture on thin water crackers or plain wafers, or, if you cannot get thin crackers, split the thicker ones. Keep them in a hot oven till they are a delicate brown.

HERMIT CAKES.—One-half cup butter, 1½ cups sugar, one cup currants, three eggs, one teaspoon of all kinds of spices, one-half teaspoon soda dissolved in a tablespoon of water, flour enough to roll. Roll thin and out with a cookie cutter. Keep in a well covered jar.

STUFFED EGGS.—Halve ten hard-boiled eggs; taking out the yolks and season, adding minced meat of any kind preferred; fill the eggs, join and put in a dish. Use bread crumbs and milk with the remainder of the mixture; pour over all and bake.

APPLE CUSTARD PIE.—Two raw apples, one cup sugar, one saltspoon cinnamon, two eggs, one cup sweet milk. Choose ripe, mild apples, sorape to a pulp with a silver knife. Mix with the sugar and spices, add the beaten egg and milk. Bake in one crust.

POTATO YEAST.—Boil some potatoes, mash them, and to six potatoes add one gill of flour. Stir in as much water as will make the whole into a thick batter; add some yeast and a wineglassful of salt. When it is light, put in your jar and cover it.

PRESERVED FRESH FIGS.—Select the fruit when fully ripe, though not soft, pick them carefully that they may not be broken. Pour boiling water over them, and let them simmer for five minutes. Preserve them as other fruits.

SUGAR COOKIES.—Two and one-half cupfuls of sugar, one cupful of butter, one onful of sour milk, one teaspoonful of soda. Flavor with nutmeg. Mix soft.

## The Week.

May rains are unusually heavy this year all over the State. At the close of last week, the southern part of the State was drenched. Nevada and the Sierra highlands enjoyed a sandwich of snow and rain. This week, most of the upper half of the State was given showers, which were in some localities almost as heavy as a short winter downpour. Vast quantities of hay have been caught, and the damage will be determined by the following hours. As we write on Wednesday evening the skies have cleared, though the signal office does not consider the danger over. Though this late rain will freshen gardens, and perhaps keep some late crops, its damage to hay and possibly to some small fruits as well as the labor imposed in reworking orchard and vineyard make it an unwelcome visitation on the whole.

PARIS GREEN AND SOAP SOLUTION.—It may sometimes be desirable to use soap suds to hold the Paris green in suspension rather better than clear water will, but it must be borne in mind that soap renders Paris green more dangerous to the foliage of the tree or vine, and if it is used at all it should be in small amounts and with due caution.

## The Grasshoppers.

These pests are upon their periodical raid upon portions of the lower country of the Sierra Nevada foothills. Such visitations are fortunately not frequent but occasional, and somewhat more rarely the pests invade the valleys and plains below. Unfavorable seasons and the spread of parasites reduce the hoppers after they have a flush season, and the country has a long respite from them until a winter favorable for the full hatching of their earth-deposited eggs comes, and then the devouring multitude again invades the country. Grasshoppers are always present in some districts in fair numbers, and in nearly all regions in small numbers, but it is only at intervals that they do damage enough to arouse the natives to fight them. Just now, the supply seems unnecessarily large and distributed over quite an extent of country. Standing grain is being out for hay, to save it from the hoppers, and as the fields are thus cleared, the pests will have gained their wings, and will be able to fly to the vineyards and orchards of the adjacent regions of the foothills or to descend like a scourge upon the valley below.

Many methods of fighting the grasshopper are in vogue. Mr. E. W. Maslin, Secretary of the State Board of Trade, has issued a timely circular in which the following methods are mentioned:

At the present time, when the hopper is on the plains and the grass just shading into yellow and easily fired, the pest is easily subdued, though at some cost, when the neighbors will co-operate in burning over the fields to protect the vineyards and orchards. The wings have not yet formed, and as they only skip and do not fly they are comparatively easily reached. One plan proposed for destroying the hoppers in open fields has already been stated by a southern paper, to-wit: Take the axes and wheels of a hay rake. Attach to the axle a piece of sheet-iron bent near the ground so as to make a table, the edge being near the ground. Upon this table put rags or rubbish saturated with coal oil. Set fire to the oil, and with a horse push the machine along ahead of the animal. In the vineyard this plan would be difficult to apply, but in the orchard it is practicable. After the wings have formed the work is less effective.

A close fence will prevent the progress of the insect until the wings are formed. One person succeeded in averting disaster several years ago when his vineyard was invaded, by having half a dozen men begin at the south fence and walking to the north, with the wind, and whipping the hopper out of the inclosure with bushes. As there was no orchard or vineyard within several miles, no damage was done to any other person's property.

There are many such ways by which the grasshoppers may be partially reduced, but they have all been superseded to a great degree at least by the poisoning method, which proved of vast importance during the great grasshopper year of 1885. The outline of this method was recalled by Mr. Mackie, in his letter in last week's *RURAL*; but in view of the prevalence of the pest and the possibility of its much wider extension, we shall give in full a memorandum, prepared by Dr. Coquillette, while he was studying the phenomena of 1885 as Riley's agent. It should be preserved so that its instructions will be available if the grasshopper should appear at valley points not yet invaded:

Among the numerous remedies for the destruction of grasshoppers which I have tried, or seen tried, only one gives promise of accomplishing anything like satisfactory results. It consists of a mash composed of bran, arsenic, sugar and water, the proportions being one part of sugar, 1½ parts of arsenic and four parts of bran, to which is added a sufficient quantity of water to make a wet mash. A common washtubful of this mash is sufficient for about five acres of grapevines. Fill the washtub about three-fourths full of bran, add six pounds of arsenic, and mix it thoroughly with the bran; put about four pounds of coarse brown sugar in a pail, fill the pail with water and stir until the greater part of the sugar is dissolved. Then pour this sugar-water into the bran and arsenic, and again fill the pail with water, and proceed as before until all of the sugar in the pail has been dissolved and added to the bran. Now stir the latter thoroughly, and add as much water as is necessary to thoroughly saturate the mixture, and it is ready for use.

Throw about a tablespoonful of this mixture upon the ground beneath each vine infested with grasshoppers; and in a short time the latter will leave the vine and collect upon the bran and soon commence feeding upon it. Those which are upon the ground six or eight feet from the bran will soon find their way to it, apparently guided by the sense of smell, as those to the leeward of the bran have been ob-

served to come to it from a greater distance than those which were upon the side of the bran from which the wind was blowing. After eating as much of the bran as they desire, the grasshoppers usually crawl off, and many hide themselves beneath weeds, clods of earth, etc., and in a few hours will be found to be dead.

The mixture costs from 35 to 40 cents per acre of vineyard, including labor of mixing and applying it. In orchards the cost will be considerably less than this. One man can apply it to eight or ten acres of vineyard in a day.

I have seen this remedy tried on an extensive scale at the vineyard and orchard of Messrs. Kohler, West & Minturn, at Minturn station, Fresno county. In that part of the vineyard which was the most thickly infested by grasshoppers, from 30 to 50 dead grasshoppers were found beneath almost every vine, while beneath the adjacent weeds were hundreds of others, the greater part dead. It was also very effectual when placed beneath small fruit trees, the grasshoppers leaving the trees to feed upon this mixture.

The addition of sugar to this mixture is merely to cause the arsenic to adhere to the particles of bran, and not for the purpose of increasing its attractiveness, since it was found that the grasshoppers were not attracted to pure sugar. Middlings or shorts have been used in the place of bran, but are not so desirable, since in drying they assume a solid mass, which the grasshoppers cannot eat, whereas bran in drying never assumes a solid form.

There is some little difference of opinion as to the proportion of arsenic which is best; also as to the advisability of using a little middlings to make the mixture more compact. One prescription is as follows:

Forty pounds of bran, 15 pounds of middlings, 2 gallons cheap syrup, 20 pounds arsenic, mixed soft with water.

Others reduce the arsenic to 15 pounds and others to 10 pounds, with the same weights of other ingredients.

To enable one to gather up the remnants of the poison after its work is done, the practice is adopted of placing the poison on shingles or other thin pieces of wood which can be easily seen and emptied. All such surplus poison should be deeply buried in the ground.

Naturally there was much apprehension of evil from such free use of arsenic when the remedy was first put into practice. Very careful analyses were made at the university laboratory, of the washings of vine leaves, grapes, and of the soil beneath the vines, and no dangerous amounts of arsenic were found, nor did there appear any danger of contaminating wells or other sources of water. Of course domestic animals and fowls must be faithfully looked to while the poison is exposed, and it is chiefly for their protection that the use of shingles, in putting out the poison, instead of throwing it on the ground, is advocated.

We hope there may not many grasshoppers appear, but if they do, this is the best way to meet them in orchard or vineyard.

## Buried Trees in Gravel Mines.

In the gravel deposits of the ancient riverbeds of the Forest Hill Divide in this State, trunks of trees similar in appearance to our present cedars and oaks are found imbedded in the upper layers, either petrified or somewhat lignitized. Mr. Ross E. Browne, in a chapter of the Mineralogist's report on ancient riverbeds, calls attention to an interesting occurrence in the Weske channel. The cement filling the bed to a depth of 100 feet is a more uniformly fine-grained sediment than is commonly encountered. It incloses a number of oak and cedar trees, standing on the banks of the channel, with the roots intact in the gravelly soil and bedrock. One of these is a cedar nearly 100 feet in height and 4 feet in diameter at the base, and stands perfectly upright, and, considering its age, is in a surprising state of preservation.

Similar standing trees are also found in the Bowen mine, in the same channel. These trees are immediately on the shore line of the shallow deposit of gravel and show that for a few centuries at least before the depositing of the volcanic material was a small one.

These standing trees show also that the first flow of the auriferous cement was not torrential, though moving with a certain velocity. The existence of a current, and its direction, are plainly indicated by the structure of the deposit immediately surrounding the trunks of the trees. The deposit where these standing trees are found is entirely covered with an extensive and deep cap of lava.

## Farmers' Institutes.

The Farmers' Institute at Auburn, Placer county, under the auspices of the Auburn Horticultural Society, was duly held on May 22d and 23d. Five sessions were held, including the evening session of the first day, which was largely musical and social in its character. Several excellent essays were read, and the discussions were bright and interesting. We shall present, in other issues of the *PRESS*, many of the leading features of the meetings. The Institute was conducted by Mr. Wickson of the State University.

The vicinity of Auburn is enjoying its share of the incoming of bright, progressive people from all parts of the world, who are now doing so much to advance California industrially and socially. There, as elsewhere, the accession readily assimilates with the more progressive element of the older population, and infuses new spirit throughout the community. The result is that Auburn is progressing fast in spite of its large resources in over-conservative people. The Institute seemed to strike the sympathies and meet the needs of the people, and probably another series of meetings will be held before long.

As a rule the Institutes have not been preceded by a sufficient breadth of plan and preparation. This will be speedily overcome. The Fresno meeting at Malaga on July 2d will probably have its program out soon after June 1st, and an effort will be made to stir up and bring together a multitude.

An instance of a proper way to arrange an Institute and to insure adequate scope and detail of preparation may be seen in the way in which an Institute is being arranged for in Alameda county. Previous mention has been made in these columns, but an article on page 537 of this issue gives fuller information. If all communities or counties desiring to participate in this work will proceed thus carefully from an early beginning, the results will be a surprise and the benefit beyond anticipation.

## New Fruit Varieties.

Probably even our best varieties of fruits are susceptible of improvement. This would seem to be the teaching of experience, and certainly every honest effort in the direction of improvement is worthy of encouragement. Some manifestations held to be improvements are not permanent, others endure and become the basis for new lines of propagation and increased profit. If not permanent, they do little harm, usually, for wise planters do not invest heavily in new varieties until their value is pretty well established. Though planters often deplore their disappointment and loss in trying new varieties in the hope of securing something valuable, they generally continue their patronage of such things, so their wounds cannot be deep. If, however, the claimed improvement proves permanent and marked, the gain to the whole horticultural interest is great. For these reasons the *RURAL* is disposed to give early notice of varieties claimed to have exceptional value, and to regard the whole effort to seek improvement in this way as worthy of encouragement.

We are always pleased to have new seedlings for examination, with accounts of their origin. We also like to hear the facts about such new varieties, even when it is impossible to submit specimens.

MR. WANAMAKER ON THE PACIFIC COAST.—It is telegraphed from Washington that Postmaster-General Wanamaker is always anxious to talk about his San Francisco trip. In an interview he said: "I thought I knew something of growing countries before I set my face toward the setting sun, but I found, before I got to San Diego, that the West was doing more than I conceived. Before we got on the Union Pacific railroad to return, and after we had spun around Washington State, I was amazed. The West must have better mail facilities, faster mails, more of them and better postoffice facilities. How quickly they make a big city in the West, with fine buildings, large factories and beautiful streets, and all that pertains to a metropolis. There are no signs of hard times out there. Everything is progress, enterprise. What nerve the people show! What profit their real estate yields!" Mr. Wanamaker has been "booming" the West and Pacific Coast in this manner every day since his return.

# FLORIST AND GARDENER.

## California Annuals.

EDITORS PRESS:—It is to the many beautiful annuals that in springtime cover the hills and mesas and valleys that California owes her just fame as a land of flowers. With the first rains of autumn her dry, barren hills take on a shade of vivid green and California emerges from her summer lethargy to a state of vegetating activity. Early in October or November, according as the first rains may fall, and immediately after these, a little tuberous plant, *Saxifraga Parryi*, dots mesa and canyon side with its little umbels of white flowers, delicately veined with purple. This beautiful perennial, modest like the genial man in whose honor it is named, the late Dr. C. C. Parry, lies dormant from the earlier part of April until the earliest autumn rains, when it comes forth like an advance messenger of Flora's fair train of spring beauties.

Closely following the modest *Saxifraga* comes a steady stream of lovely annuals. Perhaps in no country do the early spring annuals so change the face of the earth from a desolate waste to a beautiful garden, as on the Pacific Coast, hills, mesas, mountains and valleys and the arid plains of the desert alike all quickly responding to the vivifying rain in our winter months.

Not only are these annuals each individually beautiful, but they have a way of arranging themselves in groups and masses naturally, that greatly increases the charm which they possess, for the stranger especially. Bleeding heart moniously together are beds of purple, white

caught and forms miniature lakes during the winter rains.

It flowers late in May, producing numerous whorl-like flower clusters, with flowers half an inch long. The rich purplish flowers are very effective when scattered out over the little depressions on the mesas, like a rich carpet of dark green and royal purple tastefully combined. It is one of the flowers which Dr. Parry unhesitatingly recommended for cultivation, but as yet no one I believe has attempted to introduce it. All the species of this genus are Californian; one, with much less showy flowers, being abundant on the, at times overflowed lands near San Quintin, Lower California.

Another mint like plant is *Acanthomintha ilicifolia*, equally abundant in places on our mesas or among the foothills, usually growing on adobe soil where it seems to thrive best. It grows from three inches or less to a foot in height. The rigid, coriaceous, coarsely-toothed leaves render this disagreeable to handle and ill adapted for the use of florists; it is, however, a desirable plant for cultivation, as yet, I believe, unknown in either American or European gardens, and well suited for beds or borders, where it can be massed together as it is found in its native fields, where its delicate white flowers tinged with a lovely shade of purple are displayed to advantage.

Many of our annuals are known wherever the art of cultivating flowers is studied, *Eschscholzia*, *Phacelia* and *Gilia* being among the familiar flowers of Eastern and European gardens that California has contributed to floriculture. Among others, *Collinsia bicolor* is one of the best known of these annuals of early introduction. It abounds through all the western portions of the State and southward to San Quintin, Lower California. It loves moist hill-sides,

to-day as any other similar resort in the State.

As soon as it was assured that the Southern Pacific Railroad was to be built through the Salinas valley it became apparent that this place was destined to a permanent and rapid growth. Before the advent of the railroad the little cluster of buildings here was surrounded by a vast stock range, and there was little enough promise for the immediate future in the eyes of many. But enterprising men were behind the place, and the result was that late in 1886 a town site was laid out and offered to the public at auction. Fortunately the right sort of men were enlisted at the start. From the day of the auction the future was assured. Substantial business buildings were at once erected, life and energy were seen on every hand, and from that day to this there has been no halt in the growth of this youthful city.

## Notes on San Luis Obispo County.

[A Brief Statement of Its Resources, by HON. J. V. WEBSTER.]

EDITORS PRESS:—Your favor of April 29th, requesting some notes from me relative to the present and prospective resources of San Luis Obispo county, is just received. In reply I will state that, while our people are anxious that the resources of this county shall be generally known, there is no disposition among us to create a boom.

Conscious that the possibilities of our county are great, and of certain development and appreciation when the missing link in the chain of railroad communication has been

and friable soil of our mountain slopes. The scale and the fungus, which are the greatest enemies to their growth, are not known here.

The pear and the peach grow to perfection. They appear not to suffer from any cause whatever, save neglect of proper culture. Finer flavored fruit cannot be imagined.

An astonishing feature of the pear growth is that the fruit ripens the latest in the State, the Bartlett maturing in October, when there appears to be none others of this kind in the State; which gives us a wide field for this product, and at handsome prices, averaging \$3 per box in San Francisco and \$6 in New York from the 1st to the 15th of October.

For peaches, pears and figs, in addition to their table use, there is a large future for canning and drying purposes, in consequence of their superiority. Prunes are a success, and their product is of the finest quality. While almost any other kind of fruit does fairly well, those especially named are, in my judgment, the coming and staying kinds, and on which the wealth of this region will largely depend in the near future. Garden truck and vegetables of every kind do very well, in which maturity occurs on or before the 1st of July; but after that month, some irrigation is required in most instances.

## The Climate

Cannot be excelled. The nights in winter are frequently sharp and frosty; in the spring, summer and autumn, just delightfully cool. The days in winter are usually bright and moderately warm, and in summer they are sometimes hot, with the thermometer at noon ranging all the way from 70 to 100 degrees; but, owing to the elevation, from 800 to 1200 feet above sea level, there is little oppressiveness in the heat.

I cannot imagine how the mornings and evenings even in Paradise can excel ours in the spring and summer months. They are bright and free from all insects.

In the late census enumeration, it was shown that we had for the preceding year the lowest death rate in the United States, being as 4 to 13 in the general average. Mr. Samuel Cliff, our enumerator, is in receipt of a letter from Chief Commissioner Porter to this effect.

Land values range from \$10 to \$60 per acre, according to soil and location. On the

## West of the Santa Lucia Range.

And bordering the Pacific ocean, we have from the city of San Luis Obispo to San Simeon bay, on the north, a country something over 40 miles in length, and from five to eight miles in width, valleyed and rolling hills extending from the high Santa Lucia range to the sea, chiefly devoted to dairying and stock raising.

Fruit—principally apples, which are remarkably fine—is raised to a considerable extent. From San Luis Obispo, the county seat (containing 3000 inhabitants), and Butte Guardia, at the foot of the Santa Lucia range, to Arroyo Grande, extending southerly some 12 miles, are valleys and hills, from 7 to 10 miles wide from the sea to the summit. Here, farming, dairying and fruit-raising are intermingled. Land ranges from \$20 to \$100 per acre.

Arroyo Grande valley proper is from half to a mile and a half wide, and from five to six miles long, reaching out toward the ocean. This valley is a horticultural wonder within itself. An output of 150 tons of beets, 50 tons carrots, 30 tons onions per acre, with cabbages weighing as high as 80 pounds each, and squashes 200 pounds and over, are of such common occurrence as to excite but little comment where its productions are best known. Its apricots and apples are unsurpassed for excellence. Beans are the principal product; in fact, all kinds of horticultural products grow to such perfection, that the only complaint made of the valley is, that it is too small to furnish all the homes applied for, at from \$200 to \$400 per acre.

Mines of chrome, gold, and antimony are worked, while asphaltum and hills of bituminous rock abound on the western slopes of the mountains.

In fact, the manifest and possible products of the county, coupled with its diversified climates and soils, make it an empire in itself, not excelled in any other section of the world of like extent.

STEEL RAILS AS PIT PROPS—In consideration of the serious ironroads which are being made on the timber of this country by the use of wooden props in mines, it is satisfactory to note that a patent has been taken out for a method of making steel rails into pit props and supports for collieries, mines, tunnels, bridges, etc. The rails are cut at their ends and suitably framed together. In point of cost, it is claimed that this mode of propping compares favorably with other systems.

THE TOWN OF PASO ROBLES, SAN LUIS OBISPO CO., CAL.

and yellow, red and other shades of coloring, distinct yet inseparable, with different shades of green for a relief beneath and around them. Here a bed of orange-colored *Eschscholzia*, there a bed of blue-eyed *Phacelia*; beyond the graceful *Krynitzkia* with their multitude of snow-white flowers with vari-colored *Gilia*, delicate lemon-yellow *Oenothera*s and others too numerous to recall.

California's natural gardens, however, are not arranged on any small plan. Hundreds and thousands of acres are thus beautifully arranged in beds of flowers, which lend their color to the landscapes for miles and miles unbroken save by canyon or hill, beyond which the botanist may make the acquaintance of another set of equally lovely flowers.

In traversing the Mohave Desert from Cajon pass to the Mohave river, with every mile of travel one leaves behind a mass of tender annuals, passes through a belt of related species and enters yet another series of lovely tinted flowers. In the latter part of April or early May (if the season is favorable) a multitude of charming acquaintances may thus be quickly made. The low, large-flowered *Gilia Parryi*, will be met with, first of one tint, and a little further on of a different color. Just outside of the forest of tree yuccas (*Yucca brevifolia*) will be found the orange colored *Calochortus* (*O. Kennedyi*). Nearer the river the vegetation entirely changes, and only a few plants of indifferent appearance (excepting the large plukish white flowers (*Oenothera Californica*) will there reward the botanist for his pains.

Among the California annuals which have pleased me the most, is a low, sweet aromatic herb which grows on our mesas, and which, like many others of our rarest flowers, was first collected by Daniel Cleveland, of San Diego. This is the wild pennyroyal (*Pogogyne nudicaulis*), which I have as yet found growing only in the westlands near San Diego, or southward in Lower California, where it covers the surface of the low depressions where water is

and especially thrives in the shade of the live oak trees (*Quercus agrifolia*), or on the shady sides of our canyons, growing a foot or two in height.

The lower lip of the corolla is violet or rose-purple, and the upper, paler or nearly white, from which combination it receives its specific name. As in the case with nearly all flowers of a purplish color, this is occasionally wholly white, a pure white flowered form being in cultivation under the varietal name, *candida*. This is the most showy species of the genus known, the flower being three-fourths of an inch long and brilliant. Another equally beautiful but less showy species is *Collinsia*, *Cartaisifolia*, with rose-purple flowers, that is common throughout the central parts of the State, among the foothills, and in Southern California, extending eastward to the borders of the Colorado desert. O. R. ORCUTT.

San Diego.

## Paso Robles.

The little city of El Paso de Robles, on the bank of the Salinas river, was for many years noted for its springs alone. There was really no town, only a small collection of buildings clustering around the hotel at the springs. A few years ago, however, the place suddenly sprang into prominence, and to-day this is the second city in population and wealth in the county. How many years or centuries ago human beings learned the virtues of the mineral springs at this place there is no means of knowing. That those virtues were known and utilized far in the past there is no doubt. Since the American occupation of the State these waters have acquired a wide reputation, and it is a pretty safe assertion that the Paso Robles hot springs have as good and as wide a reputation

supplied between Santa Barbara and Santa Margarita, this people rest content with their surroundings. No part of the generous earth ever has been blessed with a richer mantle of green and gold than now hangs from the shoulders of our beloved county. The crop season has been perfect. The most fastidious and exacting cannot complain. No element is wanting to insure crop returns never before realized. The country

## East of the Santa Lucia Range

Constituting two-thirds of the county, with its numerous wooded valleys, plains and undulating hills, is at present divided about equally between the possessions of the cattle kings and those of the unassuming tillers of the rich, warm, brown, friable soil so common in this region. Wheat is the chief product of the county to this date and largely in ascendancy the present season. But while excelling in cereals—admitted by Mr. Montpelier of the Grangers' Bank, and other excellent judges, to be the finest raised in the State—nevertheless, wheat-growing and cattle-raising are destined, in large part, to give place to products more valuable. "The staff of life" may be raised on the soil covering the richest gold mine, but he who would persist in raising bushels of wheat where pounds of gold might be extracted with the same labor would be considered a simpleton. The coming industry and ultimate destiny of this section is

## Fruits and Vines.

The higher the hills (and they have good soil to their tops) the higher will be the grades of our port, sherry and sauternes wines, unsurpassed in excellence, for sufficient samples have already been produced to establish this fact. The home of the olive is certainly in the warm, dry atmosphere

# AGRICULTURAL NOTES.

## CALIFORNIA.

### Butte.

**CROP PROSPECTS.**—Biggs *Argus*, May 21: A drive over the adobe lands west of town shows the wheat crop to be in a much better condition than we expected. The last two weeks' cool weather has been everything for the crop, and the harvest will show almost an average yield. A number of fields examined will, in our opinion, produce 15 sacks to the acre, and very few places only where the land has been drowned out will produce less than six sacks to the acre.

### Colusa.

**GRAIN CROP PROSPECTS.**—Williams *Farmer*, May 23: The north wind of this week seems to be an affliction we have to bear with every spring. Just now it will do far less damage to the grain than had it come six weeks later. It has been cool and not of the hot, scorching kind usually prevailing at this season of the year. There is enough moisture in the ground and in the stalks of the summer-fallow wheat to mature it without any serious loss or damage, and the probabilities are that we will have at least as large a harvest as usual and of as fine a quality.

### Contra Costa.

**DANVILLE FRUIT PROSPECTS.**—Oor. *Gazette*, May 23: Almond, apricot and prune trees are very full of already good-sized fruit, and other varieties of fruit will yield a fair crop. A very few years more and our valley will fairly swarm with fruit and nut gatherers during their seasons.

### Fresno.

**FRESNO CROPS.**—*Republican*, May 22: The cool weather of the past two weeks or more has proved of remarkable benefit to farmers. Fields of wheat that ten days ago were thought to be entirely destroyed will now yield from a third to a half crop, while those in the eastern portion of the county will yield much heavier than last year. Estimates as to the loss this county will sustain by reason of a late dry season vary from 10 to 30 per cent less than last year's crop, while a few hold that taking the county as a whole, and on account of the increased acreage, the yield will exceed that of last fall. Aside from grain, all other products in the county will exceed those of last year. The honey output on the west side of the county will be the heaviest ever known. It is estimated that our wool shipment will be from one-fifth to one-third heavier than in 1890.

### Glenn.

**CROP PROSPECTS.**—Willows *Journal*, May 23: The grain crop has developed rapidly, and now barley, wheat, etc. are all headed out. Wheat that gave the appearance a week ago of making only a small yield, now presents a more encouraging outlook. The present cool weather will give later sown grain further time for more proper maturing, and will also allow the heads to more properly fill out. The berry is now in the dough, as the farmers term it, and the meshes in the head are well developed. Unless there are some severe dry winds before the berry hardens, the grain will weigh fully up to that of any previous season, and the yield per acre be up to the average. Barley is further advanced than wheat and looks fully as well. In some portions of the county it will be ready for harvesting in a few weeks. Hay has commenced and the crop bids fair to be about as heavy as in previous years. Notwithstanding a few deficiencies, the yield will be above an average, allowing for further drawbacks, and the large acreage sown this year will make the crop of the county an exceedingly large one.

### Humboldt.

**FARM NOTES.**—C. E. Spears, writing from Waddington, says: The grass is growing fast. The cows are doing better this season in the county than last year. The prospects are that we shall be able to make up for the lack of butter from the southern part of the State. Stock is very low. Cannot some one push that railroad through and give us a way out with our produce? The grain crop is good. Potatoes are not being planted very extensively on account of so much land devoted to dairying. The new creamery at Grizzly Bluff is progressing nicely and expects to be in running order by July 1st.

### Lake.

**CROP OUTLOOK.**—Lakeport *Avalanche*, May 21: Inquiry of farmers and fruit-growers from various parts of the county tend strongly to sustain the bright outlook heretofore entertained of a heavy yield of all the farm products of the county. The cool and often cloudy weather that has prevailed during April and May has largely compensated for the lightness of the late rains, and what might have been a dry spring season has been averted. In most parts of the county the soil is still moist and all the conditions necessary to the development and maturing of full crops are present. In some of the valleys, where the soil is very rich, there is danger of too rank growth rather than any results of a drought. The hay crop will be heavy, while grain and fruits of all kinds will make more than an average yield.

### Los Angeles.

**POMONA'S HONEY CROP.**—*Progress*, May 20: The season this year has so far been very favorable in its cool weather for the development of honey in the white sage, the most valuable of our honey-producing plants. In the foothills

in the vicinity of Pomona are from 10 to 20 beehives with stands of bees running from 50 to 600 swarms. The total number of stands is estimated at between 2000 and 3000. Each swarm usually produces from 50 to 200 pounds of honey in a season.

**CONTRACTING FOR NEXT YEAR'S ORANGE CROP.**—*Alhambra Review*, May 23: Much of the orange crop still remains on the trees, the shippers evidently delaying the picking in the expectancy of higher prices. Bids for next year's yield are already being made, one-third of purchase price being offered to close the bargain, with balance payable when the fruit is picked.

**LARGE YIELD OF STRAWBERRIES.**—*Covina Argus*, May 20: T. F. Griswold has taken from his three acres of strawberries 6000 pounds as the result of one picking. The fruit is of superb quality and very large, some having been picked measuring  $4\frac{1}{2} \times 5\frac{1}{2}$  inches.

**A NOVEL INDUSTRY AT PASADENA.**—*Cor. L. A. Express*, May 16: Mrs. Crowell of Center street has gone into the silkworm industry on quite an extensive scale. She has a house for sheltering her numerous trays, of which she has over 70 filled with these squirming creatures. The feeding of the caterpillars, the formation of the cocoons and the securing of these before they are pierced by the moth, and the maturing of a sufficient number of moths to supply eggs for the following year, however interesting, is a work which is something too arduous to be called an amusement. These caterpillars must be fed three times daily with fresh mulberry leaves, and it is a never ceasing marvel to the inexperienced, the quantity and rapidity with which a full grown silkworm will dispose of this food. Among the 70 trays, Mrs. Crowell had the caterpillar in all its stages, from the infinitesimal unhatched egg, the almost invisible tiny worm, and so on in every stage, each grade of growth in a different tray, until the fat, ugly silkworm is mature. When this period is reached, the caterpillar is ready to undergo the transformation into the pupa condition, and it ceases eating for some time, and then begins to ascend the twigs and brushwood provided for its use, and it then sets about spinning its cocoon. The insects complete their cocoons in from three to four days, and in two or three days afterward, Mrs. Crowell collects the cocoons and places them in an intense heat to smother the pupa and prevent its bursting its shell, which spoils the silk for use. After 11 to 15 days have passed, the moths which have not been smothered begin to make their appearance, and coupling takes place immediately. Then the males are destroyed and the females placed in dark boxes till they deposit their eggs. Then once again the round of hatching, feeding and refeeding the greedy creatures. Just at present, the caterpillars are at the spinning stage, and very interesting it is to watch their work.

### Monterey.

**WILL NOT ALLOW HAY CUTTING.**—*Salinas Democrat*: The prospects of high prices for wheat and barley have had the effect to make several landlords in this vicinity refuse to allow their tenants to cut grain for hay as has hitherto been their custom. Hence, there will be very little hay cut and the price is very likely to rule considerably higher than during ordinary seasons.

### Orange.

**POTATO AND CABBAGE SHIPMENTS.**—*Placentia Cor. Anaheim Gazette*: J. W. Fryer has loaded several cars of new potatoes at Fullerton. They were raised on the Olinda ranch. He has several cars more to ship. Quite a good many cars of cabbage are ready to be shipped, but the price is so low it will hardly pay to ship it. About 20 cars of cabbage have been shipped from Placentia, and with the oranges, potatoes, nuts, etc., shipments will round up 100 cars in the season; at \$200 a car, freight is \$20,000. That comes out of the farmers of this one locality annually. What is the matter with the farmers and other parties joining together and building a road of their own to the Missouri river, and ship their produce at nominal rates? Cabbage sells for from \$38 to \$45 a ton East. The grower gets from \$6 to \$10 a ton here. One hundred dollars a car would pay well to Missouri river points; instead we have to pay \$200. We are all simply working for the railroad.

### San Bernardino.

**A TYPICAL FARM AT REDLANDS.**—*The Facts*, May 22: The ranch of H. H. Sinclair is a type of Redlands orchards. He has 30 acres, of which 17 are planted to deciduous fruit, 10 to oranges and the balance is occupied by his fine new house, barn and grounds about them. Last year the gross income was \$4600 and he paid out for labor \$1000. The net profit was about \$3600. His oranges four years ago brought in \$125, three years ago, \$100; two years ago, \$860; one year ago, \$1700. The returns are not in hand for this year, but there is a big increase over last year's figures.

### San Diego.

**IMPROVING THE STOCK.**—*St. Julian Sentinel*: Our stock interests, while decreasing in quantity, are increasing in quality and value. The stockmen are wide awake to their best interests, and are now raising only the better grade. Cattle receive the most attention, and thousands of fat beefs find their way to market from these mountains, bringing many a golden shekel into the pockets of their owners. In this connection, the attention of the public is called to the many high-grade stallions advertised in this issue, showing plainly where the

horse of the future will largely be bred. Sheep are rapidly disappearing from our midst, but the goat, which is all profit, can still be found in all rough places. But little attention has yet been paid to the hog, but the dollars that are to be made out of the animal will attract attention in future.

### San Luis Obispo.

**CATTLE NOTES AT CRESTON.**—*Cor. Tribune*, May 22: The movement of cattle from and to the cattle ranches and markets still goes on. Mr. Easton Mills, of the Cammatti ranch, with a fine drove of No. 1 fat cattle, which were en route for the San Francisco market, passed here. Capt. Clark of the Vaquero Spring ranch has been out the past week purchasing young cattle for his ranch. He came in with a fine drove of yearlings and two-year-olds, some 250 head. The captain is out of the calf-raising business. He will divide the toil by taking the one and two-year-olds. The captain's head is level on that part of the cattle business. It takes less money to raise a yearling by dollars than it does by milk.

### Solano.

**THE HAY CROP.**—*Dixon Tribune*: The effect of the good prices at which wheat opened will be to shorten the hay crop. Farmers will thresh everything that will yield above five or six sacks to the acre. Hay is likely to command good prices. Not much has been sold as yet, but as high as \$10 per ton is asked for loose hay.

### Sonoma.

**FRUIT YIELD ESTIMATE AROUND HEALDSBURG.**—*Enterprise*, May 16: Joseph Hotchkiss estimates that over 3000 tons of peaches will be produced in the country tributary to Healdsburg this season. He is of the opinion that about 28 carloads, or 280 tons, of dried prunes will be produced in this section this year. Twenty-four carloads, or 240 tons, were marketed from this point last season, the Star Dried Fruit Co. shipping 163 tons.

**ABUNDANT CROPS.**—*Petaluma*, May 21: The Petaluma Fruit-Packing Company commenced work for the season this morning on cherries. It expects to put up during the season 75,000 cases. Fruit trees of all kinds are loaded down, and orchardists have to pull off much of it to save the trees and get better fruit. Hay is general in this section, and over 100 mowers are running in sight of the town. Hay and other crops are very promising.

### Tulare.

**PLOWING OVER THIRTY INCHES DEEP.**—*Tulare Register*, May 22: Mr. J. J. Cairns is preparing 80 acres to be planted to fruit next fall in a way that will test the efficacy of deep plowing if anything will. It is at his home place near Lindsay Station. The land is a mixture of clay and sand in such proportions as will make it easy of cultivation, but it has never been irrigated, and for want of an irrigation system in the neighborhood must be irrigated, if at all, from pump and well. It is therefore necessary that the land should be put in the best possible condition for holding water, and Mr. Cairns has gone about the business of preparation in this wise: Taking off all but two plows from his gang, he attached ten mules, weighted the plow down and sent it into the soil 12 to 13 inches. He was able to do this because the ground had been plowed and cross-plowed a number of times. Following this team came a subsoiler with 14 mules attached, and which went into the earth from 30 to 32 inches from the surface, tearing up the subsoil in a way that has been seldom, if ever, equaled in this country. If this land does not take in and hold, perennially, all the moisture which comes down from heaven, it will be because the surface is not kept free from weeds or because there is no efficacy in deep plowing. We shall watch results on this piece of land with interest.

**VINES AND TREES DOING WELL.**—*Advocate*, May 21: The immense acreage set to vines and fruit trees around Traver this season is doing well. The vines and trees are putting forth thrifty shoots and promise to make a thrifty growth during the summer. A very small percentage failed to grow and but very little replanting will be required, which proves the good growing qualities of our soil.

### Ventura.

**BIG FRUIT ORCHARD AT PURI.**—*Free Press*: D. C. Cook's orchard consists at present of 1941 acres, divided as follows: Apricot orchard, 400 acres, of which 250 acres are in bearing, the balance of the orchard will come into bearing next season. They expect to gather 200 to 250 tons this season. The fig orchard has 650 acres, of which 200 acres are now bearing. The varieties are White Smyrna and White Adriatic. Expect to gather 200 tons. Lemons and oranges, 290 acres. Not producing. Trees 1, 2 and 3 years old. Olive orchard (Picholine and Mission) 250 acres. Not producing. Trees 3 years old. Peach orchard, 50 acres. Not producing. Trees but one year old. Prune orchard, 20 acres. Not producing. Orchard 1 year old. Apple orchard, 24 acres. Not producing. Orchard 2 years old. Pomegranates, 20 acres. Part of trees in bearing. In addition to this extensive fruit business, the acreage in products will show as follows: Corn, 200; potatoes, 100 acres; hay, 300. Orange and lemon nursery, 35 acres. Ninety thousand budded orange trees are now ready for market; 5000 olive outtings; 6000 White Smyrna figs, and 5000 peaches. Planting has already commenced on 300 acres, which, added to his extensive orchards, will increase

the grand total to 2241 acres. Let it be understood that Mr. Cook is a most vigilant worker; constantly adding to and improving the lands when secured. Mr. Cook employs none but white labor, to whom he pays liberal wages, and providing married men with a comfortable house, etc. He now employs over 200 persons on his place, and during fruit-picking will require several hundred more.

### ARIZONA.

**THE IRRIGATION SYSTEM ENLARGING.**—*Tucson Citizen*, May 16: There are many ditch companies in the Territory of Arizona, and more canals in the course of construction. The Tucson canal is rapidly progressing and the canal near Gila Bend, known as Wolfley's canal, has now been begun. A map of Arizona will show that the Gila river takes a huge curve east of the station known as Gila Bend. About 35 or 40 miles north of the station the Gila passes through bluffs and canyons of considerable length, opening out below into a broad and fertile valley. A more favorable location for a canal could not be "made to order." At the lower end of these bluffs is a most excellent site for a reservoir, and here one is being built. Gen. Johnson states that he does not know its dimensions, but gives an idea of its magnitude in saying that it will irrigate from 200,000 to 300,000 acres of land in the mesa below. Teams and men are now excavating and piling up the huge embankment needful to contain the enormous weight of the water. Gen. Johnson reports that the intention of the projectors of the canal, with the capital they have beheld them, is to push the work with all the speed practicable and to complete it by the first of November. The canal will pass through the splendid level valley lying east of the river, swinging round from it several miles, bringing in north of the railroad and passing below the station for some 20 miles. The entire course of 60 or 70 miles will be level, is through cultivable land, and none of the difficulties encountered by the Tucson Canal Company in the removing of large boulders will hinder here. On this great area of finest soil farmers from the East will flock and make their homes, and Arizona will no longer be reported to the world at large a vast and sterile desert. Its location will undoubtedly give the canal advantage over those of the Salt River or Santa Cruz valleys, which are not noted unless sought.

**FRUIT IN CASA GRANDE.**—*F. B. Logan in Tucson Citizen*: It has already been demonstrated to the satisfaction of the painstaking and observant that there lies in and beneath the soil of Casa Grande and environs far greater and more certain wealth in its peculiar adaptation to the production of fruit trees, coupled with a climate inferior to none in the surety of fruit bearing, and quantity and quality of the production. To become satisfied of the above requires but to behold and believe. In the dooryard of J. M. Woods, proprietor of the Simcoe House, may be seen young apricot trees planted February, 1890, so heavily loaded with fruit that Mr. Woods was required to thin to about one-half the original amount. Prune trees show a growth of two feet already before the last spring months have merged into summer. Fig trees adorn his garden that were six-inch cuttings 15 months ago, now full set with the promise of this luscious fruit. Corn planted six weeks ago is four feet high and potatoes planted 18 days ago are in blossom to day.

Slight derangements of the stomach and bowels may often be corrected by taking only one of Ayer's Pills. Through not having the Pills at hand, your disorder increases, and a regular fit of sickness follows. "For the want of a nail, the shoe was lost," etc.

### Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

33 & 35 Main St. 68 Front Street,  
SAN FRANCISCO, CAL. PORTLAND, OREGON.

LAP JOINTED  
STEEL MAIN FRAME.  
INDESTRUCTIBLE  
STEEL DRIVE WHEEL.  
THIN STEEL PLATFORM.  
ONE APRON ONLY.  
STEEL BUNDLE CARRIER.

## LIGHT ENCLOSED GEAR REAPER

Is not only effective in good standing grain, but in the worst crops of all kinds it will save where other reapers cannot work.

It is the lightest-weight reaper in the world, yet the strongest, and is often available where land is too rough for others.

The broad sweep of the rakes delivers the grain so well that men can bind after it better and faster than after many other side-delivery reapers.

The driver has perfect command of the machine without turning his head from the team. With the levers he can adjust the height of the machine or tilt it to any angle independently, or regulate the size of the gavel by setting a lever.

## REGAN VAPOR ENGINE.

NO BOILER. FIRE. EXPLOSION. STEAM,  
ASHES OR ENGINEER.

Started Instantly Without Even a Match. Will Run on Natural or Manufactured Gas or Gasoline. The Moment Engine Ceases to Run, all Expense Stops.

Upright and Horizontal, Stationary and Marine Engines from 3-4 Horse Power, Upward.

Our Engines are especially adapted for Pumping and Irrigating and Spraying Fruit Trees; in fact, for any use where power is required.

OVER 400 IN USE.

POPE & TALBOT, LUMBER, Office, 204 California Street }  
SAN FRANCISCO, Feb. 25th, 1890.

REGAN VAPOR ENGINE Co.—Gentlemen: The 4 H. P. Vapor Engine I bought of you last May has been in constant use ever since, and has given me entire satisfaction. I have found the engine to be all that you claimed for it, and more too. You can use my name for reference if you so desire. I am, yours truly,  
H. TALBOT.

We Carry Thos. Kane & Co's Famous Racine Launches, fitted with our New Compound Engines.

SAN FRANCISCO.**

## What We Owe to the Invention of Machinery.

Few persons have any correct idea of the difficulties which were met with 60 to 70 years ago in making suitable tools and machinery from metal. There were no planing, boring or shaping machines; the turning lathe and the drill-borer were about all the devices which could be called into use by the mechanic of that time. Inventors had to make by hand the machines they invented, with the aid of other machines in making the individual parts. They had to invent some tools so as to be able to make certain parts of their invented machine. When the celebrated English machinist Clement entered a shop as master at London in 1814, he found the tools so poor and defective that he had to spend days in making such ones as were needed. James Watts, the inventor of the steam engine, could not get his first machines in working order in consequence of a lack of some contrivances. The first cylinder which he had cast was not tight, and was on one end five millimeters wider than on the other. A good cylinder should not show more difference in width than one-half millimeter.

And then the cost of work at that time was extravagant. Whitworth, one of the oldest manufacturers of working machines in England says that the polishing of cast-iron cost \$3 per square foot 40 years ago, as the work had to be done by hand. The manufacturer Perry paid for the first steel pens \$1.25 a piece, but still these pens were not as good in quality as those which are made to-day. After factories had been established, the price of a steel pen was still \$1, then 50 cents, and then 25 cents, which price was kept up for some time. To-day one can get a gross for that price; all owing to our perfect machinery.

**A GREAT BRIDGE.**—The great steel bridge across the Columbia river at Vancouver will be a mammoth concern. It will be 6000 feet from the Washington to the Oregon shore; it will be double tracked with roadway on top for teams, and will be erected upon pneumatic piers. The pivotal pier, or draw pier, will support a draw which will give an opening of 200 feet space on either side for vessels to pass, and the span immediately south of the draw span will be 375 feet. Whole structure to be of steel, built 10 feet above the high water of 1876, and 40 feet above low water. On account of the sandy formation it will be necessary to go down 80 feet below low water to get a firm foundation. This gigantic structure will cost over \$4,000,000. It will be Jan. 1st, 1892, before the cars can pass over it. The company is pushing the bridge and also the road as fast as men and money and their present perfected plans will permit.

### HOW TO DRESS WELL.

It may be an easy matter for Mrs. Vanderhilt to dress well. She has no use for this advice. But people in moderate circumstances should save their dollars by using Diamond Dyes. Feathers, faded ribbons, and all dress goods can be easily colored and one's wardrobe always be kept fresh and attractive.

A young friend, a type-writer (a class that must dress well), found herself in need of a street dress, without much money to spend for it. She ripped and washed a grey flannel dress, and colored it a warm, rich brown with Diamond Dye Fast Brown. Her work was a success, and no one would have taken this tasty suit for a home dyed dress.

Use Diamond Dyes for your home dyeing, and always have satisfactory results. They are simplest, strongest, and fastest, making the latest fashionable colors.

**COMPRESSED COAL IN FRANCE.**—Compressed coal is coming largely into use in France. It is reported that there is hardly a torpedo boat belonging to France in which the compressed coal dust is not used, and it is consumed in the battle ships wherever possible. These briquettes are generally composed of a mixture of from 8 to 9 per cent of pitch, with 92 to 91 per cent of coal dust. In the most improved machines the coal dust and the pitch are shoveled into a hopper, and it is not touched again until it is automatically stacked in the yard outside the engine-room. The materials are consolidated by means of a mixing apparatus into which steam is admitted. A form of coal which, by itself, is almost useless for burning, is thus converted into a really serviceable fuel, that, as regards cheapness, may be made to enter into successful competition with the best steam coal. More persistent efforts should be made to utilize the mountains of coal waste which are so fast accumulating in this country.

For several years past a gentleman in Nashua, N. H., has been in the habit of taking Ayer's Sarsaparilla to tone up his system preparatory to the heated term. He finds that this medicine relieves the tired feeling so prevalent during spring and early summer.

### ORANGE PLANTERS

Should read the advertisement of the Aloha Nurseries. The best varieties are offered at rates so low that no one need hesitate about planting for experiment, or for investment in places where the orange is known to thrive.

\$500,000

TO LOAN IN ANY AMOUNT AT THE VERY LOWEST market rate of interest on approved security in Farming Lands. A. SCHULLER, Room 8, 420 California St., San Francisco.

## AYER'S PILLS

Excel all others as a family medicine. They are suited to every constitution, old and young, and, being sugar-coated, are agreeable to take. Purely vegetable, they leave no ill effects, but strengthen and regulate the stomach, liver, and bowels, and restore every organ to its normal function. For use either at home or abroad, on land or sea, these Pills

### Are the Best.

"Ayer's Pills have been used in my family for over thirty years. We find them an excellent medicine in fevers, eruptive diseases, and all bilious troubles, and seldom call a physician. They are almost the only pill used in our neighborhood."—Redmon C. Conly, Row Landing P. O., W. Feliciano Parish, La.

"I have been in this country eight years, and, during all this time, neither I, nor any member of my family have used any other kind of medicine than Ayer's Pills, but these we always keep at hand, and I should not know how to get along without them."—A. W. Soderberg, Lowell, Mass.

"I have used Ayer's Cathartic Pills as a

### Family Medicine

for 35 years, and they have always given the utmost satisfaction."—James A. Thornton, Bloomington, Ind.

"Two boxes of Ayer's Pills cured me of severe headache, from which I was long a sufferer."—Emma Keyes, Hubbardstown, Mass.

## TO SHIPPERS!

## California Ventilated Barrel

EXCELS ALL OTHERS!

IT IS LIGHTER, STRONGER, MORE DURABLE AND BETTER VENTILATED THAN ANY OTHER BARREL.

This engraving of the CALIFORNIA VENTILATED BARREL makes plain to the practical shipper its points of superiority over the common barrel, which may be enumerated as follows:

It weighs from five to seven pounds less than the ordinary barrel, making a material saving in freight charges.

It costs less than one-half for trimming, and does not require an experienced hand to cooper it.

It is Made of the Best Quality of Spruce, Woven Together with Copper Wire, And can be furnished in any size desired.

It is the only thoroughly ventilated barrel made, a very important point.

The heads are warranted not to come out in transit, and no liners are required.

It is stronger and more durable than any other barrel.

Never varies in size, even to the extent of a quart.

— ALTOGETHER MAKING IT —

**The Cheapest and Best Barrel on the Market.**

THE CALIFORNIA BARREL IS ADAPTED TO SHIPPING THE FOLLOWING ARTICLES:

Apples,  
Oranges,  
Onions,  
Potatoes,

Sweet Potatoes,  
Dried Meats,  
Bottled Goods,

Glassware,  
Canned Meats,  
Crockery,

Eggs,  
Poultry,  
Walnuts,  
Almonds,

And Vegetables of All Descriptions.

A factory making these barrels is now in operation in San Francisco, with a capacity of 4000 barrels a day. The success of the barrel is almost unprecedented, and it is bound to become the package in a very short time. EVERY ONE USING IT IS ENTHUSIASTIC IN ITS PRAISE. IT HASN'T A FAULT. When shipped in knock-down form, about 2500 barrels can be placed in a single car. Special rates given on car lots. WRITE FOR PRICES AND PARTICULARS.

Florence, Los Angeles County, California.

Alameda Co. Farmers' Institute.

A conference of farmers not members of the Grange or Alliance was held at the Pioneer and Grange picnic at Alvarado, May 23d, and H. W. Meek of San Lorenzo, I. B. Haines and J. C. Whipple of Decoto were elected on the Board of Managers for calling and arranging for the first meeting of the Institute to be held probably in August next. This selection of farmers outside of the Order makes the full board of nine members. H. B. Valpey of Warm Springs, T. B. Downing of Pleasanton and Joseph Shinn of Niles having been selected by the Farmers' Alliance and W. C. Blackwood, Mr. Munson of Haywards and A. T. Dewey of Oakland, the Grange. W. Renwick of East Oakland, L. E. Osgood and A. B. Montross of Irvington, C. C. Scott of Alvarado and James Shinn have also been elected as alternates to act in case of absence of principles chosen.

The farmers elected at Alvarado with several representing the Orders named by vote recommended a meeting of the board at Niles on Saturday, June 13th, and A. T. Dewey was requested to notify members of the board to be present.

We believe much interest will be taken in even the first session of the Institute, and that it will increase at each succeeding meeting.

All Farmers

Are requested to attend and participate in the proceedings of these Farmers' Institute meetings. Many should write and read articles, if ever so brief, on subjects and methods they are most practically familiar with; others join in discussing the papers presented and exchanging views and experiences on farming and household topics. Suggestions, in the meantime, to the Board of Managers are in order. It is hoped they will all be prompt to attend, and be prepared to help make the enterprise a success from the beginning. Inquiries should be made before June 13th as to what convenient place can best accommodate the first Institute meeting for a one or two days' session. Like the Teachers' Institutes and the Fruit Growers' Convention, these Institute gatherings can be made socially and materially profitable to all attendants.

A STARTLING REVELATION

To all owners of Horses. The "Complete Horse Book" tells all you want to know about the Horse. How to cure all his diseases without a doctor. Buy it and read it, and it will save you many a dollar. Sent for 10 cents, silver or stamps. Pioneer Buggy Co., Columbus, O.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription, paid in advance, 5 mos. \$1; 10 mos., \$2; 15 mos., \$3. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

NEWSPAPER AGENTS WANTED.

Extra inducements will be offered for a few active canvassers who will give their whole attention (for a while at least) to soliciting subscriptions and advertisements for this journal and other first-class popular newspapers. Apply soon, or address this office, giving address, age, experience and reference. Special inducements to old agents.

DEWEY & Co., Publishers,  
No. 220 Market St., S. F.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

Half Tone Photo-Engravings.

Decided improvements have been made by the DEWEY ENGRAVING CO., of San Francisco, in the production of Photo facsimile printing plates that are worthy the attention of all publishers and printers.

With the advent of this style of fine and superior engravings comes an important reduction in prices over the older, slower and less perfect methods of reproductions of photographs, drawings, lithographs, paintings, printed engravings, etc. Parties interested should consult the DEWEY ENGRAVING CO., No. 220 Market St., S. F. Send for samples, estimates, prices, etc.

Ditching Machine for Sale.

If any farmer in Russian river or Santa Rosa valley desires a DITCHING MACHINE at a very low price let him address S. E. G., P. O. box 2617, San Francisco.

American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

"The Why's and Wherefore's."

BY  
Wherefore Do So Etc."

The above is the title of an illustrated annual in a handsome illuminated cover issued by Wm. Deering & Co., Chicago, the world famous manufacturers of the "Deering" harvesting machinery. From an artistic, as well as from a business standpoint, the "Why's and Wherefore's" is simply in the lead. As an advertisement it is a departure from old dry methods; and while teeming with clear and concise facts bearing upon the acknowledged merits of the "Deering Binders" and "Deering Mowers," it also contains a large quantity of exceedingly useful and entertaining matter, that cannot fail to add to the information and pleasure of every farmer and every farmer's wife, daughter and son, who may be so fortunate as to obtain a copy.

Deering & Co. are among the largest manufacturers in the United States, and it is safe to say in the world. Their aim has been "perfection" in harvesting machinery, and they have spared no pains to attain it. Liberal and judicious advertising has made the firm name known in all civilized countries, where it always stands for excellence and reliability. Mr. W. C. Rarig is general agent for the Pacific Coast with supervision over sub-agencies, which are established in all farming centers west of the Rocky mountains.

The general offices and warehouses are No. 11 Blinome street, San Francisco. "Why's and Wherefore's" will be sent free upon application by mail.

## IMPORTANT!

That the public should know that for the past Twenty-one Years our Sole Business has been, and now is importing (Over 100 Carloads) and breeding Improved Live Stock—Horses, Jacks, Short Horns, Ayrshires, and Jerseys (or Alderneys) and their grades; also, all the varieties of breeding Sheep and Hogs. We can supply any and all good animals that may be wanted, and at very reasonable prices and on convenient terms. Write or call on us. PETER SAXE and HOMER P. SAXE.  
San Francisco, Cal., April 1, 1911. PETER SAXE & SON, Lick House, S. F.

### THE BEST FENCE YET!

Cheap, Durable, Portable and Safe.

THE SPALDING HUMANE WIRE FENCE is composed of eight No. 12½ galvanized steel wires, woven into four cables of two wires each; interwoven every five feet is a corrugated iron stay or guard, and held in place by the cables, thereby holding the cables firmly in place, preventing them being spread apart and letting stock thrugh. The stays or guards are corrugated and an inch and three-quarters in width, making the fence as visible as a board fence, which is a very essential point. Write for circulars and prices. Address BIRD-TURNBULL MFG. CO., 195 La Salle St., Chicago.

## IMPORTANT!

**H. H. H.**  
Horse Liniment

Is certainly the best preparation of its kind in the market. Ranchers, Stock Raisers and Horse Owners of every description will tell you that it does good work every time.

MEASURES. H. H. MOORE & SONS, Stockton, Cal.—GENTLEMEN: In answer to your inquiry, would state that I used your H. H. H. Liniment on my Holland prize-winning cow, "Lena Menlo," for a wrenched shoulder, and it relieved her very much. She calved the next day, and while still suffering from the sprain gave the largest authenticated quantity of milk ever given on this coast (104 gallons per day), showing conclusively the great relief received from your remedy. I consider it a necessity in my stables, and when away from home feel perfectly safe, as inexperienced men can do no harm with it, as they can with the more powerful blisters. Respectfully yours,  
BREEDER OF REGISTERED HOLSTEINS AND BERKSHIRES.

## S. H. MARKET REPORT

## Market Review.

## DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, May 27, 1891.

The weather the past week has been favorable for maturing grain crops by checking ripening and causing the berry to fill out to much better advantage. It is asserted that the improved crop weather has added all of 20 per cent to the yield. The cool weather keeps fruit back, but probably it is for the best, although when warm, forcing weather does set in, the fruit may ripen too fast, and under heavy shipments cause lower prices to obtain than otherwise would. The money market is reported unchanged. Considering the Eastern and European markets ours is fairly easy. In wheat, the markets at the East and abroad have fluctuated considerably. The following is to-day's cablegram from England:

LIVERPOOL, May 27.—Wheat—Steady. California spot lots, 8s 3/4d; off coast; 44s 3d; just shipped, 44s 6d; nearly due, 44s; cargoes off coast, quiet but steady; on passage, quiet; Mark Lane wheat quiet; weather in England, cool and wet.

## Liverpool Wheat Market.

The following are the closing prices paid for wheat options per cwt. for the past week:

	May	June	July	Aug.	Sept.	Oct.
Thursday.....	86d	86 1/2d	86 1/2d	86 1/2d	86 1/2d	86 1/2d
Friday.....	86d	86 1/2d	86 1/2d	86 1/2d	86 1/2d	86 1/2d
Saturday.....	86 1/2d	86 1/2d	86 1/2d	86 1/2d	86 1/2d	86 1/2d
Monday.....	86 1/2d	86 1/2d	86 1/2d	86 1/2d	86 1/2d	86 1/2d
Tuesday.....	86 1/2d	86 1/2d	86 1/2d	86 1/2d	86 1/2d	86 1/2d

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday.....	44 3/4d	44 1/2d	44 1/2d	Quiet.
Friday.....	44 3/4d	44 1/2d	44 1/2d	Firmer.
Saturday.....	44 3/4d	44 1/2d	44 1/2d	Quiet.
Monday.....	44 3/4d	44 1/2d	44 1/2d	Quiet, but steady.
Tuesday.....	44 3/4d	44 1/2d	44 1/2d	Firm, but quiet.

## Eastern Grain Markets.

The following shows the closing prices of wheat at New York for the past week, per cental:

	Day	May	June	July	Aug.	Sept.	Dec.
Thursday.....	1891	186 1/2	181 1/2	175 1/2	173 1/2	173 1/2	173 1/2
Friday.....	1891	186 1/2	181 1/2	175 1/2	173 1/2	173 1/2	173 1/2
Saturday.....	1891	186 1/2	181 1/2	175 1/2	173 1/2	173 1/2	173 1/2
Monday.....	1891	186 1/2	181 1/2	175 1/2	173 1/2	173 1/2	173 1/2
Tuesday.....	1891	186 1/2	181 1/2	175 1/2	173 1/2	173 1/2	173 1/2

The closing prices for wheat have been as follows at Chicago for the past week, per cental:

	Day	May	June	July	Aug.	Sept.	Dec.
Thursday.....	1891	168 1/2	161	164 1/2	164 1/2	164 1/2	164 1/2
Friday.....	1891	168 1/2	161	164 1/2	164 1/2	164 1/2	164 1/2
Saturday.....	1891	168 1/2	161	164 1/2	164 1/2	164 1/2	164 1/2
Monday.....	1891	168 1/2	161	164 1/2	164 1/2	164 1/2	164 1/2
Tuesday.....	1891	168 1/2	161	164 1/2	164 1/2	164 1/2	164 1/2

NEW YORK, May 27.—Wheat—\$1.11 1/2 for May '92, \$1.08 1/2 for July, \$1.04 1/2 for August, \$1.04 for September, and \$1.05 1/2 for December.

## Wheat in France.

PARIS, May 21.—Eclair publishes to-day an interview with officials in the office of the Minister of Agriculture in reference to the projected wheat corner. These officials said they did not believe that the people who are engineering the corner would succeed in attaining the object in view, as the French farmers refused to co-operate with the manipulators of the wheat deal. The French farmers, the officials said, always sold their produce on the spot, and would enter into contracts with any large syndicate, especially a foreign one. The French crops are in a very critical condition. The home supply, they said, would fall short by 20,000,000 hectoliters, and if the present rainy weather continues the result would be disastrous to the farmers.

## Eastern Wool Markets.

NEW YORK, May 22.—Bradstreet's: The demand for wool is weak and dealers are forced to make concessions in order to secure sales. A slow movement in the goods market is restricting the operations of manufacturers. Dealers consider prices now being paid for wool in the West as too high for the Eastern market. Usually at this time Eastern dealers are well stocked with new wool, but during this year has been on a small scale. Quotations on Ohio and Michigan fleeces are lower. Holders are trying to clean out their stocks of these grades by offering large concessions. The preference for Australian wool is inducing foreign dealers to sell their fine domestic wools at a sacrifice. In Texas, California and Territories but few sales have been made. The condition of the cashmere trade is such that manufacturers are unable to take any of these wools. The poorer grades of Australian are selling at quotations under those ruling last week. Choice foreign wools are still held at former values. Carpet wools are reported quiet and unchanged.

## California Fruits East.

CHICAGO, May 27.—Porter Bros. Co. sold to-day one car of California cherries, Black Tartarians, at \$1.45 to \$2.65. Rockports, \$2.10 to \$2.15.

NEW YORK, May 27.—Porter Bros. Co. of this city report the opening of the market for California fruits for this season. They have received and sold within the past two days 500 boxes of Black Tartarian cherries of very fine quality at prices ranging from \$1.75 to \$2.75 per box of ten pounds.

## Local Markets.

	Buyer Season.	Seller 1891.	Buyer 1891.
Thursday.....	H. L.	H. L.	H. L.
Friday.....	165	164	163
Saturday.....	165	165	165

\*After August.

BAGS—The market for grain bags is reported unchanged. Ruling quotations for standard-sized hand-sewed bring 7@7 1/2 c.

BARLEY—The sample market has ruled quite strong, with higher prices at the close. In futures, trading on Call has been more active. The following are the reported sales made on to-day's Call:

Morning Session: Seller 1891—300 tons, \$1.12; 100, \$1.11 1/2; 300, \$1.11 1/2; 300, \$1.11 1/2. Buyer 1891, after August 1st—200 tons, \$1.21 1/2 c. Afternoon Session: Spot—200 tons, \$1.65. Buyer 1891—300 tons, \$1.62 1/2; 100, \$1.62 1/2. Buyer season—100 tons, \$1.64. Seller 1891—200 tons, \$1.11 1/2; 200, \$1.11 1/2 c.

BUTTER—Notwithstanding heavy receipts, the market is slightly higher. The output of the creameries and dairies east of the Rocky mountains is said to be less than for the like time in last year. In consequence of this, there are many who look for much better prices later on. The higher prices ruling at the East for cattle are in favor of butter and against oleomargarine-makers.

CHEESE—Receipts continue large, causing a weak and unsatisfactory market.

EGGS—Receipts not up to the demand, which causes a growing market. Prices at the East are against shipments to us, unless our market advances.

FLOUR—The market is steady at unchanged quotations.

WHEAT—The sample market is strong under light supplies and a good demand. In futures, trading has been only fair. It is said that many farmers sold for future delivery their expected surplus. The following are to-day's reported sales on Call:

Morning Session: Seller 1891—100 tons, \$1.62 1/2; 500, \$1.63. Buyer season—100 tons, \$1.76. Buyer 1891, after August 1st—600 tons, \$1.70 1/2 c. Afternoon Session: Buyer 1891, after August 1st—100 tons, \$1.69 1/2; 700, \$1.69 1/2; 100, \$1.70 1/2 c.

## Market Information.

## Produce Receipts.

Receipts of produce at this port for the week ending May 27th, were as follows:

Flour, qr. sks.....	60,373	Middlings, sks.....	3,867

\*Inferior.

†Sold by auction at a fancy price, actually worth, by sample, about \$1.65. It was Sonora, rather pinched and somewhat mixed with barley. It came from the Kimberlin farm, Kern Co. Last year's first consignment also came from Kern Co.

## Cereals.

The local wheat market held to strong prices throughout the week. Obtainable supplies have dwindled to the smallest possible proportions. The carry-over into the season of 1891-92 will be the lightest for years materially, offsetting our very large crop. Cool, fairly cloudy weather has contributed no little in bringing this year's crop to larger proportions. Many localities, which had calculated on a very small outturn, if not a failure, now report they will have a third to over half, while other localities have been very nearly, if not fully, as well benefited. Oregon and Washington advices received the past week are more encouraging. East of the Cascades our information is confirmatory that in the more favored sections the plant has a strong, healthy growth, while the heads are filling out well. We are not advised whether the plant stood out well. The average yield to the acre will be less than last year's. In the Willamette valley the crop is promising favorable. The Agricultural Department, Washington City, reports the general outlook for crops east of the Rocky mountains favorable for a full average, which, if realized, will give this country a total yield of about 600,000,000 bushels. The large increase over the crop of 1890 will be more

than offset by a European shortage, without taking the largely reduced carry-over into consideration. What we now want is tonnage to move our surplus crop, for the ship may try and keep vessels from coming here to keep charters up. High tariff is somewhat against ships coming.

Barley holds strong under light obtainable supplies and large consumption. Cool weather retards the maturing crop. With warm, forcing weather, new would be offering quite freely. There is a prevailing opinion that the berry will be largely off color, which, if the case, will cause bright brewing grades to fetch better prices. Eastern Oregon and Eastern Washington advices report from poor to fair for this year's crop. The want of rain is said to have injured the late sown.

Oats are strong at full figures. The supply is light. Crop advices from the Willamette valley, Oregon, report the outlook favorable for a large yield.

Corn is slightly higher. The high prices restrict the demand. Crop advices are favorable, with a larger acreage planted.

Rye is weak, under free supplies. Advices from Oregon report that in some localities in the Willamette valley the plant is seven feet high.

## Feedstuff.

Ground feed is strong under a good demand and light obtainable supplies. Bran, middlings, cowfeed, and roll barley are selling at an advance.

Poor uncured hay is being put on the market which has to be sold on receipt. Rains to-day unless followed by dry weather will do considerable damage. Advices from Oregon report that west of the Cascades the crop will be very large, but east of the Cascades it will be light or, at least, only fair. In this city dealers state that the outlook is favorable for good prices, and that well cured new hay will fetch nearly as much as is now quoted for old.

## Live-stock.

The market does not show any material change, supplies and demands being about equal. Nevada advices report surplus bullocks about cleaned up, and for what are left, Chicago pays more than we. The market for dressed cattle is quoted as follows to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent:

HOGS—On foot, light grain fed, 5@5 1/2 c lb. dressed, —@—c lb. heavy, 4@4 1/2 c lb. dressed, —@—c lb. Stock hogs, 4@4 1/2 c lb. BEEF—Stall fed, 6@6 1/2 c lb.; grass fed, extra, 6@6 1/2 c lb.; first quality, 5 1/2 c lb.; second quality 5@5 1/2 c lb.; third quality, 4@4 1/2 c lb.; bulls and thin cows, 2@2 1/2 c lb. VEAL—Small, 6@7 1/2 c lb.; large, 5@6 1/2 c lb. MUTTON—Wethers, 7@8 c lb.; ewes, 7@7 1/2 c lb.; spring lamb, 7@8 c lb.

## Fruits.

Eastern fruit crop advices are rather conflicting, but the general tenor of advices indicate that the yield while more than in 1890 will be considerably less than was estimated a short time ago. Frosts in the northern Central states are said to have damaged the crop. It now looks as if our orchardists, who do not hold too long, will get good prices for their product. Oregon advices report a promising outturn east of the Cascades but poor west of the Cascades owing to blight.

Rains last night and to-day (Wednesday) will it is feared do considerable damage to berries and also to cherries.

The receipts of cherries are increasing, with canners busy packing. The overland shipments continue large. Shipments of apricots to the east are on a liberal scale. Green apples are hard to place. Raspberries and blackberries come in sparingly. Strawberries are in liberal receipt. Currants are making a fair showing. Canners have made large contracts for the latter.

Dried fruits are cleaning up slow. Fresh fruits interfere with the distributive demand. Driers who did not sell early in the season have lost heavily; experience has taught old hands at the business to strike while the iron is hot, or, in other words, when buyers are anxious, sell.

Raisins continue to come to hand. The crop last year was about 2,250,000 boxes. Slightly more than we estimated.

## Vegetables.

Garden truck is essentially unchanged, so far as rhubarb, asparagus, etc., are concerned, but lower for beans, peas, cucumber, summer squash and tomatoes. Canners are running on peas, and will soon start on beans.

New onions are in free receipt. The quality shows improvement. There are good buyers for well matured, suitable to fill distant orders.

Old potatoes drag. New are coming in quite freely, with quality improving. Overland shipments are still in order.

## Miscellaneous.

Poultry under fair receipts, more vegetables, and fruits are weak and lower.

Wool is quiet but firm. Free receipts give good assortments for buyers. For choice desirable grades a slight advance is obtainable.

From reliable advices up to May 27th the following summary of tonnage movement is compiled:

	1891.	1890.
On the way to		
San Francisco.....	334,547	206,848
San Diego.....	17,111	14,898
San Pedro.....	13,019	11,259
Oregon.....	33,574	23,197
Puget Sound.....	33,276	20,033

Totals.....431,467 276,225

In port at

San Francisco, disengaged.....	9,366	8,384
" engaged for wheat.....	38,669	33,165
" for new crop.....	10,904	...
San Diego.....	2,581	...
San Pedro.....	14,990	...
Columbia River.....	11,461	...
Puget Sound.....	...	...

Totals.....73,281 56,468

To get the carrying capacity, add 65 per cent to the registered tons as given above.

From July 1, 1890, to May 21, 1891, the following are the exports from this port: 1891. 1890.

Wheat, cts.....12,657,960 12,602,650

Flour, bbls.....1,088,837 1,027,506

Barley.....256,053 935,369

Hops are unchanged. Supplies are light. Reports of vines in Oregon and Washington being infested with hop lice cause growers to be firmer in their views. European and Eastern crop advices are conflicting.

Beans are moving off slowly. All advices at hand are confirmatory of a large increased acreage planted in this State, and the crop is doing finely.

Money is coming in slowly, causing quotations to be more or less nominal. The new crop yield will be large and quality good.

## Domestic Produce.

Extra choices in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations. WEDNESDAY, May 27, 1891.

20,000 will be sold in '91

THESE FIGURES TELL THE STORY OF THE EVER-GROWING, EVER-GOING, EVERLASTING **Steel AERMOTOR** Where one goes others follow, and "WE TAKE THE COUNTRY"

This unprecedented success is due to the fact that before commencing the manufacture, exhaustive scientific investigation and experiments were made by a skilled mechanical engineer, in which over 5,000 dynamometric tests were made on 61 different forms of wheels, propelled by artificial and therefore uniform wind, by which were settled definitely many questions relating to the proper speed of wheel, the best form, angle, curvature and amount of all surfaces, the resistance of air to rotation obstructions in the wheel, such as heavy wooden arms, obstructions before the wheel, as in the vaneless mill, and numerous other more abstruse, though not less important questions. These investigations proved that the power of the best wind wheels could be doubled, and the AERMOTOR daily demonstrates it has been done.

2d. To the liberal policy of the Aermotor Company, that guarantees its goods satisfactory or pays freight both ways, and 3d. To the enormous output of its factory which has made possible a reduction of prices so that it furnishes the best article at least in the poorest is sold for.

If you want a firm Fixed Tower made of Strong, Stiff Steel, and a Wheel that will cost you less than wood, and last in time as long as wood, IF YOU WANT THE TOWER YOU DON'T HAVE TO CLIMB (The Tilting Tower) and THE WHEEL, that RUNS when all others STAND STILL, or if you want a wheel that will churn, grind, cut feed, pump water, turn grindstone & saw wood, i.e. A GEARED AERMOTOR THAT WILL DO THE WORK OF FOUR HORSES AT THE COST OF ONE (\$100) write for copiously illustrated printed matter, showing every conceivable phase of Windmill construction and use, to the **AERMOTOR CO.,** Rockwell & Fillmore Sts., Chicago, Ill., U. S. A., or Branch, 12 Main St., San Francisco, Cal., U. S. A.

FOR \$60 and freight, we erect on a 40 FT. STEEL TOWER a Steel Wheel that equals any 12 foot Wooden one. GREAT REDUCTION TO FIRST PURCHASER.

**BAND COUPLING.**  
Malleable Iron. All Sizes.  
These Couplings are the best in the world, most powerful and cheapest. They have a ball and socket joint, right and left screw and work freely. We use them extensively in our Tank Building Department.

**WELLS, RUSSELL & CO.,**  
Mechanics' Mills, Cor. Mission & Fremont Sts., S. F.

## The Situation in Agriculture.

EDITORS PRESS:—In an article of mine recently published in the RURAL PRESS, I endeavored to show our farmers that whatever may be the cause of the present unsatisfactory state of the great farming industry, it surely had not been brought about by over taxation of farmers. By which I meant, that in the collection of revenue for the support of our government, the farmer class had not been discriminated against, but that while the present method of obtaining the national revenue is extremely unequal, that yet it seemed to me very clear that the agricultural class paid less of this large sum than they would pay if an equal assessment were made upon the property of the country, and the tax were collected from each person in proportion to his possession of property.

I repeat, that it is hopeless to expect to remedy our grievances until we clearly understand what has produced them. Well, what has produced them?

I answer, that the extortions of the great transportation companies are undoubtedly responsible in a measure for the low condition of our class, from one end of the country to the other, and nearly all classes of our people are aggrieved in the same way. As to the remedy for this grievance, I will venture only this suggestion. I do not claim to be either a lawyer or a statesman, but it is quite plain that the great abuse of which we complain cannot be fully reached and removed by the States acting each in its individual capacity and separately. It must be accomplished by the Congress of the United States either by enlarging the powers of the present Interstate Commerce Commission, or by some similar means. Some national authority must fix the rate to be charged for freight of all sorts upon at least all the leading railroads of the country, so that while the roads may earn a moderate profit upon the actual capital employed, the people shall have their business done at a fair rate. I rejoice in the hope that the present uprising of farmers and others is likely to be concentrated upon this great "reform," and I believe the desired result may be accomplished, without the ultra measure of confiscating, or otherwise taking possession of the roads by the government.

But while it is indisputable that over charges of the railroads have been a decided influence in curtailing the profits of agriculture, yet it certainly is not the only nor the greatest factor or cause which has steadily, and for several years, reduced the business of farming from one of profit, to one that scarcely pays expenses.

What is the all-pervading cause that has wrought out so stealthily all our woes. It can be expressed in one word—overproduction.

The natural result of overproduction is the reduction of prices, and this is true of all productive industries—agriculture as well as of all mechanical and manufacturing enterprises. But when the manufacturer perceives that his wares are accumulating beyond the demand for them, he can, and does "call a halt," so to speak, and temporarily engages in some other pursuit until circumstances favor a safe return to his old work again. But not so the farmer. His profits are small at best, and he must keep right on nearly in the same old line, and the lower the prices he obtains the more he must produce, and this only still more depresses prices! And so things have gone on from worse to worse until we are suffering from overproduction in almost all lines of our calling.

A careful examination of the national census returns for the last 40 or 50 years will clearly disclose the slow but sure process by which American agriculture has been reduced from general prosperity to general unthrift, and in many cases even worse.

The census returns show that the number of farms under cultivation have steadily increased faster than has the number of our people. Thus, the population of the whole country increased from 1850 to 1890 only about 175 per cent, while the number of farms have increased during the same period fully 260 per cent.

During this period of 40 years the number of cattle increased nearly 200 per cent, the quantity of corn grown about 260 per cent, wheat nearly 400 per cent, etc., etc., all other products in about the same ratio.

Surely we need not look further for the causes which have produced the general low prices of our products. There are not people enough to consume them! Neither is it at all strange that just this state of things has come to pass. The liberal land laws of our country and the ease with which millions of these lands could be brought under cultivation proved so inviting to settlers both native and foreign, that the increase in the number of farms and acres kept steadily in advance of the increase of population; and this plethora of products would have been developed much sooner, but for the beneficent working of the revenue policy of our Government which encouraged so many of our people to engage in other than agricultural pursuits, and so become consumers instead of producers of the fruits of the soil.

That overproduction has really produced the present depression in prices can be fully verified.

There now lies before me an elaborate series of tables prepared by that able statistician, C. Wood Davis, in which the steady but sure increase of production has advanced beyond the demand for it, and beyond the capacity of our people to consume.

In the year 1890 our population numbered less than 63,000,000, while the products of our farms were sufficient to support from 6,000,000 to 10,000,000 more. Of beef we had enough for 71,000,000 of people; of pork for 76,000,000; of corn for quite as many, and of oats we grew enough for a population of 100,000,000, and so on through the whole list.

I cannot ask space here to even suggest a remedy for this state of things. In a future paper I may have something to say about it, but I fear that an increase of money, whether of coin or paper, would not remove the evils of the present situation.

JAMES SHINN.

Niles, April 25th, 1891.

## THE APIARY.

## Honey Prospect for 1891.

EDITORS PRESS:—Bees have done remarkably well so far this season. The honey obtained has been lighter in color, and better in quality than is generally gathered at this season of the year; this is no doubt owing to our moderately cool weather we have had this spring.

All bloom has been considerably later than usual, and, as a natural consequence, bees have had more of a chance to work on it.

It is too early yet to give any definite answer as to what sort of a crop we shall have; but all indications are exceedingly favorable for a large crop, especially in this part of California. Early in the season the manzanitas furnished quite an amount of nectar, and all colonies built up rapidly, and several entered the surplus boxes. The fruit bloom was also very heavy; but as we had a rainstorm for a week in the light of the fruit bloom the bees did not gather as much as usual from this source. In certain seasons the apple tree is a great yielder of honey; but the honey is not extra light in color, although it makes it up in flavor, as it retains that exquisite apple aroma. Apple honey, after once tried, I do not think will go begging for a market.

At present, bees are working on California lilac, white clover, locust, and numerous wild flowers.

I noticed early in the season that the bees worked well on the bloom of the black oaks in our vicinity; but whether they obtained much honey from this source, I am unable to state.

Our swarming season is about over here, and bees have settled down to business in the surplus boxes.

One day here, after a continued rainstorm, five first swarms came out, and all settled together, making a mass of bees as large as a good-sized barrel. I divided them up into equal swarms, as near as possible, and bived them, giving each swarm a frame of unsealed brood. They all stayed in until the next forenoon, when they all swarmed out and united again. I tiered three ordinary hives up, and placed them in it and left them alone. A few days ago I examined them and found that they had all available space filled with brood, bees, honey and comb. Such immense colonies as this work very well for a time, but in a few months they will dwindle down to the size of an ordinary colony.

Unsealed brood will not always hold a colony in a bive; of this I have had abundant proof. I have even known young swarms to stay in the line until they had the hive two-thirds filled with comb and honey, and then leave, every solitary bee in the bive going off.

Some persons may perhaps exclaim: "Well, your hives were not properly ventilated and shaded, and that accounts for it."

Yes, my hives are well shaded, and sufficient ventilation is given, but when a colony becomes dissatisfied, it is almost impossible to make them stay, unless you cage the queen, and then, perchance, three-fourths of the bees will leave and go to the parent colony.

It does not do to leave bees hang out very long after swarming in a location like mine, as hollow trees and other available homes are too abundant for bees. The sooner they are bived the better, and after you have most of them in, they should be moved quite a distance from where they clustered, because the scouts that have gone abroad to seek a home, would soon return and lead them away.

It frequently happens in a large apiary for strange swarms to come there. This is, no doubt, owing to the leaders of the swarm getting on, or crossing one of the "lines of flight" of a large apiary and coming home with the returning bees.

After an extended trial, I am completely satisfied that a cross between an Italian and Carniolan race of bees is the best. Of course, I find them a trifle more irritable than either race in their purity, but still this is of little moment compared with their other good qualities.

Come with me now and we will open a colony of my favorite bees. We raise the bive cover gently, blow a few puffs of smoke in over the sections. What beautiful, snowy white combs, you exclaim; and the honey, how evenly and whitely it is capped; what an evenness obar-

acterizes all their work, and what beautiful bees! They all show more or less yellow bands and several extremely broad bands of white. How fixed and naturally they hang to the combs when examining them! Note the abundance of brood, the immense number of bees and the cleanliness of their hive inside. Ah yes, here is the queen—a large, reddish-gold bee with bright, silvery-colored wings. She does not seem in the least bit disconcerted or excited by the opening of the bive and the handling of the frames. You see the bees continue to work even while we handle the sections and frames. Now we arrange everything in proper order again; the bive is closed up—not a single sting and not a solitary bee killed.

You ask why not raise queens from such choice stock and have them all alike. Well, the fact is, I do try to, but it is an utter impossibility to make queens duplicate themselves. Possibly you will get two out of ten queens that will somewhat equal the mother. Hybrid queens, generally speaking, are larger than the full-blooded bees and are more prolific.

Some apiarists speak of queens being too prolific, but I have yet to find the first one that I thought was too prolific—the more prolific a queen is, the more bees there are; and the more bees there are in a hive, the more honey will be stored.

The practice of clipping the queen's wing, I do not believe in. I am aware that I am stepping on some apiarists' toes by making such an assertion, but if they can prove to me that I am wrong, well and good; I should be pleased to receive their proof. Now, a few facts in regard to clipping queens' wings: In an apiary where this method is practiced, there is always quite a loss of queens, and especially so, if the hives are close together and elevated from the ground some distance. If the hives set close to the ground, possibly they will return to their own bive again. If you are not on hand to watch all swarms, there is great danger of their entering the wrong bive and getting killed. Sometimes after the bees have made frequent attempts to swarm, and are unsuccessful, they will kill their queen with a clipped wing and raise another in her stead, so that the swarming fever can be gratified.

If the ground around an apiary is infected with ants, it is an exceedingly dangerous practice to clip queens' wings. If you are constantly on hand, all right; if not, you stand very favorable chances of losing a queen. All things considered, I think that there is more disadvantages than advantages in clipping the queen's wing.

S. L. WATKINS.

Grizzly Flats, Cal.

## POULTRY YARD.

## Poultry in Tulare County.

After having had several years experience in raising and handling poultry, I wish to say that right here in Tulare county there are more natural advantages for raising and caring for poultry than in most places. It is the home of the turkey, and in fact I think all will agree with me when I say a paradise for poultry of all kinds. Our market is good for both poultry and eggs—so good, in fact, that the eastern dealers are making it very profitable sending in carload after carload of both every month in the year.

In view of these facts would it not be worth while to take a little more pains with our poultry and see to it that the fowls have plenty of food and water and their houses and yards are kept clean? These are the most important features of the poultry department. All know that a dozen hens well cared for, will bring in more ready money each year than any other investment of like amount. Then why neglect that which you know pays the best? I have paid from \$50 to \$200 for a lot of turkeys which had never cost the owners anything but a little time. Again, I have heard more than one farmer say that the net income from his poultry amounted to more than his 160-acre wheat field.

Here in Tulare the average price for turkeys is from 10 to 12 1/2 cents per pound, live weight, and chickens sell according to quality. Right here I will say that the eastern chickens bring a higher price in the San Francisco market than our own. Some of you perhaps may not have been aware of this, but it is so. And why? Because they are larger and in better condition. The time is at hand for us to see to it, and not let these eastern dealers take our market from us, while they are fast doing and will continue to do so long as we let them exult in quality. We can overcome this only by getting the very best breeds for market, such as the Cochin, Brahma, Plymouth Rock, or Langshan. You may say that the smaller kinds, such as the Leghorn, Black Spanish, Hamburg, or even the mixed breeds are the most profitable as layers. Well, if you are keeping hens for eggs only, perhaps you are right, but if you wish to raise chickens for market, the larger they are the better price you will get for them. If you want to raise both poultry and eggs, I would suggest separate poultry yards; but if you cannot do this, the next best thing to do is to get the best kind for all purposes, which in my judgment is Plymouth Rock or the Wyandotte.

We can hardly expect to compete with our eastern friends by letting our poultry run wild

and giving them no attention whatever. A few years ago I had a farm near Plano, in this county. I kept 100 hens and a strict account for one year. At the end of that time I found that they had netted me over \$250, and I have no doubt but with a little care anyone can do as well or better than that. With our mild climate and evergreen fields and the best market in the United States, it does seem as if the poultry branch of farming is sadly neglected.—J. F. VANSKIVER in Central Californian.

## THE STOCK YARD.

## Pacific Slope Grasses.

Of the 103 different kinds of grasses not known to the writer to exist in Montana many are especially valuable to our stock industry. It was these native grasses that sustained the innumerable multitudes of buffalo that ranged over our plains and mountains and grew fat. Some of our most prominent native grasses are the following:

1. "Blue joint," or "blue stem," or "wheat grass" (*Agropyrum glaucum*). It is readily distinguished by its rich and thrifty appearance and a bluish, glaucous hue, somewhat like the hue on a cabbage leaf. It does not tend to bunch itself and is not one of the "bunch grasses" of which we hear so much. It loves meadows or plains and tends to form a continuous sod of rich fodder, yielding under favorable conditions three tons to the acre. It seldom, under the severest trials and difficulties, yields less than one ton to the acre. These statements apply to native sod and not to cultivation, which would very heavily increase the yield. Prof. Scribner says: "Its quality is unsurpassed," and the same opinion of its value is held by stockmen in Nebraska, Colorado, New Mexico, and, indeed, in all our Rocky Mountain region. This grass grows abundantly all over our valleys about Helena. The region about Fort Benson is especially mentioned by Hon. Geo. Vasey in a Government report. There are several different kinds of these agropyms and all of them are valuable forage plants; some would well repay cultivation.

2. Another abundant grass is sadly too well known by ranchmen and stockmen by the common names of "fox tail" and "squirrel grass" (*Hordeum jubatum*). It grows rather short and belongs to the barley family. The spikes, when young and green, have very long bristles which give it a very marked characterization. Everybody in Montana is acquainted with it, alas, to their sorrow. If the grass be cut while the flowers are yet in bud, the bristles are easily managed by horses and cattle, but if left till the seeds are ripening the bristles become very dangerous to animals which are forced to eat it in hay. It is a perfect curse wherever it grows, and it is capable of growing everywhere. I do not believe any animal eats it, if left to choose what to eat. This comes not because the leaves and stems are distasteful, but because the long bristles are so difficult to manage. The sooner this weed can be eradicated the better for all concerned. Plowing under is the only remedy.

3. "Slough grass" (*Beckmannia erucaeformis*). This grass loves the damp meadows. It grows from six inches to three feet in height, surmounted by a panicle of spikelets crowded together in such fashion as once seen is never to be forgotten. It is a widely-spread grass growing in spots from the Mississippi river westward to the Pacific ocean. It forms a profitable crop for damp meadows and its ripe spikes cause no injury to cattle. Without careful pictures it is difficult to describe these grasses so as to be understood except by the professional botanist.

4. "Cord grass," "marsh grass" (*Spartina cynosuroides*). It grows abundantly in meadows near Helena. Its height from two to six feet. It is a stiff, coarse, reed-like grass, and is never eaten by stock. In the Mississippi valley it has been utilized by being made into paper.

5. "Reed canary grass" (*Phalaris arundinacea*) bears a good reputation, notwithstanding it is a coarse grass. Its spikes of seed are very rich and much enjoyed by horses and cattle. It is found from New England to the Pacific, and also in Northern Europe.

6. "Grama grass" (*Bouteloua oligostachya*). Its home is from the Saskatchewan to Texas, Mexico and Southern California, and everywhere it is prized as the richest kind of feed for cattle. Montana is blessed with a fine supply on all our hills and plains and parks. In regions farther south it goes by the name of "merquite," and some call it buffalo grass, a name very inappropriate, for the true buffalo grass is a very different kind of grass and probably does not grow in any abundance in Montana, surely not within reach of a radius of 30 miles around Helena and Great Falls, for neither Mr. Anderson nor myself has ever seen it growing wild in Montana.

This grama grass does not grow tall enough for profitable culture, reaching scarcely 20 inches, but is everywhere esteemed our richest native fodder. Sheep, after several years of feeding upon it, kill it out. Cattle fatten upon it with remarkable rapidity. Between Helena and East Helena and Alhambra Springs this is one of the prominent native grasses. If the

seed were gathered and planted on our bench lands, and soils above easy irrigation, this grass gives promise of very profitable cultivation where no other crop could be raised and no other hay could be cultivated. Is it not strange that so much pains should be taken to cultivate timothy and other introduced grasses when we have native grasses at our very door already acclimated and used to our drouths? Here is a rich grass, growing spontaneously and luxuriantly where no irrigation can be had, inviting us most persuasively to cultivate it, and yet farmers keep on cultivating foreign plants, ill-adapted for our peculiar region—just because they did so "back East." To any farmer or ranchman who is interested in this grass but does not know it by name, I shall, on application by mail and return postage, be glad to send a specimen of it for identification.

7. In our high mountain meadows and parks we find a "mountainous timothy," or *Alopecurus pratensis*, var., *Alpestris*. Its reputation as valuable feed and hay is very high, and where found is much prized. In similar situations we have a true native timothy, besides the tame timothy run wild from seed dropped by miners and prospectors and railroad builders. The scientific names for our true timothy are *Phleum alpinum*, L., and *Phleum pratense*, L.

8. "Needle and thread grass," "needle grass," "porcupine grass" (*Stipa comata*, *Spartea* and *Viridula*). Prof. Scribner reports also *Stipa Richardsoni*. These stipas are peculiar in their seeds, accompanied with a long awn from four to six inches, which is twisted just above the seed into several gimlet twists and serve the purpose also of a gimlet. *Stipa spartea* is a very obnoxious grass having the common name of "The Devil's Darning Needle," which one deems quite appropriate after he has suffered from their getting into his flesh, having worked their way through pantaloons and bootlegs. Horses and cattle are put to severe torture from these awns working their way into the flesh and causing a festering wound. Hon. Warren Upham, in the celebrated "Catalogue of the Flora Minnesota," says: "The grain is prolonged into a stout callus or base, needle-like in sharpness, and above in a long twisted awn, both of which are minutely barbed so that when in the wool of sheep or in men's clothing the seed works forward readily but not backward. Within a few weeks later these seeds are found to have bored into the hard, dry, clayey soil of the prairie to a depth of two or three inches, having been pushed or impelled in some way by means of the awn."

These grasses are a portion of our bunch grasses and very abundant on our hillsides and low mountains. Some of the mountains at the entrance to Prickly canyon are covered with this kind of grass. The only objection to it is this troublesome seed and awn; otherwise it is a highly valuable and nutritious grass. In early years Mt. Helena had an abundance of them; a few are still to be found there.

9. We have also as bunch grass, several species of mountain rice, called *Oryzopsis cuspidata* and *Oryzopsis micrantha*. Cattle and horses love both kinds. The whole plant clear down to the ground is eagerly devoured. These must be inestimable plants for cultivation in Montana. They grow in their native places from one to three feet high. Several species of "bent grass," or "red top," so famous in the East, are to be found native in Montana, as also the pods, one of which is identical with the celebrated Kentucky blue grass and just as valuable. "June grass," or *Kelaria cristata*, is very abundant and very valuable. "Eaton's grass" (*Eatonia obtusata*, var. *Robusta*) is a good grass of Southern Montana, and extending in fair abundance to Helena. I have gathered splendid specimens at Blue Cloud. Wild rye grows in profusion near water or on low meadows, and is sadly afflicted with a severe fungus, called ergot. I have sometimes thought that the fields near the fair grounds could supply the nation with ergot.

These are but a very few of our numerous grasses. Montana is no dry and dreary waste of desert. Few lands can show such a variety in grasses or greater value in her species. From three to five acres of our native grasses are sufficient to support a horse or ox for a year; one acre supports a sheep. Some people tell us our grazing industry has reached its limit, whereas the fact is we have but begun. — From lecture by F. D. Kelsey, Sec. D.

A RAILROAD ON TREE TOPS.—It may not be known outside of the neighborhood in which it is situated, but it is nevertheless a fact that in Sonoma county, Cal., there exists an original and successful piece of railroad engineering and building that is not to be found in the books. In the upper part of the county named, near the coast, may be seen an actual railroad bed on tree tops. Between the Clipper Mill and Stuart Point, where the road crosses a deep ravine, the trees are sawed off on a level with the surrounding hills, and the timbers and ties laid on the stumps. In the center of the ravine mentioned, two huge redwood trees, side by side, form a substantial support. These giants have been lopped off 75 feet above the bed of the creek. This natural tree bridge is considered one of the wonders of the Golden State, and for safety and security far exceeds a bridge framed in the most scientific manner.

THE GRIPPE in London is attacking the horses.

## AGRICULTURAL ENGINEER

### The New Road Law.

In response to a quite general demand on the part of our readers for the new road law, we give the following transcript, prepared by the Santa Rosa Republican. The sections as amended are as follows:

2641. The Boards of Supervisors of the several counties shall divide their respective counties into suitable road districts, and may change the boundaries thereof, and each supervisor shall be ex-officio road commissioner of the several road districts in his supervisor district, and shall see that all contracts made with, and all orders of the Board of Supervisors pertaining to the roads and bridges in his district are properly executed; provided, when in any county the members of the Board of Supervisors thereof are not elected by districts, it shall be the duty of such Board, by proper order, to be entered in its records, to divide such county into supervisor districts, to correspond with the number of members of such Board, and assign to each member thereof one of such districts, of which he shall be such Road Commissioner.

2642. From and after Monday following the first day of January, A. D., eighteen hundred and ninety-three, the office of Road Overseer shall be abolished; provided, that whenever in this Code the words Road Overseer occur, they shall be taken and construed so as to read Road Commissioner.

2643. The Boards of Supervisors of the several counties of the State shall have general supervision over the roads within their respective counties. They must, by proper ordinance:

1. Cause to be surveyed, viewed, laid out, recorded, opened and worked such highways as are necessary to public convenience, as in this chapter provided.

2. Cause to be recorded as highways such roads as have become such by usage or abandonment to the public. Also, all such streets and roads as have been or may be declared such under section seventeen hundred and sixty-four of the Code of Civil Procedure.

3. Abolish or abandon such as are not necessary.

4. Contract, agree for, purchase, or otherwise acquire the right of way over private property for the use of public highways, and for that purpose institute or require the district attorney to institute proceedings under title seven, part three, of the Code of Civil Procedure, and to pay therefor from the district road fund of the particular district.

5. At the first regular meeting in January, eighteen hundred and ninety-three, and at any regular meeting thereafter, advertise for sealed bids for keeping in order, and repair all such roads, culverts and bridges in the county, as hereinafter provided; provided, that, the Board of Supervisors, in their discretion, may exclude from such contracts the repairing of any or all bridges.

6. In case no bids for contracts are received or accepted for work in any district, the Board shall order the work to be performed by the Road Commissioner of said district, as provided for in section twenty-six hundred and forty-five of this Code.

7. If any contractor neglects or fails to perform any work provided for in his contract, the road commissioner of the district in which such neglect or failure occurs shall notify such contractor to immediately make such repairs or do such work as is needed; and if the contractor does not use reasonable diligence in complying with such notice, the Road Commissioner shall cause such work to be done by others, and the cost of such work shall be deducted from the quarterly allowances of such contractor.

8. The Road Commissioner, in all the road districts in his supervisor district, shall inspect the work done under such contracts and orders and make a written report thereon to the Board in January, April, July and October of each year, which report shall include the amount and kind of work ordered done by him during the preceding quarter, under the provisions of subdivision seven of this section. The Board shall thereupon cause the amount found due the contractor for the preceding quarter, less such sums as the Road Commissioner may have necessarily spent by reason of the neglect of such road contractor, to be paid to such contractor, from the funds of the road district embraced in his contract.

9. The Board shall cause to be kept a book showing the number of sections in each district, their boundaries, length of roads in miles and fractions of miles, names of contractors, amounts of contract, and the cost of maintaining the several sections of road in each district.

10. Levy a property tax for road purposes.

11. In their discretion, cause to be erected and maintained, on the highways they may designate, mile stones or posts, or guide posts, and guide posts properly inscribed.

12. Cause the road-tax collected each year to be apportioned to the several road districts entitled thereto, and kept by the treasurer in separate funds.

13. Audit all claims on the fund of the respective road districts, when required to pay for improvement thereon.

14. In their discretion, they may provide

for the establishment of gates on the public highways, in certain cases, to avoid the necessity of building road fences, and prescribe rules and regulations for closing the same, and penalties for violating said rules; provided, that the expense for the erection and maintenance of such gates shall, in all cases, be borne by the party or parties for whose immediate benefit the same shall be ordered.

15. For the purpose of watering roads in any part of the county, the supervisors may erect, maintain waterworks, and for such purpose may purchase or lease real or personal property. The cost for such waterworks and the watering of said roads may be charged to the general county fund, the general road fund and the district fund of the district or districts benefited thereby.

2644. This section is hereby repealed.

2645. The Road Commissioner, under the direction and pursuant to the orders of the Board of Supervisors, must:

1. Take charge of the highways within their respective districts, and have with the consent and approval of the Board of Supervisors shall employ all men, teams, watering carts and all help necessary to do the work in their respective districts, provided that no Road Commissioner shall be interested, directly or indirectly, in any contract or work to be done in the road districts under his charge and control.

2. Keep them clear from obstructions and in good repair, and destroy or cause to be destroyed, in the months of July and August of each year, all thistles, Mexican cockleburrs, or cockleburrs of any kind, and all noxious weeds growing or being on any portion of the public highways or public roads in their respective districts, provided that there be no contract to that effect.

3. Cause banks to be graded, bridges and causeways to be made, where necessary, keep the same in good repair and renew them when destroyed, provided that an emergency exists, or pending the awarding of any contracts.

4. Make quarterly reports, under oath, of the number of days they have been employed during the preceding three months, the number of days' labor performed on the roads and highways in their respective districts, by whom performed, and the wages paid per day; filing therewith a receipt or receipts, signed by each or all persons who have performed labor, stating the number of days' labor performed, and the amount received for the same; also the amount and value of the materials and the kind of each thereof.

5. When not otherwise provided for by the law, he shall receive for his services as such Road Commissioner, twenty cents per mile one way for all distances actually traveled by him in the performance of his duties; provided that he shall not in any one year receive more than three hundred dollars.

6. The Boards of Supervisors of each of the several counties may, if they deem it to the best interests of their respective counties, appoint one Road Inspector for each such county, and prescribe his duties and compensation, subject to the provisions of this act, provided that the compensation of such Road Inspector shall not exceed the sum allowed by law as the total compensation for the Road Commissioners of such county. In case such Road Inspector be appointed, no salary, fees or compensation shall thereafter be allowed to said Supervisors as Road Commissioners during the time that said Road Inspector is serving as such. The salary, fees or compensation of such Road Inspector shall be paid from the county-road funds, and shall be as nearly as possible apportioned among and paid from the road district funds, according to the amount of service performed by him in the several road districts of the county. Said Boards of Supervisors may delegate to said Road Inspector all powers conferred upon them by law as Road Commissioners, save that said Boards of Supervisors shall not delegate to said Road Inspector any power or authority to open bids, or award contracts, as provided in this Act, and no Road Inspector shall be directly or indirectly interested in any such contract.

2646. The Board of Supervisors must:

1. Advertise for sealed bids to maintain the roads in the several districts in the county, where contracts have not already been let, or for the reletting of contracts, by notice in a weekly paper published in the county, or in one published within the district in which the work is to be done, if there be one so published, and also post three notices in prominent places within said district, for four consecutive weeks immediately prior to the day set for receiving and opening said bids and awarding contracts.

2. The notice shall contain a general description of the roads in the district in which the work is required to be done under said contracts, the boundaries of the district, and explicit specifications as to the manner in which the work shall be done in particular parts or portions thereof.

3. The bids shall be made and contracts awarded for a term of not less than one nor more than four years. They shall be opened and the contracts awarded at any regular meeting.

4. Said contracts shall be awarded separately for each road district in the county and no contract shall be awarded to a person who is not a qualified elector of the county.

5. Contracts shall be awarded to the lowest responsible bidder, and a bond issued to be executed in a sum equal to the amount of the contract for the faithful performance of the conditions of said contract. The contractor shall also be required to perform the duties

described in subdivisions two and three of section 2645 of this chapter.

6. The Board may reject all bids.

2652. The Board of Supervisors may, annually, at any regular meeting held between the first days of January and March of each year, levy on each male person over 21 and under 55 years of age, found in each road district during the time set for the collection of said poll taxes for that year, excepting all persons who were honorably discharged from service in the army or navy of the United States, at any time within the first day of April, in the year of our Lord 1861, and the first day of September, in the year of our Lord 1865, an annual road poll tax not exceeding three dollars; and from every such person not above excepted, in a road district, who has not paid the same in some other district, must be collected the amount of road poll tax so levied.

Said road poll tax shall be collected by the County Assessor in the same manner that State poll taxes are collected, and all remedies given by law for the collection of State poll taxes, shall apply to and be in force for the collection of road poll taxes.

Road poll tax receipts in blank, signed and numbered in the same manner that other poll tax receipts are signed and numbered, shall be delivered by the Auditor of the county to the County Assessor on or before the first Monday of March of each year; and said Assessor shall be charged with the amount of such road poll tax receipts delivered to him, and be credited with those returned, and shall settle with the Auditor, and pay over the amounts collected, in the manner provided in section 3553 of this Code.

A sum not exceeding 35 per cent of all the road poll taxes so collected may be apportioned to the General Road Fund, and the balance shall be apportioned to the several districts of the county from which the same was collected.

Section 8. All Acts and parts of Acts in conflict with this Act are hereby repealed.

Section 9. This Act shall take effect and be in force from and after the Monday following the first day of January, in the year of our Lord 1893.

## THE IRRIGATOR.

### Water in the Desert.

Moses has gone out of the business, but, judging by recent achievements, his mantle has fallen upon W. C. Pratt, who recently has had splendid success in boring for water in the Mojave desert.

Last year, he sunk some wells east of coyote holes for Wm. Landers, in the deepest well, finding water at about 40 feet from the surface. These wells were fitted up with pumps, so that in what had heretofore been a perfectly dry region, yet at certain seasons abounding in nutritious grasses, cattle could not only feed, but be watered as well.

This season he sunk two wells—one on each side of Borax lake and at a depth of seven feet from the surface, he struck water of good, drinkable quality.

But the most interesting results have been obtained about 30 miles east of the town of Mojave. The surface of that region is arid and desolate in the extreme. The sand, which is the principal covering, is full of soda ash and borax salts, and is utterly unproductive, and where that is blown away, as happens in spots, there is to be found a villainous sort of hardpan, apparently of no use for this world or the next. In places, the ground is hollowed out, as if the bed of a dry lake.

In the gulches and canyons, and in spots upon the desert plain itself, there is some cattle feed, and stock wander all over that country in search of something to browse upon. Their method has been to hunt around for feed as long as they can stand it, and when their thirst becomes too powerful, to strike off for water. In this way, while cattle manage to sustain life, they fall of accumulating fat to any appreciable extent, and live that tiresome, cheerless and unprofitable sort of existence common to all varieties of rackabones. Then they are bothered with a tireless pest called the "heel fly," which incessantly prods them where their flesh meet, and to avoid which it is their desire and delight to wallow in mud and water.

This spring, Mr. Pratt commenced boring for water near the edge of one of those dry lakes, and altogether has now dug some 30 wells, finding, to his surprise, and as well to the astonishment of all, that from the deepest, which is about 43 feet, to the shallowest, which is only 15 feet to water, all have become flowing wells. None of them yield much water, but in the aggregate, enough flows to fill the bed of the dry lake, and make an exceedingly comfortable spot for the cattle.

The formation of the desert is very peculiar. Here and there, but not as a common thing, are patches of land that, with water for irrigation, would become exceedingly fertile. But the most of the surface covering is alkaline sand, utterly unproductive, and the bedrock of almost the whole region is lava. Where the water comes from is a mystery, and why it should be such fair quality, when there are so many salts upon the surface, is an added secret. — Bakersfield Californian.

## PATRONS OF HUSBANDRY.

## Our Grange Edition.

The Grange news of most general interest is given through our editions of our paper on this page. Several supplemental pages, devoted to Grange interests, are added in our Grange edition, which any subscriber can receive in lieu of the regular edition WITHOUT EXTRA COST, by addressing the publishers.

## The Master's Desk.

R. W. DAVIS, W. M. S. G. OF CALIFORNIA.

If you are a Patron of Husbandry, say so! Don't be ashamed of your calling! No man should follow a business or belong to an organization, and be ashamed to acknowledge his calling. The Grange honors those who honor the Grange. Don't you know it? Then stand up for the Fraternity that stands up for you, and your family and your home.

Santa Rosa Grange met with good success in its first effort to raise money with which to buy a piano.

Study to see how much work can be done with least physical exertion! Study to see how wise you may be and how few words will express your wisdom intelligently to others.

Never mind your station in life. Be sure to fill it well, and another opportunity will soon be yours.

Catch a thought and tell us through the RURAL how you caught it. Won't you?

It will be good news to the many Patrons who have heard Sister Alling of Stockton Grange sing, and conduct the singing at several of our State Grange sessions, to know that she has consented to do similar service at the coming session, soon to be held at Hayward. There is nothing that adds more to the pleasure of our annual Grange reunions than the good, well-sung songs and choruses of our Grange song-book. We hope Sister Alling will soon announce the pages on which these choruses are to be found, so that all may come prepared to sing with the spirit and the understanding. Bear in mind, this does not in any way interfere with the vocal solos, duets, quartettes, nor with the instrumental music, which the good people of Hayward are expected to furnish. This is merely for the good, enjoyable, old-time singing in which all are invited to participate.

Concerning the organization of juvenile Granges, quite a number of inquiries have been made at the Master's office. Until further information, which has been sought from the proper source, is received, no definite instruction can be imparted. In the meanwhile, we hope all will wait a time with patience.

It seems but yesterday since lines were written, urging Patrons to plant good seed, both in the soil and in the social circle, to the end that the Grange might be honored and profited. Now, so soon the golden harvest of grain is upon us, and we are reminded that the seed sown in the soil was good, and that the laborer and the cultivator did good, honest work. Now the work of the harvester and the husbandman begins, we trust they will each be faithful to the task required of them. If so, the proceeds will be fully satisfactory for the year's labors. Let us, then, turn some attention to the seed sown in the Grange field. Is the work well done? If so, what will the harvest be? We believe that the Grange seed is well sown in California's richest soil, and that the autumnal harvest, soon to be reported at our annual meeting at Hayward, will prove, like the grain harvest, to be satisfactory. Yet we should not rest. The faithful harvesters and the gentle gleaners must keep to work, so that the store of ripened fruit, to be placed in the keeping of the sturdy husbandmen and matured Matrons, will be large and well selected. Will you do your share to gather some good members into the folds of your Grange? Let every reader of this bring in at least one name.

Are you preparing a song, an essay, a recitation, or any thing for the social and mutual entertainment of members of the State Grange? If so, write Miss Jessie Sharal at Hayward, so that your name will be on the list. Don't forget.

The successful sportsman does not fire his gun till he sees the game. Because he may hear a bird flutter in the bush is no reason why he should point the gun in that direction, and hang away. On the contrary, if the hunter wants to kill the game, he waits and watches for any early opportunity to "get a head on the bird." Then, with deliberate aim he pulls the trigger, and generally the bird is killed. Now it is even so with the persons who are always ready to fire an opinion. More frequently than otherwise the mark at which it aimed is missed. Be sure you know at what or at whom you send a criticism or an objection before you bang away. Many times persons criticize harshly and unjustly (but not intentionally so) because they have not taken the time and the labor to know whereof they complain. When it is too late, the mistake is seen, the rebound is felt, and the injury comes home to the persons who little expected to be shot with their own arrows. Moral! Be cautious. Be true.

## Report of National Legislative Committee P. of H.

To the Patrons of Husbandry of the United States: In compliance with the instructions of the National Grange, your Committee have sought to impress upon the minds of the members of the National Congress the importance of enacting into law some of the measures proposed by our Order for the relief of a depressed agriculture.

We have been kindly received and many of our representatives seem anxious to comply with our urgent demands, and some satisfactory legislation was secured in the interests of agriculture, but from selfish causes many of our measures were prevented from being enacted into law. There is too frequently some selfish force which succeeds in defeating measures proposed for our relief. Of course there are other interests which antagonize our proposed legislation, and these seem to be able to promptly combine at the proper time to overwhelm, or at least, prevent for a time definite and final action. We had reason to hope that with the tariff bill a law, and out of the way, that Congress at this session might find time to protect the producer of honest, genuine agricultural products from ruinous competition of fraud compounds and mixture composed of materials not desired by consumers, but so skillfully prepared as to convey the impression that a good sample of the honest, genuine product is being received by the purchaser. For this purpose the Conger Lard Bill was introduced and passed the House, but was halted in the Senate by obstructing it with another bill, which was entirely satisfactory to the men who are manufacturing the compound lard. This is one of the effective ways of killing a good measure, and the Conger bill met this fate.

## Necessary Measure.

The feeling is very general among all classes that the Butterworth bill to prevent gambling in farm products is a necessary measure, and it was fondly hoped that this bill might become a law and give us an opportunity to test the removal of option selling upon legitimate business. This bill was antagonized by hoards of trade and chambers of commerce, organizations that should be foremost in efforts to protect legitimate trade. The opposition of gamblers in futures was to be expected, but ought not to have been able to prevent the passage of this measure, if it had been properly pressed by those in charge of the same. The legislation sought must wait until the farmers learn to send fighting and faithful friends to represent their interests in Congress. Friends without courage and push, are only in the way when reforms are sought. "If our friends, the enemy" flatter themselves that the battle is ended they will be much deceived. The farmers may be slow (too slow) in starting into a campaign in their own defense, but once the battle commences they will never give up the struggle until the right prevails.

## Contest to be Renewed.

When Congress again assembles the farmers will pitch their tents alongside the Capitol and renew the contest. The next Congress, we feel assured, will have more men who have practical knowledge of the needs of agriculture, and we confidently hope that much wise and just legislation will result from their efforts.

## Several Important Financial Measures

Were under consideration; that provided for the free coinage of Silver passing the Senate and only failing to pass the House, because it failed to come to a direct vote. It is quite probable that the measure will pass both houses of the next Congress and become a law, when, it is to be hoped, it will bring about the favorable results to agriculture expected by its friends.

Our Order represents the wishes not only of its own membership but those of a large proportion of the people of our country in asking for an increase in the volume of currency to \$40 and \$50 per capita. The proposition to issue this additional currency upon real estate security, at a low rate of interest, has been quite generally brought to the attention of the people. It has been favorably received and advocated by many of the best and most intelligent citizens of our country, who believe it would greatly relieve the depressed condition of agriculture, and enable farmers to save their homes from the hammer of the Sheriff. It is not, as claimed by some, a wild, visionary and impracticable scheme; neither is it class legislation. There is no law which prohibits any men, or class, from buying real estate, and thus be prepared to furnish the required security. Whether it would be well for the Government to enter upon this policy or not should be thoroughly discussed, which would so develop the plan as to make it entirely practical, or involve a financial policy that would give needed and permanent relief. Of one thing we may be assured, out of a fraternal discussion of the question will come light and good results. There must be better conditions possible than those which exist at present under the financial policy which now rules all the great nations, and the citizens of the United States will not be slow in finding out the conditions and applying them to the advantage of our people. The very rich must go, and there must be a more equitable distribution of the comforts of life to the worthy but extremely poor. All our people must learn the commandment: "Do unto others as you would have them do to you."

## To Whom Credit is Due.

In conclusion we report the passage of Meat Inspection Bill, the bill to regulate the transportation of exported cattle, and the Cattle Inspection Bill, which are expected to increase the consumption of our meat products at home and abroad, and thus benefit the producers. We desire to thank Brothers Sanders, Whitehead, Thompson, Wedderburn, of Washington, and all the good patrons in the several States who have so nobly responded to our calls for help. It is not the fault of your committee, nor your fault that we have not succeeded in all our efforts, and we sincerely trust that our successors may be as ably supported. We desire to say that very much depends upon having a man in the Speaker's chair who is ever and at all times the friend of Agriculture; he can do more for or against our cause than any other ten men in Congress. The farmers should therefore, use their influence to secure a favorable man as speaker of the next House.

## Only a Question of Time.

While we have not accomplished all we had hoped for, all we have worked for, nor all that we felt we had a right to ask for, still we have made good progress, our lines have been advanced, behind us we know is an enlightened public sentiment upon the economic questions, that so closely concern us all, that is growing stronger day by day, and it is only a question of time if we are true to ourselves, true to our Order and true to agriculture, that the next, or a not distant Congress must give the people what they so earnestly demand.—J. H. BRIGHAM, L. RHONE, JOHN TRIMBLE, Legislative Committee.

Washington, May 20.

## Sacramento Grange Strawberry Festival.

EDITORS PRESS:—The fact I have shouted but little for a month or so for the Grange in these columns has been noticed by several Grangers, and they have put in circulation the rumor, which is entirely without foundation, that I have been in the hospital some time, in consequence of performing the childish prank of sticking buttons up my nose without figuring on the evil consequences. The whole story is a malicious falsehood gotten up wholly for campaign purposes. To those who have wept bitterly on account of not hearing my tinny voice of late I will say to them I saw in the RURAL PRESS, or in some other paper, that the drum that has the thinnest head makes the most noise, and when I read it, the statement knocked so much climate out of me that I am still in search of it. I have not yet determined the thickness or thinness of my head, but for all that I am going to write you a description of

## The Strawberry Festival

And good time we had last Saturday at Grange. The hour set for opening was 10 o'clock, but long prior to that time there was a goodly number present to attend to the duties involved in the festival. They came with willing hands and generous hearts. Their souls were overflowing with brotherly love for those for whom they were working (for they knew some of their brothers and sisters would be there from Florin, Elk Grove, Enterprise, American River and Roseville Granges), and they having spent so many delightful hours with the Granges mentioned, felt as though they would like to try and pay up back interest on pleasure and profit received, having given up all hope of ever paying the principal.

After the 3d and 4th degrees were conferred on a class of two, the assemblage of about 175 happy, mirth-beaming Patrons repaired to the banquet hall and then the fun began. When the dainty and lovable Granger misses asked the banqueters to quote the name of their favorite weakness, in every instance they whispered "chicken pie." So general was the sentiment kindly in favor of the product of the field and coop, that it was nominated as the article of diet that would produce the greatest results, without a dissenting voice. The only brother who seemed to vote with but little vim on this important question was he whose name is a household word, whom we call by the endearing name, Uncle Hiram. The manner in which Bro. Johnson voted can be largely accounted for by the fact he is cognizant of chicken pie haggage cannot be checked on a pumpkin pie train, and it is said he has a penchant at all times to mingle with the latter. At the table, all seemed to enjoy themselves.

## Fun Was Prevalent Everywhere.

Every one caught the spirit, and mirth and good feeling ran riot. Every one seemed full of fellow-feeling. There was a smile on every face; even "Old Maids No. 1 and No. 2" smiled between the periods of shouting for more vinegar. Poor "Old Maids No. 1 and 2," you have my ripest, my sincerest and my heartiest Granger sympathy, and if it were not that you are two, I would try to help one of you out of your present awful dilemma.

The banquet over, the Grangers, old and young, again met in the hall below, and a finely executed program was rendered by the young Grangers of Sacramento Grange, aided very materially by a bright-eyed sister from Elk Grove Grange, Sister Dottie Leboyd, who recited, in a wonderfully attractive and easy manner, a humorous selection, which was greatly appreciated, "Come Again."

After the program was over, Bro. David

Reese, of Juvenile Avenue in the town of Florin, was called on and made

## Some Ringing Remarks.

He always talks business. He closed his discourse with a grand peroration which was highly appreciated, for he referred to the fact that some chickens on his way were to be assassinated next month and a post-mortem investigation held on the same at Florin, June 13th. Sacramento Grange will hold no session that day, but will go out a hundred thousand strong. Bro. Reese was followed by Bro. Halverson of American River Grange, who spoke eloquently and in a quaint and attractive manner that captivated the whole audience. Bro. Halverson pruned off verbiage and dealt in facts. After presenting one fact in which seemed to be its clearest possible light, he clinched it by adding to it in substantiation another one which left his position simply unassailable. It is our desire to have Bro. Halverson come again and deliver us a lecture. Bro. W. W. Greer also gave the Grange some good advice. His remarks were bright, clean-cut and easy of comprehension, yet did not fall to the level of the prosaic. Bro. Greer has not visited us very much of late, but he proposes to do so from now on. He has not deemed it just the proper thing to leave home, for fear the baby might have a tooth come while he was gone. We have greatly missed Bro. Greer, for he lends much life to our meetings. Bro. J. B. Welty also spoke for some time on advanced topics. I tried to jot down his speech for publication, but confusion at my desk prevented me. It was well worth it. Other speakers followed, and then the Grange closed. Hand-shaking followed, kisses were given by myself and others, and each wended his way thoughtfully homeward, firmly convinced the day was well spent, and the man who says the Grange is a failure should have his head trepanned and his skull filled with a new set of brains.

If I can settle the drum business spoken of at the outset, I may write again. In doubt,

MACK JR.,

Union House, May 20. Sec. Sac. Grange.

## Carpenteria Grange.

EDITORS PRESS:—I want to tell you of another of our pleasant Grange meetings and of the interest the members took in the "Question-box." Many questions were answered by our Worthy Lecturer and some remain to be answered at our next meeting. There was much information gained from the answers, and each member took home new thoughts, borrowed from the experience of others, which will prove beneficial and of interest to them.

Am sorry to say Bro. Smith is not well, which of late has caused his absence from the Grange. Bro. and Sister Smith are good Grangers and we always enjoy seeing them at our meetings, as also Bro. and Sister Wood.

The Grange and Alliance are going to hold their festival together and we want all the P. of H. and F. A. members to join hands and have a "good time"—that will be our aim. Will let you know in due time when it is to take place.

If you could see the beautiful bouquets the members bring to our meetings, you would believe that each meeting was a "Flora Day" with our Grange.

MRS. A. G. STINSON,

Carpenteria, May 28th. Master Grange.

## Merced Grange.

EDITORS PRESS:—Bro. Overhiser, Past Master Cal. State Grange, paid our Grange a visit May 16th and explained the Trade Card system. We were well pleased with his visit. Merced Grange is a live Grange. We all work together for the good of the Order. Our visit to Stockton Grange was a grand success. They entertained us right royally. There were 93 Patrons and friends in our car. We wish Stockton Grange to visit our Grange, or any Grange in the State pay us a fraternal visit. We will do our best to entertain and show them our beautiful little city of Merced.

MRS. E. S. ELLIOTT, Sec'y.

Merced, May 27th.

TULARE GRANGE CELEBRATES A MARRIAGE. Last Friday evening the members of Tulare Grange to the number of 40 gathered at the residence of Mr. and Mrs. John Tnohy for the purpose of congratulating them upon their recent marriage and welcome them to their home at Tulare. E. C. Shoemaker, Master of the Grange, on behalf of those present, extended to Mr. and Mrs. Tnohy the congratulations and kind wishes of the Tulare Grange, which was responded to by Mr. Tnohy in a happy manner. Under the leadership of Mr. Treetek the Grange choir sang several songs. Mr. Capin gave a recitation, after which cake and ice cream was enjoyed by all. It was a pleasant affair and will be long remembered by all the participants.—Visalia Times.

GOOD WORDS FROM GLEN ELLEN GRANGE.—The people of Glen Ellen have organized a new Grange. J. P. Whitaker, Master of Bennett Valley Grange, and Bro. Don Mills, Past Master, gave the necessary instructions in the use of the gavel and such other information as was necessary to put them in good running order. They have good material at that point for a first-class Grange, and the only wonder is that they did not take the step years ago. The agricultural outlook in all of its various branches is very promising at this time.—M. T.

## FARMERS' ALLIANCE.

## Alliance Edition.

Subscribers can receive our FARMERS' ALLIANCE EDITION WITHOUT EXTRA COST, by applying for the same. That edition contains several supplemental pages of Alliance matter, in addition to that which appears on this page through all editions.

## Uncle Sam's Cash-Box and the Alliance A B C.

EDITORS PRESS:—Pres. Cannon is right! No kind missionary of the F. A. & I. U. has as yet enlightened us benighted Carmelites even with the A B C of Alliance principles. Our cry for "more light" has been but poorly satisfied by such faint glimmer emitted through convention platforms and newspaper paragraphs. So we horny-handed people do not yet quite know how and when we are to dip our fingers in Uncle Sam's cash-box, along with the National banks, the politicians and the rest of the high-toned boddlers. The value of a farmer (as I showed in the RURAL PRESS, from a Government schedule of salaries years ago) has so long been below par that even a remote prospect of farm stock being at a premium is soul-inspiring. God speed the Alliance in all and any elevating work it undertakes!

But will Mr. Cannon pardon me if I ask him a few questions from my standpoint? And let me here say that I have been a California farmer for over a quarter of a century, and am heart and soul with any forward movement.

Mr. Cannon admits that "no sensible man" can see how a Government can lend money at two per cent, while borrowing at three.

Does not the sub-treasury scheme propose that Government should loan money to farmers, on landed security, at two per cent, and is not Government, as a fact, paying three per cent and more?

Mr. Cannon then says: "Farmers demand that more money be put in circulation by the Government." I would like to ask him whence Government is to obtain more money to put in circulation?

## How the Government Obtains Its Funds.

It seems to me that the Government obtains its funds in one way, and in one way only. That only way is by taxing the people, too often by perpetrating the very outrage farmers complain of—impoverishing one class to pamper another. I know it is popularly supposed that the Government can make money in other ways. It was customary years ago, when the Government was running dry, to water the milk. They turned the lead pot loose when they melted their silver for coins and stamped their half and half with the old mint die, and thought they had found an easy road to wealth. But the debased coin always came home to roost, and the people, after a world of extra suffering and misery, had to pay the piper with the inevitable penalty—increased taxation.

The modern supposition sometimes is that the Government can assume the role of the Creator and say "Let there be money!" In undertaking this, the Government is very apt to transcend its powers. Mysterious and cabalistic as those powers may be, even the Government can never make something out of nothing. The Government, after all, is only you and I and the rest of us, confederated for certain ends. It can issue what is called "fiat money," in the shape of notes, bonds and the like, but their value as currency depends (as the value of your and my note or bond depends) on the soundness of the Government's credit, or its ability to redeem its notes with solid value, which solid value is always wrung from the people by taxation.

## Money Is Not Only a National, but an International, Affair.

Your currency must have an international value; it must be referable to a world standard. It may be, as it has been, hogsheds of tobacco, but it must be a medium of exchange, and it serves its purpose, that being the only real purpose of money. It seems to me the F. A. & I. U. must keep this in mind in all its proposals, or it may discover it is paying a high price for its cheap money by finding paper currency at a heavy discount. There are men living yet (one or two of them pensioners, too) who have seen three genuine paper-fiat-money-Government dollars given for one of solid coin! History may repeat itself if we are unwise enough to let it, and don't you forget it!

Then Mr. Cannon argues that I could not borrow money on my farm at 2 per cent and lend it to some "other fellow" at 7 per cent, because the Government loans would fix 2 per cent as the maximum rate all over the United States. Even, for argument's sake, granting this, would it be impossible for me to find the "other fellow" across the border, or say in Australia, Europe, Asia or Africa. The F. A. & I. U. must make 2 per cent the universal rate, or they would simply deplete this country of all capital, which would seek investment in other funds at market rates more remunerative than ours.

## A Most Important Subject.

I think this subject one of the greatest importance for us farmers to discuss. We may as well try and understand what can and what cannot be done, before we formulate our demands and present them to Congress. I trust

we have enough self-control to ensure a judicial discussion, from personality and acrimony.

I regret to be, to the F. A. & I. U., in the position of an outsider, but our valley is so sparsely settled that we are hardly able to gather in a Sub Alliance. I will add nothing more at present beyond this, that I am heartily in accord with Pres. Cannon in striving that the almighty man and not the almighty dollar shall bear sway in this "Land of the Free and Home of the Brave;" and heartily in accord with that plank in the old platform that demands equal rights for both sexes. I want my daughters to have equal rights with my son. I knew in my mother a being of fully equal worth with my father, and I am aware of no reason why my wife has not as much right to make laws for me to observe as I have to make laws to coerce her.

EDWARD BERWICK,  
Carmel Valley, Monterey, May 30, 1891.

[Written for the RURAL PRESS.]

## The Relation of the Order to Politics.

The Farmers' Alliance is a place for free and full discussion of public questions.

The Farmers' Alliance offers its members political freedom. Members of the Alliance have all the rights of American citizens. They can do in a political way, in Alliance meetings and in the name of the Order, all that they could do outside the Order. But there are some things that they do not choose to do in the name of the Order. Members of the Alliance may nominate in Alliance meetings candidates for public office, but they seldom avail themselves of that privilege or right, deeming it more in accordance with American spirit, and wiser, to put up candidates in open conventions, to which all men in accord with Farmers' Alliance principles shall be invited.

There is no political obligation connected with membership in the Farmers' Alliance. Every man is assured, before taking the obligation—an obligation only of honor and fidelity toward his fellows in a common cause—that it will in no wise conflict with his political or religious views. If members of the Order act together politically, such concert of action is voluntary, and is born naturally out of a realization, largely spontaneous and instinctive, that they have like wants and like purposes, and that they are journeying together toward a common goal—the freer unfolding of individual character and the consequent more perfect development of the human race, the great objective ends of human life.

## A Farmers Standpoint Required.

When men will consent for a moment to look at political matters or public affairs from the standpoint of farmers, it does not take them long to see that their political interests are in common. We may learn a lesson in this matter from saloon men and party bosses. Let any legislation be proposed likely to injure their business interests or political supremacy, and see how quickly they drop their partyism and rally to a common standard.

The liquor men of this State have a business association, which includes nearly every dealer in California, the great object of which is to protect their business interests against adverse legislation. It decided most of the nominations to the legislature last year. With how much more propriety may the farming people form an association not exclusively political, for protecting from restricted and unwise legislation the great farming interests which do not destroy, but which produce, and build up, and make possible the prosperity of this great nation. Take the mercantile and money-lending classes by themselves and see if you can find in them sufficient patriotism to build up a great nation. More likely it is that left to themselves, their rampant selfishness would cause them to devour each other.

## In Union There is Strength.

In the unitedness of the country people—that unitedness which comes from intelligent perception of like need—is their strength. A nation in which the great majority have lost their homes is no nation. It is but a shell full of dry rot from which vitality has departed, and when injured it cannot recuperate or progress. To protect our homes, we must protect the business upon which they are built. When it comes to a question between two businesses, irreconcilable in their nature, the feast necessary must disappear.

## What Is Required.

In a country whose government is supposed to be based on the will of the people, those who do not deliberately devote a portion of their time to careful, accurate, independent and just investigation of public affairs—affairs which for very existence depend upon the money of private citizens—are not good citizens. Organized consultation of a man with his neighbors regarding public affairs—the affairs of all in such a way as to accurately preserve the results of such consultation, will be made a part of his regular business by every good citizen; but, by a little alteration in our form of government, or system, the people would be able to have a more direct and effective influence upon and more intelligent understanding of public questions with one tenth the trouble now necessary. Nothing inspires interest in public questions, and renders such interest so easy as the certainty that the people can by direct action, make such interest effective.

There is a time, and there are ways to inves-

tigate. Much of the investigation on all subjects, will always be the result of individual effort, yet need not all be. There are times and places for consultation, and there are times and places for action, of a party kind. This Order—the Alliances—may do much to promote investigation. The Order constitutes a most excellent place for independent consultation on political affairs, which are in truth only public affairs, and here and there a local candidate may be selected in the meeting of an Alliance, but as a rule, party action will be taken outside the Order, and under that most appropriate name, "The People's Party." Under that name may be combined all the good of the Republican party and all the good of the Democratic party, for each has its good points and its good men, in the ranks.

## The Power Behind the Throne.

The Alliance is pre-eminently a place for consultation; a place for compounding that wonderful thing called common sense, which is better than any man's special sense—even the sense of the wisest, because, being the compound and average and composite of all, it more nearly satisfies all. The Alliance is a formative place, from which shall continually spring forth into activity a myriad better purposes, and better men and better methods to gladden the people and render more productive the land, and, in the end, God helping us, enable every faithful citizen and wife and the children to have homes inalienable, untouchable by errors of judgment, untouchable by greed. The Farmers' Alliance is a vast machine wherein the country people of the United States may consolidate their individual opinions into common sense, and whereby they may set forth that common sense to their fellows, and do their part toward making up that greater common sense which should be—but which our present political system does not provide for making—the law of the whole land; that common sense which in old English times was the common law there, and which in these times in this country our political system, defective in one great respect, suppresses, instead of enacting. The common sense of the people, as a rule, is suppressed from becoming law; and such being the case, the wonder is that we have so little misgovernment, much though we have.

There should always be a farmers' Order for social, business and political purposes, under some name, so organized at all times to be pervaded by the will of the majority of its members, and so be kept ever fresh, vigorous, endearing; so organized that every rule governing it shall have first been ratified by direct majority vote of those to whom it is to apply, so organized that every declaration put forth to the world by it should represent the will of the majority of all its members, and not merely the will of a majority of those composing a small delegate body. God grant it may sometime be so.

FRANK P. COOK.

Modesto, Cal., May 24 1891.

## County Alliance Notes.

## Los Angeles.

EDITORS PRESS:—The officers elected by the Del Sur Alliance No. 304 are as follows: Pres. J. W. Org; Vice Pres. A. W. Butler; Secy. M. E. Mather; Treas. H. R. Meoredy; Doorkeeper, H. A. Johasse; Asst. D. K. F. Burger; Lect. J. H. Coe; Chap. T. Menzies Jr. Stew. G. Van Buskirk. Pres. J. W. Org is appointed organizer for Antelope Valley (L. A. Co.) and Kern Co. M. E. Mather, Secy.

## Monterey.

The Granger sentiment in San Lucas and the Farmer's Alliance following in Long Valley and Oasis, are respectable in numbers and enthusiastic in purpose, for obvious reasons that suggest the necessity of such organizations in this part of the county. In the purchase of flour, lumber, agricultural implements, the warehousing and transportation of grain and in a variety of ways, they are "cabineted, cribbed, confined" in a manner that excites the rebellious Adam in human nature.—Salinas Index.

JOINT ALLIANCE PICNIC.—According to previous arrangements the Oak Grove and Las Tablas Alliances met at the picnic grounds near S. P. Sitton's place on May 22, for a few hours of social enjoyment, spoiled with some important business. At one o'clock Chaplain Sitton called the meeting to order, announcing as its chief object the purpose of building a sawmill on Las Tablas creek. After some singing by Mrs. Gibbons, Miss Mann, Mr. Ramage and Mr. Gibbons, dinner was announced, and after this was disposed of the business of the day was resumed. Mr. Gibbons being called on for a speech said that we had long needed a mill here to cut our lumber, pickets, and so forth, and urged its erection and operation by the Alliance in strong argument. Messrs. Ramage, Marsh and Sitton followed, in harmony with the same, and the result was the appointment of building, finance, and other committees, who will report the result of investigation at our next meeting.—San Miguel Messenger.

## San Luis Obispo.

A corporation to be known as the Farmers Alliance Business Association, is being formed by the Alliance hereabout. The capital stock is \$20,000. They have purchased a block of land near the railroad on which to build warehouses, etc. The association intends to do a general mercantile business, sell and buy

real estate, etc. With the flouring mill at San Miguel and the business carried on here, the Alliance will control considerable trade. The farmer has at last realized his true condition, and now seeks to aid himself as well as others. These two enterprises should receive encouragement, which no doubt they will.—The Moon.

Deputy Organizer H. W. Rhyme organized two more Alliances last week, one at Eldorado, near Pozo, the other at Cholame. The Eldorado Alliance has started with a membership of 12. The following officers were elected: President, I. N. Downey; Vice-President, Louis Anderson; Secretary, Miss. H. Stone; Treasurer, Mrs. I. N. Downey; Chaplain, Wm. Billaugh. Time of meeting, first and third Saturday in each month. Postoffice address, Pozo, S. L. O. Co. Express, Santa Margarita. The Eagle Alliance started with 26 members. The officers elected were as follows: President, David Wait; Vice-President, Wm. F. Shimmis; Secretary, Marion Shimmis; Chaplain, John Kerr; Treasurer, James Byer. Time of meeting, second and fourth Saturday in each month. Postoffice address, Cholame.—Messenger.

The Melville Alliance met May 23, with about 50 members present. Seven persons were initiated. After the business of the evening, the young folks to the music of a violin, passed its fleeting hours with flying feet.

## Placer.

In speaking of the Lone Star Alliance, the Placer Republican says: Lone Star, which is usually a go-ahead community, should be able to bring together a large first-class Alliance and thereby join the march for mutual benefit and improvement of the farmers.

## Santa Barbara.

The Farmer's Alliance gave an open session on Friday night at G. T. Hall. A large crowd assembled, and was addressed first by Professor Loveland in a very eloquent and able manner on the "National Banking System." Colonel Heath addressed the assembly at length on the "Past, Present, and Future," in his own inimitable style. The speakers were greeted with hearty applause. Misses Spurlock and Ward favored the audience with some beautiful duets and solos which were highly appreciated.—Press.

## Santa Cruz.

H. C. Dauntless writes: At the last regular meeting of Valencio Alliance 18 new members were elected, and added to the rolls of the reform movement. San Andreas Alliance reports gains at every meeting. Corralitos has over 80 members and adding more at each meeting. Aplos Alliance continues to prosper. Open meetings are held the second Saturday in each month, for the purpose of discussing the leading issues of the day. Look out for enemies; all ye loyal guards!

## Sonoma.

At the meeting of the Farmer's Alliance in Petaluma, the subject of bale rope was thoroughly discussed, and the Alliance asks the farmers of Sonoma county to unite with it in carrying out the provisions of the following resolution: That it is the sense of this Alliance that all monopolies are detrimental to the interest of the farmer—that we will use our influence against and advise farmers not to purchase of the rope monopoly until a reduction in prices, and will exercise our own judgement in using wire or rope for baling our hay.—Argus.

## Santa Clara.

At a meeting of Lincoln Alliance, No. 6, F. A. & I. U. it was decided to give an entertainment and dance on Friday, June 12th, at H. V. A. Hall, Cupertino. The Alliance affairs have been the most successful given here, so a good time is expected. The young ladies take an active interest, being members, and as I am a firm believer in the ladies, why, I give them the palm in social affairs. In the affair managed by the boys something is missing, it seems to me. What, I can't explain.—Cupertino Cor. Mercury.

## Yuba.

Saturday, May 16, the first Farmer's Alliance in Yuba county was organized with the following officers: A. W. Oakley, President; P. L. Hutchinson, Vice President; G. W. Maxwell, Secretary; J. M. C. Jasper, Treasurer; D. A. Ostrom, Doorkeeper; J. C. Wilkins, Steward; C. P. Barry, Lecturer. The second meeting of the Alliance was held Saturday, May 30, when the business was gotten under way. There are now 12 members and a number of others have already signified their intention of joining.—Four Corners.

All around us and from every direction comes news of the quiet, steady growth of the Farmer's Alliance in this State. The membership now exceeds 25,000 of the tillers of the soil, and at the same rate of increase will by November 1892, exceed a membership of 50,000. These men then, if working in harmony, will be able to prevent the return to the State Legislature, of men like Bruner, Dibble and such men as composed the white-washing committees of the late session. In Butte county there are some 14 or 16 Alliances, including one at our neighboring town of Live Oak, all lively and active. In Sutter county there are four or five, each increasing in membership, and in Nevada county there is one at Indian Springs, one at Pleasant Valley and one at Rough and Ready. Yuba has now made a start, having a good strong Alliance at Wheatland, and will soon organize one at Brown's Valley and probably one in Marysville township.—Marysville Democrat.

### The Song of a Flower.

[Original—by CARRIE HOLMES.]

You wish a song of a flower!  
Shall it be of the red, red rose,  
Or of the purple iris  
That by the brooklet grows?  
Shall it be of the stately dahlia,  
Or the flaming tulip small?  
But the peony, in her dress of red,  
Doth far surpass them all.  
The modest little violet,  
Drest in white or blue,  
Peeps gaily out from her nest of green,  
And smilingly welcomes you.  
And there's the lilies, pure and white,  
Or striped with red or gold;  
I am sure of all their glories  
The half cannot be told.  
The pansy (heart's-ease) seems to me  
A radiant flower fair,  
Also the tuberose sweet,  
That with fragrance fill the air.  
The daisies (star eyes) from the glen  
May suit your fancy best,  
But give to me the woodbine sweet  
And you may have the rest.  
And there's the buttercup from the field,  
The bluebell 'mongst the grain,  
The snowdrop from the hillside,  
Which speaks of spring again.  
The poppy, our State flower,  
Stands out in bold array  
Among the fields of waving green,  
And on the broad highway.  
So you ask a song of a flower!  
Well, of which shall we sing the song?  
Which flower do you think the fairest?  
To which does the praise belong?

### The Work of Some College Girls in the Slums of New York.

There is a little colony of philanthropic young women doing earnest work for the elevation of the masses of New York City, but so quietly have they established themselves, and so modestly have they worked, that few Gothamites north of the Bowery, have even heard of their presence at 95 Rivington street, where for a year or more they have been conducting a veritable "Palace of Delight" for the mothers and children of the east side.

The College Settlement, the name adopted by the colony, is composed of graduates from Vassar, Wellesley, Smith and Bryn Mawr Colleges, who have organized themselves into an association for practical friendly work among the poor, on a basis which has never before been tried in this country, but which has a precedent in Toynbee Hall, London, the methods of which were thoroughly studied by two of the originators of the American movement, while pursuing a course at Oxford and Cambridge Universities. The house at 95 Rivington street is a large, old-fashioned mansion, the interior workmanship of which proclaims it to have been at one time the residence of some of Murray Hill's ancestors. The rooms are large and high-pitched, with the lofty impressiveness which so delighted the dames of several generations back.

The location and size of this house having been found desirable, it was rented and put in thorough repair before the girls took possession.

Although the exterior of the building is dingy and unattractive, the interior is all "sweetness and light." The visitor upon entering the parlor is impressed with the air of refinement which pervades the apartment as his eye makes note of the really fine engravings on the delicately-tinted walls, the well-bound books on the cabinet shelves, and the objects of virtu scattered about with the careless grace that suggests the presence of cultivated women. The household, numbering from seven to nine members, consists of a housekeeper, who also performs the duties of chef, Miss J. G. Fine, who is known as the superintendent or Head Worker of the Settlement, and her co-workers, the college girls, who come in relays, some remaining only two, some as long as ten months at a time, to help in the good work. Miss Fine, whose duties are arduous, is paid a salary for her services, she having resigned a much more lucrative position in an up-town seminary for the sake of becoming one of the Settlement.

All of the other "residents" give their labor and also pay a regular board of \$6 a week to the house. Each graduate is her own maid, and not only makes her bed and keeps her room in order, but contributes her share to the general household work, thus practically demonstrating the theories taught by her. The object of the Settlement residents is to meet the people among whom they work, to some extent, on their own plane. It is with this in view that these young women, brave of heart and

true of purpose, forsake their comfortable and in many cases luxurious homes, and devote a portion of the year to teaching and helping their less fortunate fellow-creatures in the tenement-house section of New York City.

The Settlement is gregarious, and hence readily co-operated with the Neighborhood Guild in the management of two girls' clubs, which were already in existence when the Rivington Street house was opened. Since then, several other clubs for little girls have been organized by the college girls.

In these, the children are taught sewing and cooking, how to sweep and dust, to make beds neatly, the proper way to set the table, and in fact, to be helpful to their mothers and fitted to earn their own living when they are older.

The larger girls are instructed in dress-making and in all the domestic arts. Lessons in hygiene, history and science are also given them.

Gymnastic exercises are taught to all. In connection with these, the boys have also military drills. Music and singing, games and reading, make every evening attractive at 95 Rivington street, where many little ones are learning the new lesson of happiness.

There are six rope swings in the yard in the rear. The ground is covered knee-deep with seaside sand, and here from three to four hundred children hold high carnival every Saturday during the spring and summer. Of course, only a limited number is allowed in the yard at one time, and as one of the girls generally remains within eight, good humor and order are preserved.

Realizing that books have been the formative influences in the lives of most persons, the members of the Settlement give a strict supervision to the reading of each one taking books. The boys are eager for history, biography and comprehensive science, while of course tales of adventure are greatly in demand. The girls show a decided preference for fiction. The library is largely made up of contributions from those interested in the work in Rivington street; and surely here is an opportunity for many to help a good cause by sending the books and magazines no longer useful to themselves.

Next in importance to the library, if not surpassing it, are the baths for the use of the neighborhood. The eagerness with which these have been patronized by the women and children of the east side is ample proof of the need for public baths in all large cities where the limited accommodations of the tenement-houses make privacy impossible. Although ten cents is charged for the bath, it is no unusual thing for forty to be taken in a single day during the summer, women frequently walking several miles and spending their care for the rare privilege.

It was found that the baths, like other proffered pleasures, were more appreciated and popular when the recipients were allowed to pay for value received. Hence the nominal fee. Dr. E. W. Higbee of Northampton last year donated a heater for the public bath-rooms, thus making it possible to continue their usefulness during the winter months.

Among the many good lessons taught at the College Settlement, that of economy is not the least important, for, although in a poor section of the city, many of the people make good wages, which they spend without thought for the morrow. The Penny Provident bank, under the direction of the Charity Organization Society, is proving very helpful in teaching how to save.—Hester Dorsey Richardson, in June Lippincott's.

**THE HOMELY BUT USEFUL GIRL**—The "useful" girl, writes Edith Wheeler Wilcox in the *Ladies' Home Journal*, is not noticeable in any way. Everybody makes use of her and everybody likes her. She has no enemies and no lovers. Women like her very much and men speak highly of her when she is brought to their attention in some way, but they never think about her voluntarily. They appreciate her highly when she helps them out of a corner and thank her cordially, and then forget her until they need her again. She is not apt to marry, for men do not care for useful girls before marriage. She can sew, get a dinner if need be, amuse children, assist in getting up entertainments for other people to participate in, and she is an excellent nurse, and reads aloud well and sings a little—enough to rock a child to sleep or to help out a chorus. She is like the green "everlasting," or old-fashioned "live-forever" plant—scentsless and not beautiful, yet indispensable in a garden.

**HOW TO MOUNT A HORSE**—Any woman who lives in the country, and who is not too stout, should be able to mount a horse from the ground unaided, writes Carl A. Nyegaard in the *Ladies' Home Journal*. If she attains to be anything of an equestrienne, she should require no more assistance than a man, though she is handicapped a little by reason of her skirt. She should lower the stirrup sufficiently to reach it with the left foot, then placing the right hand on the upper pommel and the left hand on the lower pommel, by a sideways motion, right shoulder forward, spring lightly from her right foot and swing herself into the saddle. Once there, she should take her foot out of the stirrup, place her right thigh in its proper position above the pommel, and adjust her dress. The stirrup is shortened from the right side by pulling up the strap again. A good dancer will soon learn to mount.

### Womens' Work at the World's Fair.

The lady managers of the Columbian Exposition are blocking out a very extensive work for themselves. This is apparent from a report just made to the President of the Board, Mrs. Potter Palmer, by the committee on State work.

The committee embraces Mrs. Mary C. Cantrill, Ky., chairman; Miss E. N. Book, Fla.; Miss M. E. McCandless, Pa.; Mrs. N. H. Banks, Ky.; Mrs. E. W. Allen, Oregon; Mrs. P. P. Roe, Cal.; and Mrs. W. N. Linch, W. Va. Owing to Mrs. Cantrill's necessary absence, the report was prepared by Miss Book. The same plan of work, the report states, may not be adaptable to all of the States because of differing conditions, but it is suggested that in the first place there should be a friendly consultation between the two lady managers and an agreement as to which shall receive reports, give directions, report to the executive committee, in short, be chief of the State work. The other lady manager might travel through the State arousing enthusiasm among the women and girls, and appointing in each county women best fitted to lead the work or the two lady managers might divide the State between them, attending to these duties each in her own portion. Principles and alternates should work untiedly, and the latter should be intrusted with responsible duties, especially in connection with financial matters.

Under the supervision of the lady managers one woman should direct the work in each county and select assistants in each town, village and community. The county managers might be called county directors, and their assistants local directors of the World's Fair. Each local director might organize a Woman's World's Fair club and Girl's Columbian club, each to have a president, secretary and treasurer. A small initiation fee might be charged, or honorary members might pay, say, 25 cents a week and active members 10 cents a month. The proceeds would form a helpful sum toward paying the cost of material used in preparing exhibits, or the traveling expenses of one or more members to the Fair. The trip and expenses might be offered as an incentive to best work in some line; or the money might be used to buy material for some worker without means who would do the work and perhaps win the prize, but allow the club to own the exhibit and to dispose of it as it may decide. Special effort should be directed to this class of workers who abound in every State, but considerable discretion may be exercised as to the encouragement of false hopes in the minds of a class of workers who are more industrious than artistic. It is possible for a woman to spend two years in joining together 2,000 pieces of beautiful silk with 2,000 kinds of stitches and then turn off her hands a monstrosity. A very high standard should be held up for all classes of work, yet all classes of workers should be interested. Special attention should be given to work of women and girls on farms, and every inducement offered them to compete in the grand exhibits of farm, dairy and domestic pursuits. Women who work in unusual lines should be hunted up and interested. In several States both native and foreign women work in tobacco, cigar, iron, hox, lock and other factories. In cities many such could be reached through the labor organizations.

Very important is it, the report states, to maintain friendly relations with the local press, without whose aid great success cannot be achieved. "We would advise," says the committee, "that, instead of sending the papers long, dry, formal matter, requesting them to 'oult' what they want, that a regularly organized press committee furnish only matter of real local interest. Brevity and neatness go a long way with editors, they being so refreshingly unusual."

All women's societies and clubs should be communicated with. Those of the wealthy and leisure class might be induced to interest themselves in the moral, intellectual and financial development of clubs of bread-winners. Every reasonable effort to interest and instruct the children would be amply repaid in increased patriotism, knowledge and interest, and through them indifferent parents could be reached. By co-operation of teachers special days, such as "Columbian," "Colonial," "World's Fair," and others, especially October 12, 1892 might be set apart for special observance by children.

All educational, industrial financial, social, literary and religious organizations should be induced to co-operate. The committee emphasizes the importance of careful and business-like management of all money intrusted to the hands of all engaged in the work, and says that where the State makes no provision for women's work some arrangement can probably be made with those having the disbursement of the State appropriation, "otherwise women will have to just enter for general competition." The committee expresses the belief that transportation lines, if properly requested, will furnish free transportation for all women duly authorized to travel in the interest of the Fair, who are not paid for their services.

Finally, the report urges great discrimination in the selection of local directors in State work, and that such officers should be invested with "such dignity and importance as will in themselves make the position one to be desired and accepted by the best women with due sense of appreciation and responsibility."

**DEVOTION TO ART**—A cat has nine lives, and spends them all in vocal culture.

### A Quandary.

[Written for the RURAL PRESS by CLARA S. BROWN.]

It would seem that women of the present day ought to have no difficulty in determining how to order all their ways. What they do not know they can readily learn by reading the various domestic journals. The editors of these pay handsome sums to contributors of much fame, who have nothing to do but to sit at their desks and tell their bumble sisters exactly how every task should be performed, and just what are the regulations for healthy and correct living. I acknowledge the existence of these privileges at the present time and hope I am duly thankful for them; yet, for some reason, it may be natural stupidity, the right course is not always clear to my mind. In fact, I am sometimes downright perplexed, and I have decided to lay the case before a discriminating public and beg for a solution of the difficulty. I will select a few items from the sources above mentioned as examples of the instruction which seems so complete and yet leaves me in a quandary. What, in your judgment, is the reason that I am not fully enlightened upon the points mentioned in the items?

"Nothing is better to make a rough skin smooth than glycerine, and vaseline is excellent for sunburn."

"Glycerine makes the skin yellow and vaseline causes a growth of hair, therefore their use cannot be recommended."

"Wash the hair once a week regularly. A dirty head invites disease, while a free use of water makes the hair vigorous and the scalp healthy."

"Many beads of hair are ruined by too frequent washing. Once a month is quite often enough. Use the brush freely instead of water if you would not have your hair dry and harsh. Rub your face until it looks alive; there should be a warm glow under the skin. Keep the pores open with plenty of friction, using soap and cold water."

"Never put soap on your face, and don't treat it as if it were a board to be scrubbed. If you would have a good skin, never use a rough towel, but wipe gently with a soft cloth, always using hot or tepid water."

"Supper should be light and eaten at least three hours before going to bed. Better dispense with supper altogether if you can."

"Sleepless people are recommended to eat a lunch just before retiring—noting rich or unwholesome, of course, but a cup of bouillon or beef tea, some bread and butter, etc. It is a mistake to go to bed with an empty stomach."

"Begin the day with a good hearty breakfast; the system needs toning up in the morning and much more work can be accomplished if you start in with a hearty meal. Never do any sort of work before eating."

"For breakfast eat an egg, a little toast or mush and fruit. Don't overload the stomach in the morning. It is weak then and should receive only food of a light order."

"The oven for your raised bread should be as hot as possible when the loaves are put in and afterward allowed to cool down. Bread baked in this way will not crack open."

"To prevent your bread from cracking, do not have the oven too hot at first, but gradually increase the heat until the loaves begin to brown. Too great heat at first will form a crust over the loaves before they have risen sufficiently and then they will burst."

"I might go on indefinitely, but the above extracts, I think, will make the situation clear."

### Chaff.

**KLEPTOMANIACS** have a taking way with them.  
NEVER dodge a difficulty; go at it and conquer it.

**LARGE** checks are always fashionable for lawyer's suits.

**Mrs. Cumeo**—Well, Harry's wife is certainly a thing of beauty. Cumeo—I hope she won't be a jaw forever.

**Ir** a man serves him faithfully six days in the week the devil doesn't care whether he goes to church on Sunday or not.

**SMILEY**—Now, remember, I don't want a very large picture. Photographer—All right, sir. Then please close your mouth.

**A MAN** always feels a great deal sicker when the doctor has called his disease by a high-sounding and unfamiliar Latin name.

**EMPLOYER**—"Well, Patrick, which is the bigger fool, you or I?" Patrick—"Faith, I couldn't say, sir, but it's not myself."

"I do like crying children," the bachelor said. "And why?" a friend asked, "should you like them?" "They're sent out when they cry."

"He pressed her to his breast and sighed," read the elocutionist; and the boy in the gallery brought down the house by yelling; "Which side?"

**IN EVIDENCE**—Judge—Prisoner, have you any viable means of support? Prisoner—Yes, sir, Your Honor (to his wife)—Bridge, stand up, so that the court can see yez.

"In the scheme of creation," "woman was an afterthought." "Yeth," remarked the sleeping imbecile, "and she's been thought after ever thimble."

**A SOLICITOUS Daughter**—Old Gentleman (at head of stairs)—Sally, ain't it about time to go to bed? Sally—Yes, father, dear, don't put it off another minute, your health you know, is not robust.

## Man and Land.

I knowed a man, which he lived in Jones,  
Which Jones is a county of red hills and stones,  
And he lived pretty much by gittin' of loans,  
And his mules was nothin but skin and bones,  
And his bogs was flat as corn-bread pones,  
And he had 'bout a thousand acres of land.

This man—which his name it was also Jones—  
And swore that he'd leave them old red hills and  
stones,  
Fur he couldn't make nothing but yallerish cotton,  
And little er that, and his fences was rotten,  
And what little corn he had, hit was boughten,  
And dinged if'er livin' was in the land.

And the longer he swore the madder he got,  
And he riz and walked to the stable lot,  
And hollered to Tom to come thar and hitch  
Fur to emigrate somewhar whar land was rich,  
And to quit raisin' cock-burs, thistles and sich,  
And a quit raisin' thar time on the cursed land.

So him and Tom they hitched up the mules,  
Pertesting that folks was mighty big fools,  
That 'ud stay in Georgy ther lifetime out,  
Jest scratching er living when all 'em mout  
Git places in Texas whar cotton would sprout  
By the time you could plant it in the land.

And he driv' by a house whur a man named Brown  
Was a livin' not fur from the edge o' town,  
And he hantered Brown fur to buy his place,  
And said that hein as money was skace,  
And hein' as sheriffs was hard to face,  
Two dollars an acre would git the land.

They closed at a dollar and fifty cents,  
And Jones he bought him waggins and tents,  
And he loaded his corn and wimmin and truck,  
And moved to Texas, which it tuk  
His entire pile with the best of luck,  
To git thar and git him a little land.

But Brown moved out on the old Jones farm,  
And he rolled up his breeches and bared his arm,  
And he picked all the rocks from off the ground,  
And he rooted it up and plowed it down,  
Then he sowed his corn and wheat in the land.

Five years glid by, and Brown one day  
(Which he'd got so fat that he wouldn't weigh)  
Was a settin down, sorter lazily,  
To the bulliest dinner you ever see,  
When one of his children jumped on his knee  
And says, "Yan's Jones, which you bought this  
land."

And thar was Jones, standin', out at the fence,  
And he hadn't no waggins, nor mules, nor tents,  
For he had left Texas afoot and cum  
To Georgy to see if he couldn't git some  
Employment, and he was looking as hum  
Ble as if he had never owned any land.

But Brown he asked him in, and he sot  
Him down to his vittles smokin' hot,  
And when he had filled hisself and the floor  
Brown looked at him sharp and riz and swore  
That "whether men's land was rich or poor  
Thar was more in the man than thar was in the  
land."  
—Sidney Lanier.

## The Tower at the World's Fair.

Passing the Woman's building, the visitor  
can turn toward the northeast and inspect the  
foreign and State buildings in the northern por-  
tion of the park, of which he is supposed to  
have caught a general view from the steamboat  
dock, or he can turn sharply to the west into  
Midway Plaisance and ascend the Proctor  
tower. This will be constructed of steel and  
be 1050 feet high, or about 100 feet higher  
than the Eiffel. From its top the view obtain-  
able of the Exposition grounds and buildings  
and of the great city lying to the northward  
will be magnificent beyond all description.

West of the tower, along the Plaisance and  
overflowing into Washington Park, will be a  
large and carions aggregation of structures,  
including probably some of the foreign and State  
buildings, and many of semi-private construc-  
tion and of a nature that cannot yet be de-  
scribed. Almost innumerable structures and  
exhibits, such as reproductions of famous build-  
ings, etc., most of them novel and striking in  
character, have been proposed, and it is not  
yet possible to tell how many or which of them  
will be erected. That there will be an aston-  
ishing array of them there can be no doubt,  
and unquestionably some of them will be im-  
portant and exceedingly interesting features of  
the great fair.

All of the important buildings will stand on  
terraces four feet above the general park level,  
thus greatly improving the general landscape  
effect and rendering their own appearance more  
imposing. From scores of domes and towers  
and minarets, flags and streamers will be float-  
ing, and both the exterior and interior of the  
building will be "warm" with a liberal dis-  
play of color. The beautiful park, with its  
magnificent array of architecture, will surely  
present one of the finest spectacles the eye of  
man ever beheld.

As the dead body shall be raised up in life  
so also the defeated soul to victory, if only it  
has been fighting on the Master's side, has  
made no covenants with death, nor itself  
bowed its forehead for the seal. Blind from  
the prison house, maimed from the battle or mad  
from the tombs their souls shall yet sit, aston-  
ished, at His feet, who giveth peace.—Ruskin.

"Did you ever have longings—almost irre-  
sistible longings—to reach after the unattain-  
able?" "I can't say that I have. Whenever  
my collar button gets down my back I know  
it is no use trying to reach after it. I simply  
undress myself and let it come out the other  
end."

## YOUNG FOLKS' COLUMN.

## Beautiful Sunshine.

[Written for the RURAL PRESS by A. T. DAVIDSON.]

One dark, cloudy day, when on our way home,  
The sky's pretty blue was hidden in gloom;  
The prospect was dreary, the view incomplete;  
But some then pointed adown the long street,  
And said as the light drifted through to the line,  
"Just look straight ahead and you'll see the sun-  
shine."

CHORUS.

"See the sunshine, see the sunshine, see the sun-  
shine,  
Beautiful sunshine!  
Look straight ahead and you'll see the sunshine."

Oh, beautiful thought! Let us treasure it well,  
'Twill be to the cause of low spirits a knell;  
'Twill train the young mind to a pleasanter mood;  
'Twill be the upholding of all that is good.  
Then come to me joy in this full cup of mine,  
I'll look straight ahead to the cheery sunshine.

CHORUS.

Cheery sunshine, cheery sunshine, cheery sunshine,  
Beautiful sunshine!  
Look straight ahead to the cheery sunshine.

## Such Fun.

Dirk, though grave, was much the most  
comfortable of the three. The truth is, Dirk  
knew he was in the line of duty, which was  
more than can be said of Tommy. It fact,  
Tommy was perfectly well aware that he had  
taken a very zigzag road as regards duty that  
April afternoon. I'll tell you how it was.

Tommy was in room No. 4 of the primary  
school, and had taken his little sister with him  
that afternoon as a treat. All the scholars  
considered it a treat to have that queer, oun-  
ning little Susie visit the school; in fact, every-  
body thought so except the teacher, who  
always gave a weary sigh, and asked for special  
grace, when she saw the little roly-poly making  
her way across the lawn. Not that Susie in-  
tended to be naughty; no earnest little woman  
of her size ever went to school with a more  
fixed determination to be perfect; the trouble  
was, Susie could never be made to understand  
why she should whisper what she had to say,  
instead of speaking out in a good, clear tone;  
moreover, she did not see why she could not  
ask all the questions she wanted to, when  
there were so many new things about which to  
talk.

On the whole, I do not think it surprising  
that Miss Waters generally found some good  
reason for giving Tommy a reward on the days  
when he brought his little sister to school, and  
allowing him to go home nearly an hour earlier  
than his usual time. On this particular April  
day she had done so, and it was this, among  
other things, which made Tommy determine to  
take a walk before going home.

"Mother said come right straight home from  
school, but then she did not know I was going  
to get out so early; that would make a differ-  
ence, of course." This he explained carefully  
to Susie, who trotted beside him, perfectly in-  
different as to whether she had started for  
home or for the world's end, so long as she was  
with "Bruvver Tommy." As for that young  
man, a great temptation had presented itself to  
him as he crossed the schoolroom yard, where  
certain of the big boys were gathered, chatting.

"Boys, do you know what a comical little  
dude that Tommy Stautz is?" Willie Ferry  
asked, just as the children came in sight. "He  
will believe anything you tell him, no matter  
how absurd. I've tried him with the most  
ridiculous things, that a child of three ought to  
know were nonsense; he will open his round  
eyes, and swallow them down every time. I'm  
going to give him a dose of fun this after-  
noon; that rainbow gives me an idea."

There it was, glowing in the April sky in all  
its beauty, while the raindrops on the grass  
were reflecting its glory as well as they could.  
It seemed beautiful enough to have given Wil-  
lie a better idea than he had. "Halloo, little  
chap!" he called, arresting Tommy's attention,  
do you see that rainbow? Well, did you know  
that if you went to the end of it you would  
find a pot of gold? Yes, sir, that's so, they  
say. I never went, because it is quite a walk,  
and I don't have time. Besides, I have all the  
money I want now, and don't care to take the  
trouble."

"Oh, my!" said Tommy, "mother hasn't;  
she wants money bad; she said so this morn-  
ing."

"Just so; then I should think you and Susie  
would go and find the pot of gold for her; she  
would like that first rate."

"Maybe it would be too far for Susie?" sug-  
gested Tommy, with a wistful air.

"Oh, no!" said Willie reassuringly; "she is  
a sturdy little thing, and wouldn't mind a  
walk like that. I'd go this very day if I were  
you; that is an unusually bright rainbow. I  
think the pot of gold must be very large this  
time; don't you think so, boys?"

You may think it strange that half a dozen  
intelligent boys, some of them almost old  
enough to be called young men, should have  
seen anything amusing in such silly falsehoods  
as these, but boys are queer, some of them;  
these all seemed to be ready to snuff out with  
laughter, and, to a boy, gave their opinion that  
the pot of gold would undoubtedly be large.

The end of it was that Tommy grasped his

sister's hand and trudged away, determined to  
find it for his mother before he slept.

"Did you ever hear the like?" shouted the  
boys, bending themselves double in their glee.  
"Just as I told you," said Willie; "that  
chap will trudge miles, I dare say, in search of  
the treasure, his eyes growing bigger every  
minute; he is the most credulous little dunce I  
ever came across."

"Perhaps he will really go too far with that  
baby sister of his, and get lost, or come to  
grief in some way," ventured Robert Hall, one  
of the younger of the group of boys.

"Poh!" said Willie, "no, he won't; she is  
used to long walks; when the rainbow fades  
away he will give it up, of course, and come  
back a sadder and wiser boy. It is a good  
April-fool joke. It is such fun to see his eyes  
grow big while you are telling him a yarn."

Then they dismissed Tommy and Susie from  
their minds altogether, and went back to the  
plans they were arranging for the evening. It  
would be a long story if I should tell you of  
poor Tommy's vigorous efforts to find that pot of  
gold. He trudged bravely on, although he came  
no nearer the end than when he started, and yet  
could not understand how that was possible; he  
got caught in a shower and in a marshy piece of  
ground, where he had to carry Susie across,  
filled his stout little boots with mud so that  
he had to abandon them altogether and make  
the rest of the journey barefoot; and after all to  
fail, was bitter. What they would have done  
at last, as the April twilight began to fade, I  
do not know, if the mother at home had not  
grown alarmed about their long absence and  
sent the faithful Dirk in search of them. For  
the truth was, that Tommy, in some of his  
turnings, had lost the road, and did not in the  
least know the way home. Dirk did, however,  
and never was dog more joyfully hailed than  
when he found the two sitting under a great old  
tree with Tommy's battered sun-umbrella over  
them, trying to escape from the great drops of  
another April shower. It was what Tommy  
calls "pitch dark" when they finally reached  
home, covered with mud, and Tommy without  
shoes or hat; for a gust of April wind carried  
his hat away down stream, while he was carry-  
ing Susie across it on a log.

What happened to Tommy for his folly and  
disobedience I will leave you to guess; but I  
will tell you what happened to Willie Ferry.  
The Ferrys lived just around the corner from  
the widow Stautz, and had known about her  
trouble, and tried to help her; so of course  
they inquired closely into the matter when the  
children reached home. Tommy told the  
whole story from the beginning.

"Now, sir," said Mr. Ferry to his son, Wil-  
lie, "you have had your fun, it seems, accord-  
ing to your own ideas; you can take this lan-  
tern and finish up the job. Out somewhere  
between the Wheeler place and the old mill  
Tommy Stautz left a good pair of shoes stick-  
ing in the mud; you may go in search of them,  
clean them and take them home."

"Why, father!" said Willie, aghast, "you  
can't mean to-night? It is two miles out to the  
Wheeler place, and it is as dark as ink, and  
raining besides."

"I know it; and it is the road that little  
fellow and his baby sister took this afternoon  
under your direction. He needs his shoes, and  
you are the boy who is going to find them."

"But, father, I can't go to-night; it's the  
business meeting of our society, and I'm secre-  
tary."

"I am sorry for that," said his father, firmly,  
"but pleasure before business has evidently  
been your motto to-day; and you say it was  
'such fun' to cheat that little fellow, you  
ought to be willing to complete your own job.  
Whether you are or not it will be necessary to  
do so. Remember, you are under orders to  
find those shoes, clean them, and carry them  
home, before you attend a business meeting or  
any other meeting."

As Willie Ferry trudged along through the  
mud and rain that disagreeable night, in search  
of the lost shoes, it is to be hoped he planned a  
more sensible and honorable way of having fun;  
but I don't know whether he did or not.  
Some boys are queer.—Myra Spafford in the  
April Pansy.

SUBMARINE BOAT.—The French submarine  
boat Gymnote was recently tested in Tonlon,  
and demonstrated its ability to pass through a  
hullockade line and escape attention in spite of  
systematic efforts to watch, trace or discover  
its course. It plunged and remained under  
water 40 minutes, then rose to the surface at a  
distance of more than two miles and a half  
from its point of departure, having passed under  
the watched line of demarcation without being  
seen. It again crossed the line, but this time  
two of the parties on the lookout got a glimpse  
of it—not, however, sufficiently distinct to en-  
able them to trace and pursue it. The course  
of the boat was in both instances rectilinear.

A WOODMAN'S TEST FOR AXES.—A hint which  
may be serviceable to ax-manufacturers as well  
as buyers was given by an experienced Australian  
bushman to a new ohm. "It may be useful  
to you when you go into a store to buy an ax.  
Take out your pocket-knife, open it, and hold  
it as if you were going to sharpen a pencil, but  
with the back instead of the edge toward you.  
Then run the back of the knife gently over the  
edge of the ax. If the edge turns ever so little,  
so that you can just feel it, the ax is all right.  
If it won't turn, it is too hard." Trying an  
English-made ax lying at hand, he said, "That's  
no good." The edge would not turn.

## DOMESTIC ECONOMY.

## Asparagus.

This is a delicate vegetable and yearly in-  
creasing in popularity. Indeed, a surplus in  
the market is a rare thing. The tough portion  
at the base, when the vegetable has been suf-  
fered to grow a day too long, should be broken  
off before cooking. Cut in bits and boiled it  
gives a stronger flavor to the edible portions.

*Asparagus Soup.*—Take the tender stalks of  
the asparagus, cut them into short lengths,  
wash, and lay them in your kettle. To one  
quart of cut asparagus add a quart of boiling  
water and salt to taste, and let it boil for one  
hour. Make dumplings the same as for cream  
of tartar biscuit. Drop the dough in with a  
spoon over the surface of the soup. Have  
ready a quart of boiling new milk, and when  
the dumplings have had time to cook, turn in  
the boiling milk, shake it a moment, then dish  
it into the soup tureen. This is an excellent  
soup for early spring use.

*Asparagus Salad.*—Boil the asparagus,  
drain, and arrange the stalks so the heads will  
lie in the center of the dish, then scantily  
cover with vinegar. Carefully pour off the  
vinegar in half an hour, add melted butter,  
salt and pepper, beat well and return to the  
asparagus.

*Asparagus and Eggs.*—Boil the tender parts  
of asparagus in a little salted water; when  
done drain and chop fine. Have beaten eggs  
according to quantity of asparagus. Put the  
asparagus into a saucepan in which is melted  
butter, pour in the eggs and cook three min-  
utes, stirring to prevent from burning.

*Fried Asparagus.*—Scrape and boil two or  
more bunches of asparagus. Take up, drain,  
mix in egg batter, and fry in boiling lard.

*Asparagus on Toast.*—Cut the stalks in  
lengths of about four inches, tie them in small  
bunches, wash clean, and put to boil in a small  
quantity of boiling water and let it slowly boil  
for half an hour. Have ready slices of toast  
laid upon small plates, then boiling cream and  
butter poured over them, and upon each slice  
of toast lay a bunch of asparagus. Set one to  
the plate of each individual. This is a very  
appetizing supper bit.

*Cream of Asparagus.*—Boil three bunches of  
asparagus in two quarts of water until tender  
enough to rub through a colander. To this  
pulp add part of the water in which the aspa-  
ragus was boiled, a pint of milk and as much  
cream, two tablespoonfuls of butter, salt to  
taste, a little white pepper and a dash of cay-  
enne. Thicken with cornstarch.

*Asparagus in Rolls.*—Wash a quart of aspa-  
ragus tops, boil 20 minutes in salt water and  
drain. Cut the tops off eight or ten stale tea  
rolls, take out the crumbs, and set the crusts  
with the tops in the oven to dry. Put a pint  
of rich milk on to boil, beat three eggs, and  
stir in the milk until it thickens, add a table-  
spoonful of butter, a little salt and pepper, take  
from the fire; chop the asparagus tops, and add  
to the milk. Take the rolls from the oven, fill  
them with the mixture, replace the tops and  
serve hot.

*Asparagus a la Pompadour.*—Boil the aspa-  
ragus in salt and water; when cooked, cut it  
into lengths of about three inches; after drain-  
ing them let them lie before the fire a few min-  
utes. Next take one ounce of fresh butter, two  
yolks of egg, a pinch of salt, a saltspoon of pep-  
per and a tablespoonful of vinegar; cook in a  
saucepan till thick, dish up in a pyramid and  
pour over the liquor.

*Asparagus Pudding.*—Boil the green tops of  
two bunches of asparagus until tender; cut in  
small pieces. Put a spoonful of butter in a  
saucepan and set on top of the stove; when  
melted, add four eggs well beaten, with a cup-  
ful of milk and a little salt and pepper. Stir  
and beat the mixture, adding gradually four  
tablespoonfuls of flour. Cook smooth, add the  
asparagus, turn into a well-buttered mould,  
plunge into a kettle of boiling water, or set in  
a steamer and let cook two hours. Serve in a  
pudding dish with cream sauce.

PINEAPPLE PUDDING.—Ingredients: One  
pint of milk, six eggs, six ounces of sugar, six  
sponge cakes, a tin of preserved pineapple and  
three ounces of dried cherries. How to use  
them: Butter well a pudding mould and orna-  
ment the top with dried cherries and pieces of  
pineapple; put in the sponge cakes (broken in  
pieces) and some more pineapple (broken in  
small pieces); into a basin put the milk, the  
sugar and the eggs; whisk all together until  
the sugar is dissolved, then add the syrup of  
the pineapple to it; turn the mixture over the  
sponge cakes in the mould, cover with buttered  
paper, and steam one hour and twenty minutes.  
Chop the rest of the pineapple very fine, turn  
the pudding on to a hot dish, place the pine-  
apple around it and serve immediately.

PINEAPPLE PIE.—Cut a medium-sized pine-  
apple fine, add a teaspoonful of sugar and the  
same amount of milk or cream, a tablespoonful  
of butter (or two if milk is used), the well-  
beaten yolks of five eggs, and when ready to  
put into the pastry-lined pie-plate, the five  
whites beaten to a froth. Bake with one ornament.

CANNING CLAMS.—EDITORS PRESS: Could  
you find out for me how to can clams and mu-  
sels so they will keep for the winter? You can  
write it down in the Domestic Economy list in  
the PACIFIC RURAL PRESS, and oblige—Mrs.  
J. C. WATERBURY, Creston.

## The Week.

May, this year, goes upon record as a month with about twice the normal May rainfall, at many points at least. Fortunately the first reports of damage to hay, grain and early fruits were found to be exaggerated, as is usually the case. No doubt some suffered severely, but the general damage was not great. Probably Lient. Finley is not far from right when he says: "While the occurrence of rain has been beneficial in many instances to agricultural and horticultural interests, yet considerable damage has resulted from excessive precipitation, high winds and low temperatures. It is believed, however, that less damage has resulted in California than would have followed the prevalence of hot northerly winds."

Fruit is now going forward rapidly by car-load. Fourteen car-loads of fruit were ship-

ped from Vacaville last month as against five car-loads during the same period last year. Other producing points are also shipping by car-load.

The dairymen have formed a Union as is fully described upon another page. May it rebound to their advantage. There is need for such action.

## Better Newspapers.

We often wonder how a people so intelligent, so well behaved and so full of aspiration will tolerate such a low tone in public journals as that which seems to characterize the most successful of them. If the man in the moon should come tumbling down and onshion on a knot of newsboys, he might infer from their wares that the mundane mind was chiefly occupied with the basest affairs, and the chief worldly transactions were hideous crimes; and yet this is not true. People are not so bad as the things they read, although there may be a progression toward that result, as is often claimed.

It is gratifying to find that vigorous protests are made against prevailing policies in journalism, and we can but hope that if they are made vigorously and persistently enough, a change will come. In a report of some remarks recently made by Mr. J. C. Stobbs of this city at a banquet, we find this notable paragraph:

"We may well wish that the daily press, for the good of the community and its own sake as well, would pursue its great work on the same lines. Instead of feeding us with the history of man's crimes, with accounts of murders and suicides, the details of public and domestic scandals, slogging matches and dog fights, that, if only at intervals, for short, restful periods, it might chronicle only the good that men do, the record of public virtue, the progress of civilization in the discoveries of science, the achievements of art, that it should permit us as a community to look only upon the pleasing features, the improving, elevating incidents of society. Why may we not have a spring-time, when the bare earth of organized society shall be covered with the verdure of man's doings for his fellowman; when the thorns of vice shall be hidden by the leaves of virtue; when mankind shall be regaled with the fragrance of the good deeds which are thickly strewn along his path—the living, blossoming mile-posts, marking his advance toward a higher state. We should be better for it."

Most assuredly; and yet the papers, apparently oblivious of any responsibility which may inhere in them as molders of public opinion and promoters of morality, persist in heralding the base, the brutal, the inglorious, the criminal, and if a ray of virtue shines at all, it must pierce its way through such clouds as these.

## What the Business Costs.

It is seldom we get an idea of the actual cost of doing railroad business, and therefore only occasionally do we get any data for measuring the imposition which high freight rates are upon the producing and trading community. There has been a little knocking out in the railroad centers in this city, and one man who has for a score of years been manager of one branch of the great system has been summarily displaced, much apparently to the dissatisfaction of some of his old associates. According to the deadly work of the interviewers one of the managers who had not been consulted in the change and was apparently displeased with it, recounted the idea of the incapability of the man who was removed using, according to the reporter, these words: "Any railroad manager who could show operating expenses as low as 46 per cent of the gross earnings must be a capable man, as 50 per cent is considered an excellent showing for any road, while 70 per cent is common."

Now, we do not know all the fine points about railroad management, but we infer that when operating expenses are 46 per cent of the gross receipts, the profits are 54 per cent. If this is so, it begins to be plain why railroad managers so quickly become millionaires, and it also shows how sadly the producer and merchant are mulcted. Why, such a percentage beats pawn-broking. No wonder the people complain. The only wonder is, that everybody is not ruined by it.

NOT THE HOP LOUSE.—Alexander Craw, entomologist of the State Board of Horticulture has just returned from examination of the hop-fields around Sacramento, and reports that the aphid, supposed to be the hop fly, is the common grain louse. He also found the cabbage louse and the plum louse in the vicinity of some of the hop-fields, but none on the vines.

## The Future.

Sir Charles Dilke, in a recently published work in two volumes, entitled "The Problems of Great Britain," expresses the belief that in the future the world will be practically divided between the Anglo Saxon, the Russian and the Chinese. If the present rate of increase both in numbers and wealth is kept up, the French and German nations will appear as pigmies beside the all-conquering Anglo Saxon. The German surplus of population has largely overflowed into boundless America, and to all intents and purposes becomes Anglo Saxon. How many millions of people there are in the United States whose names alone indicate their Gallic or Teutonic origin. How many more in Great Britain and her provinces. Had Sir Charles Dilke's prescience reached far enough, might he not have made the statement that the Anglo Saxon is the coming race? Russia, it is true, while old in years, is young in progress. Her awakening is that of a young athlete. Her power is physical. Something more is needed if she is to keep step with the Anglo Saxon and rule the world or divide it into three parts; yet Sir Charles Dilke's predictions may be verified if Russia is content to work out the possibilities of her now practically endless domain. The autocratic rule of the house of Romanoff will be modified before the next generation has passed away. Then, and not before, Russia's future greatness or weakness may be foretold.

We may fairly suppose that Sir Charles Dilke sees the Chinese through other lights than we who know them as a sort of human teredo.

China has vast areas of unoccupied territory which will in time be occupied, if not by Chinese, perhaps by Russians. China, unlike other nations, loses nothing to the Anglo Saxon through emigration; wherever a Chinese emigrant is found he is a Chinaman. If the great wall of China is ever rebuilt, it will be done by the rest of the world; its purpose will be to keep the Chinese in and a thorough job will be made of it.

## Wool Interests in Washington.

It is telegraphed from Washington that Columbus Delano and Judge Wm. Lawrence of Ohio, representing the National Wool-Growers' Association, held a conference with the Secretary of the Treasury on June 1st upon the subject of certain matters in which the wool tariff was used to the disadvantage of home products of the article. They wanted a readjustment of the series of valuable parts imported. It is demanded that the duty be levied as if upon the whole fleece and "skirting" be stopped. Another matter complained of was a speech said to have been delivered by Consul Griffin, the representative of this country at Melbourne, Australia. In that speech Mr. Griffin is reported as saying that he was making every effort in his power to have the United States tariff on wool repealed, so that the Australian wool-growers would have an unrestricted market in this country. The wool-growers' representatives showed Secretary Foster a copy of a Melbourne paper in which the speech was reported, as stated, and afterward exhibited the same to President Harrison. If the Consul were correctly reported, they thought that he should be removed, and urged the same upon the President. The latter promised to look into the question.

## California Dairy Scenes.

We give our first page this week to a number of attractive views pertaining to dairying in California, which are welcome, not alone for their industrial significance, but as breathing the country air, which even city folks consider delightful at this season of the year. The engravings are reproduced from the May issue of the popular California magazine, the *Overland Monthly*, and form a part of the excellent dairy articles published by that periodical, to which we referred in a recent issue of the *RURAL*. At another time we shall present other views, mainly illustrative of local dairy practices, accompanied with a part of the very excellent descriptive article by the *Overland* writer. We are glad, as we remarked upon a previous occasion, to see agricultural matters receiving prominent place in a well-known literary periodical.

## QUERIES AND REPLIES.

## How to Destroy the Woolly Aphis.

EDITORS PRESS:—There has appeared of late considerable inquiry in the Press for remedies against the ravages of the woolly aphis. In a former number of the *RURAL* I am quite sure I gave my experience in destroying this pest, but as the object is of importance it will bear repetition. Simply whitewashing all parts of the tree from the ground up to the small branches with a wash, the same as is used for ordinary whitewashing, with the addition of some strong wood ashes and a little salt, will effectually clean the trees of this pest and prevent their return. Besides this, whitewashing the trees will clean them of all other pests, moss, rough bark, prevent sun-scalding and add greatly to the beauty of the trees.—J. S. TIBBIS, Muskegon, Mich.

## Double Peaches.

EDITORS PRESS:—In issue of May 2d, L. B. D. of Monterey writes for information on the subject of "Peaches Doubling," and asks if "some kinds are more disposed to doubling than others." I find that this is the case, and as with him, the Early Crawford are much more inclined to put forth double fruit than any variety I have. As to a remedy, I know of none, and doubt if there is any available to human hands, as I think that it is caused by the influence of the past season in which the fruit buds were formed. He also asks if "some varieties are free from this overdoing business." I find that the Wager, which ripens about ten days later than the Crawford, is nearly free from the habit; in fact, I might say it is quite free, as it is only now and then that you will find a double peach on the tree I have; also another peach, a seedling which ripens still a week later than the Wager, which is nearly free from the habit, but not so much so as the Wager; but as it is a seedling from the Crawford, perhaps that is the reason that it has some double fruit upon it; still, it is not bad, as there is generally enough single fruit on the tree for a good crop, and we pick the double ones off.

Speaking of fruit doubling, I notice a great many of my grapevines are putting out two and sometimes three shoots from one bud, and each shoot shows two bunches of grape buds, making six bunches in all from one bud. There is a prospect of a heavy yield of grapes if the season keeps favorable to the present outlook, and not only for grapes, but all other fruit gives promise of a good yield here in the mountains.

We have had quite a rain yesterday and today; about .75 of an inch have fallen, and it looks as though we might get more to-night. This will be bad for the hay that is out, but the most of the crop is late in this section, and will be benefited by the rain; besides, many of the fruit-growers are a little late with their plowing, and this rain will help them to get their land in good condition.—W. W. WATERMAN, Laurel, Santa Cruz Co.

[Thanks. Probably the only way to handle the double peach is to take them off at thinning, as our correspondent mentions.]

## Phosphorus Squirrel Poison.

EDITORS PRESS:—I have made a gopher poison with phosphorus, flour and wheat according to the directions found in several papers, but the mixture does not get hard and consequently is hard to handle. Please inform me through the *RURAL* if drying by artificial heat would diminish or destroy the force of the poison.—E. S. W., Aptos.

We never had this difficulty, so cannot speak from experience. Heat would not hurt the mixture if it was of degree low enough not to ignite the phosphorus; but why not dry the mixture, by using more flour? Will some one who is practically acquainted with the subject, help our correspondent out of his difficulty?

## Reports and Bulletins.

EDITORS PRESS:—Will you please inform me through the columns of this week's *PRESS* to whom the Agricultural Reports and Bulletins are sent. Whether only to statistical correspondents, or to any that apply.—FARMER, Stockton.

This question is indefinite because there are so many official publications in the agricultural interest. Usually copies can be had by any one who applies, as follows: For U. S. Department of Agriculture, Hon. J. M. Rusk, Washington, D. C.; University Experiment Station, E. W. Hilgard, Berkeley; State Board of Agriculture, E. F. Smith, Sacramento; State Board of Horticulture, B. M. Lelong, 220 Sutter street, S. F.; State Board of Viticulture, O. J. Wetmore, 317 Pine St., S. F.; State Board of Forestry, Sands W. Forman, 25 Flood Building, S. F.

FRUIT SHIPPING.—Mr. H. A. Fairbank, who has been widely known during the last few years as Secretary of the California Fruit Union, has opened an office in Sacramento, where he will operate in fruit lines during the shipping season. Mr. Fairbank is the local representative of the following well-known Eastern firms: Sgobel & Day, New York; Maynard & Child, Boston; F. Nickerson & Son, Chicago. We trust Mr. Fairbank will be able to do his full share in the disposition of our great fruit surplus, and be himself advantaged thereby.

## RURAL IMPROVEMENT.

## Trees and the Village.

[Not's from an address by C. H. SHINN of the University of California at San Lorenzo, Alameda county, May 19, 1891.]

I have been asked to address the people of San Lorenzo upon something that belongs to the village improvement idea. This is a broad field. One could easily be statistical and assault you with facts. The Duke of Argyle planted many hundred thousand larches, at a cost of one-third of a cent apiece, and now that he is dead his grandson is making his everlasting fortune by selling larch timber to the English Government. Very true, very instructive, and extremely ill-adapted to the present occasion, which must deal with the living present, not with Scotch larches or British peers.

Village improvement work is worth any one's while. The English-speaking races are land-lovers, land-getters, land-keepers. When they are sufficiently educated and refined, they surpass the people of all other races (except our brother race of the Germanic stock) in their capacity to make gardens, orchards and great landscape effects. English parks and avenues are not equaled anywhere else in Europe. In scientific forests the Germans are ahead, but that will not always be so. France, Italy, Austria are full of magnificent landscape gardening and of grand old forests. But England remains the most splendid illustration of what our race can do in the field which ever broadens and becomes more important as the world grows older.

Increased demand presses hard on supply. The time is coming when every forest must justify itself by its timber yield, when every field and hillside from Alaska to Patagonia must give something, no matter how scanty, for the food, the clothing, the shelter of the teeming millions of a world in which disease is lessened, life is made longer, universal peace reigns, and "star-eyed avarice" becomes more and more a daughter of the earth, a helper of humanity.

A world-artist of this future time will be the landscape gardener, shaping into undreamed of harmonies the plantations of village, town and city, the trees of the streets, the forests by the banks of rivers and sloughs, the copse of the wild ravines. Every county or other home-governed political division, in those days, will have its thoroughly trained landscape gardener, as, in some sense, an officer of the State, to guard against outrageous infractions of the laws of tree-harmony. But those laws will be so well understood by the community, and so generally accepted, that the landscape gardener will be only the adviser and helper, the outdoor architect, and, under his supervision, houses, streets, village, fields, farms, orchards, will at last become a perfect whole, and full to overflowing with the charm that always dwells in the higher harmonies.

The word village is a sweet, simple and beautiful old name for a thing that is worth having and worth fighting for. Village-dweller, town-dweller, city-dweller—of the three, the first, in these latter days, may well fill the larger place. It is that life which men have agreed to call suburban—half city, half country—that combines the greatest advantages in kind and degree. The villager who still keeps in touch with the life of a city is more apt to move in the greater currents of national life and of world-life. Thinkers, inventors, leaders, great soldiers, statesmen, poets, masters of time and circumstances—these come more often from the kind of plain, healthy country-life that is never quite divorced from urban activities. Upon this life the great cities draw forever, or they would perish in a generation.

Now a village can be made beautiful with a beauty that is more durable than granite. It can not only inspire its own people, but it can be a joy and an honor to the commonwealth.

First, there is the beauty of names. "Street"—that is stiff and ungainly; "Jones Street," that is positively ugly. The English speech has many better names. We want lanes, roads, paths and all the rest; we want the historic Indian and Spanish terms to stay in our country-side. The stately old Spanish explorers and pioneers who settled the infant colony must not be ignored for lackadaisical real estate titles from boom-land.

Secondly, there is the beauty of cleanliness, of weedless roadsides, of as few fences as possible, general carefreeness and sightliness.

Thirdly, there is the beauty of trees for shade, for avenues, for blossoms, for wayside fruitage. This of itself is a chapter. If I could wish a sudden gift of superb trees to San Lorenzo, and wish it so deftly and well that tomorrow morning the trees would be in full maturity here—what think you I would choose for it?

Mind you, they should be century-old at least. Along your main roads deciduous trees of cleanly habit and harmonizing foliage, some nut-bearing, some chiefly planted for flowers, and all set somewhat irregularly, occasionally in clumps of three or five. Among these trees I see *Salisburias* fifty feet high, the purple-leaved and the common *Buohes*, *Walnuts*, *Tulip trees*, *English Oaks*, *Peonies*, *Ems*, *Maples*, and many others. *Redwoods*, *Sequoia* gigantes and other native conifers find an occasional place. A few masses of golden *Acacias* give

spring-tide color. Choice native shrubs and the best of the exotics fill spaces occasionally, not in set rows, but in copses and small groups. A few of the grander palms are used to complete the climatic scale, but care is taken to avoid the deadly monotony of too many straight rows of Palms, Peppers, *Grevillias*, *Eucalypti* and *Magnolia grandifloras*. On that rock the beauty of many a colony village has been wrecked. Parts of Southern California look as if the Creator had only sent out Palms, Peppers, *Grevillias*, *Eucalypti* and *Magnolia grandifloras*.

I wish Californians would "brace up" and learn to have some little faith in our native trees and shrubs. The finest tree of its age in Alameda Co. is a native live oak (*quercus lobata*), 24 years old, planted by old Captain Scott, near Niles. It is a grand tree, perfect in shape, large enough now to shelter a very respectable cottage, and evidently just beginning a useful career of five or six hundred years at least. The Douglas spruce, the Lawson cypress, the *Librocedrus decurrens* and the two *sequoias* deserve planting here as much as the *Deodar* and the *Cedar of Lebanon*.

One fine specimen of a tree is better a thousand-fold—better for you, better for the village and the State—than a thousand hastily planted, poorly cared for trees. One oak that may last more than a thousand years; one redwood, to become, perhaps, the famous tree of our valley in times when the forests are swept away and none of equal size are left; one beech tree to recall to the thoughts of men the giants of ancient Denmark—these were better worth your labor than long rows of smug poplars or lachry-mose willows that perish after their kind.

If you plant in the true spirit—the Aryan spirit of love and reverence for the forest, and for every tree and every growing thing therein—you cannot fail nor go astray. Out of the depths of the forests the great solitudes, the vast shelters, the green silence—all that our race knows—has somehow come. There our ancestors met and conquered the Roman legions; there they gathered the tribes together and made the beginnings of nations; there the songsmiths hammered out their sagas and wove the tale of the *Volungs* and the *Nichelungs*; there, in old time, the houses of our folk were built in the glades by the oaks, the strong places whence the war-hosts went forth. When we plant a tree in these days, that have gone far afield from the days of Goth folk and Saxon folk, we plant that which may become, in the fullness of time, a tree to which nations shall make pilgrimage—an oak of the charter, a plane tree like that which still stands by the Cave of Machpelah.

The art that outdoes nature, the infinite harmony of trees as planted that the race in instincts are satisfied, is an art that is of slow growth. Men come to build finely, said Lord Bacon, far more easily and quickly than they come to garden finely. Hence the gardening is the higher art, and men sooner garden well on a small scale, with narrow though laudable aims, or sooner learn to plant lawns or door-yards with beautiful trees, than they learn to consider their neighbors, their village and the whole community. It is a great step forward when the first tree is planted on common soil, for common use, in the spirit of fellowship. One neighbor, as Emerson puts it, has the woodland, one the river margin, one the hills—I have the landscape. So, in the true village life, that contains many neglected germs of modern happiness, each citizen must consider what kind of a landscape he is helping to make.

## HORTICULTURE.

## The Fig of Commerce.

[The following paper by D. VAN LENSEN of Auburn was read at the Placer County Farmers' Institute.]

In writing a paper on the fig tree, I will confine myself principally to the fig of commerce, which is known in America as the Smyrna fig. I believe that the name Smyrna fig has been the occasion of much trouble, expense and disappointment in trying to obtain in California out of the fig of commerce shipped from Smyrna, but which is not really a Smyrna fig.

The fig of commerce is raised in the Province of Aidin, about 90 miles a little east of south of Smyrna. There are several fig districts in the Province, bearing the names of the principal towns in them. The principal ones are Aidin, Ebelli, Nasli, Denizli and Omorlu. The Ebelli district raises the fig in excellence.

The figs of commerce are raised and cured in these districts, put in bair sacks and shipped to Smyrna, where they are bought by merchants, assorted and packed in boxes, drums, cartons and barrels, according to quality and country to which they are to be shipped. Hence the name of Smyrna fig.

Figs are raised in Smyrna and vicinity in different varieties, some only for eating fresh and others for drying; the last are used mostly by natives. They are not suited for commerce, being inferior to the Aidin figs. I will state here that a fig called *Barthjeck*, raised about Smyrna for eating fresh, has no equal in flavor; it is supposed, however, it loses its flavor in three or four days.

The fig districts of Aidin are situated in a valley separated from the sea by a range of mountains; by the description, I surmise it may be somewhat similar to the Coast Range

in California. The soil is said to be argilo-calcareous, containing little humus. Generally a cool breeze comes from the sea, over the mountains, in the summer season when the fruit is on the trees.

The trees are raised by cuts 10 to 14 inches long in nursery rows and watered. The next year they are set in orchards. The second, third, and even fourth year, the fruit is small and falls off before maturity. Growers generally do not fructify the fig with the wild fig until the fifth year. This they think is better for the trees in their subsequent growth. They fructify fruit by placing on the trees a number of will fruit on strings, as heads are strung, in the months of June and July. The pollen is said to escape through the aperture opposite the stem of the wild figs, and spreading through the trees gets to the cultivated figs. After this operation, the later fig as it ripens becomes plump, increasing in size until the latter part of August. The ground under the trees is freed from grass and smoothed down and leveled in July to make it perfectly dry to receive the falling fruit. The figs are left on the trees until they fall by their own weight on the ground and are picked up every day and placed in places under shade prepared for them on the ground for a day or two; then they are put in sacks for the Smyrna market. In case the weather is damp or raining, the trees are shaken, as they drop with difficulty by their own weight in that case. They are then exposed to a dry atmosphere. The trees are irrigated little if any, but a cool soil is favorable to them. They are pruned very little; one or two trunks are left and all small branches on the trunks and main lower branches are removed to leave free access to the body of the tree. These trees have only one crop. The average yearly crop of the Aidin districts is reckoned at 30 to 35 millions of pounds.

I have already mentioned that the Aidin figs are fructified by the wild figs, which are also called capri fig. The trees grow wild on the mountains and hills of the district; the fruit is gathered in June until the first part of July and sold in the market places in strings to be placed on the cultivated trees to fructify them. The owners of orchards on being asked why this is done say that the figs do not come to maturity unless they do this. The figs they say will dry and fall before they come to full maturity or shrivel up, dry on the tree and become hard. The strings of wild figs are sold as high as the heat figs in the market when the crop happens to be short. The orchardists do not plant them in their orchards as they are plentiful on the mountains, yet if they happen to be growing in their orchards they leave them. They say that one tree is enough to furnish the pollen to twenty and as many as thirty of the cultivated trees. The seeds of the cultivated figs when planted produce mostly the capri tree. In the fall of the year the capri figs can be distinguished on the trees above the falling leaf by a small swelling. In the cultivated this does not occur before the next Spring.

There is an insect called fig wasp, that is the *hlastophaga*, which enters both the wild and cultivated figs and carries the pollen from one to the other. The growers think that the wasp helps, but it is not present every year, and to make sure of success they have to put the wild fig itself on the trees.

The prevailing opinion in Smyrna and in Aidin is that the same fig cannot be raised anywhere else, but in the districts mentioned above. The soil, locality, situation, sea breeze all combined is thought to be the secret of the perfection of the fig. The same trees are planted on the other side of the mountains toward the sea, around Smyrna in the plains of Magnesia north of Smyrna; but in all these localities the figs are not equal to the Aidin; some have tougher skins, others do not dry well, others have not an equal flavor. Please take notice in conclusion that all that precedes are facts and opinions existing where the figs are raised. It is for California to try and obtain a similar or as good a fig as the fig of commerce and present it to the markets of the land in the most attractive form and packages for ready sales.

I will note first that the locality is somewhat similar here at Auburn as in those districts where they are raised to perfection. We have an intervening range of mountains; true, we are farther from the sea, but, remembering how much larger the ocean is than from the archipelago and how much more subject to fog the former than the latter, we may reckon this as in favor of the locality. Our soils are cool in most places. The little water needed is an advantage for trial and success. Our good success with the white Adriatic may give us a good amount of hope in this respect. Many in California do not believe in caprification, while others are ready to try the practice which has been in use for centuries in the old countries. The pros and cons of this will not be mentioned as it would require a separate paper. But the fair, intelligent and wise experiments of raising the trees in different parts of the State, under propitious circumstances, I believe will enable us to obtain an additional industry in California which may be of great benefit to many. I will also state that most of the information given was obtained from a brother in Smyrna well qualified to give it, who also sent me cuts and small trees of the Ebelli district, with some of the capri. The Ebelli having come wrapped up in the soil from which they were taken, I sent a sample of this soil to the Cali-

fornia College of Agriculture for analysis last September, hoping to be guided in that way in the requirements of our soils for a successful raising of the trees. I have no returns thus far of the result, and I hope on a future occasion to impart the analysis to you.

## Placer County Fruit.

The following paper by P. W. Butler, of Penryn, was read by F. M. Varden at the Placer county Farmers' Institute:

The man who plants an orchard for profit, should, at the outset, learn just what fruits are best adapted to be grown on the spot where he is located. Placer county has already become famous for the superior quality of its deciduous fruits; many of them are not surpassed in excellence by any other country. The State Horticultural Societies and the Agricultural Department of the State University have done much toward determining the best varieties of fruits to plant in different parts of the State. "California Fruits," by E. J. Wickson, is a most valuable work. The author is eminently qualified to treat the subject and he has brought to his assistance the best horticultural writers of the State. This work should be in the hands of every orchardist. While the knowledge to be obtained from these sources is important, local information is more valuable. The local Horticultural Society that brings to its aid local writers, can obtain and disseminate information that will be invaluable to the people of its section, and should receive assistance from the entire community.

Nearly all deciduous fruits can be grown with fair success throughout the whole State, but it is now well known that only from one to five varieties can be grown in any particular locality at the highest profit to the producer. In this county, the fruits that have thus far yielded the most profit are peaches, cherries, apricots and plums; strawberries, blackberries and raspberries have also in many instances been made profitable.

Peaches, however, lead all other fruits in popular culture. In the centre of the thermal belt, and there only, should all the early varieties be planted and in a few of the most favored of such locations astonishing profits are frequently made. Even in this belt, the most sheltered places, where the land has a southerly slope and is light, warm and thoroughly drained, should be selected and where all these conditions exist it is questionable whether in any other portion of the State these early fruits can be grown as profitably. The heat fruits, however, ripen later and they are depended on for the main crop throughout the county. They all do well in the valley land, in the foothills and in the mountainous sections until an altitude of 3,000 to 4,000 feet is reached.

Apples do their best in the higher altitudes, and it is only there that the winter varieties should be grown.

It now seems probable that the fig is destined to become one of the leading fruits of this county because of its superior quality when prepared in a dried form. The Parker fig and the White Adriatic are the best varieties that have been fruited here. They have thin and tender skins, are very pulpy, are of delicious flavor and are transparent when dried, qualities necessary to make a popular product for extensive consumption. The largest figs should be selected for drying, the smallest can be preserved and canned or put in glass jars, and in this form, it is thought, it may rival the peach in the amount consumed when properly introduced. In the Smyrna district where the finest figs of commerce are produced, caprification is practiced in the production of the best varieties, some of which are supposed to have been introduced into this State. In a conversation a few days ago with one of the members of the largest fig importing houses in America, who has traveled through the fig countries of the old world, he stated positively that the best fig produced in Smyrna could only be fruited by caprification with the wild fig and that until California got this variety and planted the wild fig with it and pursued the methods of caprification as practiced in the East, the best results in fig culture possible to this State could not be attained.

Apricots, cherries and early peaches must be planted in warm, sheltered places where they will ripen early. Apples, pears and plums do well on colder and more level land, but all peach land should be well drained, well irrigated thoroughly and irrigated plentifully. All orchards must be fertilized to produce best results.

The man planting an orchard now in Placer county takes fewer risks than in almost all other kinds of business. He plants only such fruits as have been proven to be profitable. Experimenting is done by nurserymen and others interested in the introduction of new fruits and the practical man is ever ready to utilize the results of their experimenting. To do this effectively take one or more leading horticultural journals, take the local newspapers, join your Horticultural Society and attend its meetings, advise with your neighbors, practice what you learn, and if attentive to your business you cannot fail to meet with success.

STATE BOARD OF TRADE.—The exhibition rooms and office of California State Board of Trade will, on and after June 1st prox., be located at No. 603 Market St., near Second, next door to the headquarters before the Grand hotel fire.

## AGRICULTURAL NOTES.

## CALIFORNIA.

## Butte.

**FLOURISHING ORCHARDS AND GROVES AT PALERMO.**—Oroville *Mercury*: A drive over Palermo disclosed a highly gratifying condition generally. The vast area of fruit trees is a slight worth riding miles to see. They are in a flourishing condition, and the numerous orange groves look exceptionally pretty. The system of irrigation shows to splendid advantage, for at this season the ramifying ditches can be traced in all directions. New residences are going up and many acres have been set this year. On the Hearst & Taylor place 30 acres of Tragedy plums were set this spring and not one died. This is a remarkable fact, for not often can a man set 3000 trees and have the satisfaction of seeing every one live and flourish. It is needless to say that the soil was thoroughly prepared and the trees properly set. This plum, something new here, is called the "Tragedy" because of its gory color, and is intended for early shipment to the East. We were glad to notice that the grapes, olives, figs, plums, in fact, all the young fruit trees are thriving as well as could be desired, and the prospect is very bright.

**BUTTE COUNTY ORANGES.**—Chico *Chronicle Record*: Mr. Gillett, the Florida agent of the W. R. Strong Company of Sacramento has been visiting the Coast, and concerning his visit to the several parts of the State the *Record-Union* has an extended article. It concludes with the following: "The visitor has also spent a few days in the famous Butte county orange groves. At Palermo, Thermalito and Oroville he found the orange groves in a flourishing condition, and was much gratified to know that carloads of oranges had been shipped last fall and early winter from this district, and that the quality was fully up to the best grown in the State."

**FIRST CARLOAD OF CHERRIES.**—Chico *Enterprise*, May 26: Last Friday the first complete carload of cherries ever sent from Chico was shipped East, and the second is loading today. To ship cherries, and we suppose other fruit is the same, it requires about seven tons of ice to make the trip. Three tons are put into the car in Chico, and before starting East from Sacramento, an addition of four tons more is made. The ice is placed in a receptacle above the fruit, and the waste water runs off toward the end of the car.

**POTATO CROP IN BUTTE COUNTY.**—Biggs *Argus*: During a drive through Rio Bonito and the young orchards on the other side of the river during the past two weeks we were pleased to note that many have planted potatoes between rows. The potatoes are growing fine and a large yield will be the result. On the Reed & Johnson place there are many acres in potatoes and we never saw a finer outlook. The failure of this crop in other places will undoubtedly work to the interest of the potato crop in Butte county, which will assure a good market for the home production. There is lots of room on Rio Bonito for growing all kinds of vegetables in the various orchards, and when our people learn the benefit to be derived from utilizing the soil between trees the cost of living until the fruit materializes to the owner will have been more than paid by that which has been raised while cultivating the trees.

**DAIRYING IN BUTTE.**—Register, May 28: With cream-separators, butter can be made as readily here as in a colder climate, where the milk is set in pans. The price is always profitable, the demand good, and there is no reason why thousands of dollars should be sent out of this county each year to pay for butter that ought to be made at home. The true secret of successful farming is in producing all that is possible on your lands, and thus avoid having to purchase from others. The people of Butte will find it a profitable business to make their own butter rather than buy it; the money will be kept at home, the land will be enriched, the dairyman will get a good price for his calves, and he will be sure of a paying price for the butter he produces.

**GOOD FRUIT REGION.**—Oroville *Register*: That portion of Butte county which lies on Barry and Bear creeks is an exceptional locality for fine fruits. A rocky ridge extends between this strip of land and the Middle Fork of Feather river; it lies far below the high backbone known as the Mountain House ridge, and is thus sheltered and protected from wind and is not high enough for snow to do any harm. The apple, peach, plum, pear, apricot, English walnut, olive and orange all grow in this favored belt. Berries of all kinds are unsurpassed; the cranberry thrives finely, and even the cranberry succeeds well. Among those who have orchards in this section are Philip Zink, Geo. Spitzler, G. V. Oton, Miss Biogham, Alfred Clark, Joel Flynn, Geo. Martin, W. L. Moore, Mr. Woods, Bob Chaplain and J. McCollan. There is much land that cannot be irrigated, and experiments have been made by Alfred Clark, Geo. Martin and others to test the capacity of the soil for growing fruits without water. These tests have been very satisfactory, and Clark has a variety of trees, including the peach, almond, chestnut, etc., that are doing well without having been irrigated. Martin has the almond, peach, plum and pear, all growing finely without a drop of water. The soil is deep and good, the climate is unsurpassed, and all that is needed to make the

region one of the most desirable in the State for homes is rapid and easy communication with markets.

## Contra Costa.

**HARVEST WORK.**—Antioch *Ledger*, May 30: There will be about a dozen combined harvesters, besides headers and old-fashioned thrashing machines. The following prominent farmers will have harvesters in the field this season: Volney Taylor, H. Hoffman, Livingston, Porter, Haey & Co., Wilder Bros., Geddes and McCabe, G. Cople, E. D. Griby & Co., Fred Quant, Howard Bros., J. Christensen and Gen. Veale. Mr. Christensen's harvester will be hauled by a steam road wagon, and the others will be hauled by horses, requiring about 24 animals for each.

## Fresno.

**CROP ADVICES.**—Fresno City, May 30: The continued cool weather during the latter part of May has been very favorable to the well-filling of grain, the grain being much more plump than would otherwise have been the case. Hay harvesting is pretty well over, and grain harvesting will begin in earnest the coming week. Extensive arrangements are being made for the care of this season's fruit. The El Modelo packing-house is being rebuilt. The new structure will be of adobe, one story, and covered with corrugated iron, so that it will be practically fire-proof. Many of the leading producers of the raisin center are perfecting a co-operative packing establishment. The objects are to secure uniformity of grade, keep up the standard of brand, secure reduced freight rates, have a voice in regulating prices, etc. It promises much for the future. A committee of Fresno raisin men have spent the past few days in San Francisco in conference with railroad people with a view of securing more favorable freight rates.

## Inyo.

**EIGHTEENTH DISTRICT FAIR.**—Bishop *Register*: The 18th District Association directors met at Independence, and decided the time for the fair of 1891, beginning Tuesday, September 29th, and ending Friday, October 2d. A premium list was adopted. The meeting was entirely harmonious and pleasant, and the manifest intention is to make the coming fair the very best that circumstances will permit. The southern end of the valley will exhibit handsomely, and our local producers and citizens should, and no doubt will bend every energy toward making the event a notable one.

## Kern.

**TO IRRIGATE FOR EARLY CROP.**—Bakersfield *Echo*: The reputation of the Delano country for the early maturity of crops is already established. The warm, loamy wash from the hills pushes vegetable life of all kinds forward at a rate scarcely equalled in any part of the State. Watermelons mature there weeks in advance of even the celebrated Lodi country. The first grapes to reach the market each year also hail from that section—so the McGee boys say. These factors in wealth-making are to be availed of hereafter by some enterprising gentlemen in that vicinity. They propose to put in a pump plant next year and plant 40 acres to grapes, and also plant melons between the rows. The same water that flows down the rows to fertilize the grapes will instill life into the melon vines, and the latter will more than pay the expenses of cultivation and irrigation. In years past, the melons from that section have sold readily at 50 cents each.

## Los Angeles.

**POTATO CROP.**—Pasadena *Star*: The high price of potatoes last year has stimulated an immense planting, and large and frequent fields of them are seen in driving about the country.

**WHEN TO PLANT ORANGE TREES.**—*Star*: The time for planting orange trees has been much discussed, but the consensus of opinion among the best-informed men seems to be that it should be done in the spring and early summer, at a time when the buds are beginning to show signs of starting, or at the latest before the new growth shall have reached two inches in length. Snob was the recent decision of the Pomological Society of South Riverside. In the vicinity of Pasadena some of our best horticulturists have not yet planted their orange trees, but will do so some time early in June.

**VEGETABLE SHIPMENTS EASTWARD.**—L. A. *Express*: S. A. Butler, agent of the Wells Fargo Express Co. says that the result of the past winter's vegetable shipments has been that there is a new business started in the nature of raising winter vegetables for Eastern markets. The railroads are alive to the movement, and next winter you will find vegetables, peas, beans, tomatoes, new potatoes, and strawberries leaving here by the carload, running on fast time just as the orange trains run now. The express company took the lead, and by conveying small lots at reduced rates of freights allowed the farmers to feel the Eastern winter market, and the result has been satisfactory. Our business will now be largely confined to carrying the vegetables from the centers in the East whence they are shipped to the surrounding or adjacent small cities. Just at present there is very little fruit and vegetable shipment going through the express; the strawberry season is nearly over and tomatoes are backward. They have for some reason we have not heard satisfactorily explained been so for the six months past. We had a heavy winter call for tomatoes but we couldn't get them. There was one frost which killed all the

strawberries and tomatoes and threw everything back. I tell you, the man who has the piece of frostless land in this country has a treasure, for I am sure these winter shipments are going to grow into one of the most profitable businesses we have.

**SMALL CROP OF PRUNES.**—Pomona *Progress*: The yield of prunes in this valley this season will probably be less than one-half of an average crop. Last year the yield was enormous. A gentleman who has had occasion to visit a score or more of the best prune orchards in this locality, during the past week, tells us that the fruit (now about the size of a pea) is rotting at the stem, and falls away from the tree by the handful every day. Some trees are now almost bare of the green fruit. It seems to be the rule that trees that were loaded with the great crop of prunes last year are the poorest bearers this season. There are all manner of reasons given for the loss of the prune yield, but none that is generally accepted. Some horticulturists say that too much moisture and the cloudy sky have killed the young fruit, and others declare that lack of irrigation or rain did the business.

## Monterey.

**CROP NOTES.**—Cor. Salinas *Index*, May 30: Much has been said about an anticipated shortage of crops in the central portions of Salinas valley, and there are a great many fields from Gonzales to Cholone in which the grain has been converted into hay, and the hay cocks do not appear to be very thick. The stock requirements of all farmers compel them every year to cut a portion of their grain for hay, and the light straw of this year compelled them to sacrifice a greater area for this purpose than usual; but light straw does not necessarily denote light grain; on the contrary, the best crops are often harvested under these conditions. J. P. Raymond, a heavy grain-buyer in the valley, and R. M. Shackelford, who is interested in warehouses along the railroad express themselves pleased to witness the evidences of a fair crop where reports had led them to expect nothing. The crops about Bradley this year will be first class—far better than they were last year. The rainfall of the year has been greater at this point than at Salinas. The 300 foot warehouse will not hold the grain tributary to this shipping point if producers wish to hold for a rise, but with present prospects of good prices the crop is expected to move soon after harvest. A great many fruit trees have been put out in the vicinity of Bradley this year, and the experience of the past has demonstrated that this region is well adapted to horticulture, especially peaches, apricots and prunes.

**GRAIN CROP AT SAN LUCAS.**—May 30: E. T. Harris, who was warehouseman at the time, received 71,000 sacks of grain from south of the river in 1888 and 93,000 in 1889. J. B. Anderson received 84,000 in 1890, and a careful estimate places the number from that side of the river this year at 100,000 sacks.

## Orange.

**HOW A LARGE WALNUT GROVE IS PLANTED.**—Anaheim *Gazette*, May 28: The 900-acre walnut grove south of town belonging to Meers, Fowler, Minor, Culton, Jones and others is looking splendidly. The trees have made more than a year's growth since being set out last spring. There are in the neighborhood of 30,000 walnut trees set out in the tract, and on going over the place to prune the trees not a single dead tree has yet been found. Some of the trees are nine and ten feet high, and are looking as thrifty as can be. Between the young trees the owners have put in a crop of potatoes, which is now about ready to dig. Messrs. Fowler and Minor have 220 acres in potatoes, and the other patches on the tract amount to 220 acres more, making 440 acres, one may say almost in one patch. It is claimed by experienced potato growers that the crop will average upwards of 100 sacks to the acre. At this rate the tract will produce 44,000 sacks, which at 300 sacks to the car, will load 146 cars. That is potato raising.

## Placer.

**ORCHARDS IN PLACER.**—Sutter Co. *Farmer*, May 29: R. C. Kells and wife took a trip to Placer county, driving through the rich fruit country near Auburn, Loomis and Newcastle. One of the noted orchards visited was that of Robt. Hector, near Newcastle, known all over the State as the Hector cherry orchard, which was planted in 1852, and is one of the oldest in the State. The tallest tree in the orchard is 60 feet in height and 3 feet and 2 inches in diameter. Last year, over 3000 pounds of cherries were picked from it, and this season the tree bore 1800 pounds. Other orchards and vineyards were visited, and everywhere the fruit industry seemed to be awakening. Hundreds of acres have been planted there during the past year. Peaches predominate over other varieties planted there; also a great many fine orange trees were noticeable in the gardens and orchards.

## San Joaquin.

**WILD BLACKBERRY CROP.**—Lodi *Review*, May 30: Wild blackberries are being gathered in large quantities along the Mokelumne river. The crop is exceptionally heavy this season, and the berries are of a very nice size.

## San Luis Obispo.

**DAIRYMEN ORGANIZING.**—S. L. O. *Tribune*: As Cayucos is a leading shipping point, enough good material was found to start the Dairymen's Association on a good footing. The fol-

lowing agreement has been adopted and generally signed: "We, the undersigned, dairymen of Cayucos and vicinity, agree to assist in the movement of forming the Dairymen's Association, and will sustain the action of the delegates from this place to the convention, to be held in San Francisco, June 1, 1891." The above was signed by 26 leading dairymen who were present.

## San Mateo.

**HESSIAN FLY.**—Redwood City *Gazette*: An examination of the stalks of wheat in one of J. A. Robinson's fields, which John Corran had cut over and where the wheat was not as thrifty as elsewhere, disclosed the presence of a small insect. Mr. Robinson took some of the grain to San Francisco this week, and left it at the room of the State Board of Horticulture, and, as a result, received a letter from Quarantine Officer Alex. Crow, in which he says: "The samples of wheat left upon my desk contain the puparia of the Hessian fly (*Oedemera destructor*). As I have just hatched the perfect insect from specimens received from Rio Vista, I would recommend the burning of all infested stubble as soon as possible, so as to prevent the winged insects from hatching and spreading."

## Santa Barbara.

**EDITORS PRESS.**—We have had a long spell of cool, cloudy weather. Most of the hay is out and in the field. I think there has not been enough rain to injure it much. Bean-planting is nearly through with. There will not be a good crop of fruit all around this year. In apricots there is a good prospect here and there, but there are many trees with little or no fruit on them. In apples it is rather early to tell what the crop may be. Pears bloomed very full, and I presume enough will remain on the trees. Many of the peach and plum trees have the buds and seem inclined not to start leaves or blossoms, so there will be, with few exceptions, light crops. Grapes promise well. Prunes are very backward, on the whole, so I think there will not be a full crop. Neotaries promise a fair crop. Dawson plum trees are full of leaves and fruit. —O. N. CADWELL, Carpinteria, May 27, 1891.

## Santa Clara.

**TOBACCO CULTURE.**—Gilroy *Gazette*: The experimental tobacco crop of three acres that was planted in Los Angeles county this season is said to be doing very well. At Livermore, a few acres are also being satisfactorily experimented with, and we are informed that in many of the northern counties it is also grown in a small way with good results. Near us, at San Felipe, Mr. Culp is raising considerable tobacco of excellent quality, and Duncan's crop on the Uvas is always of good marketable growth. It is a well-known fact that the land about Gilroy is well adapted to this culture, and that our climate is exactly what is needed for the proper curing of the leaf.

## Santa Cruz.

**DRAINAGE DISTRICT ORGANIZED.**—Watsonville *Rustler*. At a meeting of the land owners held in Kennedy's hall last Saturday afternoon the Pajaro Drainage District was organized by the adoption of by-laws and the election of the following officers: President, A. F. Richardson; Vice President, John Kennaugh; Secretary, O. D. Stoenner; Treasurer, Otto Stoenner; Trustees, J. I. King, A. Hughes, and Nele Struve.

## FRUIT PRESERVATION.

### An Oregon Discussion of Fruit-Driers.

As the fruit-drying season is at hand, we give in full a discussion of mechanical driers, held before the Marion County (Oregon) Fruit-Growers' Association. The leading essay is written by a man who has a drier of his own invention to which he frankly alludes. If he should have been unconsciously drawn into finding more defects in the machines of other inventors than they are willing to admit, our columns are open for replies. A discussion of the whole subject can hardly fail to be of value and for this reason we write it. We quote from the *Salem Journal* as follows:

Mr H. S. Jory led this discussion by reading the following paper:

Having been requested to give a description of the various kinds of fruit-driers, together with their merits and faults as viewed from my standpoint, I will comply to the best of my ability. Of course, to give anything like an extended description of all the driers, with which I am acquainted would make this article too long, so I will content myself with giving a short sketch of some of the most common ones used on this coast. I will commence with

#### The American.

Manufactured at Waynesburg, Penn. This company claims to have made and sold more driers than all others combined. It consists of a frame drying chamber or flue, set at an incline of 20 degrees, the lower end resting on a furnace, surrounded by a casing or jacket, to confine the heated air and discharge it in the flue, where the fruit is placed to dry on galvanized wire trays, the frames of which are made of wood and of a square form. The fruit is prepared in the usual manner and placed on the trays immediately over the furnace, and when another tray is filled, the first one is slid up, toward the upper end of the drying chamber, repeating the operation as each succeeding tray is filled, or until the drying chamber is filled. Some of the larger sizes have a device for sliding the trays upward, by means of a crank and ratchet which makes it somewhat easier. Defects: The difficulty of sliding the trays upward in the drying chamber, especially when loaded with fruit or gummed as they are liable to be with syrup or drippings, from plums or other soft fruits. The difficulty of getting at the fruit to examine it while drying, as being in this long drying flue, it would have to be pushed through in order to examine it, and it would be necessary to push it up one tray from the bottom, and then get up on the step ladder and take one tray out, and then go to the bottom and push another up, and so on continuing the process until all were examined or taken out. The difficulty experienced from steaming or retarding the drying of the fruit in the upper end of the drying chamber, by constantly putting in green fruit at the bottom. This machine does good work when only a small amount is in the drying chamber at a time.

#### The Alden Drier.

This consists of a furnace in the basement, from which the heated air is conducted into a tall vertical drying chamber or flue, discharging at the top of the building. This flue is usually of seasoned lumber, and about 3 1/2 feet on the inside, and extends from the bottom up through the floors and roof. On the inside of this flue is placed four endless chains, and in the chains is placed at intervals of five inches, little hooks or projections to engage and hold the fruit trays and keep them in their proper position, while ascending in the flue. The endless chains are drawn upward in the drying flue, by means of a crank and pinion with ratchet attachment, to elevate the fruit trays. This device is worked either by hand or power, as desired. On the main or operating floor is placed a door into the flue; through this door all the fruit to be dried is put in. On the upper floor or loft is placed another door at which all the fruit, when dried, is taken out. Defects: The difficulty of getting the heated air to circulate through the tall drying chamber, when filled with fruit trays one above another, as it is impossible for the heated air to rise until the fruit on the lower trays is dried or shrunk, so as to allow the heated air to pass through to the top. This continued steaming from the damp fruit below causes the fruit to oxidize or turn dark, thus injuring its appearance, and to prevent this, the pernicious practice of bleaching with sulphur was resorted to. This machine is so expensive and so obviously inconvenient as to be little need at present, a large one being unused and discarded in this city for several years, and is fitted up and is now known as the Oregon House. In regard to the large drier now in operation by Mr. Wallace and others in this city, it would be hard to give a description of it, as they have been continually changing it each year since its erection. Suffice it to say, however, that the first year it was the Alden in every essential particular. The next year it was entirely remodeled, and the system of Mr. Cozins of San Jose, Cal., was adopted. Now I will describe Cozins' drier. It is a large concern, and they were drying apricots when I was there. They claimed a capacity of some 30 tons daily for it. But you will not wonder at the capacity, when I tell you how it was done. The fruit was first pitted, then put in the bleaching-box and

bleached with sulphur, then put in the drier and warmed a little, then taken out into the back yard, where it was finished in the sun. The drier proper consists of a long drying chamber, about 60 feet long, 16 feet wide and 7 feet high. This is made as tight as possible with seasoned lumber. There is a partition running lengthwise to within about seven feet of either end, making two drying chambers, 51 1/2 feet. These drying chambers are in or near the center of the building. The outside walls of the drying chambers consist of a series of doors fitting closely, to confine the heated air. These doors are large enough to admit a car with 64 trays 3 1/2 x 3 1/2 feet. There are 14 of these cars, 7 on either side, and they run on iron trucks from the main building, where they are filled into the drying chambers and out into the back yard. There is a close room in which is situated the furnace for generating the hot air. A fan is used to force the hot air through the drying chamber, and the current can be changed to go into either chamber, passing down on one side and up on the other, or reversed. A steam engine is used to operate the fan. The parts or openings, where the hot air and steam escapes, is right over the passage where the hot air enters, when it is desired to turn the hot air on one side; then the part in the top of that chamber is closed and the other one opened, and vice versa. Defects: The difficulty of getting an even circulation of hot air through the entire drying chamber, as the hot blast passing through the cold fruit on the first car, a considerable portion of heat would be taken up before passing the second, and so on to the fourteenth car. It would be pretty well spent, even if it should ever reach that. It would be so loaded with moisture as to be worse than useless. So it becomes necessary to keep changing the cars and changing the trays, which makes a great deal of work and is not quite satisfactory, as evinced by the fact that he is again changing it the present season.

#### The Clarke Drier.

This is a home made drier, of which quite a number are constructed in different parts of our State and Washington and all of this general form of construction, of which can be mentioned Clarke's of Salem, Lambert's of Milwaukie, Cardwell's of West Portland, and Hadden's of Vancouver, Wash., with others I could name. It consists of a long furnace constructed of brick some 20 or more feet long. This furnace is made in the bottom and center of a cellar or excavation in the ground, say 4 feet deep, 6 feet wide and 24 feet long. This is walled with brick 2 feet above the top of the ground, or 6 feet from the bottom. On this wall the framework of the drier rests. The framework of the drier consists of a 2 x 4 scantling or sill, on top of each of the brick walls. To these are secured at the bottom stanchions or studding, like those used in building an ordinary house.

These are 3 feet apart on the sides, and pieces are nailed across from one side to the other, to form a support on which to slide in the fruit trays used in drying the fruit, which are about 2 x 3 feet. The whole is inclosed or boxed in with seasoned lumber, and is provided with small doors to put in and take out the fruit. Each door is intended to accommodate two trays, and in fact the whole of both sides of the drying chamber is composed of these small doors, so that the fruit can be put in or taken out on both sides of the drying chamber. Holes are provided at intervals in the top of the drying chamber for the escape of the steam or moisture.

Defects: the difficulty of getting a thorough circulation of heat throughout driers, necessitating a changing of trays constantly, also an enormous consumption of fuel.

#### The Plummer Drier.

This drier has been more generally distributed and sold on this coast than perhaps any other. It has a basement of brickwork in which is situated a cast-iron furnace in the usual manner. On top of this basement is a wooden drying chamber about 4 feet square and 7 feet high, made of seasoned lumber with a ventilator in the top to allow the heated air or steam to escape. In one side of the drying chamber are 8 small doors, each made to accommodate 2 trays so that any one of the 8 doors can be opened and 2 trays taken out or put in. The trays are about 3 1/2 x 3 1/2 feet square with wooden frames, galvanized wire cloth bottom, and 16 in number. Defects: the trays have to be continually changed from top to the bottom, in order to dry evenly, as the heated air cannot rise through so many trays of green fruit to dry evenly. In order to examine the fruit to determine the exact condition in drying, one would have to take out the tray or turn it around. This is frequently quite difficult when the trays are large and stick to the ways with the dried fruit syrup, making considerable hard work.

I now come to the description of revolving driers and as this is already lengthy I will only describe two. The Walters drier of Los Gatos, Cal., has a horizontally revolving rack on which to dry fruit. This is the Riggs drier with which some of you are doubtless acquainted. It is however built on a larger scale. The inside parts are all iron, consequently fire proof. The rack containing the fruit to be dried is kept continually revolving by means of a steam engine. This drier seems as perfect as it is possible to make it in its drying appointments and its only fault is its cost.

#### The Oregon Drier.

I will now describe another revolving drier, the Oregon, of which I am proprietor, and hope

you will pardon the assumption when I assert it has more good points and less objectionable ones than any other on the market. This drier has unlimited capacity, the only limit being in the size and number of the drying chambers. It is described as a hollow, cylindrical rack frame, situated above a furnace and revolving around a central heating drum and smoke-pipe, the whole being inclosed in a suitable shell of brickwork or wood lined with sheet iron to confine the heated air used in drying fruit and vegetables. No engine is needed in order to revolve it; as the heat is central, it is perfectly evenly distributed, and it is only necessary to revolve when filling in or examining or taking out fruit, and this is done with the hand. The ventilation in this machine is perfect, as the fruit-trays are two or three times as far apart as in most others. No steaming or oxidation of the fruit can occur in this machine, as the hot air and moisture passes through the inner edge of the upper trays from the trays below, seeking a direct line to the ventilator, which is nearly in the center above. No changing of trays is required, to dry evenly. The entire charge is put in at one time, and it is ready to come out at nearly the same time. No smoke can occur on account of the dippings falling on the furnace, as they do not fall on it nor in fact anywhere within the inner circle. This machine is made in seven different sizes, in capacity from 10 to 150 bushels of apples per day for a single chamber, and in price from \$75 to \$500 for a single chamber. Where more than one is required at the same place, a liberal reduction is offered. The economy in labor in operating this machine is wonderful, as several can be set conveniently together and operated by one person, so that all can be used, or a part, as occasion requires. The saving in fuel alone would soon purchase any other machine, as it does not amount to more than one quarter what it takes in most other machines. In conclusion, I will just add that I have spent the greater part of ten years in inventing, perfecting and operating this machine. In order to do this, it has been necessary to travel extensively through different parts of this State and California, in order to examine what others had done in this line; hence my acquaintance with the different kinds of driers, many of which it has been impossible to even allude to in this article.

#### Fruit-Drying and Fruit-Driers.

Mr. J. M. Coulter of Portland then read a paper as follows:

I come before you more in the interest of fruit-driers than in the raising of fruit, as I am not a fruit-grower. But I have taken a good deal of notice and interest in the drying of fruit, and years ago, here in Salem, I was engaged in business that required the handling of both green and dry fruit, and I often found the dry to be burned or smoked, and consequently bitter to the taste and of poor flavor when cooked. I often thought of some way to construct a drier that would do the work better and also one that the farmer could afford to buy for his own use at home, one that would be free from burning the fruit and also the danger of burning his house. But I could not see my way how to make such a drier, and see any of the hot-air methods, so as to bring it within the reach of persons with small orchards in the matter of cost, or avoid the matter of burning or smoking the fruit. And so the years went by, and no drier came that filled my idea of what ought to be in that line. Well, some six years ago, while at the State Fair held at Salem, I saw what was called a steam cooking affair, and I saw it did the work well. I then formed the idea of a steam fruit-drier, and I have since got one up that I am going to call your attention to, yet I am not going to claim I am the first to get one up, for I am not; but I am going to claim that I believe my drier, with the improvements I have placed in it, is the best now in existence, and I will give my reasons for my belief in it.

My first reason is that it does the work better than any other drier, and especially any hot-air drier. My second reason is that it dries faster than any other. My third is that it is easier attended and less expensive to run than any other. My fourth is that it leaves the fruit in better condition and with better flavor than any hot-air drier. My fifth is that it gives more pounds of dry fruit to a given number of pounds of green than any hot-air drier, as there is no loss from bleeding or dripping. My sixth is the fact that they are more adapted to the wants of the people, as the cost for family sizes is so small that they come within the reach of all, and for those wanting large driers they are cheaper than any other that will do the same work, both in cost of drier and running expenses.

Gentlemen, I have given my drier the name of The Surprise Steam Fruit Drier, as it surprised me by its good results in all ways when I first tested it, and it surprises all who are using them as it did me; and now, in conclusion, let me remark that whether my drier is or not the one to take the place of the hot-air drier, which I hope it will, somebody's steam drier will, for steam has come to stay in the matter of drying fruit.

#### Mr. S. A. Clark.

Then gave a description of a drier which he uses on a large scale. He burned green wood and dried 400 to 500 bushels with a cord of wood. He could dry the Italian prune in 24 hours, the French in 10 hours. He thought the proper use of steam as a drier must prove superior to hot air. He emphasized the importance of plenty of air space around drying

fruit. His drier was 30 feet long and would handle 200 bushels of Italian prunes a day. It was heat to fill the drier with green fruit and finish that. If any fruit was not quite done when taken out, it could be taken into the attic and left to dry with the ascending surplus heat. He could dry prunes for one cent a pound in large lots. This included expense of gathering. He had fruit picked into old oil cans that had handles put on them. The fruit was dipped 5 seconds in boiling lye, then into two lots of clear, cold water. The fruit is then put into the drier. He paid boys and girls 75 cents a day and kept several hands through the year.

Such a drier costs \$500 to \$1000. Fruit dipped in a hot solution of one pound of glycerin to 20 gallons of water obtained a beautiful glossy finish. Fruit should be gathered by shaking trees and the soil beneath should be finely mellowed by cultivation and no fruit would be bruised.

Mr. Jory said the cost of making dried apples was about two cents a pound. A bushel made from 5 to 5 1/2 pounds. Fruit gathered should be put in water and handled out of it into the trays for drying. Prunes, without dipping, made about 33 per cent weight of green fruit. He secured over a ton of dried prunes off an eighth of an acre. With three hands and two driers he could handle two tons of fruit a day. A machine costs \$350.

Mr. Clark emphasized the value of fruit ripening perfectly on the tree. Fruit could not be handled in any great amount without loss. It was not economy to transport green fruit.

#### HOW TO MAKE PRIZE BUTTER.

J. H. Bickford, Supt. of West Lebanon (N. H.) Creamery, whose butter has won many first prizes, in answer to the question "How is it your butter is so uniform in color?" said "Because I always use Wells, Richardson & Co.'s Improved Butter Color. I have used other kinds, but the improved was the only satisfactory one." This color is not only the most uniform, but it is much the stronger, and hence most economical.

Joe R. Anderson, Jr., proprietor of Thorncliff Stock Farm, Lee, Va., writes: "That my butter, which won the Jersey Bulletin gold medal for the best Jersey butter, was colored with Wells, Richardson & Co.'s Improved Butter Color." In fact, the makers of prize butter, in all the dairy sections of the world, emphatically endorse this color as the best. Don't allow your dealer to sell you anything else.

MECHANICAL IMPROVEMENTS.—A writer in an exchange says that the past two years have developed more improvements in mechanical devices than any 20 years preceding. During that time almost every branch of business has been more or less revolutionized by new mechanical appliances or new processes. It is a remarkable fact that it is more applicable to the American people than to any other nation that whenever any new device is brought out or any new process introduced, even before its utility is fairly demonstrated, in many cases hundreds and thousands are found ready to adopt it.

#### THE WORLD'S FAIR IN '93

Will be held in Chicago. The Pioneer Bugby in '91 will be made in Columbus, O. If you care to know how, send 10 cents, silver or stamps, for "Complete Horse Book," and that will tell. Pioneer Bugby Company, Columbus, Ohio.

#### Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

## Tree Planting in the Foothills.

The following paper was read by Fred C. Miles before the Placer County Farmers' Institute:

In the planting of trees, we only follow Nature in her wonderful ways. Countless ages have elapsed since the elements began to disintegrate and change the primitive rocks; water and ice, and the effect of heat and winds have been working together, and are working today, changing the characteristics of our rocks and soils, and rendering them capable of sustaining and nourishing the growth of that mystery, the germ of life. We find it everywhere, from the tiniest seed through all the growths of earth. The knowledge required, and delicate care to be used in promoting this growth of plant life, make it one of the most pleasant and pleasurable things mankind can do.

As we look about, we find that Nature has allotted certain types of trees or plant growth to some one locality, other varieties to different places, while a few are common to two or more zones.

Many of them will thrive in homes far removed from their origin. Others change their habits somewhat, where the change is more marked. Some become better or worse as we regard them with a financial result in view.

Placer county may be compared to the world, for from the great valley of California, where the sun ever bathes the foothills in perpetual warmth to the mountains that witnessed the transformation and building up of this empire—the most beautiful habitation of man—the orange, the date, the banana, the palms and plant growth from nearly everywhere find a congenial home and make their fortunate owners the most happy and contented of mankind. Thus the orange, date and peach, that have come from that mysterious storehouse of Aëla that has sent out all the great movements that have shaken the foundations of mankind, have grown, increased in flavor and size, and finally, in this most western country has attained, in this favored place, the highest excellence.

When a person has selected a home, he should find out particularly the variety of trees each part of his farm will grow to perfection, and plant that, and only that variety in that place. If he does otherwise, he will not obtain the best results, and failure often follows.

The peach root likes a light, rich, well-drained and warm soil, and so it would be folly to plant it on low, wet ground. Other roots like colder, stiffer soils. They would not grow as well on lighter, warmer soils. A stranger, by going to a successful fruit-grower, may obtain all this information free, and so make his start in the best way. Having chosen his land with the idea of growing early or late peaches, or early fruit and oranges, or midsummer fruit, the next step is the tree-planting. The ground should be broken up deeply with a plow, and a sub-soiler run after the plow; do not use a subsoiler that throws up the bottom soil, but one that stirs up the earth. Earth should be in as fine a state of division as possible. The stakes for trees should be set by a competent man, as it adds to value of land to have rows straight and also lessens cost of plowing and cultivating. The condition of soil at time of planting should be such as to readily break apart when turned out of a shovel, and earth does not have a slick look when it has been in contact with iron. A hole should be dug not larger than will accommodate the roots of the tree, and soil should be replaced in hole in same position that it naturally holds.

Nearly all the elements of plant food are within a short distance of the surface, and the rain and irrigation water in passing down, carries with it many of the elements that enter into structure of plants, so if surface soil is placed at bottom of hole, most of the plant food contained therein is lost, while in some soils the subsoil contains elements that are not favorably acted upon by air and heat, and do not combine with other elements, and so the action is to starve or injure the tree.

The general rule of planting requires that trees be placed at least twenty (20) feet apart on equilateral system. Many do not know that by planting by above method fifteen (15) per cent more trees can be placed on given area of land than if land was planted by the square system. Figs require a longer distance and perhaps some other fruits also.

The holes for trees should not be dug until just before planting. The earth should be carefully placed about the tree, leaving roots in natural position, the tree usually a little higher than in nursery, as ground will settle and so leave them same depth as before. The earth should be firmed about the tree, and in case ground is least bit dry a bucket or two of water should be placed in hole before it is quite full, and when water has seeped away, then fill hole up level with earth. The horticultural books that have been published give very good directions for planting, including a notched board to insure placing of trees in line after hole is dug and planting tree.

The time for planting deciduous trees is during the dormant period. For citrus trees the best possible time is just when the buds are beginning to swell. All leaves should be removed and water applied as above, and the health and growth of tree assured. Citrus trees may be set out at any time during the year, but March and April are the favorite months in our locality.

## METEOROLOGICAL.

## Some Notes on May Weather in California.

EDITORS PRESS:—Many inquiries have reached this office as to the causes which under the peculiar conditions that have prevailed in California and parts of Nevada and Arizona during the past two weeks. The subject is an important one and should be fairly well understood by those whose interests are affected.

During the first week of May a cyclonic disturbance of decided energy prevailed over Oregon, Washington and British Columbia. Severe gales occurred off the Washington coast and unusually heavy rains were reported as far south as San Francisco. The area of light rains extended southward to Mexico. The barometer was decidedly below the normal in all districts. Before the atmosphere could recover its equilibrium over Southern California, Southern Nevada and Arizona, another storm entered British Columbia and again the barometer began to fall in all districts, attended by the development of heavy cloudiness and cool weather. There has been a rapid succession of these cyclonic areas, passing eastward over British Columbia, which continually affected atmospheric equilibrium over the southern portion of the Pacific Coast States and prevented any attempt at recovery. This region is so far south of the line of storm movements, especially at this season of the year, that weather fluctuations are very gradual there. Once under the influence of a pronounced condition of weather, the change from it is very slow. This is one of the marked climatic differences between the South Pacific region and the North Pacific region.

Within the path of cyclonic movement across this country, from ocean to ocean, we find the maximum of meteorological changes. This region lies between 43 and 53 degrees north latitude. The area of cyclonic disturbance is a region of vertical currents which give rise to high winds, clouds and precipitation. Vertical atmospheric currents prevail over the South Pacific region not always under the influence of cyclonic action but from the effect of the sun's heat upon its vast arid plains. Devoid of vegetation, the earth becomes excessively heated and in turn heats the air resting upon it, therefore low barometric pressure is a normal condition of this region, in summer especially.

The easterly movement of cyclonic disturbances over the North Pacific region intensifies the low atmospheric pressure of the South Pacific region because the two systems of vertical currents are particularly the same, differing slightly as to their origin. The air from the ocean is drawn inland where, under the influence of the vertical currents, its moisture is condensed by the cold of elevation, forming clouds, occasional showers, and giving rise to low temperatures at the surface.

If there is a marked increase in the frequency of cyclonic disturbances passing over the North Pacific Region, there results necessarily an increase in the conditions which give rise to cool, cloudy, threatening weather and showers in the South Pacific Region. For the reason above given the weather of the latter region is particularly dependent upon the movement of cyclonic disturbances along the northern boundary of this country. Even after the cyclonic center reaches eastern Montana and Dakota, its southwest quadrant is still connected with the low barometric pressure in the South Pacific Region. Low barometric pressure and vertical currents over Nevada will cause westerly winds and cool cloudy weather over northern California. If this condition is prolonged by the passage of cyclonic disturbances to the northward, light rains with snow in the mountains will follow, attended by low temperatures in the valleys.

If the vertical currents are checked over Nevada by the presence of an anti-cyclone (high barometric pressure) then the flow of air from the ocean and consequent condensation is prevented. The sun's heat produces its full effect in the quiet air, the ground heats up rapidly and lack of motion in the superincumbent air tends to accumulate the heat over such a region.

JOHN P. FINLEY,  
Lieutenant 19th Infantry, A. S. O.  
San Francisco, May 25.

A GREAT ENGINEERING FEAT.—The greatest engineering feat in the history of the anthracite coal mining is about to begin. It is the commencement of what will be known as the Jeddo tunnel, which will be driven for the purpose of draining the flooded mines of Jeddo and Harleigh. It will be constructed from Butler valley, Pa., to the bottom of Eberwade mammoth vein, a distance of three miles through solid rock, to be eight feet square in the clear. The scheme of tunneling through the mountain first occurred to John Markle, who is to be president of the company, which will bear the title of Jeddo Tunnel Co., Limited. It will open an inexhaustible supply of coal and furnish employment for thousands of people for many years to come. It will also serve the double purpose of draining all the collieries in the valley.

## GOOD HEALTH.

## Swallowing Pins, Twigs, Etc.

Several cases of accidental swallowing of things other than food have come to notice since the lamentable death of Rev. Dr. Bothwell of New York, who recently died from swallowing a cork, which lodged in his windpipe. The first is that of a locomotive engineer, who, several years ago swallowed a piece of wood. He was subsequently treated for consumption, on account of violent coughing, but without the other usual accompaniments of such a disease. One day the man had an unusually severe fit of coughing, accompanied by a violent pain in the trachea, in which something seemed to have lodged. With a supreme effort, he ejected it, and it was found to be a piece of wood about an inch long and of the thickness of a lead-pencil. It was thickly coated with mucus and as black as coal. A slight hemorrhage followed, after which the patient felt great relief. He then recollected that one day while running his train he stopped at a depot, beside which there grew an apple tree. He carelessly broke off a small twig and put a piece in his mouth. The train again got under headway, and, while running at full speed, he saw a hull on the track a few yards ahead of the engine. He quickly applied the airbrake and reversed his lever, in order to render the inevitable shock as light as possible. In the sudden surprise, coupled with the strain of throwing back the lever, he made a convulsive inspiration, and unknowingly inhaled the piece of twig, but, in the excitement, forgot all about the swallowing until it was ejected as above. He completely recovered under the care of Dr. Dowds of Brooklyn, New York.

Another case is one which also closely parallels that of Dr. Bothwell. It is related by the *Baltimore Democrat*, of a late date, that Annie Glaesner, aged six years, is dying from the effects of a pin sticking in her throat, which two weeks ago she drew in with a breath in the same manner in which the Rev. Dr. Bothwell inhaled the cork. The accident occurred in school. The child was suddenly seized with a violent fit of gagging. After the paroxysm, she informed the teacher that she had been holding the pin between her teeth, when, in an effort to yawn, she drew it down her throat. She was taken to a hospital, but as yet the doctors have been unable to locate the pin. At times the child suffers terribly, and then she will not feel it again for several hours. The throat is swelling, and it is feared that blood-poisoning has set in.

We have not yet seen any report of the result; but such accidents should be a warning against the too common practice of unneccessarily placing such things in the mouth. There is always great danger in doing so.

## Are the Finger Nails Poisonous

There is a common belief that the finger nails are poisonous, which idea is natural enough, considering the fact that scrotoches made by them are generally quite irritable and much inclined to unusual inflammation. The fact, however, is that the nails themselves have no poisonous properties, but the trouble caused by them is due to the foreign deposits under them. In other words, if one keeps his finger nails clean, scrotoches caused by them will be no more irritable than those produced by any instrument that is considered innocent. The results of an examination made in Vienna show that it is more important that the finger nails be kept clean than is supposed. In the dirt taken from under the nails were found 30 kinds of micrococci, 18 different bacilli and 3 kinds of sarcinae; besides, common mold spores were present in many instances. It would seem from this that the spaces under the finger nails were favorable hiding places for minute organisms which are more or less prejudicial to health, and that therein lies the poisonous element attributed to the nails. This shows that cleanliness of the nails is a very important essential. It is not sufficient to use merely a knife-blade, but at the toilet a nail brush and plenty of soap and water should be called into service. Surgeons long ago learned that deposits under the nails were a menace even to the life of a patient, because through them wounds were easily poisoned, and were thus led to extreme care in the matter of personal cleanliness on their own part and on the part of all their assistants. Before an operation is performed, all who touch the patient or the instruments which are to be used must first clean their hands thoroughly with soap and water, being especially careful to have the spaces under the nails absolutely clean. After this, the hands are put into disinfectant solutions.

DANGER IN FRENCH CANNED GOODS.—Extensive investigation by the Massachusetts Board of health into French canned vegetables has resulted in the order prohibiting their sale in Boston. In every sample tested, it was found that metallic poison existed in the form of copper, and 27 out of 37 samples showed adulteration.

Bolls, Carbuncles, and eruptions of all kinds are nature's efforts to throw off poison from the blood. This result may be accomplished much more effectually, as well as agreeably, through the proper excretory channels, by the use of Ayer's Sarsaparilla.

## A Great Event

In one's life is the discovery of a remedy for some long-standing malady. The poison of Scrofula is in your blood. You inherited it from your ancestors. Will you transmit it to your offspring? In the great majority of cases, both Consumption and Catarrh originate in Scrofula. It is supposed to be the primary source of many other derangements of the body. Begin at once to cleanse your blood with the standard alternative,

## Ayer's Sarsaparilla

"For several months I was troubled with scrofulous eruptions over the whole body. My appetite was bad, and my system so prostrated that I was unable to work. After trying several remedies in vain, I resolved to take Ayer's Sarsaparilla, and did so with such good effect that less than one bottle

## Restored My Health

and strength. The rapidity of the cure astonished me, as I expected the process to be long and tedious."—Frederico Mariz Fernandes, Villa Nova de Goya, Portugal.

"For many years I was a sufferer from scrofula, until about three years ago, when I began the use of Ayer's Sarsaparilla, since which the disease has entirely disappeared. A little child of mine, who was troubled with the same complaint, has also been cured by this medicine."—H. Brandt, Avoca, Neb.

## Ayer's Sarsaparilla

PREPARED BY

## "PRESERVATIVE"

ACKNOWLEDGED THE BEST  
AND ONLY

Pure Preservative  
—FOR—  
MILK, CREAM, BUTTER  
AND CHEESE.

Will keep Milk and Cream sweet and fresh  
even in the warmest and muggiest weather.  
Butter and Cheese kept fresh in their origi-  
nal condition for many months.

It has been the aim of science these many years to  
counteract the disadvantageous influence exerted by  
heat and atmospheric changes upon animal and vegetable  
food. The experiments have been many and the reme-  
dies proposed very numerous, but all were found to be  
ineffectual, impracticable and useless until the discovery  
of Preservative was made.

### A Simple Experimental Test.

Persons who wish to convince themselves of its effec-  
tiveness should send for sample, which we mail free, and  
by taking two separate quarts of new milk; into one put  
1/2 of a teaspoonful of Preservative; put nothing into the  
other, and set them side by side so that the temperature  
of the milk may be the same. See which keeps sweet  
the longer and which raises the more cream.

Preservative is the only genuine preservative that has  
ever been discovered. It is the cheapest, because it is  
not only the BEST, but because, at the same time, it is  
Harmless, Tasteless, Odorless, Simple, Economical, and,  
above all, absolutely Effective.

Circular giving full directions how to apply Preserva-  
tive, as also prices and other information desired, can be  
had of

130 Beale Street, San Francisco, Cal.

Iron cut, punched and formed, for making pipe on  
ground. All kinds of Tools supplied for making Pipe.  
Estimates given. Are prepared for coating all sizes of  
Pipe with a composition of Coal Tar and Asphaltum.

## Agricultural Notes.

(Continued from page 554)

## Solano.

**ENGLISH WALNUTS.**—Dixon Tribune: C. H. Newman has a large number of black walnut trees on his place, which were grafted to English walnuts last year. The trees show a remarkably thrifty growth. The leaves have attained an enormous size, many measuring over a foot in length and from six to seven inches in width. In nearly every instance that has come to our knowledge of walnut trees properly grafted the growth has been healthy and steady, and there is great promise for the future of this industry, which will in time rival that of fruit-culture.

## Sonoma.

**CROP NOTES.**—Forestville Cor. Courier, May 27: Some farmers are cutting hay; others wait to, but are afraid it will spoil, as we have no sun to cure it, but we live in hope of sunshine at some future period. Corn is coming up well, notwithstanding the cold; potatoes are being planted for which much ground is prepared. Cherries are ripening and are a fair crop. Apples are scarce, but peaches and prunes are abundant. Grain and hay are extra heavy. Strawberries are good and blackberries promise to be a large yield. We never saw grape vines start so vigorously, but this weather may bring a blight.

**SERICULTURE.**—Sebastopol Times: A cocoonery on a large scale is being arranged by Mrs. Joseph Farrington of Santa Rosa in the large hop-house on Mr. Farrington's Green Valley ranch. Many thousands of eggs have been procured and provided for. A few years since several hundred mulberry trees were set out on the place, and ample feed is at hand for the worms when hatched. As the season of feeding and spinning lasts only about six weeks, this will not interfere in the least with the hops, of which Mr. P. has a large acreage. Mrs. P. is an experienced sericulturist, and we predict a grand success for her in this enterprise.

**FRUIT BUYING NOTES.**—Healdsburg Enterprise, May 30: Thirty dollars per ton is being offered for two-inch Crawford peaches. Clingstones sell readily for \$35 and \$40 per ton. But little fruit has as yet been contracted for in this vicinity, and none by outside buyers. Around Geyserville, Hunt Bros. and the Santa Rosa Canneries have purchased a large amount. Fruit-growers are now ready to make contracts.

## Sutter.

**CONTRACTING FOR FRUIT.**—Yuba City Farmer: The cannery is contracting for the fruit crop at an early date. At present over 250 tons of fruit have been contracted for. The prices quoted by the buyer for the company varies according to quality of the fruit, and is as follows: Apricots, 1½ cents per lb; early peaches, 1½ cent; cling peaches extra, 2 cents; pears, 1½ cents; and plums, 1 cent.

## Ventura.

**BARLEY AND BEAN CROPS AT LAS POSAS.**—Free Press: There are 700 acres of barley in small tracts of 60 acres and upward to 160 for hay and grain. The farmers are planting beans and corn. There are 2000 acres in corn and 1000 in beans. Lady Washington and Pinkie, with few Limas, have been planted. Few have planted white corn. This land is divided from 60 to 250 acres per man. The balance is rented for grazing purposes.

## Yolo.

**COFFEE PLANT.**—Woodland Democrat: Yolo county people are constantly being surprised at what their soil will produce. One of the latest is the luxuriance with which the coffee plant grows in our climate. Prof. C. E. Dingle has left at this office a sprig of that plant that was grown by Andy McClary near Winters. The grain was first soaked in water by Mrs. M. Cory and after it had germinated, it was planted in the ground where it has been growing ever since. The plant is now in the second year of its growth. It is certainly a useful experiment, and shows that our soil may grow almost anything.

## NEVADA.

**LARGE PURCHASE OF CATTLE FOR WASHINGTON.**—Reno Gazette: George Wright of Toomsa is still here picking up beef cattle for the Washington market. He shipped one train load of 336 head several days ago and another of 339 head on Friday, and expects to ship two or three more trains. His purchases thus far amount to 1227 head, divided up as follows: Fred Dingberg, 123 head; Joe Marz n, 200 head; G. W. Maple, 170; Humphrey & Freeman, 40; Frank Frey, 157; J. N. Evans, 114; John Wright, 40; Polley, H. H. Brown & Co., 200; Louis Dean, 128; and Pete Dalton, 20. In addition to the above, Mr. Wright has bought 100 head that are now on the bank of the Carson awaiting shipment. By the time Mr. Wright gets through overhauling this market there won't be many cattle left. He has paid on an average from 6 to 6½ cents.

## JAY EYE SEE, 2-O.

Mr. J. I. Case, Racine, Wis., writes, "After trying every known remedy, I removed large Bunch, of two years standing, from 3 years old filly with three applications of Quina's Ointment. It is the best preparation I have ever used or heard of. I heartily recommend it to all horsemen." For Cuts, sprains, spavins, Windpuffs, Bunches, worth many times its price. Trial box 25 cents, silver or stamp. Regular size \$1.50 delivered. Address W. B. Eddy & Co., Whitehall, N. Y.

## HAGGIN HORSES!

Supplemental Sale  
Of 100 Head

## FABIOLA HOSPITAL

— AT —

## OAKLAND, CALIFORNIA.

**THE FABIOLA HOSPITAL** is healthfully and pleasantly located on high ground in the suburbs of Oakland, accessible from every part of the city, the street cars passing the door.

**THE APPOINTMENTS** of the institution are of the best class; the building thoroughly warmed with Harvey's system of hot water heating; rooms large and sunny; neatly furnished with all the comforts of a private home for the sick and the convenience of a first-class general hospital. Sewerage perfect.

**WELL TRAINED NURSES** are in attendance, and patients will receive all nursing and care required for any ordinary case without extra charge; but patients in private rooms, requiring a special nurse in constant attendance, will be charged extra.

**MATERNITY CASES** are given special care, and large sunny rooms are set apart exclusively for such use, with most skilled physicians and careful nurses.

**BOTH HOMEOPATHIC AND ALLOPATHIC PHYSICIANS** are in regular attendance at the hospital, and patients may choose the school of medicine they prefer.

Should patients desire to employ a physician other than those on the hospital staff, they are allowed to do so at their own expense.

Address S. J. FENTON, Resident Physician, Fabiola Hospital, Oakland, California. Telephone No. 948

## Ditching Machine for Sale.

If any farmer in Russian river or Santa Rosa valley desires a DITCHING MACHINE at a very low price let him address S. E. G., P. O. box 2517, San Francisco.

## THE RAISIN INDUSTRY.

A Practical Treatise on the Raisin Grapes, Their History, Culture and Curing.

By GUSTAV EISEN.

This is a book of marked character. It is an attractive volume of more than 200 pages, printed on heavy paper, with wide margins, and is well illustrated and neatly bound. It has won the thoughtful attention of specialists, and called forth the hearty commendation of the newspaper press. Prof. E. W. Hilgard, of the University of California, says: "It is certainly a most timely work, and one that your training and experience have fitted you peculiarly to undertake. I congratulate you and the raisin industry upon the work, in which I recognize from the outset the Germanic thoroughness and a close adherence to facts that do not always characterize such publications." Prof. E. J. Wickson, of the same institution, writes: "I discern in the work a breadth of information and a faithfulness in details of practice which will constitute it the standard treatise on the raisin." Col. For-yth says: "With your book in hand the inexperienced farmer or clerk can safely engage in raising grapes with expectation of success from the very start." Says the Fresno Republican: "No work on a technical subject has ever been published that more thoroughly, completely and honestly discussed its specialty than does Dr. Gustav Eisen's work on 'The Raisin Industry.' This valuable book, just out, is published by the H. S. Crocker Company, San Francisco. It is just what it pretends to be, a practical treatise on the raising of grapes, their history, culture and curing." The Rural Press says: "Dr. Eisen's work is broad and scholarly, and yet compact and definite in the development of the subject. It should find a place on the book-shelves of all California horticulturists, and will no doubt go to the uttermost parts of the world." The California makes this reference to the book: "It is a clear, vigorous, fresh and logical treatise; learned, exhaustive, profound and yet extremely practical and useful." The Marquette Appeal says: "A very valuable contribution to the literature of horticulture is the volume on 'The Raisin Industry,' from the pen of Prof. Gustav Eisen. Among California raisin-growers Prof. Eisen has long been recognized as an authority upon everything relative to their industry." The San Francisco Chronicle says: "In this work the author has performed a much needed task, going into the details of every branch of what has become one of the foremost industries of California. No man better qualified for the enterprise could have been found." The State Horticultural Society, by its committee, reports as follows: "We find Dr. Eisen's work a most valuable treatise upon raisin production in all its branches, historically complete, broad and comprehensive in its scope, accurate in its details and a valuable guide in the practice of the growth of the raisin-grape vine and the preparation of its products for the market, and as such we earnestly commend it to the public."

Price Three Dollars, per paid. For sale by DEWEY & CO., 229 Market Street, San Francisco.

## THE DAIRY.

## A Dairymen's Union Formed.

A largely attended meeting of gentlemen interested in the dairy industry was held in the Commercial Hotel, S. F., June 1st. Thirty-five duly accredited delegates from the various dairy centers and several dairymen who had attended of their own initiative assembled to form a dairymen's protective union.

B. G. Tognazzini presided temporarily, and the following permanent officers were chosen: President, B. H. Franklin of Cambria; vice-president, Louis Tomassini of Petaluma; secretary, C. P. Martin.

Letters from ex-Senator Steele and others expressing their sympathy with the objects of the meeting and their regrets at their inability to be present were read; also a communication from the honey-producers of the State asking that they be permitted to co-operate with the association, which was placed on file.

I. Sartori of Seattle sent a long communication on the Northwestern States as a market for California dairy products. He stated that the amount of dairy products sent from California to that section had not increased with the advance in population.

An invitation was then extended to Col. R. R. McGlinchey of Campbell, formerly Secretary of the Illinois State Dairymen's Association and of the Northwestern Dairymen's Association to address the meeting.

Colonel McGlinchey described the successful results of the Illinois association and urged the necessity of such an organization in this State. Similar organizations exist in about 18 or 20 States. An association could watch the markets to see that dealers who sold oleomargarine and butterine had licenses to sell these fraudulent products, and could bring pressure to bear on the Legislature if a change of laws is deemed necessary. The speaker then described the manufacture of oleomargarine and filled cheese, the former of which the French Government had not thought good enough for the paupers in their charitable institutions. Good work could also be done by a State organization in securing information from sister organizations.

The speaker described the manner in which the retailers evaded the national law bearing on the subject, and pointed out how a dairymen's union could co-operate with the revenue officers in its enforcement.

The need of immediate organization having been strongly urged by B. G. Tognazzini and J. Francioli, a committee consisting of B. G. Tognazzini, I. Sartori, A. Tognazzini, John Bonatti, J. Francioli, J. O. Bloom and E. B. Martinetti was appointed to formulate a plan of organization. The convention then took a recess of an hour to enable the committee to prepare their report.

On the convention reassembling at 4 o'clock, the report of the committee was taken up seriatim and adopted with a few trifling amendments.

The committee recommended that an association, to be known as the Dairymen's Union, should be formed to carry on a general commission and produce business in San Francisco, with power to establish agencies or branch offices in other cities. The stock is distributed among the dairymen of the State, and the affairs of the union to be managed by a board of 15 stockholders, each of whom must own at least 20 shares. It is proposed to commence work with 10 per cent of the capital stock paid up.

## A Committee Appointed.

The following 25 members were appointed a committee to obtain subscriptions: Contra Costa—Williams Bros.; Del Norte—Strane Bros.; Marin—J. Blum, L. Tomasini, B. Johnston; Mendocino—Joseph Sheppard; Monterey—Wm. Hatton, J. Corey; Plumas—Chas. Troisi; Napa—Frank Sahlnna; San Luis Obispo—E. W. Steele, Peter Tognazzini, E. Griesinger; San Mateo—R. H. Brown; Santa Barbara—B. Pezzoni, H. H. Johnson, H. Dolcini; Santa Clara—G. B. Polhemus; Santa Cruz—D. D. Wilder, P. Scaroni, Solano—G. Braghetta; Sonoma—C. Fillipini, Z. Sartori, Hollis Hitchcock; Humboldt—W. F. Kansen; Sierra—A. S. Nichols.

A Central Committee, composed of Louis Grolli, Louis Tomasini and E. B. Martinetti, was appointed to receive reports from the Subscription Committee, to deposit the money at Borel's bank, and to call a general meeting of the stockholders for the purpose of incorporating when they think a sufficient amount has been collected.

After votes of thanks for the notices given to the proposed association had been given to the press, considerable discussion followed on a proposal to establish a uniform butter-mold. The sense of the meeting was in favor of a mold which should give a uniform weight, but details were left for future consideration.

Considerable objection was made to a proposal of Colonel McGlinchey that the Union adopt a brand to be used by all its members in stamping their butter. It was urged that inferior and superior grades of butter would thus be marked alike.

A proposal of Mr. Tomasini that the members use the word "Union" at the bottom of their private brand met, however, with general approval.

The convention then adjourned, subject to the call of the special committee.

## List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific Coast.

WEEK ENDING MAY 26, 1891.

- 452,903.—DOOR-SECURER—N. Cosman, Fremont, Wash.  
452,946.—GAS GOVERNOR—F. Ellis, S. F.  
453,042.—FRUIT PITTING—W. C. Evans, Oakland, Cal.  
453,045.—HINGE SINKER—W. H. Gutzman, Berkeley, Cal.  
453,117.—CAR AXLE BOX—D. B. James, S. F.  
452,947.—DOOR-SECURER—W. B. Morris, Seattle, Wash.  
452,948.—STRAW SEPARATOR FOR THRASHERS—E. H. Nicholson, Santa Maria, Cal.  
452,942.—AIR BRAKE SYSTEM—Wm. W. Slater, Oakland, Cal.  
453,165.—FAUCET—C. P. Smith, San Diego, Cal.  
453,095.—TRAMWAY—J. T. Vinton, Spokane Falls, Wash.  
452,818.—SANITARY PLUMBING—F. A. Weinshank, Los Angeles, Cal.

The following brief list by telegraph, for June 2 will appear more complete on receipt of mail devices:

- California—San Francisco, James B. Stetson, J. Hammond, W. L. Holman, J. W. Harris, cable gripping mechanism; John T. Smith, W. Copeland, tanning composition; John A. Laguth, mechanical ledger; Emery I. Nichols, governor and valve movement for gas engines; San Diego, Elmore Stewart, car coupling; Santa Cruz, Hiram M. Hamore, non-heating conducting composition; Fresno, James Porteous, raisin and fig press.  
Oregon—Salem, Michael J. McKinnon, tire tightener; Taylor, Geo. W. Rowley, cable clamping device.  
Washington—Seattle, John M. Frisk, J. Readman, logging truck; Colfax, Legrand D. Harding, shoe for deformed feet; Laconner, Peter E. Frostad, rudder for boats.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail for telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

## Disinfection of Imported Fruit Trees.

EDITORS PRESS:—Our recent investigation into the manner of inspecting and disinfecting the Eastern fruit trees imported into San Jose during the season of 1890 and '91, impels us to ask for the facts, therein elicited, a wide publication. This is certainly acting in the interest of every fruit-grower of this State. By publishing these facts widely, we may hope to partially if not wholly prevent the importation of both the Eastern plants and trees, and those from foreign countries as well, with their ever attending pests and diseases. If importation can not be stopped we must expect not only all the Eastern fruit pests and fruit tree diseases, but also all of those from the foreign countries from which we import.

Doubtless both the inspection and disinfection done here at San Jose is a fair average of that done throughout the State. The inclosed printed report is probably one-fourth of the proceedings of the meeting reported, still there are facts enough in it to clearly set forth the manner of inspecting and disinfecting as now practiced here at San Jose by order of the State Quarantine Officer. F. M. RIGHTER, Campbells.

[We receive with the above a clipping from the San Jose Mercury of May 24, giving a long report of a lively meeting held at Campbells on May 23. Statements concerning the disinfection were made by the State Quarantine Officer and his deputy, which were not considered satisfactory, and resolutions condemning the process and the officers were passed. The issue will we understand come before the State Board of Horticulture at a meeting in July, and for this reason we do not go into it more in detail at this time. The question of guarding against further importation of fruit pests is, as Mr. Righter urges, exceedingly important, and we trust the Board may be able to satisfy the people in reference to it.—EDS.]

APRICOTS IN VENTURA.—One of our Ventura subscribers writes as follows: "The highest price that has been offered for apricots here this season is \$20 a ton. Some have sold for that, but I for one will fit up and sun dry before I will take it."

The vocal organs are strengthened by the use of Ayer's Cherry Pectoral. Clergymen, lawyers, singers, actors, and public speakers find this preparation the most effective remedy for irritation and weakness of the throat and lungs, and for all affections of the vocal organs.

AMONG the many educational institutions of San Francisco, the San Francisco Business College stands in the front ranks. No one can pay a visit to this school without being impressed that its proprietors are abreast of the times, and that they know how to conduct a Commercial Training school that will thoroughly and practically prepare young men and women for business and for office positions. The Science of accounts is taught here without any reference to a text-book on the subject. Experienced book-keepers are employed as teachers of this branch, and no theory or text-book work is tolerated, but instead, actual business transactions take place of copied forms and entries. This institution has accommodations for several hundred students, employs a large corps of experienced teachers, and ranks with the best schools of its kind on the Pacific Coast. It has been endorsed by the Farmers' Alliance of this State as an institution worthy of the support and confidence of all parents who have children whom they desire to educate thoroughly and practically for business. We take pleasure in commending the San Francisco Business College to our readers. It is a good school.

## Another Haggin Sale.

As shown in our advertising columns, there will soon be another sale of Mr. Haggin's horses. It was originally intended to offer these horses at the sale of May 14th, but this would have necessitated a three days' sale, and it was therefore decided to hold a supplemental one upon Tuesday, June 23d. The animals, chiefly draft, are of the same high class as those offered at the late sale. It may not be out of place to allude to the superior quality of the draft stallions in use at Stockdale rancho. The older ones were purchased in England, Scotland and Australia, and the younger stallions are the produce of these horses and thoroughbred mares, selected in Australia with the greatest care. It is the universal expression, that the animals offered at the late sale was the finest individual exhibit ever made by any one breeder in America. Those in the present sale will fully equal those already sold. The attention of buyers is called to the numerous teams purchased at the last Haggin sale, now working daily upon the streets of San Francisco. For handsome appearance, docility and good, true pullers, they have never been excelled. The horses will be on exhibition from Saturday, June 19th, until day of sale. Killip & Co. of S. F. are the auctioneers.

## TO FRUIT GROWERS.

FRUIT-GROWERS should not fail to note the advertisement of D. D. Wass, on another page. The illustration of the cylinder grader gives a very clear idea of how the machine works. Its simplicity commends it to practical men, and it is finding favor wherever used.

## Farmers Attention.

The Mercantile Agency and Investment Co., No. 16 Post St., S. F., has \$3,000,000 to loan on ranch property in sums of from \$5000 up. You can also renew old loans at a reduced rate of interest by corresponding with the Secretary, stating all particulars. The following well-known business men are officers of the company: Will E. Fisher, Pres.; Eugene G. Davis, Vice-Pres.; Wm. S. Tevis, Treas.; Alfred D. Hall, Sec'y.

## The Only Actual Business College ON THE PACIFIC COAST.

This popular institution stands upon its merits as the live, progressive, practical Commercial Training School of San Francisco.

Individual instruction given in the English Branches, Commercial Law, Penmanship, Commercial Correspondence, Shorthand, Typewriting, and Book-keeping in all its forms.

Expert Accountants of wide experience only, employed as teachers of Book-keeping and Commercial Customs. First-class board at the College Boarding Hall, under the management of members of the faculty, at \$18 per month.

ENDORSED BY THE FARMERS' ALLIANCE OF THE STATE OF CALIFORNIA.

Send for Illustrated Catalogue, and copies of our College Journal. Address

San Francisco Business College, Cor. Market and Jones Sts., San Francisco, Cal.

### HONEST LOSSES PAID IN CASH.

## MERY'S IMPROVED PIONEER BARLEY CRUSHER

— USING —  
The Benoit Corrugated Rollers.

### STILL AT THE FRONT.

VALUABLE IMPROVEMENTS HAVE BEEN ADDED THIS YEAR.

This Mill has been in use on this Coast for 10 years, TAKEN THE PREMIUM AT THE STATE FAIR

Four years in succession, and has met with general favor, there now being

Over 250 of them in use in California, Nevada and Oregon. It is the most economical and durable Feed Mill in use. I am sole manufacturer of the Corrugated Roller Mill. The Mills are all ready to mount on wagons.

GRAINLAND, BUTTE CO., CAL., June 9, 1887  
MR. M. L. MERY—Dear Sir: We have used one No. 2 Roller Barley Crusher now for eight years and have used it steadily during that time; have crushed 45 tons a day and the Crusher is as good to-day as when it came out of your shop. I am satisfied that it is the best mill made. You may reconstruct this testimonial to the best advantage for you and sign our names, for you cannot overrate the merits of your mill.  
F. E. REAM,  
JNO. P. SUTTON.

DURHAM, May 21, 1887.  
MR. M. L. MERY—Dear Sir: In reply to yours of the 19th, would say that I crushed from two to two and a half tons per hour, but could crush three and a half tons if my elevators were large enough to carry the barley from the machine. The No. 1 machine I used at Gridley was run on a sack a minute, but if we got behind we could run through five tons an hour and do good work. The machine I use here is a No. 2. Yours,  
WM. M. TAYLOR.

I thank the public for their kind patronage received thus far, and hope for a continuance of the same.

M. L. MERY. Chico Iron Works, Chico, Cal.

## H. H. H. Horse Liniment

Is certainly the best preparation of its kind in the market. Ranchers, Stock Raisers and Horse Owners of every description will tell you that it does good work every time.

MRS. H. H. MOORE & SONS, Stockton, Cal.—GENTLEMEN: In answer to your inquiry, would state that I used your H. H. H. Liniment on my Holland prize-winning cow, "Lena Menlo," for a wrenched shoulder, and it relieved her very much. She calved the next day, and while still suffering from the sprain gave the largest authenticated quantity of milk ever given on this coast (10½ gallons per day), showing conclusively the great relief received from your remedy. I consider it a necessity in my stable, and when away from home feel perfectly safe, as inexperienced men can do no harm with it, as they can with the more powerful liniments. Respectfully yours,  
FRANK H. BURKE,  
Breeder of Registered Holsteins and Berkshires.  
Menlo Park, Cal., January 22d, 1889.

MANUFACTURED BY

H. H. MOORE & SONS,  
THE DRUGGISTS,

STOCKTON, CAL.

## MECHAM & FRITSCH,

—IMPORTERS AND BREEDERS OF—  
Red Polled Cattle.

We have 19 head of Imported Stock.

YOUNG BULLS and CROSSBREDS ON DEVONS for Sale.

H. MECHAM,

Importer and Breeder of Shropshire Sheep.

They were all imported from England in '83, or bred direct from Imported Stock, and all registered.

H. MECHAM,

Breeder of American Merino Sheep Without Horns.

The only flock in the United States. When we bought our sheep East 20 years ago, among them was a ram without horns. He grew to be a fine large sheep, shearing at 2 years old, a 12 months' fleece, 35 lbs. of long white wool.

I have bred from him and his get ever since and have never made an out-cross and never used the same ram but one year on the same flock. My rams at two years old will weigh from 160 to 180 lbs., have a strong constitution, without wrinkles, and will shear on an average about 25 lbs., a 12 months' fleece, of long white wool. Rams and Ewes for sale. P. O. Address,  
Stony Point, Sonoma Co., Cal.  
K. R. Station, Petaluma.

THE LATEST AND BEST.

BEST TREE WASH.

"Greenbank" 98 degrees POWDERED CAUSTIC SODA (tests 99 3/4 per cent) recommended by the highest authorities in the State. Also Common Caustic Soda and Potash, etc., for sale by

T. W. JACKSON & CO.,

Manufacturers' Agents,

104 Market St. and 8 California St., S. F.

## RUPTURE AND PILES.

WE POSITIVELY CURE all kinds of Rupture and Rectal Diseases, no matter of how long standing. In from 30 to 60 days, without the use of KNIFE, DRAWING BLOOD, or DETENTION FROM BUSINESS. Terms: No Cure, no Pay; and no Pay until Cured. If afflicted, come and see us or send stamp for pamphlet. Address:

DRS. PORTERFIELD & LOSEY,

889 Market Street. - San Francisco

For Sale Cheap.

A Steam Threshing Outfit Complete

In Good Condition. For particulars address

SOUNEY BROS. Manufacturers of Bone Teeth,  
2109 P Street, Sacramento.

## S. H. MARKET REPORT

## Market Review:

## DOMESTIC PRODUCE, ETC.

**SAN FRANCISCO, May 27, 1891.**  
Cool weather has continued to prevail, greatly benefiting cereals and vegetables in general, and not doing any perceptible damage to fruits, hay, etc. It now looks as if California farmers, as a whole, will have a more prosperous year than ever before enjoyed. The money market is easy, although there is some talk of closer working when crops begin to move. The English market has fluctuated. The following is to-day's cablegram:

**LIVERPOOL, June 3.—Wheat—**Quiet but steady. California spot lots, 8s 5d; off coast, 4s; just shipped, 4s 6d; nearly due, 4s 3d; cargoes off coast, very quiet; on passage, inactive; Mark Lane wheat quiet; English country markets, quiet; French country markets, steady; wheat and flour in Paris, quiet.

## Liverpool Wheat Market.

The following are the closing prices paid for wheat options per cwt. for the past week:

	June.	July.	Aug.	Sept.	Oct.	Nov.
Thursday.....	86d	87d	87d	88d	88d	88d
Friday.....	86d	87d	87d	88d	88d	88d
Saturday.....	86d	87d	87d	88d	88d	88d
Sunday.....	86d	87d	87d	88d	88d	88d
Monday.....	86d	87d	87d	88d	88d	88d
Tuesday.....	86d	87d	87d	88d	88d	88d

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday.....	44 3/4	44 3/4	44 3/4	Quiet.
Friday.....	44 3/4	44 3/4	44 3/4	Quiet and Firm.
Saturday.....	44 3/4	44 3/4	44 3/4	.....
Sunday.....	44 3/4	44 3/4	44 3/4	.....
Monday.....	44 3/4	44 3/4	44 3/4	Inactive.
Tuesday.....	44 3/4	44 3/4	44 3/4	Inactive.

## Eastern Grain Markets.

The following shows the closing prices of wheat at New York for the past week, per cental:

Day.	June.	July.	Aug.	Sept.	Dec.	Jan.
Thursday.....	185	181	175	173	176	.....
Friday.....	186	181	175	173	176	.....
Saturday.....	185	177	173	172	174	.....
Sunday.....	185	177	173	172	174	.....
Monday.....	185	177	173	172	174	.....
Tuesday.....	185	177	173	172	174	.....

The closing prices for wheat have been as follows at Chicago for the past week, per cental:

Day.	June.	July.	Aug.	Sept.	Dec.	Jan.
Thursday.....	167	160	162	162	162	.....
Friday.....	167	160	162	162	162	.....
Saturday.....	167	160	162	162	162	.....
Sunday.....	167	160	162	162	162	.....
Monday.....	167	160	162	162	162	.....
Tuesday.....	167	160	162	162	162	.....

**NEW YORK, June 3.—Wheat—**\$1.09 1/4 for June; \$1.07 1/4 for July, \$1.03 1/4 for August, \$1.03 1/4 for September, \$1.03 1/4 for October, \$1.04 1/4 for December and \$1.08 for May.

**CHICAGO, June 3.—Wheat—**98 3/4 c for July, 95 c for September and 96 1/2 c for December.

## Eastern Wool Markets.

**NEW YORK, May 29.—Bradstreet's** will say: The wool markets are reported quiet. This is not the time, however, for a heavy movement. Wools from the new clip are coming forward slowly. The first lots are always high, but this year they are not wanted at the prices growers are asking. The manufacturers are said to have taken very little of this wool, and the largest dealers have only small lots. Buying is confined to the choicest lots, there being no demand for inferior grades. The values on most wools in Eastern markets are lower. A weak demand is still noted for Ohio and Michigan wools. Manufacturers continue to take Australian in place of domestic fleeces. The best foreign wools are firm and choice lots are in good demand. Dealers who secured only the best wools at the London sales are said to have made large profits in their investments. The movement in inferior grades of Australian is very slow and holders are offering their stocks below cost. There is practically nothing doing in either Texas or California wools. Choice Territories are considered good property, as sales of these are easily made and values are firmer than on any other grade of domestic wool. Carpet wools are quiet.

**NEW YORK, June 1.—**The indifference of wool buyers is unfeigned, prices are undecided, unsold remnants becoming less and less attractive, and country prices are regarded with genuine caution. This is likely to be so while primal dealers use sales of picked parcels as standard value. Some of the deputed buyers have returned from Texas empty handed. Much animation is not probable at the seaboard among the average traders until, at least, larger blocks of stock are under view. Considerable mill machinery is idle at present. Orders for some fabrics ought to be begun upon by June, but there is no inclination or reason to force the season, in the present aspect, of garments or cloth. Boston sales were light, 472,000 foreign, 1,717,000 domestic. Philadelphia is waiting for supplies from the slowly marketing new clip. There is no buoyant feeling.

## Foreign Grain Review.

**LONDON, May 4.—The Mark Lane Express** says: English wheats are firm and prices stationary. In foreign, changes in values are fractional. Indian is 3d cheaper. Californian 3d higher. Californian futures are quoted at 44 3/4 for prompt and 45s for September shipment. Oregon is quoted at 45s for June shipment. Russian and Indian red wheats were 6d lower, and were hard to place at a decline. Flour was weak. Both flat and round corns 3d to 6d lower. Corn is weak and lower.

## California Fruits East.

**NEW YORK, June 1.—Raisins** continue weak. Buyers helped by further arrivals. Three Crown boxes, \$1.10 @ 1.20; good layers, \$1.35 @ 1.40; bags here neglected, as cheap boxes take their place, besides Valencia are down to 4 1/2 c. Dried apricots pushed at low prices to make room for new at 10c for bags; 12 @ 13c for boxes; some sound but discolored bags, 7 @ 9c; best offer for new crop, 11 @ 11 1/2 c landed here. Dried prunes limited to grocery demand; forties and fifties at 10c; fifties at 9 1/2 c; sixties at 9c; no small offerings; plenty of French, however, at 7 1/2 c for sixties, which shows our close competitive rates with the foreign market. Green cherries first two cars are in fine order and brought \$3.30, a remarkable auction return for tender fruit that has crossed the continent; Tartarians, \$2.75 @ 4.15, in ten-pound box; others about \$1.50; second car in poor condition range at \$1.40 @ 2.40.

**CHICAGO, June 3.—Porter Bros. Company** sold

to-day at auction one carload California fruit. Seedling apricots brought \$2.15 @ 2.70; Pringle apricots, \$1.50 @ 2.35; peaches, \$3.85; Black Tartarian cherries, \$1.75 @ 2.15; Royal Anne cherries, \$2.15 @ 2.20.

## Local Markets.

	Buyer Season.	Seller 1891.	Buyer 1891.

Tuesday.....	.....	.....	110 1/2

\*After July. †After August.

	Buyer Season.	Seller 1891.	Buyer 1891.
Thursday.....	171	170	163 1/2
Friday.....	170 1/2	170	163 1/2
Saturday.....	170 1/2	170	163 1/2
Monday.....	169	175 1/2	162 1/2
Tuesday.....	168 1/2	175	161
Wednesday.....	168 1/2	174	159 1/2
Thursday.....	168 1/2	174	159 1/2

\*After August. †After September.

**BAGS—**The market continues to rule steady at 7 @ 7 1/2 c for hand sewed of standard size.  
**BARLEY—**The sample market has held strong throughout the past week, with higher prices on a settling basis than have obtained for years. In futures, trading has been fair and at firm prices. The following are the reported sales on to-day's Call:

**Morning Session:** Buyer 1891, after August 1st—200 tons, \$1.16; 100, \$1.16 1/2. Buyer 1891, after July 1st—100 tons, \$1.21 1/2. Seller 1891—200 tons, \$1.10 1/2. Buyer season, after August 1st—100 tons, \$1.23 1/2 cwt. **Afternoon Session:** Seller 1891—500 tons, \$1.10 1/2 cwt. 100, \$1.10 1/2 cwt. Buyer 1891, after August 1st—600 tons, \$1.17; 200, \$1.17 1/2 cwt.

**BUTTER—**Receipts are large, yet the market does not go off much, packing and orders apparently absorbing all. The cool weather continues in favor of sellers.

**CHEESE—**The market shaded off a fraction, closing weak. Stocks are large, as are receipts; the demand is only fair.

**EGGS—**Under light receipts and a good demand the market is strong at an advance.

**FLOUR—**The market does not show any material change. Receipts from up north are slightly larger.

**WHEAT—**The trading in the sample market is restricted by reason of light supplies. The market continues strong. In futures, trading has been fair. On to-day's Call the reported sales are as follows:

**Morning Session:** Buyer 1891—100 tons, \$1.73. Seller 1891—700 tons, \$1.59. Buyer 1891, after August 1st—100 tons, \$1.66 1/2 cwt. **Afternoon Session:** Seller 1891, 200 tons, \$1.58 1/2; 1200, \$1.59; 600, \$1.59 1/2. Buyer 1891, after August 1st—100 tons, \$1.65 1/2; 100, \$1.65 1/2; 500, \$1.66; 100, \$1.66 1/2.

## Cereals.

A New York Exchange just to hand says: The market now is in the hands of the traders, and there is a general feeling that nothing can be told about the next swing right off. As far as the old crop is concerned the *Produce Exchange Weekly*, from careful calculation, concludes that as far as the old supply is concerned the consumption and exports indicate either that the crop of last year was underestimated 22,000,000 bushels, or that we have intrenched that much on an already very small reserve. The bull position favors the latter idea, and the claim is made that notwithstanding hop prospects for 550,000,000 bushels that the home milling demands, and the sales already made for export will absorb all the farmers can possibly ship. Up to October 1st prices will go away up in the air. If, however, the movement exceeds the demand, some of the mills may be looking for buyers.

The local wheat market continues to hold strong. The stock of wheat in the San Francisco, Port Costa and Stockton warehouses aggregated on June 1st, about 38,000 tons, while the engaged tonnage in port has a carrying capacity of about 60,000 short tons, which to load will require 22,000 tons of additional wheat. Well-informed parties claim that outside of the above three points, the stock of old wheat in the State on June 1st did not exceed 35,000 tons, while the quantity to come down from Oregon and Washington will be quite light. Continued cool weather is proving of the greatest benefit to the maturing crop. Many thousands acres, which with hot weather would have proven a failure, will turn out fully 50 per cent of an average. The berry will also be plumper, but in some localities the color may not be quite so bright as it could have been with clearer skies. The Oregon Weather Bureau reports on May 30th, crop prospects west of the Cascades as follows: "Warmer weather is needed to develop heading of wheat, oats, etc., but the stalk is developing well. Spring sown wheat has made excellent progress. General reports indicate the most flattering prospects for the wheat crop throughout this section." East of the Cascades the rains

the past week were of inestimable benefit and value to the wheat crop. The east winds did some damage in parts of Umatilla, Morrow, and Wasco counties. The effects of the rain is supposed to offset the damage. The rains have revived the excellent wheat prospects throughout this section.

The barley market has been excited and quite difficult to correctly quote. The oft-reported information given by us of short supplies was fully corroborated by the high price reached (\$1.76 per cental) for spot. But this price was only secured by forced purchases to fill shorts. The Produce Exchange fixed settling prices at \$1.65. The stock of old in the State is very light, and cool weather retards harvesting, while the consumption is very heavy, owing to so much fruit hauling and other outdoor work. Up north supplies are about exhausted. Cool weather is a great assistant for maturing crops to turn out a larger yield than claimed even a week ago, but then we will want it all.

Oats are barely steady. The supply, it is said, is ample for all legitimate requirements up to harvest. Oregon continues to send us fair supplies.

Corn has moved up several points, under strong holding and a fair demand. The stock is undoubtedly short of requirements up to harvest. At the East, the market holds strong at full figures.

Rye is barely steady.  
Geo. A. Abel, official inspector of the Produce Exchange Call Board, reports the following stocks of grain, etc., in city Call Board warehouses at the close of May, and on the 1st of that month:

Tons—	1st.	31st.
W. eat.....	4,225	1,803
B. rye.....	6,607	6,541
Oats.....	1,659	1,927
Corn.....	1,392	1,166
Barley.....	216	178

At the close of May, 1890, the stocks were as follows: Wheat, 3596 tons; barley, 13,869; oats, 2509; corn, 524; bran, 150.

The stock of wheat, May 31st, was as follows:

San Francisco.....	Tons.
Stockton.....	1,808
P. & Costa.....	13,195
Total.....	23,007

## Feedstuff.

All kinds of ground feed are strong, with an advance in feedmeal and rolled barley. There is a decided falling off in the output of both bran and middlings. Oregon is sending us a little of both.

Quotations for old hay are withdrawn. New is coming in more freely, with the quality showing a decided improvement. The crop of the State, taken as a whole, will be barely enough to meet requirements up to harvest in 1892. The stock of old hay is about exhausted.

## Live-stock.

Bullocks and mutton sheep are steady. Cool weather admits a longer run on the former than usually obtains. Hogs are in demand at an advance. Lambs and calves are steady.

The market for dressed cattle is quoted as follows (to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent):

**HOGS—**On foot, light grain fed, 5 1/2 @ 5 3/4 c lb. dressed. —@—c lb. heavy, 5 @ 5 1/2 c lb.; dressed. —@—c lb. Stock hogs, 4 1/2 @ 4 3/4 c lb. **BEEF—**Stall fed, 6 1/2 @—c lb.; grass fed, extra, 6 @—c lb.; first quality, 5 1/2 @—c lb.; second quality 5 @—c lb.; third quality, 4 @—c lb. **VEAL** and thin cows, 2 @ 3c lb. **VEAL—**Small, 6 @ 7 1/2 c lb.; large, 5 @ 6 1/2 c. **MUTTON—**Wethers, 7 1/2 @ 8c lb.; ewes, 7 @ 7 1/2 c lb.; spring lamb, 7 1/2 @ 9c lb.

## Fruits.

The first peaches of the season came to hand June 1st. Dutton, Vacaville was the shipper. They fetched 25c per lb. Cherry plums came in from different places and sold at \$1.50 a box. The receipts of cherries and apricots are increasing, causing lower prices to obtain. Cannery are buying the former. They are paying the following contract prices, 30 @ 45c per ton according to quality; apricots, 30 @ 35c; cherries, 30 @ 60c lb. according to quality; Bartlett pears, 35 @ 45c. Driers are paying 35 @ 45c for prunes.

The apples, pears and peaches coming in are most too green and small for ready sale. They and also apricots will probably be quotable by next week although cool weather retards ripening.

In berries the market is fairly well supplied. There is a great lack of warmth to force maturing and to improve the quality. Cannery are not buying so far as we can learn. Raspberries are still high. Currants are coming in quite freely with prices shrinking.

Dried fruits are slow of sale. The stock is light. Raisins continue heavy under free receipts for the season. Our statement made in September 1890 that the crop would be about 2,200,000 boxes is more than verified. The crop was nearer 2,400,000 boxes. Those who acted on our information and sold made money. It will not do to believe papers whose advertising patronage and support comes from buyers—they invariably mislead.

The Oregon Weather Bureau reports May 30th the fruit crop in the Willamette Valley as follows: "Quite a number of correspondents report fruit falling from the trees. Frosts which at the time were not supposed to have injured, evidently did considerable damage. Prunes, cherries and peaches were injured. Cherries especially will not prove to be the crop hoped for. Yamhill, Clackamas, Linn, Benton, Lane, and Douglas counties report these fruit conditions. Curl leaf or yellows observed at Dayton."

About all the peaches in Rogue River valley (Oregon) have been contracted for by the Salem (Oregon) cannery.

## Vegetables.

The weather is generally good for garden truck, as it keeps it from too rapid growth and allows the market to be more evenly fed. Shipments of cabbage, cauliflower, etc., out of the State are falling off. Cannery are running on peas and will soon be able to handle string beans. Bay squash put in an appearance this week.

Quotations for old potatoes are withdrawn, as the trade is running largely if not entirely on new. The latter are well matured and of good quality. The crop this year is simply enormous. Eastern shipments aid no little in keeping the market fairly steady. Oregon reports favorable crop prospects.

Silverskin and red onions are in good supply. Matured suitable for filling distant orders are wanted.

## Miscellaneous.

From reliable advices up to June 3d, the following summary of tonnage movement is compiled:

	1891.	1890.
On the way to	.....	.....
San Francisco.....	321,841	212,514
San Diego.....	18,798	14,898
San Pedro.....	13,019	13,655
Oregon.....	28,163	23,987
Puget Sound.....	30,764	21,029

Totals.....412,585 286,083

In port at

San Francisco, disengaged.....	13,912	4,616
" engaged for wheat.....	36,111	23,680
" for new crop.....	16,312	.....
San Diego.....	2,009	12,344
San Pedro.....	10,596	.....
Columbia River.....	.....	.....
Puget Sound.....	.....	.....

Totals.....81,521 40,640

To get the carrying capacity, add 65 per cent to the registered tons as given above.

From July 1, 1890, to May 28, 1891, the following are the exports from this port:

	1891.	1890.
Wheat, cts.....	12,837,975	12,891,737
Flour, bbls.....	1,094,572	1,034,241
Barley.....	256,488	945,476

Poultry is irregular, with turkeys, broilers and geese lower. Liberal supplies of fruit restrict the demand. Considerable of the stock coming in are poor to fair, good to choice are wanted.

Hops are naturally unchanged. Reports of hop louse in Oregon and Washington cause some growers to hesitate in making contracts for future delivery. The stock of old is about exhausted.

Wool is in large stock, with assortments good to select from. Large holders do not appear disposed to force sales, believing that better prices will obtain by fall.

Beans are steady. Receipts are light and so is the demand. The crop this year will probably be the largest on record. It is said that buyers are offering 2 @ 2 1/2 c for new crop limas.

Honey and beeswax are virtually unchanged.

## Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

BEANS AND PEAS.	do	do	do
Bayo, cts.....	3 30	do paper shell	9 1/2 @ 10

## ORCHARDIST.

AN EXPERIENCED ORCHARDIST AND GARDENER would like a situation as foreman of a fruit ranch. Temperate and steady habits. Can refer to former employers. Address ORCHARDIST, Box 2517, San Francisco, Cal.

## MANILLA ROOFING

FOR FAY'S WATER-PROOF Manilla Roofing, Siding, Ceiling, Sheathing, &c., send 2c for Illustrated Catalogues and Samples. J. F. WYMAN, General Agent for Pacific Coast, 304 Market St., San Francisco.

## TWO OF THE GREATEST AND BEST INVENTIONS OF THE AGE FOR DOMESTIC AND FAMILY USE.

## THE BRYAN DISH WASHER.

A New and Novel Machine for Washing Dishes. This device washes and dries the dishes without putting the hands in water, or the use of wiping cloths. The work is quickly and easily done; even a child can do the work in less than half the ordinary time taken by dish washers. It is especially adapted for use in hotels, large boarding houses and families.

## DIRECTIONS.

Fill the tub with hot water so as to cover dishes, and put soap or perline in water as may be needed. Now put dishes in basket, lapping them so that water will pass between them, the small mixed with the large, cups, saucers, glassware, knives, forks, spoons, etc. Place wire spring cover down upon the dishes, put basket in tub and vibrate the basket right and left for two or three minutes; then take out the basket, empty the dirty water out; return basket to tub and after dashing hot water on the dishes and removing the basket from the tub, they will be dry in a few minutes.

## THE I-X-L CLOTHES WASHER.

A new and useful device invented and patented by a California lady. Marvelous in its simplicity and efficiency. It is not a machine, but a simple instrument of peculiar construction, embracing all the requirements necessary to do washing on scientific principles, without rubbing, and with less than one-half the labor employed by hand or by other devices heretofore placed upon the market. It will wash flannels without fulling or shrinkage. Does not wear the clothes, bleaches without the use of chemicals, and completes the task of washing in less than one-half the time and expense employed by other means.

## DIRECTIONS.

1—Very dirty clothes should be soaked over night. 2—Provide sufficient hot water to submerge the clothes twice. 3—Place your boiler over a hot fire with sufficient water to cover false bottom up to first holes in upright tube. 4—Cut up soap enough to wash a boiler full of clothes; put it under washer in bottom of boiler; and then put in the clothes; boil and steam 20 minutes, counting time from commencing of steam and foam flowing over top of clothes. 5—Take clothes from boiler and put them into first warm sudsing water; rinse out well; wring out into the next warm water; rinse, wring out, and hang out to dry. 6—Colored clothes in all respects the same, except 15 minutes instead of 20. 7—Woolen goods and blankets handle in all respects the same as white clothes, except using less soap, and with boiler filled with water up to cross-ripe. 8—Clothes must always be put into warm water when taken from boiler. HOT FIRE NECESSARY TO DO GOOD WORK.

Washers for Sale at Wholesale and Retail. Agents Wanted Everywhere. Territorial Rights for Sale.

## WIRE WORK OF ALL KINDS.

Window Guards, Wrought Iron Fencing, Bank, Store and Office Railing, Store and Window Fixtures, Ornamental Wire Work, Roof Cresting and Finials, Sieves, Riddles and Screens, Galvanized Dipping Baskets, and Prune Screens.

## THE CYLINDER GRADER

Has Proven the most Rapid Working Machine that has ever been introduced. Its capacity is practically unlimited, as it will grade the fruit as fast as it can be fed into the machine.

SEND FOR CIRCULARS AND PRICES.

D. D. WASS, 141-143 First Street, San Francisco.

## FOR GRADING ORANGES, PRUNES, OLIVES, WALNUTS, PICKLES, ETC.

Will Grade Green or Dried Fruit Equally Well.

TUSTIN, Sept. 17, 1890.—MR. D. D. WASS, San Francisco.—Dear Sir: The Grader arrived the 3d inst., and I had no trouble in putting it up and operating it. It worked like a charm, and I could easily grade five tons of fruit a day. I have finished and shipped my crop. I wish you would now explain the attachments or screens for grading oranges. If they grade oranges as nicely as prunes, I want them. Please describe them and state the price. Yours, etc., J. H. CREW.

DIPPING BASKET.

## THE JUDSON RABBIT-PROOF WIRE &amp; PICKET FENCE.

fence colored RED by boiling in a chemical solution that preserves the wood. Address JUDSON MANUFACTURING COMPANY, 14 and 16 Fremont Street, San Francisco.

CHEAPER and BETTER than Ever. Their 2-ft. high 8-cable fence has taken the trade. Farmers put barbed wire above it and have the CHEAPEST GOOD Fence that can be made in ANY WAY. Rabbits cannot get through. Hogs cannot break it and Horses or Cattle cannot get over it. All our

# The Harvest Queen COMBINED HARVESTER.

The Lightest Draft Harvester in the Market.

ENDORSED BY ALL FARMERS AND RANCHERS. SATISFACTION  
GUARANTEED. NONE EVER RETURNED.

## POINTS OF MERIT:

FIRST—Having two pivot wheels on the ground enables it to turn square corners like a mowing machine.  
SECOND—All of the frame work about the cylinder is the best of oak lined with sheet steel and put on with screws. Other parts built of the best of material and painted inside and out.  
THIRD—The driver is NOT isolated by a ladder from the machine, but is safely seated on the separator where he can hear and see the working of the machine and drive to suit.  
FOURTH—The new cleaner put on last season works perfectly.  
FIFTH—The machine is so geared that the cleaner, separator or header can be started independently of each other.  
SIXTH—The header is portable. By the use of our supplemental truck we can pass a 16-foot header through a 12-foot gate.  
SEVENTH—The shaftings are all made of steel.

SIZES, 10 TO 16 FEET.

Send for Price List.

With all our Machines we furnish Straw Dump and Header Truck separate from Machine. Machines delivered on board cars or boat.

## TO SHIPPERS!

# California Ventilated Barrel

EXCELS ALL OTHERS!

IT IS LIGHTER, STRONGER, MORE DURABLE AND BETTER  
VENTILATED THAN ANY OTHER BARREL.

This engraving of the CALIFORNIA VENTILATED BARREL makes plain to the practical shipper its points of superiority over the common barrel, which may be enumerated as follows:

It weighs from five to seven pounds less than the ordinary barrel, making a material saving in freight charges.

It costs less than one-half for trimming, and does not require an experienced hand to cooper it.

It is Made of the Best Quality of Spruce, Woven Together with Copper Wire,  
And can be furnished in any size desired.

It is the only thoroughly ventilated barrel made, a very important point.

The heads are warranted not to come out in transit, and no liners are required.

It is stronger and more durable than any other barrel.

Never varies in size, even to the extent of a quart.

— ALTOGETHER MAKING IT —

The Cheapest and Best  
Barrel on the  
Market.

THE CALIFORNIA BARREL IS ADAPTED TO SHIPPING THE FOLLOWING ARTICLES:

Apples,  
Oranges,  
Onions,  
Potatoes,

Sweet Potatoes,  
Dried Meats,  
Bottled Goods,

Glassware,  
Canned Meats,  
Crockery,

Eggs,  
Poultry,  
Walnuts,  
Almonds,

And Vegetables of All Descriptions.

A factory making these barrels is now in operation in San Francisco, with a capacity of 4000 barrels a day. The success of the barrel is almost unprecedented, and it is bound to become the package in a very short time. EVERY ONE USING IT IS ENTHUSIASTIC IN ITS PRAISE. IT HASN'T A FAULT. When shipped in knock-down form, about 2500 barrels can be placed in a single car. Special rates given on car lots. WRITE FOR PRICES AND PARTICULARS.

California Ventilated Barrel Co.,

No. 403 MARKET STREET, - - - SAN FRANCISCO, CAL.

FACTORY: N. W. Cor. Powell and North Point Streets.

# HILL'S IMPROVED LIGHTNING BALER.

Capacity, 32 Tons per Day:

AWARDED FIRST PREMIUM BY THE CALIFORNIA STATE AGRICULTURAL  
SOCIETY FOR 1890.

MULES  
VERSUS  
MEN.

CALIFORNIA'S  
TRIUMPH.

No tramping No forking from the stack. No cutting of stacks necessary. You can sit at a hundred-foot stack and bale it without a move. It makes the best bale in the market. You can put ten tons in a car. The forking from the stack is all done by the horses. The Baler can turn out more hay in less time and better style than any other Press. Here is one of the recent endorsements of this wonderful machine:

J. F. HILL—Dear Sir: We baled on James Ryan's Ranch on the Cosumnes, one mile from the Slough House, 277 bales of alfalfa hay, that weighed 32 tons and 35 pounds, with one of your Lightning hay presses on the 21st day of July, 1890. Yours respectfully,  
CONNOR & ANDERSON.

THESE FIGURES TELL THE STORY OF THE EVER-GROWING, EVER-GOING, EVERLASTING Steel AERMOTOR Where one goes others follow, and "WE TAKE THE COUNTRY"

This unprecedented success is due to:  
1st. To the fact that before commencing the manufacture, exhaustive scientific investigation and experiments were made by a skilled mechanical engineer, in which over 5,000 dynamometric tests were made on 61 different forms of wheels, propelled by artificial and therefore uniform wind, by which were settled definitely many questions relating to the proper speed of wheel, the best form, angle, curvature and amount of all surface the resistance of air to rotation, obstructions in the wheel, such as heavy wooden arms, obstructions before the wheel, as in the vaneless mill, and numerous other more abstruse, though not less important questions. These investigations provided that the power of the best wind wheels could be doubled, and the AERMOTOR daily demonstrates it has been done.  
2nd. To the liberal policy of the Aermotor Company, that guarantees its goods satisfactory or pays freight both ways, and 3rd. To the enormous output of its factory which has been a reduction of prices so that it furnishes the best article at less than the poorest is sold for.  
If you want a firm Fixed Tower made of Strong, Stiff Steel, and a Wheel that will cost you less than wood, and last 10 times as long—IF YOU WANT THE TOWER YOU DON'T HAVE TO CLIMB THE TOWER, and THE WHEEL that RUNS when all others STAND STILL, or if you want a wheel that will churn, grind, cut feed, pump water, turn grindstone & saw wood, i.e. A GRADED AERMOTOR THAT WILL DO THE WORK OF FOUR HORSES AT THE COST OF ONE (\$100) write for copiously illustrated printed matter, every conceivable phase of Windmill construction and work, to the AERMOTOR CO., Rockwell & Billmore Sts., Chicago, Ill., U. S. A., or Branch, 12 Main St., San Francisco, Cal., U. S. A.

## In the Southern Metropolis.

The growth of Southern California in wealth in population and in prosperous industries is a matter in which the whole State should take pride. Those who have allowed a few years to slip away since their last southern visit can have little idea of the changes which have taken place. Towns have grown in vacant places, cities have grown from towns, and the great city of the south has a municipal beauty, vigor and activity which the summer visitor of a decade ago could not recognize as the outcome from the town which he then saw droning in the southern sunshine. Our readers are, however, kept constantly informed of progress at the south, as in other parts of our great State, and they are warned to expect surprises—if the term is admissible.

Perhaps in no two buildings can the old and the new in Los Angeles be more sharply contrasted than in the courthouse of the old time and the grand building which is now rapidly approaching completion as the county's temple of justice. Our engraving shows the new courthouse, which occupies a commanding position in the city, and is visible from long distances in the valley. The style is Romanesque, with some new features introduced to suit modern days. The building is all fireproof, being constructed of brick, stone and iron. It is a most imposing pile of building, graceful in its lines, substantial in its proportions and thoroughly well constructed in all respects. The building was planned by Carlett & Eisen, architects of Los Angeles, who also planned the Los Angeles school. The contractor for the courthouse is O. E. Brady of San Francisco. Alonzo Bassett of Oakland has been the superintendent, under whose immediate eye the work has been done.

Aside from its creditable public buildings, of which Los Angeles has many devoted to different purposes, the city is notable for the beauty of its residences. Improvements of this kind have kept pace with the growth in population, and have served as the avenue for the sensible expenditure of the vast amounts of money realized from advances in land values or brought in by new-comers for home building in an incomparable climate. There are more pretentious residences than those shown on this page, and yet we doubt if many are more beautiful, at least in the horticultural environment. The grand California fan palms, which the engraving shows, are in themselves notable, and the well-kept lawn upon which they stand as kings of lesser examples of fine vegetation can hardly be improved upon; and when one thinks that such a view as the camera has caught of these homes is practically unchanged from end to end of the years, that summer and winter alike these gardens are green and beautiful, it is no wonder that to possess such homes people will fly from wintry climes, and devote their time and means to the upbuilding of California.

## The Sugar Bounty.

It is announced that there will be three applications filed before the end of June for the government bounty for home-grown sugar produced during the year ending June 30, 1892. According to the terms of the law, application must be made before July 1, 1891. The application must state the capital and amount of machinery employed and the acreage given to sugar beets. Thus far two such applications have been presented to Collector Quinn, by the Watsonville factory and the Alvarado factory, and have been sent on by him to Washington for approval. In addition, the factory at Chino expects to have its machinery in position and its plant in operation in time to send on an application.

The aggregate production of beet sugar by the first two factories for the year ending June 30, 1890, is stated to be 5,700,000 pounds. For the year ending June 30, 1891, the product will be 6,000,000 pounds. The first application of the bounty in this State will be to the beet sugar manufactured in the year ending June 30, 1892. An estimate of the amount which will be produced by the three factories mentioned is 25,000,000 pounds. So that the first bounty to be paid sugar producers in this State will be about \$500,000 in round numbers.

**FREIGHT RATES ON RAISINS.**—A committee of Fresno raisin-growers, consisting of T. C. White, Colonel William Forsythe and H. D. Colson, which visited this city last week, asked the railroad for a reduction of rates on that fruit to \$1.10 a hundred.

CALIFORNIA FAN PALMS IN LOS ANGELES DOORYARDS.

## THE FIELD.

## Summer-Fallowing.

[Read at Farmer's Institute Wasco, Oregon, by JOHN MEDLER.]

It has been said "that he who causes two spires of grass to grow where only one grew before is greater than he who conquers a city." Now if this great truth is applicable to the production of grass, how much more so is it not to the production of the cereals and vegetables. If a farmer can adopt a mode of farming that will increase the yield of crops to double the amount gained by the old way, how much more is he not enabled to add to his income, and consequently to the welfare of himself and family and to the country in general. We believe this happy result can be obtained in this great, so called, inland empire of ours by summer-fallowing if done intelligently.

When we notice the conditions that prevail in Eastern Oregon and Washington we find that we have a rich, deep alluvial soil, capable of absorbing and holding all the moisture that may fall, but there is a very deficient precipitation which probably amounts to 14 to 15 inches in Sherman county, which, of course, is not sufficient, with the excessive evaporation that we have, to insure good profitable crops annually, for it must be remembered that the late spring and summer months are destitute of rain or nearly so, and what little falls is evaporated with great rapidity.

The ground should be summer-fallowed not for the purpose of resting it according to an old antiquated idea, for the farmer might as well talk about resting his plow by putting it in the stable as to talk about resting his land, for it will produce good crops, and where climatic conditions are favorable two or three crops annually, provided you have a sufficient amount of moisture, and keep up the fertility of your soil by supplying it with the necessary plant-food.

But the idea of summer-fallowing is to store up the moisture of the preceding winter and spring and thus have the moisture of almost two seasons for your crops to draw from. The way to accomplish this is to plow your land as early in the spring as possible a good reasonable depth and harrow immediately after the plow, and cultivate during the season as much as may be necessary to prevent the growth of weeds. The effect is to retain the moisture already in the ground by preventing its evaporation, the fine, well pulverized surface acting as a mulch, and so it becomes possible in this semi-arid region to raise fine crops of the cereals because they have almost two years' rainfall to draw their supply of moisture from. Of course it is very evident that the earlier in the spring this work is done the more moisture will be retained, for the air becomes drier as the season advances and evaporation is much more rapid.

I claim that the above idea is the keynote to all successful farming in regions like ours where the soil is very deep and is composed of a large percentage of volcanic ash, and where the rainfall is deficient; for, where it is abundant, summer-fallowing, except for some special purpose such as the destruction of weeds, would be a sad waste of time. With it, however, if properly carried out, the yield in this region may be doubled and in some cases trebled, and the harvesting expenses, which constitute nearly a third of the whole, are but a little more than for an annual crop.

Now, while the most of the farmers in Eastern Oregon and Washington do summer-fallow their ground, it is somewhat strange that they do not seem to grasp the whole idea with all its consequences and carry it out to a logical conclusion. They summer-fallow for wheat, which of course is their main crop and is generally planted in the fall. Barley and oats are sown, and all kinds of vegetables planted, on land plowed in the spring and often with poor results; and it often happens that the yield of wheat is very fine while all else is a comparative failure. Now, why is this so? If the rainfall is not sufficient to grow an annual crop of wheat, and you have to resort to summer-fallowing in order to carry over the larger part of one year's rainfall into the next to secure moisture enough to assure a good crop of wheat, why will the same treatment not hold good for everything else whether sown in the fall or spring.

The whole idea is that of having enough of moisture for all plants, not one kind alone, that by summer-fallowing ground any one can raise double as large a crop of oats, barley or anything else.

Then why not extend the system to your gardens, potato patches, and truck patches in general? By taking a garden and summer-fallowing one-half one year and the other half the next there is only half the area to hand cultivate that there would be if it was all in. Then, if the yield be twice as great, as it surely will be if the moisture in the ground is doubled, or nearly so, which is the effect of a good summer-fallow, adopt this system for everything; in fact, if you only have one acre of ground, you ought to divide it and summer-fallow one-half one year and the other half the next. In carrying it out, it must be remembered that, in addition to sowing on summer-fallowed ground, to get the best results the seed should be put in the earth as early in the spring as

practicable before evaporation begins to rob the ground of its moisture, for a few days' delay in planting will make a marked difference in the germination as well as the growth of the seeds.

No doubt this system has added, and will add, thousands of acres to the cultivated area in the dry belt of this so-called Inland Empire, and by it it becomes possible for civilized man to exist in comfort and add largely to the development and prosperity of the country.

## A Great Hop Enterprise.

The Tacoma Ledger refers to the incorporation of the Puyallup Hop Co. with a capital of \$100,000.

The trustees who are to manage the concerns of the company until the first Monday in October, 1891, are E. Meeker, Fred S. Meeker, Louis R. Searles, W. H. Nichol and Roderick McDonald. The officers are: E. Meeker, Pres.; L. R. Searles of New York City, V. P.; Fred S. Meeker, Sec.; W. H. Nichol, Treas. The capital stock of \$100,000 is fully paid up.

The property is situated in the rich valley lands of White river, near the flourishing town of Kent, and lies adjacent to the line of railroad from Tacoma to Seattle, 16 miles distant from the latter city and 20 from the former. It is also 15 miles by rail from Puyallup, and between this latter place and Seattle.

The soil is rich, friable, alluvial valley land and practically inexhaustible.

A brief account of the rise, progress and present status of the hop industry of Washington will not be amiss in giving information to those seeking investments in the State of Washington, and particularly in this branch of the varied resources of the State.

The following article on hop culture, written for the State Board of Trade by the Hon. Ezra Meeker of Puyallup, and soon to be put into print by that responsible body, states the facts in as few words as can be said and yet gives the desired information.

"Twenty years ago, Jacob R. Meeker, then residing in the Puyallup valley (three miles distant from the spot where the present city of Puyallup stands) planted a peck of hop roots, and the same year harvested a bale of hops. These selling for 85 cents per pound attracted the attention of others and resulted in further planting—first in the Puyallup and afterward in the numerous rich alluvial valleys to be found in the rich Puget Sound basin. From this small beginning sprung this great interest that has brought into the State more than \$20,000,000, giving employment to fully 15,000 people annually and finally culminated in a crop of nearly 50,000 bales for the year just passed—the largest yet on record—in spite of the losses incurred. This remarkable result has been entirely due to the favorable conditions found to exist here for the development of this branch of agriculture. The deep, moist, friable rich soil; the cool nights coupled with our long days of sunlight; the certainty of our summer rainfall; the ease with which the loamy land can be cultivated; the constant continued growth unchecked by drouth or other causes all have contributed to make the yield large, the cost light and the quality choice.

"The average yield of hops in New York, or the hop districts of England or Germany is not more than 650 pounds per acre. The writer can testify to having harvested 168 tons off 170 acres and to having several well authenticated instances coming within his personal knowledge, where over 4000 pounds per acre have been harvested.

"The cost of producing hops in New York State is not less than 5 cents per pound; in England, at least an average of 18 cents, while in Washington, the average cost is less than 10 cents; hence, Washington hop farmers frequently sell at a profit, while others producing at higher cost are selling at a loss.

"The quality of the Washington hops is well attested by the growing favor with which they are received in the world's market. We have 'bearded' the English grower in his 'den' until he has cried quits upon several thousand acres, and finally the quotation of the Washington hops has moved up to the front rank and stands equal with the famous New York growth, so long at the head of the list, and forced many of the New York growers to reduce their acreage.

"The average yield of hop yards the world over is not more than 12 years. In the deep soil and mild climate in certain hop districts of Europe the hop yards never fail, some of them being now a century old.

"Similar conditions exist in Washington as to soil and climate, and the oldest yards, now a quarter of a century in bearing, show no signs of failure or diminution in yields.

"The future of this industry is difficult to foretell, but this much may with certainty be said, that we have the soil wherewith to produce ten times the present output, and we have assured the market and the people to harvest.

"No one connected with the early development of this business had the faintest conception of the proportion it was destined to assume, no more than they had of the wonderful development of the State at large that has followed in the wake of the expansion of trade incident to the wonderful and varied resources found here. We have seen the early hop yards of Puyallup covered with brick buildings; have seen the hops go out by train load after train load; the forests give way to cultivated fields;

the primitive roads turned into carriage drives; the railroad supplant the ox wagon. We are ready to believe almost anything of the future, judging from the past, and to look to a further expansion of this interest as our population increases and means of transit are multiplied and cheapened."

At this writing (May 20th, 1891), the crop is in the most flourishing condition. The vines will average more than as high as your head in many places, fully half way up the poles, growing strong and vigorous and free from vermin or any disease whatever. The prospects now are for as heavy a crop yield as has ever been harvested.

## FRUIT MARKETING.

## A Californian in the Eastern Fruit Regions.

EDITORS PRESS:—You wrote me if I found anything during my Eastern trip to interest the California fruit grower to let you know, so I will write you and you can be the judge.

I went to Washington and saw Prof. Van Daman, head of the Division of Pomology. He went with me to Dr. Smith of his department, who has been four years trying to find a remedy for the peach yellows. Dr. Smith and I left for the peninsula, which embraces the State of Delaware and part of Maryland, where some seven or eight million peach trees are growing, the largest peach region on the Atlantic Coast. The crop this year was very promising up to April 15th, and then a heavy rain set in on the 18th, when the trees were in full bloom. That destroyed a good part of the fruit buds; then, on May 6th, a heavy frost came and killed many more. I was told by competent judges that this year's crop would not exceed 900,000 baskets (30 pounds to a basket).

Dr. Smith showed me many of the experiments he is making to find out what the peach yellow is, and thus far he has found no remedy. His field for experiment extends all over this coast and includes Michigan, Georgia, and wherever peaches are grown. The yellows are taking the trees very fast. Not an orchard was visited but one could see 10 to 50 per cent of the trees dead or suffering from the yellows—trees planted from 3 to 10 years. The fruit-growers are discouraged and many orchards large enough to bear had wheat growing or some other crop to help out.

Dr. Smith tells me the yellows are in every section of this coast where peaches are grown in large quantities. If this disease continues to make its deadly havoc, in less than ten years the peach-raising will be known only in the past.

Almost every grocery store we stopped at in the peach belt had a sign up, "California Dried Peaches and Prunes."

The large cities lying near this peach belt will have hardly a taste of peaches grown on this peninsula. It is safe to say there will not be many peaches canned or dried from this region. It is also safe to say the peach crop of our State will bring an extra good price this year, notwithstanding the reports that we read before I came East of a large crop of fruit East.

The apple crop will be light this year. The Baldwin apple trees are not showing any signs of blooming. This cuts off two-thirds of the apple crop in Western New York. There have been very heavy frosts, so one cannot tell how much damage to the pear, plum and cherry crop will be, but enough is known to show one-half of the crop was killed by the frost.

The Eastern States will have to depend largely on California for their fruit supply again this year. The planting of orchard trees has been light for the past four or five years compared to former times, and it will be less in the future unless the climate and other conditions that now exist, change. J. T. BOGUE.

Batavia, N. Y., May 26.

## Handling Fruit for Shipment.

Mention has been made recently of the importance of thinning out peaches and other fruit trees which are likely to overbear. I am afraid growers generally do not fully comprehend the importance of this, and are disposed to sacrifice quality to quantity. In a great majority of orchards, fruits, especially peaches, will not grow to their full size nearer together than six inches on an average. This often necessitates the plucking off of twice or three times as much as is left upon the tree, and it requires no small amount of moral courage to do it, and yet it must be done if large and fine fruit is desired. A tree that is uniformly full all over should be mercilessly thinned down to five or six inches apart, at least; but in trees bearing less, or on which the fruit is not evenly distributed the fruit might be allowed to grow a little nearer. A glance at the whole tree will show at once what should be done. Even with a thorough knowledge of what a tree should bear, the most experienced grower will leave too much on the tree. This is proven by the fact that they often thin out a second and even third time, as the fruit increases in size.

We should bear in mind that quantity is but one consideration in the production of fruit. Quality is of much more importance, and quality properly includes size as well as appearance and flavor. In the market, large fruit

will always take precedence. Purchasers in selecting, choose by the eye instead of by the tongue, therefore, it is necessary to have the fruit as large and of as fine appearance as possible in order to command the highest prices.

And here comes in another consideration of the greatest importance to growers and shippers—the quality to pack and the manner of packing. Located as we are along the line of the overland railroad our market is naturally at the East. It is a long road to that market and an expensive one and it is the surest folly to ship any but first-class fruit to it, for that is the only fruit that will pay. And first-class fruit packed in a first-class manner will always pay. Second and third-class fruit is almost always shipped at a loss, and yet, in order to get rid of it is often mixed in with better fruit and sent out in the vain hope the good will sell the bad, when a glance at the poor fruit will cause it all to be rated as poor, and it will bring scarcely more than freight; and yet, under the present order of things, it will continue to be shipped year after year; to the manifest injury of the market and the fame of California fruit.

It would be an excellent plan, if it were possible, to have all fruit shipped East, packed at the fruit house from which it is shipped, and by experienced packers, under the eyes of the managers. Only by this plan, as things now stand, can fruit be put on the market in a first-class condition, because many lack the requisite knowledge and others are indifferent as to how it is packed so they get rid of their fruit. Poor fruit injures the market by making purchasers suspicious that the loaded California fruit is not what it is represented to be. What a reputation California might have with only her first-class fruit in market—as it should have—and what a tremendous demand there would be far and near. In addition to all this, it would induce and finally compel growers to produce only first-class fruit and thus be benefited in spite of themselves. All that would be required would be space for packing. Fruit could be brought in the bulk to the packing houses in padded boxes to avoid bruising. The fruit could be packed directly into the boxes in the orchards, and from the boxes in packing, thus saving one handling. The boxes should be duplicated, the empty ones to be taken back when the full ones were brought in. The cost of packing would not be great and might be less than when packed on the ranch. There are other considerations which lead to the putting of only first-class fruit on the market, one of which is the packing of fruit at the right time, when neither too green nor too ripe, which cannot be discussed now. Time will settle these questions.—A. P. Hall in Placer Republican

## Mr. Hatch Announces a Discovery.

A. T. Hatch, of the World's Fair Commission, in conversation with a Call reporter recently, let drop a piece of information which cannot but be of great interest to fruit-growers of the entire State:

"Experiments are now in progress in this city," he said, "which, if they prove as successful as they promise to do, will give the industry a boom such as it has never known. The great obstacle against which we have had to contend was the natural deterioration of fruit in transit, and this for a long time gave our Eastern competitors an advantage which kept us long in the background. Refrigerating cars were introduced and aided us vastly, but now a new discovery has been made, more important than any former one, so far as California fruit is concerned.

"A local chemist, who has been experimenting for a long time, has hit upon a gas which it is claimed will preserve fruit in its natural state for an indefinite period of time, at the same time preserving both the appearance and the flavor of the fruit just as it comes from the tree. A short time ago I was shown a sample of cherries that had been preserved in this way for six months, and they were in a perfect state of preservation in every way. Even an expert could not have detected that they were not fresh from the orchard. Other experiments are now in progress, and a number of fruit-growers, myself among the rest, have advanced money to carry them on. The gas is easy to manufacture, costs little or nothing, and no difficulty is experienced in handling it. Some little trouble was experienced at first, owing to the fact that the gas was prone to mingle with the air and thus dissipate, but that has been obviated now. It has been made so that it possesses a specific gravity just twice that of air, and the result is that it cannot mingle.

"If the experiments prove as successful as promised, the entire problem will be solved and fruit may be shipped around the Horn if necessary."

WHY THE EAGLE CAN LOOK STEADILY AT THE SUN.—The eagle is enabled to look at the sun by reason of a thin, semi-transparent veil, which can be instantaneously drawn over the front of the eyes. It is known as the nictitating (i. e., winking) membrane, and acts as a screen to shut out the too great intensity of light, so that with its assistance the eagle can confront the sun even at noonday. The membrane is so fine as not to obstruct the sight when drawn, like a curtain, across the pupil, and when not in use lies folded up in the inner corner of the eye.

## THE IRRIGATOR.

## How Much Water Is Needed?

"The question of irrigation" as presented by E. S. Babcock [RURAL PRESS May 23d] is one pertinent to the times. Who is qualified to answer it? Certainly not those with little or no experience.

Where has irrigation been practiced on the dry mesas back of San Diego (the real fruit lands) sufficient to determine? Who can tell in miles' inches, or by the gallon, how much water has been used or how much is needed? Who can tell how many dollars has been spent in applying water to a ten-acre grove through the nozzle of a hose, or from an inch faucet? Or how much to irrigate the same through furrows from a flume? Let us compare figures and see. We will start out with the proposition that one inch of water is necessary to irrigate a ten-acre grove of citrus trees. That will give the irrigator 30 inches of water for 24 hours each month.

A careful man can easily distribute and use that amount of water without waste through furrows already prepared. Thirty inches of water for 24 hours would be equal to a rainfall of 1.4 inches; but as it is settled into the soil from the bottom of furrows which are three to four feet apart, and much of the surface left dry, it would be equal in effect to perhaps three inches of rain. Thirty inches of water running 24 hours would discharge 390,000 gallons, or about 52,000 cubic feet, and with proper system, one man can easily apply it all in one day at an expense of \$2. We will say that interest on water-right and rental for one month has cost \$8, making total cost of water and labor of applying it for a month \$10, or \$1 per acre. Now let us suppose that, instead of using one inch to ten acres, we take Mr. Babcock's economical plan and use one inch to 60 acres, or five inches one day on ten acres each month. Reduced to gallons, this would give 65,000. To use in this way requires an elaborate system of pipes and hose with which to conduct into basins at the base of the trees. We will say nothing about the greatly added cost of forming such basins and keeping the whole grove in good till in such small squares, over the furrow system; and only compare cost of water and time of application. The hose for such irrigation will cost \$3 per acre per annum, as it is usually handled. In this way, a man can only use about one inch of water at a time, and, as it can only be applied in daytime, it would require 12 days of ten hours to distribute his monthly supply, at a cost of \$24, whereas by the other it is all turned on in one day, and the irrigator regulates the flow in the evening and lets it run all night. Add to this the cost of 65,000 gallons of water at 20 cents per 1000 gallons, and we have \$13 cost of water with \$3 for hose, making a total of \$40 for each monthly irrigation on the economical plan, as against \$10 on the wasteful plan, with six times as much water-economy that doesn't economize.

How many irrigators have stopped to figure up and see what an amount of water equal to one inch for one year would cost by the thousand gallons? Let us see how the comparison stands. An inch flowing for 24 hours is equal to 13,000 gallons. Calling it worth 20 cents per thousand gallons, as Mr. Babcock figures, would give \$2 per day, and 365 days would give, as an annual cost, \$949. Take for example the cost of water as furnished by the San Diego Flume, which many deem high, and it would cost rental \$60. Interest on investment at 10 per cent \$60, equals \$120 per year, as against \$949 by the gallon on the so-called economical plan, leaving a net saving of \$829 annually.

But how much water is necessary for ten acres? Mr. Babcock gives as illustrations Coronado Beach and Point Loma each enveloped in the humid atmosphere of the ocean. Also that of Dr. Cogswell of El Cajon. Why did he not refer to Major Chase's place where the water is running a constant stream through a ditch less than three feet deep and some of his orange trees have died from wet feet. It would have been as fair as the ones he gave.

The truth of the whole matter is that some of the poorest citrus land in the district around San Diego has been planted first because it was moist and others because it held moisture exceptionally well. The latter are all right. But the mistake is yet being made of planting lands which are wholly unfit for citrus fruits, and while many of these may make "exceptional" growth while young when they are large and should bear golden fruit they will bear disappointment. And to base calculations on the growth that young trees will make for a time on such lands as to the future of at least nine tenths of our best fruit lands would bring only disappointment and disaster.

Again the gallon system will only admit of watering in basins around the root of the trees. This is in effort to place the tree in a box, for when the roots reach the limit of the moist earth they will turn back, and the result is that only a small part of the land is occupied by the roots of the tree when every inch under proper management would be full of roots. After a few years such trees will get root bound the same as potted plants.

Again if the fruit grower takes Mr. Babcock's advice and brings water by the gallon, what assurance has he that when his trees are large

and must have more water or be worthless that he can get it?

No doubt it would be a very handsome thing for the water companies to sell at 20 cents or 10 cents or even 5 cents per 1000 gallons. Let us look at it a moment. Say a company has a pipe carrying 1000 inches of water at 20 cents per gallon, it would bring an annual rental of the enormous sum of \$949,000.00. If the system would carry 5000 inches it would bring an annual rental of \$4,745,000.00.

Does any one imagine a few thousand acres of land tributary to one water system can pay such an annual tax? And if a whole community cannot do it can the individual any better? Irrigators are advised to verify these figures and see for themselves the enormous difference in cost of water by the inch and by the gallon and not to be deceived and plant under false impressions.

It is well known that where alfalfa is raised successfully it must have water sufficient to cover the entire surface three to six inches deep once every 30 to 35 days. How much would that cost by the gallon?

And how would a man look standing on the corner of a ten-acre lot and shooting at it with a hose? It is also well known, and there are 1000 successful orange growers in Southern California, who will testify to the fact that one inch for ten acres is only sufficient where the conditions are all favorable, such as we believe to be the case in the bay region.—*The Great Southwest.*

## Legal Aspect of Irrigation Bonds.

Ex-Judge A. L. Rhodes furnishes the *Chronicle*, the following succinct review of a very important question:

It was generally agreed among those present at the meeting at the Merchant's Exchange on Tuesday last that persons desirous of purchasing irrigation bonds are required to satisfy themselves in respect to only three matters: First, that the district was organized in pursuance of the provisions of the Wright Act; second, that the bonds were issued in pursuance of the provisions of that Act; and third, that the lands of the district are of sufficient value to afford security for the bonds. It will be conceded by every one that if the bonds of a few of the districts be readily purchased by capitalists inquiry will be stimulated as to the quality of the bonds of the other districts. In respect to the larger number of the districts the only inquiry that is attended with much labor or expense is, whether the district was duly organized and the bonds duly issued.

In regard to these inquiries it ought to be stated, for it is not generally known, that some of the districts have had the proceedings for the organization of the districts and for the issue of their bonds confirmed by decrees of the court. The only question that the counsel for capitalists must solve in the cases of such districts is whether the decrees are in due form. If the decrees be found to be valid, then capitalists have only to ascertain whether the lands are adequate security for the bonds. Any competent expert can examine the lands, and his report would be accepted by the larger part of the capitalists in this city.

In 1889, the Confirmation Act, so called, which is supplementary to the Wright Act, was passed. The purpose of the Act is to require every person interested in the district to present to the court in which the confirmation proceedings are brought, all the objections he may have to the proceedings by which the district was organized, and the bonds were issued, and have those objections passed upon by the court once and for all, instead of allowing him to remain silent and reserve his objections until after the bonds are sold and have been in circulation for many years.

The confirmation decrees in the Modesto irrigation district case was recently affirmed by the Supreme Court. In the Poso irrigation district case, a land owner sought to enjoin the sale of the bonds, he relying upon almost all conceivable objections to the proceedings for the organization of the district and the issue of the bonds, and the district in answer to his complaint set up the decree of confirmation, and both the Superior and the Supreme Courts sustained the answer, and held that the confirmation decree was as conclusive as it was possible for a judgment to be, and that it absolutely precluded the plaintiff from setting up any of his objections.

It necessarily results from these decisions that the decree of confirmation places the proceedings for the organization of the district and for the issue of the bonds beyond the reach of attack by the district or a holder of real property therein. The only legal investigation that is required, where the district has procured a decree of confirmation, is to ascertain whether the confirmation proceedings were regular, and that investigation is no more difficult than in case of a decree of foreclosure of a mortgage.

If those proceedings be found to be regular the purchaser of the bonds of that district has only to ascertain whether the value of the lands constitute adequate security.

Three of the districts—the Modesto, Tulare and Poso—have valid and sufficient decrees of confirmation, and it is said that other districts have like decrees.

An assessment of \$5 to \$10 per acre will cover the principal of the bonds authorized to be issued by either of those districts, and the bonds ought to command a premium.

A. L. RHODES.  
San Francisco, May 27, 1891.

## POULTRY YARD.

## Poultry for Eggs.

The following are portions of an essay read at Worcester West District Grange by Robert R. Havener, Hubbardston, Mass.:

I am well aware that many agriculturists look upon the so-called hen farmer with a sort of contempt or pity. Without a thought as to the importance of the industry, let me quote from report of United States department of agriculture for the year 1889:

"The time has come when the importance of the poultry interests should be recognized in this department. The poultry products of the United States had a farm value of at least \$200,000,000 last year, and no less than 16,000,000 dozen eggs were imported at a first cost of over 15 cents per dozen, or nearly \$2,500,000, while the average annual value of such importation during the past four years has been \$2,216,326." Such being the facts, we can look forward with confidence to the future of the poultry business. We read in the "Book of books" that man was "given dominion over the fowls of the air," and all improvement which has been made is the work of man. To the fowl which laid perhaps 25 eggs, man said, lay 50 eggs, and straightway he made the necessary conditions and 50 eggs were laid. But man is never satisfied and has continued down through the ages to command the hen to lay more, consequently we have breeds to-day that will lay 250 eggs per year with proper treatment.

It would be sad indeed to spoil a good dairyman to make a poor preacher or poulterer. If you cannot take pleasure or comfort in your business or calling, you will never know success. If you can see no beauty in your poultry or in your pigs, you will never attain the best results with them. You must be in love with your business, then if you have a hen or a pig that does not thrive you will know it, and will look for the cause and will remedy it. Now every one that does not hate a hen can produce fall and winter eggs if he will make the necessary conditions.

1st. Secure good vigorous stock.  
2d. Do not try to keep too many in a family.

A pasture large enough for three cows would not be expected to pasture six.

3d. Do not feed wholly on corn or cornmeal. Feed in the morning something of this sort: Boiled potatoe, turnips or cabbage, clover rowen chopped into half inch lengths or shorter if you can, and scald, mix with shorts, a little cornmeal or buckwheat meal, ground oats or barley with a little ground meat and a pinch of salt. I would not advise a constant diet of any one mixture. But the greater the variety the better the result. Don't forget to keep your fowls at work; they must have exercise. Litter the floor with leaves or chopped straw or hay, and scatter a few oats, wheat, buckwheat or barley, and let them scratch for it. Feed small quantities at a time, but feed well. Do not keep large amounts of food by them that they can get without work. Idleness always breeds disease. Hang up a cabbage, turnip or beet where they can get it if they will only work for it; or a bundle of oats, barley or wheat—any thing to keep them at work. Don't forget to give good, clean water at least twice a day, and they will thank you for a little milk once in a while if you have it to spare; and don't forget to supply them with plenty of grit. This is very important if you keep a large number on a limited space. For grit give gravel, broken crockery, oyster or clam shells.

And another thing let me emphasize—avoid damp close quarters. And in the winter look out for cold draughts of air such as come from broken panes of glass or top ventilation.

I need not say much about cleanliness. You all know that it is necessary even with hogs, if you wish to attain the best results. The droppings should be removed from under the roosts at least three times per week. Every day is better.

And hens must have a place to dust themselves if you do not want to feed a lot of vermin. Dry sand, sifted coal ashes, with a little sulphur, will be excellent. Dry coal ashes for poultry houses I value very highly. Perhaps you will say the dust settles on everything about the houses. That is why I value it.

After your chicks are hatched feed them for growth. As soon as you can distinguish the males separate them from the pullets which should have as wide a range as possible. Feed very liberally not forgetting beef scraps, but avoid the so-called poultry invigorator or egg food. And if you do not want to do the work don't blame your hens because they do not lay. Instead of manufacturing our own eggs we send our grain abroad and then buy the eggs produced by the pauper hens of Canada and Europe. The poultry business in our country is yet in its infancy. We talk of artificial incubation as though it were something new when it has been practiced thousands of years by the Egyptians and destined soon to become a universal method in our country.

A good illustration of how the fibers of cotton will catch on to everything is shown in the machine shop when a nut is tapped on a little too small, or the adjustable die-plate left a little large. A piece of oop waste is wrapped around the tap, and once more made to find its way through the nut, with the result of making it more easy on the bolt.

## SHEEP AND WOOL.

## Meeting of the South Down Association.

EDITORS PRESS:—The annual meeting of the American Southdown Association was held on May 27, 1891, in the Illinois National Bank, Springfield, Ill., at 2:30 o'clock, P. M., President J. H. Potts, presiding.

The reports of officers show the association in good working order, and it was the expressed intention of the members to forward the interests of the Southdowns by every possible means. To this end the offering of liberal prizes at the World's Columbian Fair will probably be made.

The deaths among members since last meeting were: W. A. Wood, East Smithfield, Penn.; N. R. Boutelle, M. D.; Waterville, Me., and Phil M. Springer, Springfield, Ill.

Messrs. D. W. Smith, C. F. Mills and S. E. Prather were appointed a committee to present resolutions on the loss of these co-workers, and on account of the especial loss sustained by the association in the death of Phil M. Springer, the secretary was directed to set apart one page in volume IV of the Record in Memoriam for him.

Messrs. J. H. Potts, Jacksonville, Ill., T. W. Harvey, Chicago, Ill., and G. J. Hegerty, Hanover, Ohio, were re-elected members of the Board of Directors, and Frank K. Springer was elected to the Board to fill the unexpired term of Phil M. Springer, deceased.

Messrs. J. H. Potts as President, S. E. Prather as Secretary, and D. W. Smith as Treasurer, were re-elected for the ensuing year.

In accordance with previous action, the awarding of the following prizes offered by the association was approved: At the Detroit International Fair, Detroit, Mich., 1890, to John Jackson & Sons, Abingdon, Ont., Can., for pen of recorded Southdown ram and two ewes, a silver cup valued at \$30, and for recorded Southdown ram and ewe a silver medal each. At the Sangamon Fair, Springfield, Ill., 1890, to J. H. Potts & Son, Jacksonville, Ill., for pen of recorded Southdown ram and two ewes, a silver cup valued at \$30, and for recorded Southdown ewe a silver medal; and to S. E. Prather, Springfield, Ill., for recorded Southdown ram, a silver medal. At the American Fat-Stock Show, Chicago, Ill., 1890, to J. H. Potts & Son, for Southdown wether, sire and dam, recorded, a silver cup valued at \$50.

The Secretary placed before the association the correspondence had in regard to the registry of Southdown sheep owned in or imported from Great Britain. The matter was, after discussion, referred to a committee for further action, it being the disposition of the association to encourage the importation and registry of purely-bred animals for the improvement of American flocks, as opposed to the indiscriminate registry of animals having no other distinction in their favor than that they were bred in Great Britain. J. G. S.

Springfield, Ill.

## Artificially Colored Flowers.

At the last meeting of the California State Floral Society, Mr. Emory E. Smith read the following, which is replete with interest to all lovers of flowers:

Every now and then some one starts a story of having seen flowers of unusual colors, such as blue roses, red oalla lilies, green violets, etc. These seeming freaks are always a seven days' wonder to those who are not familiar with the method by which they are obtained. For many years it has been a well known fact that flowers when dipped in certain chemicals would rapidly change colors to such a degree as to be almost unrecognizable as the same variety. The public in general has known but little of the methods employed. M. Eppol, a distinguished savant, recently exhibited to the Scientific Association in Paris the results obtained by subjecting flowers to the influence of a mixture of sulphuric ether and ammonia. A quantity of ether is poured into a glass and to this is added a small quantity of liquid ammonia, say one-tenth of the volume.

The flowers are then plunged into the fluid and with the most surprising results. Those which are naturally red or violet in color, take upon themselves a bright green tint. Flowers, the colors of which are variegated, assume as many different shades; for instance, the upper petal of the sweet pea would become dark blue, while the lower petals would turn a bright green. White flowers usually assume a yellow color. Red geraniums turn blue, and red snapdragons become brown. Yellow is seemingly the only color which the solution does not affect. The action of the liquid is very rapid, and colored spots can be procured upon the flowers by pouring here and there a drop of the solution. Flowers which are many colored are sometimes changed to the most remarkable novelties that it would be possible to imagine. After the flowers have been subjected to the liquid, they should be plunged in pure water, when they will retain their new tints for several hours, but will gradually assume their natural colors.

The colnages at the San Francisco Mint for the month of May was as follows: Double eagles, \$880,000; standard dollars, \$850,000 dimes, \$46,075; total, \$1,776,075.

## PATRONS OF HUSBANDRY.

## Our Grange Edition.

The Grange news of most general interest is given through all editions of our paper on this page. Several supplemental pages, devoted to Grange interests, are added in our Grange edition, which any subscriber can receive in lieu of the regular edition WITHOUT EXTRA COST, by addressing the publishers.

## The Master's Desk.

E. W. DAVIS, W. M. S. G. OF CALIFORNIA.

From all sections of California comes the welcome tidings, "good crops." This means plenty of work for all the idle hands, which in turn, means money for the million. And as money makes the mare move, no doubt there will be a season of general hilarity and universal prosperity. It is a cause for congratulation that the idle are to have employment and compensation, that the granaries are to be filled, that larders are to be replenished with luscious fruits and toothsome meat and vegetables, and that a feeling of confidence among business men is to be, in part at least, restored. But while all this is pleasing, tis well to ask, what of the Grange? Are there signs of Grange growth, to keep pace with the general evidences of prosperity among farmers? Now kind reader, don't forget to help the Order. Let some of your prosperity find lodgment in the Grange. Help a good cause and help right away.

Independence Day is almost here. It ought to be properly observed by every true American citizen, no matter whether he is a native or a foreign born. What more appropriate work for the Grange than to take the lead in celebrating the Fourth of July? Who has more true patriotism than the farmer and his family? He it is who knows the true worth of that dearest of all earthly spots, home. What Order is more fully allied, and more appropriately so, to the principles of Independence, than the Grange? Every lesson of our Ritual teaches honest Independence. Therefore let the Subordinate Grange take the lead in celebrating the Fourth of July. Go to the Grange Hall, or better yet to the Grange Grove, and there, amid all that is pure and patriotic, turn loose the Bird of Freedom. Have the children join in the celebration. Give them something to do. And by all means let the Grange take the lead.

All efforts to get the Grange into partisan politics have failed, and properly so, too. The Grange is too big for any political party. It is big enough to control the affairs of each State, and, in a corrective way, it is going to do so. The Grange stands for all that is pure, progressive and elevating in each of the political organizations. It is for honest men, free government, an enlightened statesmanship, universal education and happy homes. It is for these and kindred things and not for partisan politics.

Have you ever studied the lorm, the beauty and the habits of the humming-bird? That little innocent has many lessons in store for you.

Read the newspaper and read it thoughtfully, but don't supply the old-fashioned, friendly, good-humored letter with the newspaper. Keep up the friendly correspondence!

Study the sub-Treasury scheme. It is a big, live question, and one which is sure to affect you and your property interests. Study this question for your own sake, for your neighbor's sake, and for the welfare of the country. Be like Davy Crockett before you act!

The common cutworm which infests our gardens and corn fields, doing much damage in a silent and effective way, must be almost kin to a class of people who know more about doing harm than good.

## Work of the Grangers' Bank.

We have seen some interesting correspondence between Mr. Albert Montpelier, Manager of the Grangers' Bank, and Mr. Herbert Myrick of Springfield, Mass., who is preparing a book on "How to Co-operate." Mr. Myrick asked first for a brief statement of the origin, early history, success and recent progress of the Grangers' Bank. Mr. Montpelier wrote an interesting statement of these facts, to which Mr. Myrick replied:

"Your experience will form a prominent feature in the department on co-operative banking in my practical manual for co-operators which will appear this fall. I can readily see the secret of the success of your institution—the best possible management, fidelity to the auspices under which it was inaugurated and strict integrity in conducting it." He also asks for much more information in detail, which Mr. Montpelier will furnish.

It is gratifying to see such frank acknowledgment of the work of a California institution—the only one of the kind we believe in the United States. To have a full showing of its history and methods prominently brought to the attention of the millions at the East must prove of much value to all concerned and to the public.

## The Grange and Its Teachings.

There is no one class organization among all the many that have grown up during the past 50 years, in which so many persons have been directly interested and about which so much has been said, and of which in many places so little has been really known and against which there has been so much prejudice existing as the Grange or P. of H., an organization of farmers.

After more than 20 years of existence, it still grows and prospers. It has outlived prejudice to some extent, yet there are some farmers who are opposed to it and are doing all they can against it. It has made itself known and felt, it has won the respect and confidence of a great many; and according to what some of the leading men of the Grange say, it is stronger and accomplishing more good now than at any other time in its history. Unlike all other organizations, the Grange confers its benefits not alone on its own members. Neither do farmers only reap its rewards. It extends beyond its own class and advances the interests of all.

The farmers are the bone and sinew of the land. When they are prosperous, we never hear of hard times; but if from any reason there are short crops, low prices, hard times, then it is that the manufacturers talk of over-production, merchants of dull trade, mechanics and laborers complain that they cannot get work. Individual happiness depends upon general prosperity. The soil is the source from which we derive all that constitutes wealth. Without wealth, we would have no agriculture, no manufacturers, no commerce.

Of all the gifts of the great Creator and Giver of all good, the various productions of the vegetable world are the first in importance. All history proves that where agriculture has prospered the nation has prospered.

The Grange seeks the greatest good to the greatest number, and so benefits manufacturers and commerce, as well as the farmer and his family. In common with all other steps of the world's history, the early days of the Grange were days of struggle, of opposition and of misrepresentation. Even farmers themselves sometimes opposed it. Mistakes were made in its earlier work. Its own members did not always understand it.

## What It Is and What It Is Doing.

In as few words as possible, we will tell what the object of the Grange is and what it is doing. It is teaching the farmer to protect himself. It teaches him that he has a mind as well as muscle, brains as well as land, and it pays him to cultivate one as well as the other. It teaches him how to be a better farmer, how to raise a crop and how to get better returns for his labor. It teaches him not only how to earn his money, but how to spend it to the best advantage. By organized effort and on business principles, he knows the cost of goods and the value of his products, and knows how to open up channels of trade so as to reach the best markets. Through organization, the farmer can deal with the wholesale grocers and get a reduction on his goods.

The Grange is making the farmer a better citizen, freeing him from the party lash and causing him to think and act for himself, and cast an intelligent ballot, causing him to vote for men that will favor the farmer without regard to party prejudice. It is doing this in all parties, and by so doing purifies and elevates them. It is securing for him better representation in Legislatures and in Congress, and getting laws more to the farmers' interest.

The Grange is making the farmer and his family more social, sociability being one of the features of the Order. It makes brighter and happier homes. It benefits its members morally, socially and financially. Temperance is supported, charity is a prominent characteristic. It makes the farmer better to his country and better to his God. None of its teachings has ever made man or woman worse, but its lessons all develop the good, the beautiful and the true.

The Grange is founded upon the great principles of truth and justice. It is the conservator of the farmers' rights, promoting the general interests of all people. It is destined to live on and on, keeping pace with the march of improvement. The half has not been told of its good works, and it can and will do more in the future.—Mrs. M. M. Deffenbaugh in *Am. Grange Bulletin*.

## Granges, Exchanges or Warehouses.

In some of the States at the East the Granges in from three to four counties organize a Grangers' exchange, or warehouse, through which all their feed, grain implements, groceries, etc., can be purchased, and also at the same time marketing all their produce. The Elmira, N. Y., *Husbandman* gives the plan of co-operation in the counties of Jefferson, Lewis, St. Lawrence and Oswego, from which we condense the following:

Each subordinate Grange has a director or sales agent, who takes all orders for goods, and forward them to the head office at Watertown from which place they are ordered in one bill and sent direct from the manufacturers or wholesalers to the Grange director, without going through the warehouse at Watertown, thus saving a big item in freights and handling. The business is conducted on the plan of the Rochdale system in England, thus avoiding any out-throat business which injures the merchant

or jobber, but simply gives him a little healthy competition by a stock company of farmers, incorporated under the State laws, and transacting an honest cash business for their own benefit. Each director or agent in the Grange does the business mostly upon orders but can carry a small stock of groceries or repairs for implements, as the Grange sees fit, so at each meeting, if there is some little trading a member wants to do while waiting for the goods to be ordered, he can do it. It can be seen if this organization can be made to work successfully, anywhere from 5 per cent to 40 per cent can be saved by purchasing direct from the wholesaler's or manufacturer's, thus saving all the middlemen's profits to the purchasers or the Grangers.

Then, too, by four counties working together, the purchase being so much larger, a much greater discount is obtained than could be gained on a small bill. The capital stock is enough to carry on the business on a cash basis. The stock is divided into shares of \$5 each, and every Granger holding a share is a member of the exchange and can purchase or sell through it as he chooses. All profits of the exchange, after the expenses are paid, are divided among the stockholders. All goods are sold at the ordinary retail prices and the profits accruing paid in cash dividends to the purchasers. Grangers who are not members trade at the exchange with equal privileges with members, except they are credited with only one-half the profits from their purchase. Thus outsiders are encouraged to deal with the exchange much to their advantage, and the stockholders as well. Most of the goods are sold when ordered, so no large stock is carried, which greatly facilitates a cash business and enables the exchange to work with less money than would be required to run a store carrying a large stock. The management of the organization is vested in the directors, one from each Grange taking stock in the four counties. These 80 men elect officers who have charge of the business and manage all the affairs of trade. The officers or managers are elected from each county and form a board of five or nine, as is thought best.

## Woman's Work in the Grange.

From the annual proceedings of the New Jersey State Grange we take the following able paper read by Eliza A. Rodgers, of Crosswick Grange:

After I was appointed to take a part in the woman's work in the Grange, I read that there was no restriction made in regard to the work they should engage in, in their efforts to build up and strengthen our Order. The work that I feel called to do is to strive to arouse the farmers from their lethargy, so that they will realize the fact that they are responsible that they and their families are in their present unjustly taxed, heavily burdened, impoverished and enslaved condition, and that the farmers are so fast drifting into a landlord and tenant system—for they have tamely submitted (with but few exceptions) to be dictated to in all things, even as to how and for whom their ballots should be cast.

The majority of the leaders in both of the old parties (many of whom were elected by the vote of the farmers) are controlled by the different monopolies, corporations, syndicates and trusts, who are using them in Congress and the different State Legislatures to procure legislation that will enable them to add a rich harvest annually to the millions that they have been given the power to legally rob the farmers and the other wealth producers of in the last 25 years. Equal rights for all, and special privileges for none, will no more apply to the conditions that now exist between those of our people who have been granted special legislation, and the farmers, than it would to the farmers in the most despotic government in Europe.

The farmers have created untold wealth, but class legislation has been obtained by a favored few that has given them the power to legally rob the farmers, and reduce the masses of them to their present indebted and unsatisfactory condition. My Brothers, you may rest assured that there will be no relief from the deplorable condition of the large class that you are here to represent, until they consider that the preservation of their homes and the comfort of their families are of more importance to them than partisan politics. Unity of action on the part of the farmers means their self-preservation. It is the duty of every farmer to make a common cause against every form of oppression that has made them the burden-bearers of this nation. For, if they ever expect to procure relief from the onerous burdens that class legislation now imposes upon them, they will have to lay aside partisan and sectional prejudice and resolve that henceforth they will not be influenced by the partisan press or dictated to by their party bosses—that they will throw off the shackles of party bondage, and stand together, and vote solidly and unitedly for true and tried men from their own ranks, who are in full sympathy with the farmers in their battle for their rights; instead of allowing themselves to be about equally divided between the two political parties as they have done in the past, and cast their ballots to elect men who were pledged, before they were nominated, to use all their influence to procure legislation that would give the men who have taken upon themselves to be their masters the power to compel the farmers to

pay such oppressive tribute, that, after they have paid the various taxes that are now levied upon them, there are many of them who do not have enough left of what they have produced to recompense themselves and their families for their labor.

## Past Master Overhiser Visits California Grange.

EDITORS PRESS:—After receiving a letter from the Master of California Grange, inviting me to attend their meeting to-day, and a letter from Bro. Loucks urging me to do so, I concluded to make an effort to meet with the California Grange.

I left Stockton yesterday on the 6:45 train and arrived here last evening. This morning Bro. A. Smith called to see if I had arrived, and finding that I was on hand, he left only to return with his fine buggy team to take me to Planeshurg in time for the meeting at 10 A. M. On arriving there, I was informed, to its credit, that no liquor is sold. We soon met the Worthy Master, who welcomed us as no one but a true Patron can. We soon repaired to the hall, where we found the members were assembling, and where many a warm shake of the hand and Patron grip were tendered your humble servant. The Master's gavel fell about 11 A. M., and we soon got to work. A class of 14 was put through the third and fourth degrees, after which a hounteous feast was partaken. After the feast we again met for business when much good work was done in the interest of the Grange. The trade-card system was explained. The Master of Merced Grange was present and told us that he had done some trading through the trade card, and was well satisfied with the results. I think you will soon hear from California Grange in that direction.

I told the members of the exertions the Executive Committee is putting forth in their interest which they seemed to appreciate—the Master so expressed himself.

During the recess, one new application was received. I was informed that quite a large class was about to start on its way to the Master's desk.

Before the Grange closed, I distributed several copies of the PRESS to members who are not subscribers. I trust the seed sown will take root and produce a good crop of subscribers.

The time having arrived to close the Grange, the Master, in a short, pithy speech, thanked the Executive Committee of the State Grange for the interest taken in the Order in sending them a Deputy to instruct them in the work and explain the trade-card system. The Grange was then closed, and the Grangers' grip was exchanged by the members, and a hearty goodbye, with kind invitations to come again. Yours fraternally, WM. L. OVERHISER.

Merced, June 6 1891.

## A Prophecy of Lincoln.

Unpolished and uncouth as he sometimes was, President Lincoln was not only a man of a kindly heart, but also a politician of much shrewdness. There is no doubt that his sympathies were fully with the common people of the country—the class, indeed, to which he belonged in private life—and that if he were living now he would be the sturdy opponent of the trusts and gambling commercial methods of the time. The following is published as a prediction of his, made shortly before his deplorable death:

"I see in the near future a crisis arising which unnerves me and causes me to tremble for the safety of my country. As a result of the war corporations have been enthroned, and an era of corruption in high places will follow, and the money power of the country will endeavor to prolong its reign by working upon the prejudices of the people until all the wealth is aggregated in a few hands and the republic is destroyed. I feel at this time more anxiety for the safety of my country than ever before, even in the midst of war. God grant that my fears are groundless."

Inspiration could hardly have more truthfully foretold the present condition of the country and the evils which threaten it. The great fortunes that have been accumulated and the influence acquired by the money power in both our politics and business, undoubtedly had their source in the late war. Its jobs and its derangement of values afforded speculators an opportunity to enrich themselves at the expense of both the government and the people, and they improved it to the utmost. They are now too strong, financially, for the government to check, and for the ordinary laws of commerce to control.

Mr. Lincoln's fears for the safety of the republic, on account of the influence of the money power over its politics, would be quickened by present conditions if he were alive. The "era of corruption in high places" has been reached, and the great political evil is the influence of money in our elections. It has sent a number of millionaires to the United States senate, and a presidential election now without a great campaign fund, would be an anomaly in our political contests.

An uprising of the people, like that of last year, may apply the brakes and arrest the progress of the country toward the abyss described by Lincoln, but it will be a struggle that will severely test the integrity and patriotism of the people.—*Atlanta Journal*.

## FARMERS' ALLIANCE.

## Alliance Edition.

Subscribers can receive our FARMERS' ALLIANCE EDITOR WITHOUT EXTRA COST, by applying for the same. That edition contains several supplemental pages of Alliance matter, in addition to that which appears on this page through all editions.

## How the Money Goes.

OFFICE OF THE STATE SECRETARY,  
GILROY, CAL., June 8, 1891.

EDITORS PRESS:—I have had several letters lately asking what becomes of the money sent up from the Sub Alliances to the State Alliance, and intimating that the State was absorbing an undue proportion of the funds. Of course, these inquiries do not come from parties who read the Alliance news in the RURAL, for the supplement of May 2d contained a financial statement showing the amounts collected and disbursed, and who received them—the largest amount paid to one person or firm being \$451.00 to Hurlbert Bros. for printing. More than one-half of the material represented by this sum is now in this office.

The \$547.52 paid out by the Secretary was paid for postage and express, office rent, rituals and literature for distribution, for every dollar of which value received was returned to the Order. There is but one salaried office at present in the State Alliance and that gets the paltry sum of \$600 per year, and certainly the most economical member in the State would not take the position for a less sum. The Executive Committee have been allowed only actual expenses while in attendance on the two quarterly sessions now past; while our honored President has given most of his time to the work since the State Alliance was organized, and paid the entire expense of his office amounting to several hundred dollars from his private funds, and surely our economical brother could effect no saving in that quarter. Still some may think that the State officers are having an every day picnic. To all such I will simply say: Have a little patience; there will be an annual election in October, and you will then have a chance to try your hand. Until that time, let us all try to practice the motto of the Order: "In things essential unity and in all things charity." Fraternally Yours,  
C. W. PEDLAR.

## The Farmers' Loan Scheme.

The daily press of our State has severely criticised the idea of "Government" making loans to "farmers." Corporations are individuals in the eyes of the law. Government has loaned money and is loaning money to these legal individuals. It has practically loaned \$70,000,000 to the "Whisky Ring" for three years; no interest. It has loaned \$64,000,000 to the Pacific railroads; no interest. It has paid accrued interest on Pacific railroad bonds to the amount of \$50,000,000; no interest. It has loaned National Banks two to three hundred million dollars at an interest not to exceed one per cent per annum. These banks have sub-loaned these millions to "farmers" and manufacturers at an extortionate rate of interest. Now, if our law-makers have discovered a constitutional right to loan money as above, where, in the Constitution, do they find a clause or section which permits them to discriminate, in the matter of money-lending, against the "farmers"? Newspaper comments cannot give them that right, nor can press opinions prevent the "farmers" as a class from making this inquiry: "Where do they find a constitutional right or precedent to discriminate against citizens engaged in 'farming,' and in favor of citizens engaged in building railroads, or citizens engaged in banking, or citizens engaged in distilling whisky?" It is self-evident that they have made such discrimination; and "farmers" are merely asking: "Where do you find authority to discriminate against us?" And echo answers, "Where?" JUSTICE.

THE sentiment America for Americans is growing and intensifies under discussion. The latest outbreak of this feeling was witnessed at Baltimore, where a semi-secret meeting was held, at which stirring speeches were made in favor of keeping America for Americans. The efforts of the people of other nationalities to overthrow the Government and institutions of the United States, such as the doings of the Mafia, anarchists, socialists, etc., were commented on as examples of what may happen if immediate steps are not taken to prevent complications which are inevitable when men of different nations attempt to govern the affairs of State.

AN ALLIANCE GRADUATE.—Last Friday evening the graduating exercises of the class of 1891 of the Stanislaus Seminary and Normal School, situated at Oakdale, took place. The essays and orations by the graduates were remarkably good. We may mention the one by Guy Laughlin on "Mortgages the Bane of Social Wealth," which was read in a very clear manner and showed a turn of thought in the right direction. We remarked to Guy that he should join the Farmers' Alliance. The principal, Prof. J. M. McKenzie, is Lecturer of Oakdale Alliance.—HUGH BAKER, Oakdale, June 6, 1891.

## Farmers Rattling the Old Dry Bones.

The New York Herald with its usual enterprise, has a staff correspondent visiting various States in the Union to probe the farmers' movement. The last published letter of that paper's correspondent from Des Moines, Iowa, contains many pertinent points from which we excerpt the following:

One thing that worries the leaders of the old Alliance is the rapid growth of the new organization of the Farmers' Alliance and Industrial Union. It is depleting the ranks of the older order somewhat, and what worries them still more is that it forms a strong and compact organization which they cannot control, and which promises to direct its energies in an organized movement against the G. O. P. Further than this, the party leaders are seeking a coalition with the old Alliance organization, and are begging that body to name the candidate for Governor, which they profess themselves ready and willing to indorse. The only aspect of interest to the country in which these leaders here present themselves, is that in which they stand as vicarious confessors for their party. They virtually insist that the evils which have roused the farmers, are capable of a political remedy; that their cure must be sought in politics. This is an admission that their cause is political and must be sought in the policies and the legislation of the party with which these leaders have willingly acted all their lives. More than that, these same policies are still the declared purpose of that party. It has in no wise abated them, and in no particular has it given signs of a change. The agricultural industries are the most permanent, and by nature the most profitable of a country so varied in its capacities of soil and climate. Our productive processes have been refined by labor-aiding machinery. We have turned the soil with gang ploughs for wheat, while the European farmer has been using a spade. We have planted with a drill while he has been sowing by hand and covering with a garden rake. We have been outting and threshing at one operation, with a single machine, while he has reaped with a sickle and thrashed with a flail. In this way we have nullified the cheapness of his labor by the superior productive power of ours, and in spite of all obstacles have sustained the profit of our production. The Western farmer understands that the trouble is that this profit has been, by the connivance of the G. O. P., legislated away from the men who earned it, for the benefit of classes whose contribution in campaigns kept their party in power, for the return of legal favors that power could bestow. The Western farmer finds now that he has been taxed out of his profits to enable the Eastern manufacturer to sell the tools of agriculture cheaper to his European competitor than to him. He finds that to the cheaper labor of the Old World, his forced enrichment of the American manufacturer has now added cheaper machinery than he can buy, and the spade, hand rake, sickle and flail, are now obsolete for American machinery, cheapened to the foreign buyer by taking part of its price out of the American farmer. This system has driven the American farmer into the last ditch, where his struggles are now so appalling to the political party, which has so long been active in producing them.

## Fighting Against Mortgage Foreclosure.

The Farmers' Alliance and Industrial Union movement in the West, is chiefly significant for its recognition of a political cause for the distress of which it is the outcry. Until very recently the farmer could be hardened to his condition by passionate appeals to his patriotism. Florid declamation about the Civil War and prophecies that it must be fought over, controlled his vote, for he did not see, through the fuliginous political atmosphere, the coldly selfish motive of sectionalism. Kansas is a fine example of both phases of the issue. In 1888 Mr. Calloway carefully gathered the statistics of rural debt and production, and published a statement of the farm mortgages in each county, and the relation of their sum to the aggregate of farm production and profits. The showing was appalling. But it was met by a political party with a storm of indignation. The very farmers who were carrying ten per cent mortgages on one per cent farms, and buying corn because they could not exchange it for coal dug by the starving miners of Pennsylvania, were induced to burn and hang Mr. Calloway in effigy all over Kansas, and with the most wonderful exhibition of obedience to party leaders ever shown in this country, were persuaded to roll up the greatest G. O. P. majority given by any State. Then came reaction. In the very next session of the Legislature attempts were made, severally, to extend the maturity of farm mortgages, to lower their rate of interest, and to extend the equity of redemption under foreclosure. As each of these methods proved to be repugnant to the federal constitution, which forbids such impairment of a contract, the farmers in more than a third of the counties of Kansas to-day stand embattled and defiant of the sheriff who attempts to sell a farm on mortgage foreclosure. When a local paper criticizes their attitude, they sack the office.

Now, it is useless for any one to say that American farmers do any of these things wantonly and without cause. The old party politicians are busy trying to turn these aroused

energies of desperation aside in chase of rain-bows, to be dissipated upon vagaries and chimeras. But the farmers of Iowa are wise enough to insist upon relief of their financial situation, and the beginning of that relief is in lightening the taxation that has heretofore drained their resources to support industries not naturally profitable. This is why the farmers' movement in Iowa this year is likely to help rather than hurt the Democratic party. The campaign of education has been under way here for years, and the debate will go on until the issue is fully understood. Necessity has opened her old-fashioned school, but the pupils therein are no longer fools. They are becoming wise in their day and generation, and evidence of this is found in their persistent rejection of the Republican Party and the men responsible for the political cause for which they now seek to unite to secure a political remedy.

## Alliance County Notes.

## Butte.

The usual bi monthly meeting of the local branch of the Farmers' Alliance, took place Monday evening, June 1, at the school house. Our Alliance is in a flourishing condition, and all who join it frankly say that it is just what the agriculturist as well as the working man needs. Its constitution is founded on good, substantial everyday doctrine, and is perfectly calculated to meet the wants of the above-mentioned classes. By joining it, an individual must not labor under the false impression that it will affect his politics or religion. It is just the reverse, for by entering into the spirit of the organization, one improves his condition to such an extent that he is better enabled to form opinions on these two factors in his everyday life. The Alliance advocates temperance, and its aim among other things is the abolishment of the saloon power. Women as well as men are admitted to its benefit, and their joining should be encouraged. Two new members joined Monday evening, which now makes a total of fifteen, every one of whom should do all in their power to encourage others to join, so as to make Palermo Alliance second to none in numbers, as it now is in enthusiasm.—Progress.

The convention of the County Alliance of Butte county, consisting of delegates from the various Sub Alliances throughout the county, will be held in Odd Fellows Hall Biggs, beginning at 10 o'clock A. M., Tuesday July 7th. There will be a secret meeting during the day, and a public meeting at night. J. W. Blues, State Organizer will be present and address the people. The ratio of representation is fixed as follows: Two delegates for each charter, one additional delegate for each ten members, and one for a majority fractional part of ten. A general invitation is extended to the public to attend the open meeting.—Biggs Argus.

## Humboldt.

The Table Bluff Alliance will hold an open meeting on the evening of June 13th, to which all are invited. They hope to have a speaker present who can explain the designs and workings of the Order, and would be glad to have a large attendance of all who feel an interest in the movement.—Western Watchman.

## Nevada.

EDITORS PRESS.—I will hold a meeting for the formation of the Co. Alliance at Rough and Ready on Monday, June 8, and the next day will leave for Stockton. I now have five Subs. established, and will speak at Chicago Park tonight, and here to-morrow night. I expect to organize in both places. I have been under the weather. Will write particulars later on. Fraternally. BURDETTE CORNELL.—Grass Valley, June 5.

## San Diego.

The Valley Center Alliance No. 6, on last Saturday, was very interesting and entertaining. Mr. Wm. Balise and wife and Mr. R. Breedlove were initiated and on the previous evening, Mr. J. Borden and wife joined the ranks, which gives us over 30 members. It is decided that we shall hold an open meeting on Friday evening, June 12th, to discuss the Alliance platform. It was also decided that the Alliance has nothing whatever to do with the tariff question, and that speakers shall be held strictly to the platform.—Escondido Times.

## San Luis Obispo.

The Alliance met May 30, but few male members were present. Mr. McFaddin of San Miguel was present on some business relating to the Alliance flourishing mill to be erected at his town.—Adelaide Cor. Messenger.

Chas. Smith, of Las Tablas Alliance, and daughters are visiting the editor. Bro. Smith reports the Alliance work as moving finely in his county. We are looking forward to the County Alliance to be held at Exline Grove on the 7th of July. A good deal of preparation will be necessary. Would it not be well for the leading members of the Alliance to make such suggestions as they may think useful, through the newspapers?—Garden City Alliance

## Santa Clara.

Lincoln Alliance No. 6, will give a grand entertainment at Cupertino on June 12th.

The Farmers Alliance is going to make quite a stir here. Mr. Pedlar, State Secretary, states they are very soon going to erect a large flouring mill. The papers of incorporation were made out this afternoon, and things look very businesslike. A delegation is in town to-day looking up a suitable site for the building;

the old cannery property will probably be selected. It is also hinted, and on good authority, that they will erect a box factory and will control the proposed electric light plant.—Gilroy Cor. Mercury.

The County Sub-Alliances are all in a flourishing condition. The attendance at the weekly meetings are good, and the interest and harmony in the work is most satisfactory. Our County Organizer should form an Alliance at Mt. View and Evergreen. The times are propitious and the work should be pushed.—Garden City Alliance.

## Sonoma.

Bro. J. Roberts of Santa Rosa called last Wednesday and reports Santa Rosa Alliance on the boom. New applications are coming in, and at nearly every meeting Initiations are the order. The Fourth will be celebrated at Sebastopol to which all Alliances and friends are invited. The details and general arrangements will be under the supervision of the Sonoma Co. Alliance.

## Stanislaus.

State Organizer T. P. Cook writes: On June 6th I organized Rising Sun Alliance. P. O., Vernalis, Stanislaus Co. It has 14 members. The following officers were elected: L. M. Larson, P.; F. M. Cowell, V. P.; Miss Laura Cowell, Sec'y; Henry Beck, Treas.; Mrs. L. M. Larson, Chap.; Miss Gracie Cowell, Lecturer; Miss Lenora Sperry, Steward; Mrs. F. A. Cowell, A. D. C.; John Jones, D. K. All solid citizens.

## More Alliances in Nevada Co.

There were published in the Tidings recently the names of the officers of the Sub. Alliances established by Organizer Burdette Cornell, at Indian Springs and Pleasant valley. Mr. Cornell was in town lately, and in the course of conversation stated that he organized a Sub. Alliance at the Union schoolhouse, under the name of "The Lone Valley Alliance." The new subordinate is the largest established in the county, having 20 charter members. Its officers are: Pres., S. A. Winn; Vice-Pres., Mrs. C. A. Odell; Sec'y, Miss Evaline Barnes; Treas., E. B. Odell; Chap., Henry Nichole; Lecturer, D. J. Lynch; Doorkeeper, I. N. Hite; Ass't Doorkeeper, Merrill Odell; Steward, Miss Hattie Winn. The organization of Lone Valley Alliance is mainly due to the efforts of Miss Hattie Winn, who made a thorough canvass of the neighborhood.

The officers of the Rough and Ready subordinate are: Pres., F. E. Gross; Vice-Pres., S. E. Weeks; Sec'y, Miss Hattie Martel; Treas., Mrs. S. J. Miller; Chap., E. W. Weeks; Lecturer, E. E. Black; Doorkeeper, A. P. Martel; Ass't Doorkeeper, S. C. Hanley; Steward, A. J. Miller. This Alliance starts out with 16 members.

A fifth county subordinate will be organized at Pleasant Ridge.

Mr. Cornell is a young man, hailing from Nebraska. He is a fluent talker and very energetic.—Grass Valley Tidings.

## The Good Work Going on Bravely.

A press telegram dated Washington, June 7, states that President Polk of the National F. A. & I. U., and Congressman Jerry Simpson left for La Crosse, Wis., to attend the convention of the different industrial organizations of that State to be held for the purpose of uniting with the National Alliance as one working body. After the organization of the Alliance is completed, they will make several speeches in the State and then proceed to Illinois, Indiana, Ohio, Pennsylvania, New Jersey and New York, where mass-meetings are arranged by Alliance leaders to discuss the principles of the order. President Polk has arranged through the State Alliance Presidents to have mass-meetings at several points in each of the forty States during the next four months. He will have 100 speakers at work throughout the entire Union educating, as he says, the masses to the Alliance cause before the meeting of the fifty-second Congress. By the time the National Convention meets in November, he thinks the Alliance will be fully posted as to what strength it will have as a Presidential and Congressional factor in 1892.

COMMENDABLE FEATURE.—One of the most commendable features of the Farmers' Alliance, is their rule that differences arising between Alliance men shall, if possible, be settled within the Alliance of which they are members. In each Sub. Alliance five men are carefully selected to whom are to be submitted differences arising between the members. They are, in fact, a sort of jury. If either party interested objects to one of the five, or more, then others may be selected, until the jury is satisfactory, and it is expected that their decision will be regarded as final. And why should not the result be as just and equitable as if recourse had been had to the courts? Judges and juries are but human, after all, and are likely to err as other mortals. Besides, the Alliance jury is not liable to become befuddled by technicalities, but will decide entirely on the merits of the case. The system is regarded with great favor by Alliance men, among whom it has settled many difficulties that would otherwise have given rise to much expensive litigation.—Bakersfield Californian.

## Kinship.

If you have a friend worth loving,  
Love him. Yes, and let him know  
That you love him, ere life's evening  
Tinge his brow with sunset glow.  
Why should good words never be said  
Of a friend—till he is dead?

If you hear a song that thrills you  
Sung by any child of song,  
Praise it. Do not let the singer  
Wait deserved praises long,  
Why should one who thrills your heart  
Lack the joy you may impart?

If you hear a prayer that moves you  
By its humble, pleading tone,  
Join it. Do not let the seeker  
Bow before his God alone,  
Why should not your brother share  
The strength of "two or three" in prayer?

If you see the hot tears falling  
From a brother's weeping eyes,  
Share them, and by kindly sharing  
Own your kinship with the skies.  
Why should anyone be glad  
When his brother's heart is sad?

If a silvery laugh goes rippling  
Through the sunshine on his face,  
Share it. 'Tis the wise man's saying,  
For both grief and joy a place.  
There's health and goodness in the mirth  
In which an honest laugh has birth.

If your work is made more easy  
By a friendly, helping hand,  
Sav' so. Speak out bravely, truly,  
Ere the darkness veil the land,  
Should a brother workman dear  
Falter for a word of cheer?

Scatter thus your germs of kindness,  
All enriching as you go;  
Leave them. Trust the Harvest Giver,  
Who will make each germ to grow.  
So, until the happy end,  
Your life will never lack a friend.

—D. W. Hoyt.

## Emma Marwedel.

(Written for the RURAL PRESS by MRS. E. L. CAMPBELL.)

In the first quarter of this century, in a quaint old city on the North Sea, a little German child, three years old, listened to her mother telling the story of Ose who died by crucifixion that he might thus save millions of people. She was an infant of extraordinary beauty; bright-balred, fair, with wide open violet eyes and a precocious sympathy. She crept into the dark hall, and standing close against the wall, stretched out her little arms and imagined them nailed to the cross; she tried to realize the thorns and nails piercing brow and feet, and asked herself if she would be willing to suffer thus for other people.

This child was Emma Marwedel, and while she has not suffered martyrdom, she has willingly made her whole life a sacrifice for her ideas, and has counted the world's ease and honors well lost if she could set in the right path the feet of such little children, as she then was.

This year, in America, where the crowning days of her life are passing, and where so much of her work has been done, there is an eager demand for a fuller story of her life. The teachers she has trained, the children she has loved and taught, the educators she has inspired, all alike wish to know somewhat of her ancestry and environment, of her first creative impulses and achievements. These data she promises to furnish soon, but meanwhile it is with somewhat of difficulty that the following record of successive steps has been obtained. Her family,—an old bureaucratic family of Hanover,—always employed about the Court, or serving as officers in the army, lived in Menden when she was born. Both parents were unusually gifted, and the father, an army officer, gave her as a child an exceptional education.

Her mother died before Emma was 11, and the property which should have been inherited by the children from the mother's side was lost through a negligent guardian, and the little ones, with Emma as head, were thrown largely on their own resources. What miracles of successful enterprise she accomplished, through a heroism as rare in those days as it is frequent in these, will probably never be published; but all was the preparatory development—was the generating of power, for what she has since done in the service of education.

The first public recognition of her abilities took place in Leipzig in 1864, when she was elected to serve on the Board of a society called "The Association for the Promotion of the Education of the People." She and her colleague, Miss Anguste Smith, were thus the first women ever elected in Germany to act with a board of men on educational

al matters. Professor Biederman was at that time the president of the board and still retains the office.

In 1865 the first German Association for the Advancement of Women was formed, and Miss Marwedel was made a member of its executive board.

About this time Herr Schultz-Dalltech was strenuously active in endeavoring to ameliorate the lamentable condition of the laboring men of his country, and Miss Marwedel entreated him to include in his efforts the equally oppressed laboring women.

He in turn challenged her to take this work in her own hand and carry it to success.

Every one who there and then had a scheme to push for the good of humanity, or a reform to inaugurate in any educational direction, seems to have perceived the value of this eager, ardent, capable woman, fertile in ideas, practical in organization, resolute and intrepid, as only those can be who are at the same time intelligent and self-assured.

The Baroness Marenholz Bulow advised her to leave all else and devote herself to educational reform work through the kindergartens.

But at this time Miss Marwedel felt the burden laid on her of helping young women to prepare themselves for the many kinds of work by which, all unprepared, they were struggling to support themselves. Eighteen months she gave to the study of this problem, travelling in France, Belgium, England and Sweden, investigating institutions, studying methods, and comparing plans, and finally responding to an urgent call from Hamburg, and establishing there, in 1867, the very first Industrial Art School for Women ever known in Germany. She became Principal of this school, and remained with it a year, only leaving it when it was an assured success. (The school now numbers 400 pupils and has a thorough equipment.)

Miss Marwedel then put forth a brochure on Industrial Education for Women, the result of which was that Berlin and Breslau offered her inducements to establish similar schools in their midst. But a more irresistible call had reached her from this side of the Atlantic.

Miss Elizabeth Peabody had made her acquaintance while visiting the Industrial School in Hamburg, and perceiving the close and logical connection between the principles of Froebel as a foundation, and the Industrial Art Training School as a superstructure, interchanged ideas with her on how best to attain the wider dissemination of these principles of educational reform.

She came to America the next year, was welcomed with acclaim by the most advanced minds of Boston and Cambridge, and as in Europe, so in this country she is seen everywhere she went carrying an illumined torch and setting aflame other torches hitherto waiting for the contagious spark. It is this power of influencing to action the minds of those already prepared for a higher development that strikes the present writer as one of her most noteworthy characteristics.

Growing herself, always growing, always seeing some higher level of truth than the one she has just attained, she is the best illustration of her own idea of education as a germinating process in opposition to the old method of imparting knowledge. If she has gone from place to place instead of stopping and focalizing the forces in some one place, that has perhaps made her the greater benefactress.

Prodigal of ideas as the sun of warmth and light, she has left in every place where she passed a burning center of enthusiasm and enlightenment, and has done immense work which history will never record.

Still yearning over the unfriendly state of the struggling women everywhere, and observing that men in similar conditions were being actively looked after by politicians, one of the first things done by Miss Marwedel after coming to America was to call attention to the great tracts of uncultivated lands (in the Eastern States alone) which would lend themselves to horticultural purposes in the hands of women trained for such work.

She published articles on this subject, and as a first result was invited by the president of the Boston Horticultural Society to present her plans before that institution. Out of this grew America's first Horticultural School for women, located at Newton, Mass.

At this time, Miss Marwedel was offered most lucrative and honorable positions as a teacher in New England and New York, but this work she felt would limit her power in Educational Reform, and must therefore be refused.

Her pamphlet on "Industrial Training" having been translated by a professor at Cornell, President Andrew White of that University, invited Miss Marwedel to discuss with him a plan of connecting a Horticultural Department for women with Cornell University. Mr. Cornell offered land and buildings, and the City of Ithaca wished to donate \$2000. This is mentioned as one example of the enthusiasm excited wherever Miss Marwedel carried her plans for practical work, and actual "knowing by doing."

The climate was found unsuitable at Cornell, and after receiving a host of offers of land and money from many different States, she finally decided on Brentwood, Long Island as a proper location for a self supporting Horticultural School.

Much good work was done there, and the practicability of the scheme fully demonstrated.

The next step was the opening of an Industrial School for girls in Washington, D. C., in which

work, a phenomenal success was achieved. Then came the ideal Kindergarten and Training School in Washington—an effort participated in and watched over by Senators Garfield, Blaine, Sherman, Blair, Sprague and many others of our cleverest public leaders, whose children were her pupils. Next followed the call to the Pacific Coast and the establishment of the training school at Los Angeles. From this school have gone out some of our most brilliant California kindergartners—one of them Mrs. Kate Smith Wiggin, the head of the Pacific Training School to-day, and Miss Anna Stovall, principal of the Golden Gate Training School.

Not content with this alone, Miss Marwedel opened in Los Angeles an evening industrial school also, where, assisted by the voluntary services of 14 professional experts, she caused to be instructed 70 eager pupils in languages, needle work, wood-carving, modelling and drawing—all free of charge.

Thence she came north, founding schools in Oakland, Berkeley and San Francisco, and organizing Froebel Educational Societies. The writer ventures to say that no finer example of the genuine kindergarten has ever been seen than that one in its own beautiful grounds, at the corner of Van Ness avenue and Sacramento street, in San Francisco, where, for so many years, the very genius of the new education presided. The lovely garden was there (one of nine gardens, which Miss Marwedel has laid out with her own hands since coming to America), the walls of the schoolrooms were lined with exquisite pictures of plants and animals, and with cabinets of mineralogy and embryology, and everywhere was most lavish provision for the unfolding of the young intelligence.

Tiny children sprouted seeds on moist cotton-wool, examined the germs with microscopes, observed with minute attention and either reported orally, or if they could write, kept a journal of their observations. It was about this time that Miss Marwedel found herself taking the measurements of her own progress since she first received the thought of the endless meanings of the sphere.

Froebel had seen it as the type of unity—she saw it as the type of life. Every living thing from the lowliest protozoan, through all organized forms up to the gray matter of a Newton's brain—and on, to the whirling planets of the solar system, was observed to be the ever-recurring eternally persisting circle. She realized that some more permanent record of her development of those principles must be made than was being accomplished in her daily teaching.

She began to write. Simultaneously with the production of her Conscious Motherhood she carried on the preparation of the Circular Drawing System, which had already in a less developed form attracted much attention from leading educators assembled at Madelon, Chicago and elsewhere in convention. This now gradually expanded into an ideal elementary Botany, the circle reappearing in continuously higher forms of life, and the color sense being cultivated at the same time by reproduction of the natural lines of all objects. The illustrations of this book consist of one hundred exquisite plates, and the text is a "fairy tale of sciences" held to technical accuracy by the oversight of Professor Eugene Hilgard of the California State University, who also writes the preface. In 1888 Miss Marwedel went East to attend to the publication of her works. Conscious Motherhood was placed in the hands of the publisher, and she proceeded to Europe with the double purpose of perfecting the Botany, and of causing to be manufactured the various implements and materials invented by herself, and tested by their successful use in her own school. A later and fuller biography must follow her through her three years of fruitful journeying through England, Belgium, Switzerland, Austria and Germany, visiting and studying kindergartens and manual labor schools and taking counsel with the most illustrious representatives of the new education.

Since returning to America, a sad accident has befallen Miss Marwedel—a fall down stairs while in Boston having greatly injured her, and as a consequence retarded her work.

The Botany is not yet in the market, but will not be much longer delayed, and meantime she has written and published still another book, called the "Connecting Link" which is distributed at her request, by the Bureau of Education at Washington.

At the present writing Miss Marwedel is once more in San Francisco, with the most flattering prospect of a general adoption of her ideas and methods in educational reform.

Three of the public schools of Oakland and the kindergartens of San Francisco are to introduce into the regular course after having tested different portions of her system and notably of the wooden color-forms and the advanced paper-cutting (representing life-processes in nature as in the circular drawing) which are especially designed to form the link between the kindergarten work and that of the primary and manual labor schools.

In most States of the Union, and in most of the centres of education in the old world, there are earnest men and women who join in a common aspiration that Emma Marwedel's life may be spared to see her ideal realized here in California where, if anywhere in the world, the ideal conditions are present for the development of a school in which pupils shall "be prepared for life by living."

A HORSE may pull with all his might but never with his mane.

## The Almanac.

Now, Hanner, 'tain't no use to tell what them newspapers say  
About the storms and winds and floods that's comin' right away,  
The cold waves that they harp about that's brewin' in the West,  
An' movin' East 'bout just so fast. I hain't no confidence  
In anything of that ere kind; it's the newfangled way  
Of running things as if the Lord He wouldn't hev' His say  
About the weather any more. I ain't so tarnal green,  
As 't' be tuk in by weather that's ground out of a machine!  
An' I look where I'll find it straight, for snow an' rain an' hail,  
In the good old Almanac that hangs there on the nail.

Them Probabilities don't count; I want to know for sure  
An' sartin, when the winter'll come, the real Simon Pure!  
The kind of weather that we had so plenty in my day,  
When sleighin' in November came, an' sometimes held till May!  
In them times, Hanner, b'izzards wuz a thing we didn't know;  
A snow storm wuz a snow storm, and a high wind wuz a b'ow,  
An' when it cleared away we didn't harrer up our souls  
A-worryin' about the storm that wuz hatchin' at the poles;  
An' when we wanted weather news 'bout which there was no fail,  
We looked in the old Almanac that hung there on the nail.

We trusted some to signs you know, as how the wild geese flew  
A goin' South, an' how the husks upon the field corn grew,  
An' how the beavers build their dams, whether they's high or low,  
An' if the breast-bone of a goose wuz white, look out for snow;  
But when my mother wanted for to set a broody hen  
She'd have to have the signs all right for a good hatch; an' when  
My father wanted to find out if there'd be a rainy May,  
So's he could raise his calves, an' know he'd have a crop of hay—  
Why, then they looked where weather calculations did not fail,  
In the old Almanac that hung there on the nail.

So, Hanner, 'tain't no use to try to beat it into me,  
That them "forecasts" in the newspapers that every day we see,  
Is of any sort of consequence; why, there hain't no kind of doubt  
But what a man that undertakes to plan the weather out  
Must know the heavenly bodies, an' conjunctions, just as I  
Know all my cows an' horses, an' pigs that's in the sty!  
He can't trust to them thermometers with figgers sot by rule,  
Like the sums upon the blackboard when I went to destrict school.  
An' when I want to know about the rain, an' snow, an' hail,  
I'll look in the old Almanac than hangs there on the nail.

—Clara Augusta in New England Magazine.

## Chaff.

ETHEL—Of course, papa, I want to marry him, but you'll have to give me up, poor dear, won't you? Papa—Well, my dear, that's true; but then we'll get rid of your young man too, you see.

DID you recognise your wife at the masquerade last night? Not until I patted her on the shoulder, and she whispered to me, "Lemust, dunt make a fool of yourself, you old donkey."

"A fool for luck!" exclaimed Bangs, when he heard that a friend had married a rich woman. "I don't know about that," replied his wife; "you don't seem to be especially fortunate."

THE newspapers are forever speaking of "the blushing bride." Well, when you reflect upon the kind of husband not a few of the brides marry, you cannot wonder that they should blush.

"How pleasant it is to see husband and wife of one mind." "It is indeed. There's the Robinsons, for example. She thinks there's nobody in the world like Robinson, and he thinks so, too."

"WHY didn't you write oftener in answer to my letters, Jack?" she asked tearfully. "Because, dearest," he remarked, "yours were so long and interesting that I spent all my time reading them."

A WOMAN'S Reason.—Clara—Jack intends to have everything his own way when we are married. Clara's Mamma—Then why do you marry him? Clara—To relieve his mind of a false impression.

DID you get your bro-a-bras home from the cottage all right? Yes—with a marked increase too. My wife packed six pieces in a barrel, and when they got to the house there were 30 pieces.

JAY—"Well, by Jove, Jones, how are you? How you have changed!" Stranger—"But my name isn't Jones." Jay—"What, your name changed, too?"

## YOUNG FOLKS' COLUMN.

## Two Intelligent Dogs.

No. 1.—Sancho Spaniel.

[Written for the RURAL PRESS by SAMUELETTA DICKSON.]

While the milkman's son Walter was herding his father's cattle, he was studying and fitting himself for some higher position in life. He first went to work in a flouring-mill, and proved himself so efficient that in a few years he was made the manager of a fine mill in the new town of Rexville. Like most newly settled places, the hotel accommodations were poor, so Walter built him a small house near the mill, and "hached it."

As there was not much congenial society, he found his evenings long and lonely, and got a spaniel puppy for amusement and company.

Sancho, as he called him, proved a dog of great intelligence and aptness in learning tricks, so that he became the wonder of the town. When he was small, Walter felt afraid some one might steal him, so during the forenoon, when he was engaged in the mill, he left him in his room. As soon as the whistle blew, Sancho knew his master was coming, and, climbing into a chair, would stand at the window welcoming him with barking and much tail-wagging. After dinner, when Walter took his smoke on the porch, Sancho got his pipe—without tobacco, however, and holding it in his mouth, sat up in a chair beside his master, much to the amusement of the millmen, who used to call them the "happy parduers."

In the afternoon, Walter allowed Sancho to be with him in the office, and when the train came he taught him to take the book, go to the depot, which was not far off, and get the freight receipts.

When the mill closed at night, Walter always went over the huge warehouse before locking up, and Sancho took great delight in running up and down the long, narrow alleys between the piles of wheat sacks that reached to the top of the building. He especially enjoyed the forbidden fun of scaring the cats, one glimpse of their wild, shining eyes was irresistible—he had to give chase. Another sport was to hunt the hens' nests about the mill yard. He never disturbed the eggs, but waited for Walter to get them.

At supper, Sancho sat at the table and ate off a plate, but before he ate Walter taught him to put his forepaws on the table and bow his head, as if saying grace.

Sometimes he got hungry before supper was on the table. Then he would sit up on his hind legs and hold up his paws, but if Walter was busy and did not notice him, he would roll over and over in front of him till he gave him a bit of meat.

However, if Walter said when he laid down the meat, "Sancho, it is Friday; you know you are a good Catholic," the dog would not touch it until he said, "No, it is not Friday now;" then he would snap it up. Or if Walter said, "It is poisoned," he would not taste it until his master had shaken it and said, "It is all right now."

After supper they went up town, and Sancho greatly enjoyed the attention bestowed on him. When at the market, if Walter said, "Sancho, steal me an apple," he would slyly get one from the box and bring it to his master.

He liked this trick so well that sometimes he did it without being told, much to the amusement of the bystanders.

Sancho had a sweet tooth, and if Walter gave him a nickel and said, "Pay Mr. Green for the apple, and get some candy," he at once laid the money on the counter before the grocer who gave him the candy in a paper bag which he took in his mouth and carried home, and ate the candy while Walter read his paper and did his writing.

After this business, Walter began his evening's entertainment.

"Come, Sancho, let's have a little social dance."

Then while Walter played on his violin, the dog danced, and when he sang, the dog whined an accompaniment.

At Walter's direction, Sancho stood on his head in a corner behind a box while he hid a handkerchief, and when told to hunt the handkerchief, he at once did so, and quickly found it.

If Walter laid down on the floor a stone, a stick and a ball, Sancho could bring him whichever one he called for. After each performance the dog expected to have his master caress his long, silky ears and praise him.

"Sancho, would you die for the girls?" asked Walter.

Sancho made up a face expressive of disgust and shook his head.

"Will you die for me?"

Down the dog dropped, shut his eyes and lay perfectly still until Walter clapped his hands and said:

"That will do my faithful one."

Sancho did not like this trick of lying still, and if kept too long would open his eyes a bit to see if Walter was not ready to clap his hands, but if he said instead, in a tone of reproach, "Dead dogs can't peek," Sancho shut his eyes and looked ashamed at being caught with them open.

When Walter asked, "What do sleepy dogs

do?" Sancho opened his mouth and gave a wide yawn.

"Then it is time to go to bed," Walter replied. "Get your head." Then Sancho got an old coat which served for his bed, gave it a vigorous shaking, and finally laid it beside his master's head, but he did not lie down till he had "said his prayers," which he did by sitting on his hind legs with his paws crossed on Walter's knee and his head laid on them. He remained in this position till Walter said "Amen," then he jumped up and lay down on his bed.

Sometimes Walter went hunting in the mountains near Rexville, and then Sancho exhibited his natural spaniel sagacity, and Walter returned with a bag full of game.

Walter is all the time teaching new tricks to Sancho, who at present is not three years old, and with his wonderful aptness and his master's patience, there is no telling what he may yet do.

Walter had Sancho photographed performing his tricks, making a very amusing set of pictures.

## Sally.

[Written for the RURAL PRESS by ROSIE, Aged 15.]

Sally sat outside the schoolhouse door crotcheting. The tears were in her eyes and she looked as if she were going to cry.

"Go away, I hate you! I hate every one of you!" she suddenly cried angrily to the scholars gathered about her.

"Whew, what a spit-fire!" said Albert Dillon, the oldest.

"War signal!" shouted Will Bard in mock terror, while the girls giggled and whispered among themselves.

Sally began to cry. She wondered why they made fun of her and stared at her and watched her so much. Oh, yes, she knew that she was poor and lived with her father in a tent down on the flat, and wore a bonnet and went barefooted, while the other girls didn't, but what of it? Her dress, though patched, was always clean and her curly brown hair was neatly tied back with a blue ribbon and her lessons were always good.

Yet Daisy and Katie, both girls of her own age, never played with her, and their sister, "Miss Ella Bard," wouldn't even speak to her or notice her, neither would the other older girls, and the boys were always teasing her. She had never said a word about it, but kept silent; but this morning everybody felt out of spirits. Daisy and Katie stared harder than ever at her, and the boys, finding all else disagreeable, finally crowded about her in a most offensive manner, just to "see what she'd do," and Sally actually lost her temper.

"I'm just as good as any of you, and just as nice, and I think you are the meanest boys and girls I ever ever saw! So there!" and with flashing eyes she dropped the stitch she had just found after a five minute hunt.

"O, we don't care what you say; you're just wasting your tongue," was the rude reply.

"Think she was! She'd better lose a part of it and give me a chance to go to the head in spelling!"

"I'd rather—" "Hush, hush," said a firm voice, and the teacher stood before them. "It is getting cloudy, children, and I fear it will rain; it is a very dull day, and I think I will give you a half holiday. Sally," she said, gently placing her hand on angry Sally's head, "try and keep silent, my dear, and they will grow tired of teasing you. Sally said nothing, but walked slowly down the road.

She felt very sad and lonely as she listened to the roaring of the river as it leaped the high bank and poured into the deep narrow channel, that wound through the canyon, into the valley, passing the old, shabby tent that Sally called "home."

Her father had had "bad luck" since they left the neat little home in the valley, but was still toiling on hoping for another.

Sally helped her father as much as an eleven-year-old girl can, and never complained when she felt lonely and longed for poor mamma whom she could never see again.

As she turned the corner a sight came before her eyes which she never forgot; there, standing on the bank, just where the river was its deepest, holding in her tiny hands a yellow sun flower, was Lilly, the baby sister of Daisy and Kate.

Her golden curls were tossing in the wind, and her blue eyes were gleaming with pleasure.

Suddenly the rosy lips parted, she stretched out her arms to something she saw by the river, and then—oh, could it be?—she fell; there was a cry, more like a strangled moan, a rush through the bushes, and a moment more, all crippling and faint, Sally was standing on the bank holding little Lilly in her arms.

A week passed. The children were gathered at school around Sally and a little yellow-haired baby girl; but oh! how different were their faces! all smiles and laughter instead of angry scowls.

You don't hate us now?" It was Daisy Bard who spoke, as she put her arms about the now beaming Sally.

"No; I love you," said Sally, "and you love me, you all do now, and"—she paused and kissed Lilly's rosy cheek—"we all love our little peace-maker."

And peace there was ever after,  
Santa Paula.

## GOOD HEALTH.

**IDIOTS.**—An interesting experiment was made recently at the great idiot asylum of Paris. A kind of Punch and Judy show was exhibited before the inmates, with a view to ascertain whether any impression could be made by it upon their dormant intelligence: "About 1100 idiots were assembled in the gymnasium of the institution, most of whom had made some slight progress toward intelligence. Many of them had learned to tie their own shoes; others could dress themselves, with a little assistance; others could feed themselves pretty well; all had learned to sit still, and most of them could imitate the easier motions of their instructors. When they were seated and in order, the curtain rose, disclosing a small stage. The play presented was called 'A Dentist's Pupil,' and the fun of the piece was chiefly due to the vigor with which the hero plied his cudgel. At first the physicians were inclined to believe that the experiment was going to be successful. The unfortunates applauded the outdoings in their unconfined way, making loud outcries and laughing boisterously. It seemed that there was but one perfect idiot in the whole assembly—a dwarf, with a huge, misshapen head, who had been exhibited at fairs under the name of the 'King of the Eskimos.' He alone remained quite passive during the whole play. When the performance was over, the company relapsed at once into their usual silence and vacancy. There was no exchange of impression, no after-glow of interest, and, what was more discouraging, they appeared to have no recollection of what had occurred. The conductors of the experiment were obliged to conclude that the play had had no effect in rousing or stimulating intelligence."

**TOO MUCH SHADE.**—Houses in places otherwise unexceptionable are often so closely overhung with trees as to be in a state of humidity by the prevention of a free circulation of air and a free admission of the sun's rays. Trees growing against the walls of houses, and shrubs in confined places near dwellings are injurious also as favoring humidity. At the proper distance, on the other hand, trees are favorable to health. On this principle, says Dr. James Clark, it may be understood how the inhabitants of one house suffer from rheumatism, headache, dyspepsia, nervous affections and other consequences of living in a confined, humid atmosphere, while their nearest neighbors, whose houses are otherwise situated, enjoy good health; and even how one side of a large building fully exposed to the sun and a free circulation of air may be healthy, while the other side, overlooking shaded courts or gardens, is unhealthy. Humid, confined situations subject to great alternations of temperature between day and night, engender the most dangerous of all the physical qualities of the air, and humidity in general is the most injurious to human life. Dryness, with a free circulation of air and a full exposure to the sun, are the material things to be attended to in choosing a residence.

**CITIES DETRIMENTAL TO EYESIGHT.**—That "we are all poor critters," as the Widow Bettott quoted her late husband's saying, is but too well proved by noting the percentage of thin, scrawny, pale and otherwise defective people in any crowd; but of late the doctors have presented appalling proofs that city-bred people are unhealthily "poor critters." Their greatest defect is in the eyes. One-third of all the city people are more or less near-sighted. The tall buildings limit their range of vision, the invisible dust, even more than the visible, injures the eye, and the wearied organ is not restored by gazing over the green fields and far away. The narrow walls of the home or playground or schoolroom shut the children in during their growing years, and the eye, habituated to so short a range, loses half its capacity. The truth of this is proved, and more, the city.

**THE CHIN IN WALKING.**—Much care and thought should be exercised in walking. The shoulders should be kept up and square; the chest should be expanded. The chin is the pivot upon which largely depends the poise of the machine. Step out easily and firmly, letting the hall of the foot strike the ground first, so that you get the benefit of that beneficent little spring which Dame Nature has built into your instep to save the rattle and jar to the whole system, which people who will walk on their heels inflict on their anatomy.

**GIRLS WITH THEIR SCHOOL BOOKS.**—The habit of young girls carrying their school-books under their arms, or in bags or portfolios hung from their arms, is said to be to distort the figure. German doctors are exhorting parents to provide young girls between the ages of 11 and 14 with knapsacks for carrying their school-books.

**THE BLOOD IN PNEUMONIA.**—Dr. Kikodze, a specialist, has been devoting his attention to the condition of blood in the human body during pneumonia, and found that during the course of this disease, the white corpuscles increase in number as much as three times what they are in healthy persons.

## DOMESTIC ECONOMY

## Canning Small Fruits.

The following as prepared by Mrs. E. R. Parker for the Marysville Appeal, will be found worthy of consideration by housekeepers who desire to do canning:

**Small fruits, berries, currants and cherries** for canning, should be selected with care, and only the most perfect need, as well as the best sugar. The self-sealing glass jars are preferable to any others.

When ready, the cane should be set in a large pan of hot water, and set on the back of the stove. The syrup may be prepared and the fruit added. When the cans are ready they should be filled as full as possible, and set aside where no cold air will strike them.

**Strawberries, raspberries and blackberries**, after being carefully picked over, should be put in a porcelain lined kettle and set on the stove, and let come to a boil, when a quarter of a pound of sugar should be added for every pound of fruit. As soon as well heated the berries should be put in the cans.

**Canned Currants.**—To every quart of currants allow half a pound of sugar. Put in a porcelain-lined kettle and cook together for fifteen minutes and can.

**Gooseberries.**—Pick and wash the berries; put in a kettle with water to cover. Let cook twenty minutes; add half a pound of sugar to every pound of fruit, and let simmer ten minutes; can and seal.

**Canned Cherries.**—Stone ripe cherries, if Morelloes or other varieties. Allow half a pound of sugar to a pound of fruit. If sweet cherries, a quarter of a pound of sugar to a pound of fruit will be sufficient. Cook the fruit and sugar together for twenty minutes and can.

**Canned Pie Plant.**—Cut in pieces two inches long; put over a slow fire, with equal quantities of sugar. Let cook slowly until clear, and can.

**Canned Raspberries with Currant Juice.**—Make a syrup of five pounds of sugar and one pint of currant juice. Let boil; add four pounds of ripe raspberries, and boil ten minutes. Put in glass cans.

Light injures all fruit, and after canning it should be set in a dry, dark place. Cans should be examined two or three days after filling, and if leaking from the rim, they should be unsealed, and the fruit cooked down into jam, or used in some other way, and not returned to the cans.

**CHICKEN BROTH.**—Cut up a fowl and remove all the fat and skin, as these leave a strong flavor in the broth. If a very delicate flavor be desired, put the meat on to boil in cold water; boil five minutes, pour off the water and add fresh, cold water; then simmer until the meat is in shreds. Take out the breast as soon as it is tender. Strain the broth, and when cool, remove every particle of fat. Heat again, and when boiling thicken with whole wheat flour wet in cold water, one tablespoon flour to each pint of broth. Season delicately with celery salt and white pepper. When a richer broth can be taken, add half a cup of sweet cream and the breast of the chicken out in small dice.

**SPONGE CAKE.**—One pound of sugar, three-quarters of a pound of flour, ten eggs. Dissolve the sugar in one gill of water, then put it over the fire and let it boil. Beat the eggs a few minutes, till the yolks and whites are thoroughly mixed together, then stir in very gradually the boiling sugar; beat the eggs hard all the time you are pouring the sugar on them. Beat the mixture for three-quarters of an hour; it will get very light. Stir in the flour very gently, and add the grated rind of a lemon. Butter your pan and set it in the oven immediately.

**POACHED EGGS.**—Have a broad shallow vessel of boiling water. Break your eggs in a plate, and be careful not to break the yolks. Take the water from the fire, slide the eggs carefully into it one at a time, and then put them over the fire again. While they are boiling throw the water over the yolks with a spoon, and as soon as the whites are thick take them out with an egg slice. Trim them neatly and send them to the table hot.

**RAISIN-LAYER CAKE.**—Three-fourths cup butter, two cups sugar, yolks of four eggs, one cup milk, three cups flour mixed with 2½ teaspoons baking powder, one teaspoon lemon extract. Bake in four jelly-cake tins; fill with raisin cream, made of whites of four eggs beaten well, half-cup fine sugar, half-pound heated raisins chopped fine, half-cup chopped currants.

**BANANA CAKE.**—Bake any light cake in shallow pans as for cream or jelly-cake. When ready to serve (not before) cover one cake with sliced bananas, sprinkle with powdered sugar and orange juice. Put on the other cake and cover in the same manner.

**CREAM SAUCE.**—Boil a pint of cream, sweetened very well with white sugar, and flavored with grated lemon-peel or vanilla. Let it boil once, then take it off the fire and strain it. Serve it hot or cold, according to the dishes it is to be eaten with.

**CARAWAY COOKIES.**—One-half cup butter, one cup sugar, one egg, two tablespoons caraway seeds, one cup cream, one-half teaspoon soda, flour to roll out. Mix rather soft. Roll thick, cut off, sift sugar over, and bake quickly.

## The Week.

As we go to press on Wednesday evening the signal service promises light rains over the upper half of California and the air certainly feels like it. It will be a June rain, rather a rare thing, and it is to be hoped it will not fall in any amount for there is little that can be helped by it. If it would kill grass hoppers it would be a great blessing, for these pests are doing too much injury on the foothills and the eastern side of the great valley. Every device is being employed to reduce them and even the arsenated bran does not always succeed this time though it is doing much and the arsenic supply is being reduced.

The fruit season is advancing fast and supplies are being readily disposed of as they ripen. Eastern shipment of cherries and apricots is helping out greatly. Prices in local markets hold up well so far and the outlook is good. Complaint is made of light-weight raisins. We hope California packers will not

pursue that reprehensible and suicidal policy. Californians can afford to give full, honest weights.

## Arrangements for Farmers' Institutes.

The Regents of the State University at their meeting on Tuesday of this week, took action which makes it possible to outline the conditions under which any locality of the State can secure the co-operation of the University in arranging and holding Institute meetings. It may be remembered that at the Regents' meeting of March 10, Prof. Wickson was "appointed to organize and carry into effect a system of farmers' meetings substantially similar to that already in operation in Wisconsin and other agricultural States," and "instructed to report to the Chairman of the Faculty a suitable plan and regulations for that purpose, including the enlistment of other speakers from the University Faculty and from the ranks of practical agriculturists as may be found feasible."

In accordance with the foregoing instructions, Prof. Wickson prepared an outline of arrangements, which received the approval of the Regents, as stated above. For the information of our readers we give below a sketch of the policy to be adopted and a synopsis of the arrangements to be entered into with the parties in localities in which Institutes are desired, as follows:

A. That the work proceed somewhat slowly at first with the expectation that the numbers of meetings will increase as the people become informed on the character of the Institute effort and its influences as a factor in the advancement of practical agriculture. Such has been the history of the work in those States in which the system has reached its best development.

B. That for a time at least the work be allowed to proceed in directions which seem to welcome it; or, in other words, that the demand for the work, as shown by application and local preparation for it, shall indicate the direction in which the supply shall proceed. This is not only a natural course for the effort, but is at the same time a surety of local interest and co-operation without which success is impossible.

C. That it shall be understood that evidence of such interest and co-operation shall be manifested by willingness to undertake local preparations for the meetings; that representatives of local agricultural societies or volunteer committees, or energetic individuals acting singly, shall undertake to arouse local interest and secure promises of participation from progressive agriculturists of the region—both men and women, when feasible, shall provide suitable places of meeting, and whatever local printing may be desirable for the public information, and shall meet whatever expenses shall arise in the carrying out of their own plans.

D. That whenever the officer of the University who is conducting this work shall be assured of trustworthy local interest of this kind it shall be his duty to render the local participants every possible assistance in planning their meetings and in other preliminary preparations, and either he, or some other member of the University staff, shall attend in person (without expense to the locality) all meetings which are understood to be held under University auspices.

E. That such meetings, when understood to be under University auspices, shall be conducted by the University representative under rules usual for the conduct of parliamentary bodies—that all such meetings shall be understood to proceed under the head of "Special Order," which shall be the improvement of agricultural practice and the education of the people in the sciences underlying it, the improvement of the home and the methods of home life; the advancement of educational interests and intellectual culture, and other matters calculated to render the meetings valuable, entertaining and profitable, but that all vexed questions of politics, religion, socialism and the like shall be considered out of order. This course has been fully approved by Eastern experience with such meetings.

It is hoped that by this plan of thorough co-operation between the University staff and the local representatives, it will be possible to hold Institutes where they are most likely to prove successful, and thus to inaugurate the system under propitious circumstances. The first

thing to determine is the applicability of the Institute style of work to the tastes and needs of California people. When that is affirmed by experience, it will be in order to adopt a more aggressive policy, and to carry the effort into regions which may not undertake much in their own behalf. This will be for the future to determine. The present undertaking is preliminary. Comparatively few people know what a Farmers' Institute is. A few months' experience in this State will supply this information and forecast the future of the work. Prof. Wickson is now in correspondence with several counties in reference to holding Institutes and is ready to make himself as useful as possible in this line of University extension. Detailed information and careful suggestions will be given to all who manifest a desire to begin Institute work in their regions of the State.

## The Coyote Scalp Business.

The new bounty for coyote scalps promises to largely deplete the ranks of the varmints. Coyote killing is being taken up systematically. It is announced from Fresno that the office of the county clerk has been besieged with people loaded with scalps. Two business men of Fresno have conceived the idea of making the capture of coyotes a business. They have gone over on the west side and have established an agency in Fresno. In less than a month they have sent in 87 scalps. They use rifles to destroy the animals, and it is said there is an inexhaustible supply of them. Hundreds of scalps are coming from all quarters for redemption at Fresno.

This is all fair enough apparently, and if vigorous work is done in all infested regions, the coyote pest will be largely and quickly reduced. But tax-payers will not undertake to clean out coyotes from outside territory. It is reported that the custom's inspector detailed to look for a coming Chinese at Tia Juana, on the Mexican line in San Diego county, recently seized a large bundle of coyote skins, some 50 in all, which the owner was endeavoring to bring over the line. The fact behind the seizure is that a company of sharp Mexicans have concocted a scheme to kill coyotes below the Mexican border line, bring them across the line surreptitiously into California and secure the bounty offered by the State. The inspector, in reporting the amusing trickery, writes that the Mexican speculator who invented the money-making plan furnished arms, ammunition and food to his employees and succeeded in one month in cheating the State out of \$175.

## The World's Want Is More Money.

Mr. Goschen, Chancellor of the British Exchequer, advises the issue by that Government of one-pound notes, and also of 20-shilling notes secured by silver. No bank of England note has yet been issued for a less sum than five pounds; both these propositions are a new departure in British finance. It shows that Mr. Goschen, at least, fully realizes the fact that the increase of money has by no means kept pace with the world's requirements, and that something besides gold must be used as a money basis. It shows also that silver will be used to supply this hole for more money.

Money-lenders and all who trade in money and prosper best when money is tight and "times are hard," have and will continue to oppose an increase of circulating money because it snubs their present selfish purposes.

The farmer, the miner, the manufacturer—those who need money to carry on the industries and commerce of the world and to develop new industries—need money at reasonable rates of interest. They do not so much exercise themselves about the security back of this money, if only it have the good faith of the Government issuing it, though all agree that silver, which has served so long and well, properly supplies the want. The gold advocates, or rather the opponents of more money in this country, know that if any other basis than gold is used to increase the circulating medium it will be silver, therefore their whole effort has been directed against silver. They have counted on England's financial policy as backing of the first order, and it would seem as if this proposition of Mr. Goschen must be a knock-out blow for them.

We have no need of land notes or any other form of money in this country than gold and

silver if we fully utilize our resource of these metals, and there will be enough for England as well.

## Wheat Crop Estimate.

We will publish in next week's RURAL the estimated stocks of grain held in this State on June 1st of this year. It gives a smaller quantity of wheat in store than at a like date since 1884. By these returns, which are accepted as approximately correct, we can form a fair idea of last year's wheat output. The exports from June 1st, 1890 to June 1st, 1891, aggregated, with flour reduced to wheat, 856,004 tons; the local consumption, accepting average figures per capita, for the fiscal year 205,900 tons; seed for 3,700,000 acres (for the preceding year it was not quite 2,600,000 acres) 154,500 tons; feed for stock estimated from returns made by well informed parties in each county, 120,000 tons; stock (flour reduced to wheat) held in the State on June 1st, 99,503. Total 1,435,907. From this deduct the following: Stock on hand June 1st, 1890, 252,216 tons; receipts from Oregon and Washington 99,900 tons. Total 352,116 tons, which gives the wheat crop in 1890, 1,083,791 tons, or within 100,000 tons of the crop of 1889. The large quantity fed to stock during the season drawing to a close was due to the high price of barley, besides which many localities, not having any need, wheat almost if not entirely.

The prospects for a large output of wheat this year could not be better. Cool weather the past few weeks will cause many fields to yield a fair average that the forepart of May were expected to be cut for hay. The plant, taking the State as a whole, stood out well, while the meadows are above an average. The berry will average plumper and heavier than for years. As the acreage seeded to wheat is estimated to be not less than 3,700,000 acres, it will be seen that even allowing one-third a failure or to be cut for hay, yet the acreage to be harvested will aggregate as much as the entire acreage seeded in 1889, and of which latter fully 20 per cent was cut for hay. At this writing, from all data at hand, it appears reasonable to claim that this year's crop will be among the largest if not the largest harvested in this State.

**MR. KOEBELE GOES ABROAD AGAIN.**—Secretary Lelong of the State Board of Horticulture announces that Albert Koehle, the introducer of the *vedalia cardinalis*, will again go to Australia, New Zealand and adjacent countries, to search for parasitic and beneficial insects for introduction into this State. An arrangement has been made whereby the Department of Agriculture pays his salary and the State Board of Horticulture pays all his expenses, and he will thus be kept abroad at least two years.

**VITICULTURAL MEETING.**—At a meeting of the Viticultural Commissioners in this city, this week, J. De Barth Shorb was chosen president and C. J. Wetmore, Viticultural Officer. Other officers were re-elected. C. A. Wetmore made a report on "markets for wines," which will soon be published in pamphlet form for general distribution. It is also planned to publish a treatise on brandy distillation and a full directory of California grape-growers.

**PEACH SALE REPORTED.**—It is stated that Hunt Bros. have purchased of C. A. Man of Bakersfield all of his Orange Cling peaches of this year's crop at \$40 per ton, but will take no peaches that measure less than 2½ inches in diameter. The Orange Clings ripen in August, and they expect to get at least two carloads that come within the contract. They will be put up in glass jars for the fancy Eastern market.

**MORE PEOPLE WANTED.**—The real estate and other organizations of this city are agitating the immigration question, and have appointed a committee to issue a call for a general convention at some date in the near future.

**RUSSIAN WHEAT.**—It is telegraphed from St. Petersburg that an official report says the yield of winter wheat is expected to be below the average, and that a large deficit in the rye crop is certain.

**THE INTERSTATE COMMERCE COMMISSION** paid a flying visit to this city the beginning of this week.

## The University Culture-Station near Paso Robles.

We intend to give from time to time, as opportunity offers, views and descriptions of the sub-stations tributary to the University Agricultural Station at Berkeley, and under direction of Prof. Hilgard, the head of the Agricultural Department of the University. There are several of these stations devoted to general outcrops, as our readers already know, and they are located in Amador, Tulare and Los Angeles Counties—in addition to the one to which we especially refer at this time, in San Luis Obispo County. In the selection of the locations for the stations, Prof. Hilgard proceeded upon the plan of making them representative of as extensive areas of the country as possible, though of course it is not possible to cover the whole State with the few stations, for the establishment and maintenance of which, adequate funds are at present available.

The station near Paso Robles is known as the "Southern Coast Range Station." In selecting for this district of the State Prof. Hilgard, in his report for 1890, gives the following sketch of the considerations which governed his choice:

"It has been thought that these conditions (of the Southern Coast Range) would be best fulfilled by the establishment of a culture sub-station at some point in the largest valley of the Southern Coast Range—that of the Salinas river—representing a very large area of agricultural land, just being opened by the extension of the Southern Pacific railroad, and but little tried as to its productive capabilities. As the needful offers of land and money for station buildings were made from the upper Salinas valley, two personal visits to that region were made for the purpose of exploration and final location."

By such examination it was found that not only does the granitic soil occupy the largest area in the region, but that it is of considerable uniformity over its entire cross-section from the Salinas to the Estrella, it seemed proper to locate the station mainly with reference to this predominant soil, and in so doing to consider the convenience of proximity to the railroad. After examining many possible locations, it was concluded to accept the offer of Mr. J. V. Webster, of Oreston (who had taken the most lively interest in the matter), of a tract of 20 acres lying about two miles north of Paso Robles, three quarters of a mile east from the Salinas river and about 80 feet above it, on the plateau level, on the main road from Paso Robles to the Huerfano settlements, and within the region where the adobe knolls project through the granitic sand soil, so as to permit of a representation of both kinds of land within its limits.

The tract, as is shown on the plat (given herewith), is a parallelogram 1710 by 495 feet, the latter dimension representing its frontage on the public road, while the longer runs due north and south. The forward (southernmost) two thirds of the tract is practically level and presents the typical soil of the plains to the eastward, while in the rear third there are two additional soil varieties, to wit: that of the swales in the sandy lands, and on the northwest corner a triangular, sloping piece of heavy adobe clay land. The latter forms the foot of one of the hillocks already mentioned, on the top of which there is an extraordinarily luxuriant vegetation lasting far into the summer. In the northeast corner is included part of a "hog-wallow" area, the soil of which is slightly heavier than that of the front portion, yet not materially different.

The tract was inclosed with a substantial "six-board" fence, of redwood posts, with Oregon pine planks. The latter had been so disposed that it was hoped rabbits would be excluded; but experience showed that this was not the case, and it became necessary to interpose in each of two lower spaces a strand of barbed wire. Unfortunately, considerable damage to young trees and vine cuttings occurred before this additional protection could be given.

The buildings on the station grounds consist of a dwelling and a barn; the cost of the former was defrayed by subscription from citizens, chiefly of Oreston, Templeton, and Paso Robles. The dwelling house is a neat two-story frame cottage, rustic finished; dimensions, about 30 by 38 feet, inclusive of verandas in front and rear; it has eight rooms and bath. The front faces south, toward the county road and main entrance. Several groups of oaks have been left standing around the house and outbuildings, for shade and protection from wind.

The barn is placed near the east line of the tract some distance in the rear of the house; is also rustic finished, sixteen by sixteen feet, with three stalls, and hay loft giving room for five tons of (baled) hay. Adjoining the stable are wagon and tool sheds, each sixteen by fourteen feet; a space sixteen by 48 feet is in addition covered by a lean-to roof, forming an open shed, affording additional space for storing implements, etc., from the weather.

Between the barn and the house is a dug well about 105 feet deep, and four feet in diameter (with wooden cimbing down to 40 feet, and brick for seven feet from bottom), which, as a rule, contains about five feet of excellent water.

The plan adopted in laying out the track for

THE UNIVERSITY EXPERIMENT STATIONS—SUB-STATION AT PASO ROBLES, CAL.

DIAGRAM OF STATION GROUNDS AT PASO ROBLES.

planting will be best seen from the accompanying diagram.

The space immediately adjacent to the house has been laid out with curved roads and walks, and planted with a variety of trees, as well as with such plants as whether in propagation or permanent growth, require extra care and watering. Small cultures of all kinds occupy the southwest corner, left in blank on the plat, while between the house and the east fence, under the lee of the oak groves from the pre-

vailing wind, there is a plantation of citrus fruits and olives.

In laying off the vineyard and orchard it was necessary, on account of the long rectangular shape of the tract, to extend these likewise, in order to cover the variations of soil that to a certain extent occur, even in the sandy land; and for the same end the several fruits were not planted in solid bodies each, but somewhat subdivided, so as to show, as far as possible, the influence of soil variations. The heavy soil of the swale was divided between pears and plums, as being most likely to succeed in it.

The plot on the northeast corner of the tract, reserved for field cultures, embraces a fair representation of the bulk of the lands likely to be used for such purposes; a somewhat heavier loam than the land occupied by the fruits, yet not of an "adobe" character.

### A Local View of the Station.

The foregoing relates to the permanent features of the station and its equipment. The following running account of the outcrops now to be seen at the station was prepared for the Paso Robles *Moon* by a reporter who was shown about the place by R. D. Cruickshank, who has been in charge since the establishment of the station.

The orchard comprises over 600 varieties of fruit trees, embracing all the finest kinds of deciduous fruits in cultivation. Many other curious and useful trees and plants are grown, such as the bamboo, cork tree, Osage orange, eucalyptus, and ramie, the new silk plant about which so much has been and is being said as a substitute for silk. The mulberry trees are doing exceptionally well.

At the present time there are over 100 varieties of grain to be seen. It is doubtful if ever such a fine showing was seen before, as all of them have done remarkably well. Mr. Cruickshank says that they beat his last year's crop. He showed samples last year in San Luis Obispo and Santa Barbara counties and gained four diplomas, and the silver medal of the Santa Barbara Agricultural Association.

Among forage plants there are many new and excellent adjuncts, which are likely to prove advantageous to our depleted pastures where the bunch grass has been killed by too numerous herds of cattle, two grasses in particular, the Japanese wheat grass and the Schroeder's brome grass, which are the best. They, with the clover-like plant called the esparcet or sainfoin, have been thoroughly tested and are highly recommended as being able to withstand all the drouth we have, and remain comparatively green when all native grasses of an annual nature have gone down to mother earth whence they spring.

The vineyard is perhaps the best success of all, and must become highly interesting. The following types are represented: Bordeaux, Burgundy, Southern French, Sauterne, Rhenish, Hungarian, Austria, North Italian, Port, Sherry and Madeira, Table and Raisin. There are also in nursery over 50 additional kinds of grapes, taking in all the indigenous varieties for resistant stocks. Results point to this section as being pre-eminent well adapted for all the vitis family, but as time has not yet transpired to find out which varieties will be most prolific to grow, it would be premature to say. This year will decide in many cases, as the trees are well laden with fruit and the wine-making qualities will be tested in the University's laboratory.

While attending to the requirements of the fine things, we are pleased to note that Mr. Cruickshank has not forgotten to attend to vegetables all during spring. From February to date, he has had plenty peas, radishes, lettuce, beets, onions, turnips, etc. He has proved that the leaves of the sugar bean make a splendid substitute for spinach, and yield an everlasting crop (the roots are also the finest kind of chicken feed when boiled). Potatoes of 17 kinds are being tried, and all are looking finely at present.

The cultivation of the ground is in the highest state. As there is no attempt at irrigation, none of the trees or vines have received a drop of water, and the whole shows that we are able to do without irrigation."

The favorable local view taken of the station work at Paso Robles is very encouraging, for it is largely as local centers of information that the stations must yield benefit, although of course, the work has also wider significance. Mr. C. H. Shinn, inspector of the University stations has recently visited the Paso Robles station, and gives a good report of its condition and outlook.

## QUERIES AND REPLIES.

### Gopher Destruction.

EDITORS PRESS:—I have been a reader of the *RURAL PRESS* for several years and have noticed a number of articles in regard to preventing gophers from destroying fruit trees. I have conversed with every one I had a chance to on the subject, and have collected the following ideas, which I think are worth room in your valuable paper:

I take a stick (a broom handle makes a good one) and run it into the ground directly under the tree or to the center. I then drop in the hole a piece of assafetida gum; then put a little warm water in and stop the hole up.

Another way to keep gophers out of the garden is to dig a trench, say 18 inches deep, or as deep as the gopher runs his hole, and about a foot wide. In the bottom of the trench sink coal oil cans not more than 20 feet apart, so the tops will be level with the bottom of the trench. The top of the oil can must be cut out. The gopher digs his way into the trench and runs along the bottom until he falls into the can and is a prisoner. Gophers will never get into a garden with this trench around it.

I have been trying the assafetida, and where gophers have worked nearly all the way around a blue gum tree, the tree is still green and thrifty. How often this should be renewed I do not know. If this is a sure preventive it is worth knowing, and I wish others to try it and determine on how often it should be renewed.—CHAS. WHITING, Los Banos.

We would like to know the results if our readers, try the assafetida plan. The pitfall plan described by our correspondent is an old one, and has always, so far as we know, proved effective.

### Mortality Among Chicks.

EDITORS PRESS:—Please insert the following queries about young chicks in the *PRESS*. Has any poultry raiser lost any chicks about two weeks old, with these symptoms, well in the morning, when taken from brooder we find them limp, not able to stand or hold up their heads, and finally die. We have fed cracked wheat, bread crumbs, and oared for them as we usually do. If any reader can give remedy or cause for it, will oblige one of your old subscribers.—J. H. D. Arno.

### Siphons and Water Rights.

EDITORS PRESS:—There is a ridge some thirty feet high between a stream and a point lower down and sixty rods away; will a siphon work well over this ridge, and is it liable to get out of order?

Has one through whose farm a stream runs, a right to pipe water from the stream for domestic and stock use, notwithstanding the water is all claimed below?—S. P. SNOW, Ventura County.

## AGRICULTURAL NOTES.

## CALIFORNIA.

## Alameda.

**IMPROVED GRAIN CROPS.**—Haywards *Journal*: The grain around Haywards looks fine, and even the late grain has pulled itself together of late and is filling out well. A large amount of hay has been cut, and if the rain holds off we will all be happy.

## Butte.

**A WALNUT GROWERS' CHALLENGE.**—Brush Creek Cor. Oroville *Register*: Joel Flynn challenges the State to beat the growth of his English walnuts ten years from the seed. They are in full bearing, and some of the trees are 75 feet in height, with trunk measuring 4½ feet in circumference, and a spread of branches 40 feet in diameter. The number of fruit trees in this vicinity is about 5000, and many, if not all varieties require no irrigation.

**RED-DIRT FARMING.**—Oroville *Register*: B. F. Darby and J. N. Armstrong were discussing red dirt farming this week, when the latter said: "Ten acres of red dirt well manured will produce as big a crop as five times that area of land without manure." "I cut from 17 acres of manured land," said Darby, "as much hay as I cut from 70 acres of land without manure." "Yes," said the former, "20 acres of red dirt, well taken care of, is more profitable, and one can produce a bigger and more profitable crop upon it than upon a hundred acres without manure." "The trouble is," said Darby, "that we are just learning how to farm the red dirt to advantage. If it is well plowed, and then kept moist by cultivating, you can raise almost anything upon it. I have tried corn, and know that it does well on land that is well manured and cultivated." Said Armstrong: "We ought never to sell anything from our red land, but feed the hay and grain upon the land; that is the way to make it pay well. If you cultivate and manure red land, you can grow almost anything upon it." The discussion continued at some length, but the point made by each farmer was, that red dirt needed manuring to enrich it, and that a small tract of it thus made profitable would produce larger crops by two or three fold than the same land without the use of manure.

**GOOD ORANGE SECTION.**—Cor. Middleton *Independent*: Orange blossoms are seen in beautiful profusion in all directions. In some places, oranges are yet on the trees. The sight of both the blossom and the fruit at the same time is very attractive. That is one great advantage in raising oranges; the crop may be left on the trees for months. Oranges were ripe here by Dec. 1st, yet now, June 1st, there are still oranges to be seen on the trees. The two citrus colonies, Palermo and Thermalito, are growing steadily, and the acreage in oranges has nearly doubled this spring.

## El Dorado.

**FRUIT CROP.**—Placerville *Democrat*: Ranchmen throughout the county are now vigorously engaged thinning out fruit. Inquiry among residents of the various leading fruit districts of the county elicit the information that peach, plum and prune trees are heavily overladen, and a tremendous amount of fruit is being taken from the trees. The crop will be as large as any ever recorded in the county.

## Fresno.

**GOOD PRICES FOR FRUIT.**—Fresno *Expositor*: Major J. E. Hughes, who resides four miles south of this city, sold his fruit to-day on the trees. The purchaser does the picking and Major Hughes has nothing further to do with the crop. The purchase price was \$6750, which makes just \$100 per acre net, there being 67½ acres of fruit. The fruit consists of apricots, apples, peaches, etc.

**RAISINS IN THE SWEAT ADVANCING.**—*Expositor*, June 2: There has been a firm advance in the price of the finer grade of raisins. Large sales have been made at five cents a pound. The outlook is encouraging.

**CROP PROSPECTS.**—Sanger *Herald*: The grain crop has been developed rapidly, and now barley, wheat, etc., are all headed out. Wheat that gave the appearance a week ago of making only a small yield now presents a more encouraging outlook. The present cool weather will give later sown grain further time for more proper maturing, and will also allow the heads to more properly fill out. The berry is now in the dough, as the farmers term it, and the meches in the head are well developed.

## Kern.

**LARGE GRAIN CROPS.**—Bakersfield *Echo*: Cumming's valley is one continuous grain-field from the foothills that surround it. The grain is good. The fine residences of its numerous and prosperous farmers are beautifully located on slight elevations near the foothills, each supplied with fine spring water from the mountains, and each or nearly all have a magnificent view of this immense grain-field from their front doors. The valley is six miles long and about four wide. The people of Tehachapi, Brite's and Bear valleys are similarly situated almost every foot of tillable land being covered with good grain. The recent rain will undoubtedly make the crop better than ever before since the valley was settled. Fruit trees are also doing remarkably well.

**GOOD GRAIN CROP IN ANTELOPE VALLEY.**—Bakersfield *Californian*: This year some 10,000 acres are in wheat, all of which promise abundant harvest. There has not been so

much rain, but the cool days and nights of last month in some way filled out the berry, so that the grain, soon to be harvested, is plump and heavy weighted.

## Los Angeles.

**HOW HE GROWS POTATOES.**—Covina *Argus*: The potatoes being dug on the Vosburg-Neil ranch seem to be turning out poorly. An old potato raiser says they were planted too early, while another ascribes the small apparent yield to the method of cultivation. The latter is very successful in raising heavy spring crops of fine, large potatoes without irrigation, and says perfectly level cultivation is the best. That in this section the tops are small and any billing-up covers some of the leaves that should be exposed to the air, and cuts short the crop just that much or even more in proportion. This we know, that in any dry country nearly every sort of vegetable makes a finer growth and gives better returns with flat cultivation, and we always have a hearty respect for the opinions of a man who "gets there" with a good crop.

## Modoc.

**DAIRYING.**—Alturas *Herald*: J. Tbad Jones, the farmer and stock-raiser residing six miles from town, is fitting up a dairy at his Rocky Prairie ranch. He has secured the services of a professional dairyman and is going to make butter on an extensive scale and scientific principles. In point of feed and water, Mr. Jones has all that heart could desire. The ranch is covered with a heavy growth of the richest of grasses, while from the hillsides burst springs of ice-cold water, and just below one of these is situated the dairy or milk-house; through it passes a stream of pure cold water, and in which is submerged a Cooley creamer containing the milk of about 30 cows. The dairy is furnished with all modern conveniences, and will manufacture nothing but sweet cream butter.

## San Bernardino.

**TREES KILLED BY POOR FERTILIZER.**—Redland *The Facts*: It is not generally known that some commercial fertilizers must be used with care or they do more damage than good. H. G. Billings has just learned this fact at a cost of \$3000. He recently set out 25 acres of extra choice Navel in Crafon, and in order to send them ahead as fast as possible he placed a good supply of fertilizing material about the roots. This was a good deal the nature of unslaoked lime, and as soon as water was turned on it burned the roots, and all the trees on the 25 acres were killed. He has now engaged S. W. Strong to replant the tract to new trees.

**CROPS AT RIALTO.**—Cor. Los Angeles *Express*: It is said that the first barley that appeared in the market in this county this season came from Rialto. The bay crop is very heavy here this year. The fruit and berry crop will also be good, especially grapes and blackberries. Deciduous and citrus fruits will be heard from in great abundance as the colony grows in years and the many acres "put to" fruit trees, come into bearing.

## San Diego.

**NEW ACREAGE IN FRUIT.**—S. D. Union: Horticultural Commissioner James P. Jones says that this season's planting of fruit trees exceeds by many thousands anything ever known in the county. The ambition to produce and thus to increase the yearly income and also the value of property has possessed ranchers all over the county, and the result has been a tremendous importation and planting of both citrus and deciduous trees. The county is divided into three horticultural districts. In the 3d from Temecula north, over 100,000 trees, both citrus and deciduous, have been planted. In the 2d district, including Escondido, 175,000 trees had been planned up to February 15th, and over 100,000 have been set out since that time. Up to February 15th, 275,000 trees of various kinds had been sold from this city, and since that date eight carloads have been received, or about 34,000 more. In addition to these, more than 40,000 mulberry trees have been planted within a radius of 30 miles around San Diego. The total planting in the county, Mr. Jones says, has been about 600,000 since January 1st. Local nurseries have shipped 100,000 seedling orange trees to Riverside during this period. From next year, on the effect of the very extensive planting, will be felt in heavy exportations of both green and dried fruit, and in the establishment of several canneries. The total acreage in this county put to fruit trees this year for the first time is about 9000 acres.

**TWENTY-SECOND DISTRICT FAIR.**—San Diegoan, June 5: The directors of the district association met yesterday. A vote was taken, and it was decided to hold the fair in San Diego, on the 29th and 30th of September and the 1st, 2d and 3d of October, five days in all.

## San Joaquin.

**GRASSHOPPERS ON THE WARP.**—Stockton *Independent*, June 5: Frank Madden's orchard which is on the line of the narrow gauge railroad, between Lodi and Valley Spring, has been attacked by the Egyptian insects, and from 30 to 40 trees on the rim of his reservation have been eaten by them. C. C. Moore says that when four or five miles east of Bala-lota he ran into an army of grasshoppers. They are young yet and are just beginning to hop, but the warmth of these summer days will cause them to develop rapidly. Those he saw are about a half an inch long. The ground as far as he could see was covered with them. So far they have not approached nearer than five

miles to the orchard of the Moores. They are southeast of that place. Several men are engaged there in putting out arsenic, which has been recommended by the State Board of Horticulture as an agent with which to fight the grasshoppers. About 160 acres are set out with fine olive trees in the Moores' orchard. Many of the trees are of a fine imported variety and are in blossom. Mr. Madden has 160 acres in his orchard, and the greater part of that area is planted with trees. He says there are millions of grasshoppers in the foothills. He has already set out a great deal of arsenic on shrubbery under the trees. Dead grasshoppers load the shrubbery, but the relief thus given is, he says, very slight. There are so many of the sprightly insects that unless the ground were all covered over with arsenic it would be impossible to effectually fight them. There is no method by which their progress can be checked. They eat up everything green that they find, even stripping the trees of their bark. He thinks that the foothills will be bare of chaparral before the grasshoppers appease their appetite, and, of course, everything in their path will also suffer. Mr. Moore said that the path which they cover is two miles wide, and Mr. Madden said he had been informed that they extended from Biggs to Fresno. The grasshoppers at Mr. Madden's place have not reached their full development yet, and the plague that they will cause in this neighborhood has only begun. It is supposed, he said, that the eggs from which these grasshoppers were hatched have been lying in or on the ground since six years ago, when grasshoppers last ravaged fields and orchards in this State, and that peculiar climatic conditions this year brought them into active existence.

## Santa Barbara.

**FRUIT CROP.**—S. B. Star: The members of the Santa Barbara Co. Horticultural Society reported that of apricots and peaches a heavy yield was to be expected and walnuts fair; apples were late and pears plenty, while the plum crop is a failure. For Santa Barbara Mr. Hamer reported that the prospect for Bartlett pears was good, while that of other fruits was poor. The prune crop all over the State is a failure. The members report that the recent high winds have damaged the fruit crop considerably. It was brought to the notice of the society that prunes, cherries and plums do not do well in the Carpinteria valley, and that few varieties of apples are a success.

## Santa Clara.

**A NEW INDUSTRY.**—Rachael Todd in Los Gatos *Mail*: "The making of rosewater has been in operation since the 23d of April under the direction of Mrs. Whittell of San Francisco. Mrs. Whittell thoroughly understands the cologne business, having gone to France for the express purpose of learning it. The rose grown at the garden for practical purposes is a mild European rose called the May rose. It is more fragrant, smaller and less double, but in other respects resembles the old Mission rose so long cultivated in the State of California. Ten thousand plants were imported from France a year ago and of that number all but ten are now bearing a fine crop of roses. The petals of 100 of these roses are required to make a pound and from 60 to 70 pounds are being gathered daily. If the plants continue bearing through June and July the yield of rose-water will be many hundreds of gallons. As they have been grown without irrigation the result is awaited. It will doubtless be favorable as the non-irrigated roses of this locality bloom throughout said months. In France the harvest of the May rose is begun and completed during the month of May, a fact from which its name is derived. Mrs. Whittell pronounces the surrounding country a fine rose growing section and anticipates in the future the purchase of her neighbors' rose crops for distilling purposes. The cologne garden comprises 16 acres. Three acres are planted to oranges, rose geranium and a variety of French acacia. We understand that this is the first and only enterprise of the sort in the State of California."

**HAY AND FRUIT CROPS.**—Cor. Mercury: Andrew Young, the foreman of the Miner orchard, near Milliken's Corners, states that the fruit crop would be exceedingly heavy this year. He stated that orchardists in his neighborhood have been compelled to engage a number of hands to pick considerable of the green fruit, especially the peach and apricots, from the trees, so as to relieve the trees of their heavy strain. He further reported that last year's crop of hay was being eagerly sought for, but it is very scarce. In the fields between here and Agnew Station, and in the vicinity of Lawrence, the hay crop has been out and cocked, and will soon be ready for stacking. The hay-halers have already commenced overhauling and oiling their machines, as they expect a very busy season.

**FRUIT NOTES.**—S. J. Mercury, June 7: The shippers are handling cherries for the Eastern demand in large quantities, and this has had a tendency to lessen the supply for local consumption as well as canning. J. Z. Anderson has been shipping two carloads of cherries a day to various parts of the East, and reports the crop to be in excellent condition. Apricots appear to be the heaviest of any in the fruit line, and best judges claim that it will be the largest crop ever produced in this valley. The peach and pear crop is also large, but not in proportion to that of apricots. The reason for

this is that a number of apricot trees have not been bearing in previous years, but came into bearing this season.

## Santa Cruz.

**WATSONVILLE FRUIT CROP.**—The *Pajaronian*: From persons whose business has led them to examine most of the orchards of this township, we learn that the apple crop will not average over half a crop this year, and that the best yield is in the vicinity of Watsonville. The Newtown pippin and Bellflowers are especially light, but the Pearmain is a better crop. Early apples are a good crop. Apple orchards in the northern part of the valley are the lightest in setting. The prune crop will not average more than half of last year's yield. Apricots and peaches are heavy, and the yield promises to be the greatest ever produced in this valley. The apricot yield will be heavy all over the county. Pears are a much better crop here than usual, and Bartlett pears are said to be especially good. Cherries will average well, and the canning varieties are in demand by the San Jose canners.

## Siakiyou.

**IRRIGATION DISTRICTS.**—Yreka *Journal*: Farmers in Big Shasta Valley between Edgewood and Yreka, are taking much interest in the matter of organizing an irrigation district, for the purpose of building a ditch or ditches to be supplied from Shasta River, at or somewhere near the Tyler ranch, with a view also of increasing the water supply by tapping lakes and other streams at head of Shasta River. They expect to be able to secure a steady supply of at least 10,000 inches, which will be the means of opening up a vast extent of territory for the production of grain and fruit. Irrigation in Shasta Valley is a matter of urgent necessity for the prosperity of the farmers, and can be supplied by district organization so as to furnish water all the way down to the ranches south of Yreka, between Greenhorn and Orr's, as well as in the main Shasta Valley further south. On the east side of Shasta River, between Montague and Little Shasta, the land owners are also taking up the matter of organizing a district to join with the farmers on the west side, if possible, to secure sufficient water from Shasta River, or else make an effort to build a large ditch from Klamath River, which will probably prove most expensive, though certain to afford any amount of water required. A ditch from Klamath River would supply a vast extent of country destitute of water privileges, and render valuable some of the finest prairie land to be found in the State, capable of producing grain and fruit in abundance.

## Solano.

**"BASSFORD'S SEEDLING" CHERRY.**—Vacaville *Reporter*: H. A. Bassford has struck a bonanza in the shape of a new cherry called "Bassford's Seedling," which has fruited for the first time this season. The cherries are as large as plums. Mr. B. has 300 three-year-old trees, and they are all full. This is a valuable acquisition to the cherry family, as it is an early bearer, other varieties being barren until the sixth and seventh years. The new cherry has the flavor of the Black Tartarian and the color of the Royal Ann.

**LARGER SHIPMENTS OF CHERRIES.**—Dixon *Tribune*: Fourteen carloads of fruit, principally cherries, were shipped from Vacaville during the month of May. The shipments last year for the same month amounted to only five cars.

## Sonoma.

**ACRES IN GRAIN.**—Dixon *Tribune*: Assessor Schirmer furnishes the following statistics concerning the acreage of standing grain in the townships in which he personally made the assessment:

Township.	Wheat.	Barley.
Silverville.....	21,130	6,567
Tremont.....	8,513	4,724
Maine Prairie.....	3,435	6,817
Rio Vista.....	9,180	1,423
Elmira.....	6,780	3,221
Vacaville.....	745	815
Benicia.....	483	305
Totals.....	52,281	23,572

## Sonoma.

**THE MUST CONDENSER.**—Healdsburg *Tribune*: It is generally reported at Geyserville, and upon good authority, that the must condenser has recently changed hands, and that it will be run this season upon a larger scale than ever before. It is said that two more large steam boilers are to be put in to furnish power for extra machinery, and the buildings are also to be improved to facilitate the handling of grapes.

**ENCOURAGING TO FRUIT-GROWERS.**—Sebastopol *Times*: A few weeks since the Sonoma County Fruit Shipping Union was organized in Santa Rosa, and even at this early date fruit-raisers are reaping benefits therefrom. In conversation with Mr. John Merritt of Petaluma we learned that the Union, in getting up a carload of cherries for shipment East, offered for the different varieties of cherries now ripe, 3, 4 and 5 cents, and upon that came representatives of the city canneries and offered one cent advance on the same, and some of them, in opposition to the Union, bought whole orchards of cherries at the raiser's own price. Now that facilities for shipping are broadening, fruit will prove much more profitable than heretofore. There has ever been an Eastern market for our green fruits, and that market has been made accessible by the continued efforts of the California Shipping Union, and the benefits derived from their successful efforts

## The State Fair.

We can but remind our readers that an important matter in connection with the State Fair at Sacramento is the liberal premiums offered now as farm produce premiums. There is no doubt these individual premiums will be an incentive to farmers all over the State to join in making their county exhibits, and have their products in the county exhibit for a premium, and also an individual premium "for the most extensive and varied exhibit of farm produce grown by one person or firm;" first premium, \$350.00, second, \$150.00. It is hoped that liberal premiums offered for farm produce will induce producers throughout the State to take advantage of it, and make this Fair notable in the lines of farm produce, uniting the products of the State with the blooded stock of the State. The management has this year decided upon a new feature, and that is to increase the race meeting from nine to eleven days, six trotting and five running. The increase from a nine-days' to an eleven-days' meeting will be watched with much interest. Purse and stakes aggregating nearly \$50,000 will be offered in that time.

There seems to be a wide disposition to make the State Fair to be held this year one of the most successful in the history of our State. The extra appropriation made by the last Legislature, and the liberal premiums offered the counties and individuals for farm exhibits, meet with wide commendation. A RURAL reporter called on Secretary Edwin F. Smith, last week, and learned that there had been more applications by exhibitors up to date, than for any previous year.

He noticed a full force of men working on the pavilion, renovating and putting it in shape for the coming fair. In anticipation of a large following this year, the Board of Directors have concluded to make several additional improvements, and the prospective success will warrant some additional attractions for those who wish to spend a holiday at the coming fair.

A box of Ayer's Pills has saved many a fit of sickness. When a remedy does not happen to be within reach, people are liable to neglect slight ailments, and, of course, if serious illness follows they have to suffer the consequences. "A stitch in time saves nine."

## Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

## Agricultural Notes.

(Continued from page 578.)

are to be shared alike by all fruit-growers, who have been confined mainly to local markets or canneries for the sale of their fruits.

## Tulare.

**HOW TO REDEEM ALKALI LAND**—Traver Advocate: A Tulare rancher took equal parts of white alkali crust, and gypsum thoroughly mixed, put it in a box and planted alfalfa seed in the solution; the result was, the seed sprouted and grew plants six feet high. This certainly proves beyond a doubt that gypsum will redeem alkali land, if it is only applied, and if some of the owners of alkali land around Traver would expend a few dollars in this way they could place their land in a condition where they could realize from \$100 to \$150 per acre for it, whereas they now cannot sell it for \$25 an acre. There is no land in the State that will produce more to the acre than this alkali land when once reclaimed.

**IMPROVED GRAIN CROP**—Visalia Register, June 5: Harry Wallace has 1200 acres of wheat and 160 acres of barley, all of which is fair to look upon. It is a good crop. There is much good grain out northwest. These cool days have been especially favorable, and the yield bids fair to exceed early estimates by several notches. Where there was nothing is hay, and where there was hay will be grain.

**THE FIRST CARLOAD OF WHEAT RECEIVED AT STOCKTON**—Mail, June 3: J. D. Peters yesterday received from Huron, Tulare county, the first carload of this season's wheat—that is to say, the first carload sent to this city; a carload went to San Francisco some time ago. The harvest was exceptionally early. Mr. Peters paid \$1.65 per cental for the shipment.

## Ventura.

**VENTURA CO. NOTES**—Most crops, especially on the Sespe river, are fairly good; indeed, I hear of no complaints among farmers. Early barley was out several weeks ago. The most of it is haled or stacked. Late barley is not out; it looks green and thrifty, owing to our having much cool, foggy weather. Some of the early barley was very heavy, and nearly all that I have seen, early and late, is quite free from foul stuff. It will make excellent hay. Very little is being left to trash. I can see from my door many little patches of barley here and there far up in the mountains, some of them almost to the very tops. Fruit, so far as I have seen or heard, will be good—grapes set full and apricots in abundance. There were, and are still, being set out many orange, prune and other fruit trees on the Sespe, where there is abundance of water for irrigation. From the railroad bridge one can look up the river for miles and see almost continuous orchards not yet generally come into bearing. Potatoes, of which there is a considerable acreage, will be a good crop this year, so also of onions.—S. P. SNOW, Salicoy.

## Yolo.

**EARLY PEACHES**—Woodland Democrat: G. W. Hinckley, of Winters, shipped the first peaches of the season to Chicago. Mr. Hinckley is proprietor of the "Sky High" ranch that sits high up on the range of mountains that divides the Sacramento from Pleasant Valley. A few years since not ten men in the State would have given \$25 for the whole of Mr. Hinckley's ranch, but now the "Sky High" ranch is probably better known in the East than any other one farm in California.

**A NEW APRICOT**—Winters Express, June 6: J. P. Steward brought us a sample of some apricots propagated by him, which we have named "Steward's Seedlings." They are a fine specimen of this variety of fruit; ripen earlier, and are rather larger than the Royal, and as shapely and handsome in appearance. Mr. Steward has three trees of this variety from which he intends to bud and graft as many more as possible this season. J. Vandebor showed us some Royal apricots, one day this week, from J. C. Cradwick's orchard in the western part of town, which measured six inches in circumference each way.

## NEVADA.

**LARGE SHIPMENT OF CATTLE**—Silver State, May 23: We understand that Wm. Dunphy has made arrangements for the transportation of 400 cars of cattle, or some over 8000 head, from a point in Arizona to Argenta station. Mr. Dunphy is one of the leading stockmen of our State, and we are glad to see him showing such energy and enterprise, and we feel confident that the future will prove that he is using the best of business judgment in restocking his range in such an extensive manner.

## EUREKA!

We have it! The "Complete Horse Book" tells all about the Horse and Buggy. We got it for 10 cents in stamps from Pioneer Buggy Company, Columbus, Ohio.

## Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription, paid in advance, 5 mos, \$1; 10 mos, \$2; 15 mos, \$3. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

## Auction Sales of California Fruit.

CHICAGO, June 4.—One carload of California fruit sold at following prices: Black Tartarian cherries, \$1.25@1.70; Royal Anne, \$2.30; Black Big-gereau, \$1.55.

CHICAGO, June 8.—One carload of California fruit sold as follows: Cherries, Royal Anne, brought \$1.25@1.80; Tartarian, \$1.25@1.40; Royal apricots, \$2.15@2.25; Pringle, boxes, \$1.50@1.80; Alexander peaches, \$2.50. Some small and slacker packed fruit brought lower prices. Three carloads sold as follows: Seedling apricots brought \$1.85@2.50; Royal apricots, \$2.30; Pringle apricots, small and poor, 95c@1.35; Royal Anne cherries, \$1.25@2; Black Tartarians, \$1.30@1.45; peaches, \$1.25@2.75.

CHICAGO, June 9.—To-day one carload of California fruit sold as follows: Black Republican cherries brought \$1.30@1.65; Royal Anne, \$1.30@1.60; Biggereau, \$1.60; Seedling apricots, \$2.15; Pringle, \$1.10@1.35. The fruit was mostly over-ripe. Some small fruit sold at lower prices. Apricots in cherry boxes are not wanted. Two carloads sold as follows: Black Tartarian cherries, \$1.15@1.75; Royal Anne, \$1.50@1.65; Seedling apricots, \$1.95@2.15; Royal, \$2.20; Pringle, \$1.15@1.30; peaches, very green, \$1@2.45; Cherry plum, \$1.15@1.30.

## Carbolineum Avenarius, A Wood Preserver.

For ages, the inventive minds of the entire world have been exerting themselves to discover a practical remedy to prevent the rotting of timbers, and numerous so-called wood preservers have been brought out and tested, but all without any satisfactory results. In the year of 1870 to 1875, Mr. Avenarius of Germany made a series of tests with compound distilled oils, and in the year of 1875, he accomplished what had been a complete failure up to that time, that is, he discovered what has been known over all foreign countries since that time, and for the last six years in the United States as the invaluable wood preserver, "Carbolineum Avenarius."

Carbolineum Avenarius is a compound oil stain, which can be applied to the wood with an ordinary paint brush, and which by its strong penetrating power and specific gravity of 1.14 impregnates the wood to a remarkable degree at once.

It has been proven by the highest authorities in the world, that since the discovery of C. A. not a piece of wood, that had been treated with this compound, had been taken out of the ground or water in a decayed condition.

The U. S. and foreign Governments as well as practical farmers, merchants, mechanics, manufacturers, railroad and other corporations, have adopted the application of C. A., and no one should fail to use the same very freely on all timber exposed to moisture, such as sills, joists, floors, fence posts, sheds, roofs, etc.

Messrs. Muecke & Co., 319 California street, San Francisco, Cal., are the Pacific Coast agents for this valuable article, and they will be pleased to correspond with all who wish to receive fuller information, sample packages, etc., price lists and testimonials.

**SUGAR MACHINERY**—Another installment of German machinery for the Chino sugar factory has arrived. The building is nearly completed, and the machinery is being rapidly put in position.

Sarsaparilla belongs to the smilax family of plants, and is found very generally over the American continent; but the variety that is richest in medicinal properties is the Honduras root, of which the famous Ayer's Sarsaparilla is made.

San Francisco, Cal., April 1, 1891.

PETER SAXE & SON, Lick House, S. F.

## Walnut Grove Herd OF Poland China Hogs

JOSEPH MELVIN,

Proprietor,

DAVISVILLE, CAL.

BREEDER

— OF —

Strictly Bred  
POLAND CHINA  
SWINE.

At the head of the herd stands PERFECTION KING, No. 7579; KING OF THE WEST, No. 8921; HOOSIER BOY 2d, No. 8923. Breeding Sows as fine individuals and as strictly bred as any in the land; also recorded in the C. P. C. R. record with pedigrees full to standard. Breeders for sale at all times. I have first-class Pigs of both sexes at reasonable prices. Residence 1 1/2 miles northeast of Davisville, Cal. Personal inspection solicited. All inquiries promptly answered. Yours truly, JOSEPH MELVIN.

## AMERICAN RIVER BREEDING FARM.

Importer and Breeder of ABERDEEN ANGUS CATTLE. Proprietor, J. E. CAMP, Sacramento, Cal.

## THE BEST FENCE YET!

Cheap, Durable, Portable and Safe.

THE SPALDING HUMANE WIRE FENCE is composed of eight No. 12 1/2 galvanized steel wires, woven into four cables of two wires each; interwoven every five feet is a corrugated iron stay or guard, and held in place by the cables, thereby holding the cables firmly in place, preventing them being spread apart and letting stock thrugh. The stays or guards are corrugated and an inch and three-quarters in width, making the fence as visible as a board fence, which is a very essential point. Write for circulars and prices. Address BIRD-TURNBULL BROS., 404, 195 La Salle St., Chicago.

## MANHATTAN STOCK FOOD

Saves One-Quarter of Grain Feed.

FRADULENT PARTIES have been selling an article, claiming theirs to be the same, and, in order to mislead, have added a prefix to "Manhattan." Our genuine food is called simple "Manhattan Food," with the Red Ball Brand.

628 Howard St., San Francisco, Cal.

## HEADQUARTERS FOR ALL VARIETIES OF FANCY FOWLS,

Ducks, Turkeys, Geese, Peacocks, Etc.

## H. H. H. Horse Liniment

Is certainly the best preparation of its kind in the market. Ranchers, Stock Raisers and Horse Owners of every description will tell you that it does good work every time.

MESSES. H. H. MOORE & SONS, Stockton, Cal.—GENTLEMEN: In answer to your inquiry, would state that I used your H. H. H. Liniment on my Holland prize-winning cow, "Lena Menlo," for a wrenched shoulder, and it relieved her very much. She calved the next day, and while still suffering from the sprain gave the largest authenticated quantity of milk ever given on this coast (104 gallons per day), showing conclusively the great relief received from your remedy. I consider it a necessity in my stables, and when away from home feel perfectly safe, as inexperienced men can do no harm with it, as they can with the more powerful blister. Respectfully yours, FRANK H. BURKE, Breeder of Registered Holsteins and Berkshires. Menlo Park, Cal., January 23d, 1889.

MANUFACTURED BY

H. H. MOORE & SONS, THE DRUGGISTS,

248 MAIN STREET, STOCKTON, CAL.

IT WILL SUIT YOU.

Express and P. O. Address: Middletown, Lake Co.,  
Cal. J. ANDERSON, Proprietor.

FOR SALE!

PINOLITA OLIVE RANCH!!!

FORTY-SIX ACRES OF HILL LAND

In the Town of Auburn, Placer Co.

Red soil, superimposed upon upturned, friable, de-  
composing slate, yielding iron and alumina, thus fur-  
nishing a soil which, as Prof. Hildgard said after his anal-  
ysis, will retain moisture, will not require irrigation,  
and will not allow the vegetable mold to leech away;  
thus suited to the growth of fruit trees, especially the  
olive, as has been demonstrated both by the remarkable  
growth of the tree and the quality of oil.

It is situated only 15 minutes walk from Auburn  
Station—the C. P. R. R. passes along one side—and is a  
less distance from the Court House. Thirty a res im-  
proved and planted to olives, set at long distances for  
permanent growth, and other fruits planted between the  
rows for temporary profits, mostly peaches of three best  
varieties, ripening in succession; prunes, mostly Petite;  
plums of several varieties, as Kelsey, Japan, Shropshire  
Damon, etc.; figs of several best varieties; a few apples,  
nectarines, blackberries, etc. Two acres of table an-  
rains grapes, never irrigated, the vines remarkably  
vigorous and in full bearing. The trees, especially the  
1500 olive, have all been planted with regard to perma-  
nency. About one-half of them have an orchard growth  
of seven years; fruited last year 300 pounds, this year  
nearly one ton. They are mostly Mission and Picholine,  
with a few trees of other choice varieties. Two crops of  
the olives have been pressed. The yield has been, for  
the first press, 14 per cent of very clear delicious table  
oil, and four per cent from the second press—the Picho-  
line yielding this, of a peculiarly clear, nutty oil.

There is on the ranch a few acres of grain sown for  
hay; two acres of well-set alfalfa, below the Auburn  
ditch, which crosses one corner of the property; also a  
small house of four rooms and a kitchen; a well of good  
water; a small barn; a strong, permanent spring of soft,  
cold water, which wells up through the slate; a two-inch  
iron pipe connects the spring with an iron-bound 20 000  
gallon tank, situated on a beautiful pine clad hill 40 feet  
above the spring, a point which overlooks the town and  
gives very charming distant views, and is one of the  
most lovely sites for a residence to be found. The water  
is pumped to the tank by a duplex pump; the power, a  
four-horse steam engine, which furnishes power sufficient  
to pump, saw wood, run an olive crusher and do all  
needed shop work.

The land is all suited to fruit, excepting along a rocky  
ridge, which furnishes three very desirable residence  
sites, and the olive, set promiscuously, thrives finely  
among the rocks. The property can be conveniently  
divided along a sag which separates two of the high  
knobs, and water from the spring can be pumped to each  
of them.

This desirable property is now offered for sale for less  
than the improvements cost. The land is fenced, the  
title good and unencumbered. It is connected by a  
roadway, which is one of the improvements made, with  
one of the principal streets of Auburn.

The sale will convey the entire plant, furniture in  
the house, all utensils, etc. If sold before April 1st the sale  
will include the coming crop. If later, the crop will be  
reserved, unless otherwise by special agreement. If de-  
sired, one-half the purchase money can remain five  
years, secured by mortgage at eight per cent. For price  
and any further information desired, address

A. H. AGARD,

No. 1259 Alice Street, - - Oakland, Cal.

## THE KRIEBEL ENGINE

And Plain Vertical Boiler.  
Mounted on a Combined Base.

## MERY'S IMPROVED PIONEER BARLEY CRUSHER

— USING —

The Benoit Corrugated Rollers.

STILL AT THE FRONT.

This Mill has been in use on this Coast for 10 years,  
TAKEN THE PREMIUM AT THE STATE FAIR

Four years in succession, and has met with general favor,  
there now being

Over 250 of them in use in California, Nevada and Oregon.

It is the most economical and durable Feed Mill in use.

I am sole manufacturer of the Corrugated Roller Mill. The Mills are all  
ready to mount on wagons.

GRAINLAND, BUTTE CO., CAL., June 9, 1887.

Mr. M. L. MERY—Dear Sir: We have used one No. 2  
Roller Barley Crusher now for eight years and have used  
it steady during that time; have crushed 45 tons a day  
and the Crusher is as good to-day as when it came out of  
your shop. I am satisfied that it is the best mill made.  
You may reconstruct this testimonial to the best advan-  
tage for you and sign our names, for you cannot over-  
rate the merits of your mill.

F. E. REAM,  
JNO. P. SUTTON.

DURHAM, May 21, 1887.

Mr. M. L. MERY—Dear Sir: In reply to yours of the  
19th, would say that I crushed from two to two and a  
half tons per hour, but could crush three and a half tons  
if my elevators were large enough to carry the barley  
from the machine. The No. 1 machine I used at Gridley  
was run on a sack a minute, but if we got behind we  
could run through five tons an hour and do good work.  
The machine I use here is a No. 2. Yours,  
WM. M. TAYLOR.

I thank the public for their kind patronage received thus far, and hope for a continuance of the same.

M. L. MERY, Chico Iron Works, Chico, Cal.

## GRANGERS' BUSINESS ASSOCIATION, SHIPPING AND COMMISSION HOUSE.

OFFICE, 108 DAVIS STREET, SAN FRANCISCO, CAL

Warehouse and Wharf at Port Costa.

CONSIGNMENTS OF GRAIN, WOOL, AND ALL KINDS OF PRODUCE SOLICITED.

## S. H. MARKET REPORT

## Market Review.

## DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, June 10, 1891.

The cutting of hay, curing and baling are making satisfactory progress. About all the fields have been cut. The harvesting of barley is under full headway in all directions, and that of wheat has begun in several sections. The yield averages much larger to the acre than was expected the forepart of May; the improvement was brought about by cooler weather. Seasonable fruits are being marketed at good prices. The money market is generally easy with no great stringency looked for even during the most urgent time for funds to market the grain crop. The wheat market at the East and also abroad has fluctuated, being influenced by the weather abroad and also shipments from supply markets. The following is to-day's cablegram:

LIVERPOOL, June 10. — Wheat — Inactive. California spot lots, 8s 5d; off coast; 44s; just shipped, 44s 3d; nearly due, 44s 2d; cargoes off coast, quiet; on passage, quiet but steady; Wheat and flour in Paris, steady; French country markets, firm; weather in England, rather warmer.

## Liverpool Wheat Market.

The following are the closing prices paid for wheat options per cwt. for the past week:

	June.	July.	Aug.	Sept.	Oct.	Nov.
Thursday.....	88 1/2	88 1/2	88 1/2	88 1/2	88 1/2	88 1/2
Friday.....	88 1/2	88 1/2	88 1/2	88 1/2	88 1/2	88 1/2
Saturday.....	88 1/2	88 1/2	88 1/2	88 1/2	88 1/2	88 1/2
Monday.....	88 1/2	88 1/2	88 1/2	88 1/2	88 1/2	88 1/2
Tuesday.....	88 1/2	88 1/2	88 1/2	88 1/2	88 1/2	88 1/2

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday.....	44 3/4	44 3/4	44 3/4	Quiet.
Friday.....	44 3/4	44 3/4	44 3/4	Quiet but steady.
Saturday.....	44 3/4	44 3/4	44 3/4	Firm.
Monday.....	44 3/4	44 3/4	44 3/4	Steady.
Tuesday.....	44 3/4	44 3/4	44 3/4	Steady.

## Eastern Grain Markets.

The following shows the closing prices of wheat at New York for the past week, per cental:

	Day.	June.	July.	Aug.	Sept.	Dec.	Jan.
Thursday.....	18 1/2	17 3/4	17 3/4	17 3/4	17 3/4	17 3/4	17 3/4
Friday.....	17 3/4	17 3/4	17 3/4	17 3/4	17 3/4	17 3/4	17 3/4
Saturday.....	17 3/4	17 3/4	17 3/4	17 3/4	17 3/4	17 3/4	17 3/4
Monday.....	17 3/4	17 3/4	17 3/4	17 3/4	17 3/4	17 3/4	17 3/4
Tuesday.....	17 3/4	17 3/4	17 3/4	17 3/4	17 3/4	17 3/4	17 3/4

The closing prices for wheat have been as follows at Chicago for the past week, per cental:

	Day.	June.	July.	Sept.	Dec.
Thursday.....	16 1/2	16 1/2	16 1/2	16 1/2	16 1/2
Friday.....	16 1/2	16 1/2	16 1/2	16 1/2	16 1/2
Saturday.....	16 1/2	16 1/2	16 1/2	16 1/2	16 1/2
Monday.....	16 1/2	16 1/2	16 1/2	16 1/2	16 1/2
Tuesday.....	16 1/2	16 1/2	16 1/2	16 1/2	16 1/2

NEW YORK, June 10. — Wheat — 98 1/2c for July, 94 1/2c for August, 91 1/2c for September, 88 1/2c for October, 85 1/2c for December, and 81 1/2c for May.

CHICAGO, June 10. — Wheat — 98 1/2c for July, 94 1/2c for September and 91 1/2c for December.

## Visible Supply of Grain.

NEW YORK, June 8. — The visible supply of grain in store and afloat, as compiled by the New York Produce Exchange, is as follows: Wheat, 16,477,000 bushels, a decrease of 1,015,000 bushels; corn, 5,607,000 bushels, an increase of 453,000; oats, 4,549,000 bushels, an increase of 306,000; barley, 300,005 bushels, a decrease of 30,000.

## Foreign Grain Review.

LONDON, June 8. — The Mark Lane Express, in its review for the past week says: There is a moderate supply of English Wheat, the average quotations being 40s 5d. Foreign Wickets were depressed and several were 6d lower. Heavy shipments are on passage—estimated at 3,000,000 quarters—and this keeps the market weak. California, prompt shipment, is quoted at 44s 6d; new American Winter was speculated in at 40s for August shipment. Barley declined 6d, maize and oats 9d each. At to-day's market English wheats were dull at 6d decline, Foreign reds were also 6d lower, while prices of whites were maintained. Flour declined 6d.

## The Dried Fruit Trade.

NEW YORK, June 5. — The supply of evaporated California peaches and apricots in first hands is down to very narrow dimensions. One commission firm, in a position to know, asserts that New York, Philadelphia and Boston have not over five car loads, all told, out-side of jobbers' hands; the peaches remaining in commission merchants' hands consist chiefly of bagged fruit, the better grade, and 10 1/2c @ 11c is considered a close value. At the present time the holdings of apricots are of boxed fruit, a fine quality, for which 13 1/2c @ 14c is asked. Odd lots of prunes are offered at rather low prices, and there is some pressure to work small-sized raisins off at the lowest prices of the season. Several parcels of 2-crown stock have been sold at 90c @ \$1 box this week, and there is still some offering at inside figures. Choice 3-crown loose fairly hold their own. Layers are not doing relatively as well.

## Hop Crop.

NEW YORK, June 9. — Letters from Oneida Co., N. Y., state that hop lice and fly are found to a large extent in that section. Reports from Madison and adjoining counties note the presence of the pest in considerable quantities there. London cables report the weather wet and cold in England and the appearance of more fly and lice on the hoppers. One firm has a cable reporting the appearance of lice in Bohemia.

## Local Markets.

BAGS — Under a stronger demand, the market for standard-sized band-sewed is firmer at 7 1/2c @ 7 3/4c.

BARLEY — New barley is in order now. Receipts and pressing sales are causing buyers to bid down. In futures, trading is light. The following are the sales reported on to-days Call:

Morning Session: Seller 1891—100 tons, \$1.06 1/2; 300, \$1.06 1/2; 100, \$1.06 1/2. Buyer 1891, after August 1st—200 tons, \$1.14 1/2; 300, \$1.14 1/2; 100, \$1.14 1/2. Afternoon Session: Seller 1891—200 tons, \$1.06 1/2; 300, \$1.06 1/2; 100, \$1.06 1/2. Buyer 1891, after August 1st—200 tons, \$1.13 1/2.

BUTTER — Notwithstanding receipts continue exceptionally large, the market holds fairly strong.

Eastern creameries are sending in small supplies, which have a depressing influence on the market.

CHEESE — The market is still in buyer's favor. The East continues to send small supplies.

EGGS — The market shows signs of weakening, due to free receipts from the East, and the warmer weather forcing more selling.

FLOUR — The market is steady at current quotations.

WHEAT — The local sample market is weak, that is, buyers talk lower prices, but at the same time they cannot buy until new begins to move. In futures, trading continues light. The following are the sales reported on to-day's Call:

Morning Session: Buyer 1891—100 tons, \$1.68 1/2; 300, \$1.68 1/2; 100, \$1.68 1/2. Buyer 1891, after August 1st—200 tons, \$1.63 1/2; 300, \$1.63 1/2; 100, \$1.63 1/2. Afternoon Session: Seller 1891—300 tons, \$1.56 1/2; 100, \$1.56 1/2; 100, \$1.56 1/2. Buyer 1891, after August 1st—200 tons, \$1.63 1/2; 300, \$1.63 1/2; 100, \$1.63 1/2.

	Buyer	Seller	Buyer	Seller

## Cereals.

The local wheat market has ruled fairly steady throughout the week. Supplies are extremely light, causing buyers to bid up at times, so as to have their wants met. Harvesting is only under way in the more favored localities. With next month it will be general. The late cool weather brought out the berry to perfection. Present crop advices promise a larger surplus for export and of a better general average quality than for years. The Oregon Weather Bureau in its report June 6 gives the following: Western Oregon—The weather conditions have been exceedingly favorable to cereals, causing the prospects for harvest to be extraordinarily good. General reports indicate the hay crop to be unusually heavy; wheat and oats to be in better condition than for many years, if ever better at this season. For Eastern Oregon the report is as follows: General crop prospects were never better, at this season of the year, than they are at present throughout this section. Farmers are jubilant. The rains were copious, timely and very beneficial. New life and vigor has been imparted by the rain to all vegetation. The hot winds of two weeks ago did some damage, but it has been more than recompensed by the benefit the rain has been to winter and especially spring wheat. "I have never seen a more promising prospect for crops," writes a correspondent from Morrow county, and similar reports are received from every county. Crickets are doing some damage in Malheur county.

The barley market has held fairly strong throughout the week. The supply of old is virtually exhausted. Our advices report farmers busy harvesting. In some localities they are making deliveries. The crop averages unusually heavy to the acre, notwithstanding many sections report a light yield. The cool weather did much in bringing about the more favorable result. The grain will be plump. Although the crop will be all of 50, and perhaps 75 per cent greater than was that of 1890, yet it will go into consumption owing to exhausted supplies of old and the increased requirements.

Oats have held fairly steady, although there are signs of a weaker tone toward the close. The crop this year will be larger than it was in 1890. Oregon advices report good crop prospects, but the acreage does not show any increase. The stock of old is very light.

Corn has shaded off slightly. The extreme figures to which holders sent prices caused buyers to be offish, and they also shut off many export orders. Crop advices are favorable.

This year the consignment of new crop barley arrived in San Francisco on Saturday morning. It was of good quality and the samples shown on "Change attracted much attention. It was shipped by J. C. Kirkpatrick of the Sharon estate in Fresno county. Last year the first carload of new barley came from Los Banos, Merced county, and for the previous three years from Dixon. New barley was received at Elmira about the 1st of June.

## Feedstuff.

Ground feed is in good demand, with an advance obtainable far bran and middlings.

Hay is coming in freely, yet the market cleans up well without much shading in prices. The grade this year averages better than at any time for several seasons past. Although the quantity cut is all of

50 per cent more than was harvested and cured in 1890, yet it is claimed by well-informed parties that the supply will not equal the demand. Oregon will have a larger crop than last year, but up there as here, there is an increasing consumption.

## First Receipts of New Crop Barley.

The first receipts of new crop barley and prices received since 1870 are as follows:

Year.	Month.	Price.	Year.	Month.	Price.
1870.....	June 19.....	\$1.20	1881.....	June 21.....	90
1871.....	June 12.....	\$1.57 1/2	1882.....	June 12.....	1.65
1872.....	June 6.....	1.40	1883.....	June 25.....	95
1873.....	June 5.....	1.10	1884.....	June 28.....	90
1874.....	June 9.....	1.45	1885.....	June 16.....	1.25
1875.....	June 20.....	1.35	1886.....	May 26.....	1.25
1876.....	May 30.....	90	1887.....	June 3.....	1.15
1877.....	June 30.....	1.55	1888.....	June 5.....	92 1/2
1878.....	June 11.....	80	1889.....	June 1.....	75
1879.....	June 30.....	75	1890.....	May 31.....	1.06 1/2
1880.....	June 24.....	64 1/2	1891.....	June 6.....	1.42 1/2

\*Auction off in Produce Exchange hall. Market price about \$1.20 per cental.

## Live-stock.

The market does not present any new features. The consumptive demand is light, as it usually is during the fruit and vegetable season. There is no denying that butchers and stockmen are firmly convinced in their own mind that it is only a question of a short time when prices for bullocks will rule higher. For mutton sheep and hogs the market holds strong at full prices. For medium-sized work horses there is still a good demand.

The market for dressed cattle is quoted as follows: To obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent.

HOGS — On foot, light grain fed, 5 1/2c @ 5 3/4c lb.; dressed, — @ — c lb.; heavy, 5 @ 5 1/2c lb.; BEEF — Stall fed, 6 1/2c @ 7 lb.; grass fed, extra, 6 @ — c lb.; first quality, 5 1/2c @ — c lb.; second quality 5 @ — c lb.; third quality, 4 @ — c lb.; bulls and thin cows, 2 @ 3c lb.

VEAL — Small, 6 @ 7 1/2c lb.; large, 5 @ 6 1/2c.

MUTTON — Wethers, 7 1/2c @ 8c lb.; ewes, 7 @ 7 1/2c lb.; spring lamb, 7 1/2c @ 9c lb.

## Fruits.

Persons who have claimed that the production of fruit in this State is being overdone should begin to "hedge," for although the crop this year, of all kinds, is larger than ever before known, yet orchardists are getting good prices. Cherries have done unusually well, while other fruits promise good returns. The quality this year promises to average better than it did in 1890. Canners, dryers and Eastern buyers are strong competitors for good to extra choice fruits.

In citrus fruits the market shows a strong tone for good to choice oranges suitable for keeping or shipping. The most of oranges sent here now are poor keepers, which compel forced sales. Lemons and limes are firm.

Contracts for raisins in the sweat are being made at from 4 @ 5 1/2c. The vineyards are reported to be looking exceedingly well.

There is a more pronounced inquiry for new-crop dried fruits, but we are not advised regarding buyers' bids. It is quite probable that they are as heretofore less than paid. The Eastern and Pacific Coast markets are well cleaned up, and the new crop will come on a bare market.

In berries, the market is reported strong. Raspberries are in better supply. Blackberries are making a better showing. There is a large crop of wild blackberries this year. Strawberries are in light supply. Currants are scarce and promise to be high. Canners have contracted quite freely for this year's crop. In tree fruit, peaches pears and apples make a poor showing. Apricots are improving in quality and increasing in receipts.

The Oregon Weather Bureau reports the crop prospects on June 6, in Western Oregon as follows: The cool weather and rains have not been favorable to the strawberry crop, which is now ripening and berries plentiful. Stone fruits will not be an average, especially in the Willamette valley. The warmth in January, the cool spring and frosts, which at the time were not supposed to have done much damage, did really do great damage. Fruit is falling off, some trees dying. Cherries and prunes are especially injured. Cherries are beginning to ripen. Better reports in regard to the fruit is received from portions of Douglas and from Josephine, Jackson and Curry counties. Vineyards are unusually thrifty; clusters are forming.

## Vegetables.

The weather has continued favorable for garden vegetation. The market is well supplied with seasonable truck and at reasonable prices.

Green corn is coming in fairly free, and meets with a good demand. Peas are being taken by canners. Cucumbers and tomatoes are lower, as is all garden truck that has been selling at early season prices.

Onions are essentially unchanged. Receipts coming in show a gradual improvement in their keeping quality.

New potatoes rule the market. The quantity coming in is quite large, while the quality is improving. Free shipments overland are still in order, which helps to relieve our market. The crop this year is the largest on record.

## Miscellaneous.

The poultry market shows a stronger tone for well-conditioned hens, roosters and young stock, but geese, ducks and turkeys are slow.

The hop market is stronger, with slightly higher bids made for new crop. Quotations given out for new crop ranges from 18c to 20c. Growers are watching with unusual interest crop advices received from the East and also from Europe.

Beans are slow. The stock of old is well cleaned up. The new crop promises to be unusually large.

The wool market does not show any material change. Our advices indicate a large demand for goods which ought to help wool.

From reliable advices up to June 10, the following summary of tonnage movement is compiled:

	1891.	1890.

ENGRAVING - SUPERIOR WOOD AND Metal Engraving, Electrotyping and Stereotyping done at the office of this paper.

THE RELIABLE CYCLONE WINDMILL.

No story need be told of the Cyclone or of the number that have been sold. They can be seen working in every inhabited part of the Pacific Slope whilst hundreds are exported every year.

The Cyclone mill is not an experiment, but acknowledged by all who have used it to be the most powerful and durable mill on the market.

It is simple in construction, has no cogs or complicated gearing to get out of order. Has only three principal bearings, heavily habited boxes and self oiling apartments.

The wheel and vane of the Cyclone (which are the most durable parts of any solid wheel mill) are made strong and of well seasoned wood finished with the best lead and oil which neither blister in the sun nor is consumed by rust.

Send for Illustrated Catalogue to

Pacific Manufacturing Company,

575 MISSION ST., SAN FRANCISCO, CAL.

P. S.—These mills are not being rapidly taken down and replaced by others as is the case with certain all-metal mills.

CARBOLINEUM AVENARIUS.

[REGISTERED.]

Preservative Against Rotting, Decay, Fungus, Etc., of Wood & Stone. REMEDY AGAINST DAMP WALLS. PROOF AGAINST TEREDOES.

WHAT WE GUARANTEE CARBOLINEUM AVENARIUS TO DO:

1. To preserve any kind of Wood above or under ground of water, and prolong its life at least one hundred per cent.
2. To prevent moisture from penetrating into brick or stone walls and preserve them same as wood.
3. To keep off all sorts of Insects, Vermin, or other enemies of wood or objectionable and destructive agencies.
4. To prevent Rats and Mice gnawing wood coated with Carbolinenm Avenarius.
5. To disinfect barns, stables or residences and destroy Microbes.
6. To force all moisture out of the wood without closing the pores.
7. To prevent shingles coated with Carholineum from rotting, warping or cracking.
8. To prevent Rope treated with Carbolineum from rotting, causing it to remain pliable and excellent Tar Coating.
9. IMPORTANT!—Teredoes will not attack Timber coated with Carholineum Avenarius.
10. It does not contain any acids or other poisonous ingredients injurious to fibers of wood.
11. It is the cheapest and best Wood Preserver in the World.

All the above statements are facts, and all our testimonials to that effect are genuine and indisputable.

JONES' DECIDUOUS FRUIT GRADERS

AS IMPROVED FOR 1891.

THE OLD RELIABLE.

With the reputation that over 800 of my Fruit Assorters have established for themselves in 13 States, reaching from Connecticut to California, it is useless for me to say more in this than to describe my several styles and sizes, giving capacity and prices of each, and

A FEW REASONS WHY THEY ARE NOT ONLY THE BEST

— BUT ALSO —

THE CHEAPEST IN THE WORLD.

The machine known last year and the year before as my SMALL NO. 4, has two wooden rollers and two spaces for the fruit to roll down, makes four grades, and with it a man or woman and two good boys can with ease assort 1000 half-bushel baskets of peaches a day. With the assistance of another person, it will assort a greater quantity. In short it will grade double the quantity of any single space or single roller machine, and sells On board the cars in York, Pa., for.....\$38, or delivered in San Francisco for.....\$47 Which is much less than the price of any other two spaced or two roller machine in the State of California.

MY NO. 4 MACHINE has three spaces for the fruit to roll down, has steel rollers, improved spouting, makes four grades, will assort one-third more than any two space, and three times the quantity of any single space machine. Yet it sells In York, Pa., at.....\$50, or delivered in San Francisco at.....\$61 Which is only one dollar more than is asked for any two space or two roller machine in California outside of my own. This machine is a daisy. Keep in view its capacity and price given above.

MY NO. 5 MACHINE has four spaces for the fruit to roll down, makes five grades, will assort double the quantity of any two space and four times that of any single space machine. It is somewhat longer and narrower than my large No. 4 of last season (which it takes the place of), makes one more grade, has steel rollers, improved spouting, runs lighter (any lady can operate it), and for capacity and perfect work on various kinds of fruit, stands head and shoulders above all others on the market. Altogether it is JUST THE MACHINE CALIFORNIA HAS BEEN LOOKING FOR and sells In York at.....\$55, or delivered in San Francisco at.....\$66.50 Only \$8.50 more than any two spaced machine not my own, with but half its capacity.

All of the above machines assort small fruit such as apricots, prunes, plums, nectarines, limes, walnuts, grapes, gooseberries, cherries, etc., at 1/2-inch grade, and peaches at either 1/2 or 1/4 as desired. I never overrate the capacity of my machines, and have always won first premium wherever exhibited. To prevent disappointment in getting these machines, it is positively necessary that orders reach my agents or me personally at once. For circulars, with testimonials from leading fruit growers all over the land, address

## Animal Intelligence.

Animal Intelligence is quite as common and pronounced whether we observe it in the largest of the species or in the families of insects. The ant is proverbial for its intelligence. Even the loathsome spider is quite remarkable for the intelligence it sometimes exhibits. This insect is quite as susceptible of being tamed as any other species. A European semi-scientific journal, the *Month*, relates the following in regard to

## The Spider.

It is a well-known fact that spiders have power of discrimination, and are able to discriminate between friends and foes, approaching those whom they have found to be friendly, while avoiding strangers. One lady succeeded so well in taming spiders to recognize her, that they came down to her whenever she entered the room where they were kept. Dr. Moschken, of Leipzig, relates that in Oderwitz, where he lived for a time, he noticed one day in a rather dark corner of the ante-room a tolerably large spider's web, in which a well fed spider had made its home, and sat at the nest opening, early and late, watching for some flying or creeping food. He was accidentally several times a witness to the craft with which it caught its victim and rendered it harmless, and it soon became a regular duty to provide it with flies several times a day, which he let down before its door with a pair of pincers. At first this feeling seemed to arouse small confidence, the pincers, perhaps, being in fault, for it let many of the flies escape again, or only seized them when it knew they were within reach of its shade. After awhile, however, the spider came each time and took the flies out of the pincers and spun them over. The latter business was sometimes done so superficially, when flies were given quickly, one after the other, that some of the already envenomed flies found time and opportunity to escape. This game was carried on by him for some weeks, as it seemed curious. But one day, when the spider appeared ravenous, and regularly flew at each fly offered to it, he began teasing it; as soon as it had got hold of the insect, he pulled it back again with the pincers. It took this exceedingly ill the first time; however, as the fly was finally left with it, the indignant spider managed to forgive him, but, when later he took the fly quite away, their friendship was destroyed forever. On the following day it treated the offered flies with contempt, and would not move, and on the third day it had disappeared from its shade altogether.

## The Elephant.

Passing from one of the smallest orders of creation to the largest, we come to the elephant. The *London Spectator*, in one of its late issues, gives the following in regard to an elephant which could evidently count up to 20 and could not be cheated out of his count. One Arthur Clay sends the following to the above-named journal:

It was told me, he says, by Mr. Quay, at the time a non-commissioned officer of the First Battalion of the Sixtieth R. Regt., but now one of her Majesty's yeoman of the guard. In 1853 his regiment was marching from Peshawar to Kopnlyie, and was accompanied by a train of elephants. It was the duty of the mahout in charge of each elephant to prepare 20 chupatties, or flat cakes made of coarse flour, for his charge. When the 20 chupatties were ready they were placed before the elephant, who, during the process of counting, never attempted to touch one of them until the full number was completed. On the occasion related by Mr. Quay one of the elephants had seized the opportunity of his mahout's attention being attracted for a moment to steal and swallow one of the chupatties. When the mahout, having finished the preparation, began to count them out, he of course discovered the theft and presented his charge with 19 in place of the usual number. The elephant instantly appreciated the fact of there being one less than he had a right to expect, and refused to touch them, expressing his indignation by loud trumpeting. This brought the conductor of the elephant line (with whom Mr. Quay had been in conversation) to the scene. Having heard the explanation of the mahout, the conductor decided that he was in fault for not keeping a better lookout and ordered him to provide the twentieth cake at his own cost. When this was prepared and added to the pile, the elephant at once accepted and ate them.

## A USEFUL DYE.

Few people realize the amount of money saved by black dye. It will color over almost any shade, and makes the last wear of a good dress, cloak or suit fully as useful and handsome as the first. The simplest and most reliable black dyes are Diamond Dye Black for Wool, Fast Stocking Black (for Cotton), and Black for Silk and Feathers. Any one can use them.

Goo's dyed with Diamond Dyes can be washed with soap when necessary. The Blacks, Browns, Blues, and all the special cotton colors are brightened and improved by washing in soapsuds after dyeing. Of course, when delicate colors like purple, violet, and green have to be washed, the suds should be weak and lukewarm. Nothing equals Diamond Dyes for fastness and durable colors.

## ORANGE PLANTERS

Should read the advertisement of the Aloha Nurseries. The best varieties are offered at rates so low that no one need hesitate about planting for experiment, or for investment in places where the orange is known to thrive.

## WHEN THE HAIR

Shows signs of falling, begin at once the use of Ayer's Hair Vigor. This preparation strengthens the scalp, promotes the growth of new hair, restores the natural color to gray and faded hair, and renders it soft, pliant, and glossy.

"We have no hesitation in pronouncing Ayer's Hair Vigor unequalled for dressing the hair, and we do this after long experience in its use. This preparation preserves the hair, cures dandruff and all diseases of the scalp, makes rough and brittle hair soft and pliant, and prevents baldness. While it is not a dye, those who have used the Vigor say it will stimulate the roots and color-glands of faded, gray, light, and red hair changing the color to

## A Rich Brown

or even black. It will not soil the pillowcase nor a pocket-handkerchief, and is always agreeable. All the dirty, gummy hair preparations should be displaced at once by Ayer's Hair Vigor, and thousands who go around with heads looking like 'the fretful porcupine' should hurry to the nearest drug store and purchase a bottle of the Vigor."—*The Sunny South*, Atlanta, Ga.

"Ayer's Hair Vigor is excellent for the hair. It stimulates the growth, cures baldness, restores the natural color, cleanses the scalp, prevents dandruff, and is a good dressing. We know that Ayer's Hair Vigor differs from most hair tonics and similar preparations, it being perfectly harmless."—*From Economical Housekeeping*, by Eliza R. Parker.

## TO SHIPPERS!

## California Ventilated Barrel

EXCELS ALL OTHERS!

IT IS LIGHTER, STRONGER, MORE DURABLE AND BETTER VENTILATED THAN ANY OTHER BARREL.

This engraving of the CALIFORNIA VENTILATED BARREL makes plain to the practical shipper its points of superiority over the common barrel, which may be enumerated as follows:

It weighs from five to seven pounds less than the ordinary barrel, making a material saving in freight charges.

It costs less than one-half for trimming, and does not require an experienced hand to cooper it.

It is Made of the Best Quality of Spruce, Woven Together with Copper Wire,

And can be furnished in any size desired.

It is the only thoroughly ventilated barrel made, a very important point.

The heads are warranted not to come out in transit, and no liners are required.

It is stronger and more durable than any other barrel.

Never varies in size, even to the extent of a quart.

— ALTOGETHER MAKING IT —

The Cheapest and Best Barrel on the Market.

THE CALIFORNIA BARREL IS ADAPTED TO SHIPPING THE FOLLOWING ARTICLES:

Apples,  
Oranges,  
Onions,  
Potatoes,Sweet Potatoes,  
Dried Meats,  
Bottled Goods,Glassware,  
Canned Meats,  
Crockery,Eggs,  
Poultry,  
Walnuts,  
Almonds,

And Vegetables of All Descriptions.

A factory making these barrels is now in operation in San Francisco, with a capacity of 4000 barrels a day. The success of the barrel is almost unprecedented, and it is bound to become the package in a very short time. EVERY ONE USING IT IS ENTHUSIASTIC IN ITS PRAISE. IT HASN'T A FAULT. When shipped in knock-down form, about 2500 barrels can be placed in a single car. Special rates given on car lots. WRITE FOR PRICES AND PARTICULARS.

### Buildings for the Columbian Exposition.

All reports speak of great activity on the grounds at Chicago which will be devoted to the great World's Columbian Exposition of 1893. It is expected that in many respects this will be the grandest World's Fair ever held as would befit the effort of the greatest nation in celebrating one of the greatest events of history—the discovery of the New World by Columbus 400 years ago. It is our plan to keep our readers well informed of the progress of preparations for this great industrial event and we begin with the display on this page of outline pictures from the architects drawings of two of the chief buildings. Other buildings, plans of grounds, etc., will be given from time to time as the work progresses, and in connection with the ground plan we will give facts concerning the site and its environment.

The imposing structure shown herewith is the Administration Building, which it is claimed will be the gem and crown of the Exposition structures. The first object which will attract visitors on reaching the grounds will be the gilded dome of this great building. It will cover an area of 250 feet square and consist of four pavilions 84 feet square, one at each of the four angles of the square of the plan and connected by a great central dome 120 feet in diameter and 220 feet in height, leaving at the center of each facade a recess 82 feet wide, within which will be one of the grand entrances to the building. The general design is in the style of the French renaissance, and it will be a dignified and beautiful specimen of architecture as befits its position and purpose among the various structures by which it will be surrounded. The first great story will be in the Doric order, of heroic proportions, surrounded by a lofty balustrade and having the great tiers of the angle of each pavilion crowned with sculpture. The second story, with its lofty and spacious colonnade, will be of the Ionic order.

Externally, the design may be divided in its height into three principal stages: The first stage consists of the four pavilions, corresponding in height with the various buildings grouped about it, which are about 65 feet high. The second stage, which is of the same height, is a

FRONT ELEVATION OF ADMINISTRATION BUILDING, COLUMBIAN EXPOSITION.

continuation of the central rotunda, 175 feet square, surrounded on all sides by an open colonnade of noble proportions, it being 20 feet wide and 40 feet high, with columns four feet in diameter. This colonnade is reached by staircases and is interrupted at the angles by corner pavilions, crowned with domes and groups of statuary. The third stage consists of the base of the great dome, 30 feet in height, and octagonal in form, and the dome itself, rising in graceful lines, richly ornamented with heav-

ily molded ribs and sculptural panels, and having a large skylight of glass to light the interior. At each angle of the octagonal base are large sculptured eagles, and among the springing lines are panels with rich garlands. This great dome will be gilded, and, asserting itself grandly at the end of the long vistas which open up in every direction across the lagoons, and between the neighboring palatial buildings, will form a fitting crown to the first and second stages.

The interior features of this great building

will even exceed in beauty and splendor those of the exterior. Between every two of the grand entrances, and connecting the intervening pavilion with the great rotunda, is a hall or loggia, 30 feet square, giving access to the offices, and provided with broad circular stairways and swift-running elevators. Internally, the rotunda is octagonal in form, the first story being composed of eight enormous arched openings, corresponding in size to the arches of the great entrances. The principal story of the rotunda is crowned with richly decorated cornice, on the shelving top of which is a continuous balcony on the same level as the colonnade outside, and from which can be viewed the vast interior.

Above the balcony is the second story, 50 feet in height. The walls are embellished with pilasters, between which a frieze of windows is placed, giving light to the rotunda from the rear wall of the surrounding colonnade. From the top of the cornice of this story rises the interior dome, 200 feet from the floor, and in the center is an opening 50 feet in diameter, transmitting a flow of light from the exterior dome overhead. In size this rotunda will rival, if not surpass, the most celebrated domes of a similar character in the world.

As to the uses of the administration building, each of the corner pavilions, which are four stories in height, will be divided into offices for the various departments of the administration. The ground floor contains, in one pavilion, the Fire and Police Departments, with cells for the detention of prisoners; in a second pavilion, the offices of the ambulance service, the physician and pharmacy, the Foreign Department and the Information Bureau; in the third pavilion, the postoffice and a bank, and in the fourth the offices of public comfort and a restaurant. The second, third and fourth stories will contain the Board rooms, the Committee rooms, the rooms of the Director-General, of the Department of Publicity and Promotion and of the United States Columbian Commission.

The other drawing on this page shows one face of the Agricultural Building, one of the most magnificent structures that will be raised for the Exposition. The style of architecture is classic renaissance. This building is to be

## San Diego Notes.

EDITORS PRESS:—Last season's yield of honey for San Diego county was 2½ millions of pounds, and the yield the present season promises to equal the amount of last year's product. Extracting has already commenced, but owing to the cool, cloudy weather of the past two or three weeks, has not progressed as favorably as it otherwise would. At Oceanside, the hills adjacent to the ocean are covered with the white sage, the great bee plant of Southern California; but after leaving the coast one does not find it in any quantity until some 10 or 15 miles back in the defiles and canyons of the foothills where it becomes abundant. There is no contention between the beekeepers and fruit-raisers in Northern San Diego county as there is in the southern part of the county, and especially in the El Cajon valley, where such is the opposition of the fruit raisers that many of the beekeepers are selling off their swarms (so I am informed) at a very low price. Some swarms were sold as low as \$1 per swarm.

Over a large portion of the county, the Merriam, Simplicity and Root hives are those that are usually preferred, the Simplicity taking the lead for extracting, while the Root hive has the preference for one pound comb sections. There is a hive made at Carlsbad that somewhat resembles the Root hive in its interior arrangement; but the sides are so constructed that they can be unclasped and removed, revealing the sides of the movable comb frames. The frames rest on the edge of tin supports, the object of which is to prevent the bees from sticking the ends of the frames fast to the hive. By the arrangement of removing the sides of the hive, the apiarist is enabled to have more perfect control of his bees and also to clean off the bottom board of moths or other obstructions that may collect. Taking it altogether, it impressed me favorably as being a very desirable form of hive.

The soil of the mesas here is composed of a decomposed granite and is adapted to the production of vines, figs and olives. There are hundreds of thousands of acres of this kind of land in this country, and all it needs to transform it from a comparative waste to blooming fields and gardens is water, which problem is likely to be solved in the near future by the San Luis Rey Flume Co.

In the San Luis Rey valley there is 20,000 acres of some of the richest land to be found in Southern California—land that will produce anything that can be grown outside of the tropics, and such astonishing crops of grain and vegetables are grown on this land. In the center of the valley is a mesa on which stands the San Luis Rey Mission, the erection of which was commenced in 1768. It is a quaint old structure and shows the corroding effects of time. The mesa on which the old Mission stands is a level plateau but a few feet elevation above the valley. The San Luis Rey Flume Co. owns a tract of land on the mesa mentioned, on which it proposes to subdivide and lay out a town site when the Oceanside and San Luis Rey Valley railroad will be built and run up through the valley. In time this will be known as the land par excellence of the olive, the fig and the vine; but, like all other places in this mundane world of ours, it too has its drawbacks, chief of which is lack of lumber, wood and water. After buying the land, it costs a small fortune to build on it and fence it. If lumber was cheap and plentiful where are now miles on miles of sage-brush and cactus, would be dotted with beautiful homesteads. It is astonishing to see some of the crops of barley and corn grown on these dry mesas by cultivation, and that, too, without irrigation.

Oceanside, May 28. O. F. SHAW.

## Not Over-Production.

EDITORS PRESS:—An article by James Shinn in last RURAL, is sensible and suggestive, but the latter portion is based on a gigantic error, to-wit, the stale and often exposed fallacy of "over production beyond the capacity of our people to consume." The consuming capacity of the American or any other people has never been tested, and the export of food is no sign that the home people have enough. In every famine in Ireland, when its people were begging the world for food to keep alive, thousands of fat heaves and sheep were being continually shipped to England. To-day in comparatively prosperous America, not only thousands but millions, not only millions, but one-half and perhaps two-thirds of the population of the U. S. are not able to procure a full supply of food of the best quality, while the unconsumed—though needed—portion of the annual products are gathered into an immense "enrpin." The creators of this surplus wealth are in daily need of better food, better comforts of all kinds. The physical body requires an abundant and regular supply of food of the best quality, with pure air and cleanliness. Only based on such bodies can the people achieve and maintain a high development and perfect their freedom. On a hundred thousand farms it is the custom to sell all food products that are choice and good, and to consume only the refuse. Many

hundred thousand childish mouths are cheated of their dues in eggs, butter, cream, fat poultry, choice and tender beef-steak, and wholesome fruits, that the 10 to 15 per cent. interest on the mortgage may be paid. The tenement houses of New York, Chicago, and every other city, the factories of every town, the wives and children of workmen everywhere, and the last great invention of American progress—the tramp—can each and all bear burning testimony to an under-consumption of proper food.

It is argued by Mr. S. that in 1850 agriculture was prosperous, but since, farms have increased in number 260 per cent, while population had only 175 per cent, and hence that production had outstripped consumption. I have not the census reports at hand, but it is within the knowledge of every one that in 1850 we were an agricultural people without manufactures, importing most of our goods. Now with factories thickly covering the whole East, with an immense stream from county to county, with great cities springing up everywhere, while deserted farms are plenty from Maine to California, it cannot be that the ratio of farmers to the whole population is greater than in 1850. I don't believe it. The working class is everywhere the victim of false statistics and false reasoning, misrepresentation and fraud. As long as it can be muddled, it can be robbed.

While such crawling parasites as Edward Atkinson, beg and plead for greater economy among the poor—well knowing that capital ultimately reaps the benefit of every general economy in living among laborers—the undersized bones, lean flesh, dull and care worn faces among the very poor, and signs of deficient nutrition, a too hard struggle for bread, increasing pauperism and suicide—all make eloquent claim for a more generous scale of living, a better diet, better education and more time for it. This matter of under-consumption of deficient diet, of imperfect bodies and therefore imperfect minds, is not a small matter; a matter concerning only a few, or a matter to be remedied, as some mistakenly propose, by restricting the productions thereby increasing the already great evils of our system. The remedy for the downward course of all industrial classes must be sought in a totally different direction. If a farmer now raises 110 bushels of wheat and sells it for \$1 per bushel, what will it advantage him if he raises only 100 bushels and gets \$1.10 per bushel for it? In every case Shylock rides to the farmer's door in his fine carriage and takes all but a bare and scanty living. It is not what any one earns, but what he keeps that enriches him. The American farmer, as well as other laborers is trying the curious experiment of trying to fill through a half inch pipe, a barrel of which half the bottom has been knocked out, while certain parties are trying to knock out the other half. When the farmers are all tenants, and half the workmen tramp, the whole bottom will be out. Mr. Shinn, et al. propose to fill said barrel by increasing size of pipe to a ¾ inch, while I modestly suggest that we first make the barrel water-tight. I am watching the Alliance to see which it will do. W. S. Placer Co.

## Sample Products Wanted.

EDITORS PRESS:—The crops this year of every variety of grain, vegetable and fruit, promise to be abundant and of the highest excellence. This is, therefore, the year in which to secure and preserve specimens for the Columbian Exposition in 1893. Next year's crops may not be so abundant nor the quality so fine as in this year. Every farmer and fruit-grower should select the best sample of his productions, sheafs of cereals, vegetables and fruit.

The California State Board of Trade lost its exhibit by fire last winter, and all that it has is such as was on "California on Wheels." The Board is anxious to have a more comprehensive exhibit than before. It wishes to extend its field of usefulness by collecting specimens of every product of the soil, samples of soil, descriptions of the topography of counties, meteorological data, maps, information as to the variety and special excellence of crops produced in each county and the adaptability of soil and climate to such productions and products of California manufacture. The mining interests will not be neglected. It is intended to make the Board a "Bureau of Information" relating to all divisions of industry. Daily inquiries are made, not only by people in the East, but by our own citizens respecting the resources of the counties, the cost and profit of production of fruit, prices of land and climatic features of different sections of the State, and the feasibility of establishing manufactures.

The Board can be made one of the most useful institutions in the State, if properly supported. The advantage of a county having a representation in the Board and on the floor is at once manifest. To the end that the Board may effect its purpose, it earnestly requests contributions to its exhibit from the citizens of the State. It matters not how small or apparently insignificant the gift may be, it will be useful and thankfully received. Send a sheaf of grain, a stalk of corn, a mineral specimen, a sample of soil, a box of fruit, fresh or dried, and any example of vegetable growth that will illustrate the fertility of soil or skill in culture.

For preserving fruit, use the fluid prepared according to the following formula, which, ac-

ording to the experience of the Board and Prof. Hilgard, is the best generally:

Boil the quantity of water to be used and allow the sediment to settle; when clear, pour it into a barrel or clean wooden receptacle, to be filled to about two-thirds of its capacity. On the top of the water float a tin basin in which put a quantity of ground sulphur. Set the sulphur on fire and cover tightly until the fire goes out; renew the sulphur until the whole is consumed, removing the cover for renewal of air between doses. At each firing stir the liquid. Use about one pound of sulphur for each 20 gallons of water. To every gallon of water add eight ounces of glycerine to keep the fruit from bursting. The jar must be hermetically sealed.

Persons living along the line of the Southern Pacific and S. F. & N. P. R. R. systems can leave packages with the station agent, marked "For State Board of Trade," and they will be forwarded.

E. W. MASLIN,  
Manager State Board of Trade.

## The New Town of Hickman.

EDITORS PRESS:—The extension of the railroad from Oakdale to Merced is bringing into existence the new town of Hickman. This place is named after Mr. L. M. Hickman, who, in company with Mr. E. N. Cogswell and Mr. Robert Dallas, is subdividing a large tract of land, which is being sold on the easiest of terms to actual settlers. Mr. C. H. Finley is managing the tract for Meza & Williams, real estate agents of Modesto. But the railroad is not the sole factor in the development of this town and colony, for it lies within the bounds of the Turlock Irrigation District, in which water will be available before long. This is one of the finest grain sections in the State of California, and, on examination of its soil, shows its adaptability to trees and vines. There are evidences to this point which greatly surprised the writer on a recent visit. Mr. Hickman set out a raisin vineyard last March of 320 acres. It has avenues running around, and through it, lined on both sides with fig trees. This tract has received no irrigation, yet it looks remarkably well, for the soil readily retains moisture. But I was much more surprised in looking over the home grounds of this ranch of 18,000 acres. Here 20 acres are devoted to vines, which are now two years old and producing a fine raisin grape. There are also 20 acres in figs, olives and oranges. These look thrifty, some of the oranges being in bearing. The arrangement of the grounds is on a scale which is seldom surpassed on a grain ranch. The beautiful residence is approached through an avenue lined with double rows of ornamental trees. Immediately around the residence are lawns and flower beds. This farm is under the supervision of Mr. E. H. Williams.

Next season Mr. Hickman will set out a large acreage to prunes, besides 15 acres to oranges. The two other gentlemen also intend to set out a large number of trees and vines.

With three such enterprising farmers at its back, the town of Hickman will soon develop great importance. Indeed, plans are now being executed in the construction of fine buildings. The Grange Company of Modesto is building a brick warehouse, 200x80x16 feet, having cement foundations and a solid floor of earth up to the level of the car floor.

Next week work will be begun on a railroad depot, a Presbyterian church to cost \$3500, and a hotel to cost \$10,000. Other buildings are soon to follow these.

It is remarkable the number of people who are ready to invest in a small tract of land when offered on reasonable terms. Nothing will develop a country sooner than good bargains in land. Such a place I found Hickman to be, and when its colony tracts are set before the public it will attract many settlers.

The canal of the Turlock Irrigation District is nearly completed to Hickman, which is the only difficult section in the whole course. The dam, which is to be built jointly with the Modesto Irrigation District, will be finished by next January. Water is to be taken from the Tuolumne river. Just on the edge of town there will be a drop in the canal of 15 feet. This will furnish an abundant power for manufacturing, as the canal is a large one.

Oakdale, June 6, 1891. HUGH BAKER.

## POULTRY YARD.

## Odds and Ends.

EDITORS PRESS:—Last October one of my hens hatched out 12 chicks and raised nine of them. Two were pullets, and when they were five months old they began to lay. One of them has lately hatched out eight nice chicks, and I was just thinking how finely they were doing, when I heard a flitting outside the door and there were five of the eight flitting about in sly, sly, sly. There had been poison put into a gopher hole and Mr. Gopher had thrown it out just in time for Mrs. Biddy to give it to her chicks. I gathered the poor little things up, melted some lard as quick as I could and poured some down their throats, but two died immediately and the others were in spasms. I happened to remember reading in "Hard Cash" that the old Scotch doctor cured one of his patients of poisoning by having him inhale chloroform when the spasms or rigors came on, so I rushed for the bottle and grabbed up the chick that was having the worst spell and snuck his bill into the mouth of the bottle. Almost instantly the rigors relaxed and the

chicken stood up. I gave them a whiff of the chloroform two or three times before the spells ceased, but they are all right now.

One of my older chicks was running about kind of lopsided. Its head had been scratched clean of feathers and was ornamented with a big scab. One eye was closed and he looked as though he had been having a free fight. I caught him and wet his head well with diluted carbolic acid, and was going to put him down, when I noticed the lids of the swollen eye had what looked like hairs. That rather struck me as queer, for I had not even imagined that chickens had eye-winkers. Thinking maybe they were the cause of the swelling, like wild hairs on human eyes, I took hold of one of them and gave a vigorous pull upward, and found in my fingers one of the big foxtail seeds or "boobs," as the children call them. It had worked its way down the cheek inside the lid till there was only about one-sixteenth of it showing. Mr. Chick shook his head and seemed much relieved, and he is all right now.

Then for variety one of my 12 Turkeys began to droop, so I caught him or it, and opening his bill there appeared to be a sort of shelf stretched across its mouth. I told him I thought he was quite an enterprising young Turk to be making an extra receptacle for food, but that I believed his health would be better without that. I took the tweezers and pulled out at least an inch square of egg shell that had been entirely too large to swallow. How he got it into his mouth as far as he did, I don't see.

I tried my hand at hatching duck eggs this year but I shall not get rich from them. I set two hens on ten eggs apiece and when they had set 12 days we went visiting and did not get back till late, so thinking the setting hens could not get out of the granary where I had set them I went to bed without making my accustomed tour among the chicks. In the morning there were two nests with a lot of cold duck eggs in them. I hunted around and found one of the hens and put her back thinking there was no use bothering with her but would let her set the time out just to see what would happen. I have often had chickens hatch out when the hen has been off three and four hours and the eggs and nests were quite cold, but had never tried setting eggs that had stood all night. Well four of those eggs hatched out and one duck is still alive and half grown.

Our boys have been raising pigeons but they have the nests too close together I think as only two pairs ever stay, the rest all go off. Talk about the meekness of doves, they are horrid cross to each other and the males fight fiercely. A young fellow who lives near us was telling us the other day how a friend of his who had a pet dove utilized it quite successfully in hatching chicken eggs. Whenever it wanted to set she would put a hen's egg in the nest and Mrs. Dove would hatch it out. She had hatched 13 in that way up to date.—MRS. J. HILTON.

Los Alamos

## THE DAIRY.

## Cheese Making at Gilroy.

The writer of the dairy article in the *Overland Monthly* for May, to which we have already alluded, gives the following interesting account of dairy policies and practices at Gilroy, Santa Clara county:

The method of making cheese as practiced in one of the most progressive cheese factories I have visited is something as follows: There were being milked 140 cows, and the product was five and a half cheeses per day, of 60 pounds each. The cows were milked in a barn, and the milk after being weighed was hauled by a pulley, and strained from the outside into the cheese room by a trough which carried it into a large vat, holding over 400 gallons. In this, the night's milk stood until morning, and the morning's milk was then added to it. The whole was then heated to 86 deg. Fahrenheit,—the cheese maker can do nothing without his thermometer. Then there was added to it a certain amount of coloring matter, extracted from annatto seed with a little lye and reduced with whey, and the rennet put in at the same time. In ten or twelve minutes the thickening was complete. The cheese-maker discovered this by the test of introducing his finger horizontally, under an inch or two of the curd, and slowly raising it. When the curd broke clean across his finger, he noted the time it had taken to thicken, and after waiting double that time more, cut the curd. This was done by passing quickly through the whole mass, a frame with horizontal knives in it, about an inch apart, and following by cutting with a similar frame holding vertical knives, thus reducing the curd to long strips about an inch square. In a few moments the effect of this showed in the gathering of whey at the top of the vat, hastened by the beginning of the cooking process, which was done by turning steam into the water chamber which surrounds the vat.

The steam was kept on till the temperature was 102 deg. to 106 deg., a difference determined by the desired firmness of the cheese to be made. Then it was out again or overways with the vertical knives, which reduced the curd to cubes about an inch square. Into this vat of floating cubes the cheese maker plunged his arms to their full length, and gently stirred it up till the heat grew too great for him, and

then he took an ordinary hay rake and continued the process, making the motions very gently to avoid squeezing the curd against the sides of the vat and breaking the curds. The curds, under the operation of the heat and stirring, soon gave up so much whey that they shriveled to something less than half their original size, and looked like little irregular dice. They were allowed to stand in the whey two hours or so, until the whey became slightly acid. The stirring was repeated every fifteen minutes. Then the whey was strained off, and the curd salted at the rate of two and a half pounds of salt to 1000 pounds of milk. It was then put into the press, and stayed under the heavy screws about 20 hours. Then it was taken out and placed in the cheese room, which was heated by a stove to a temperature of from 68 deg. to 75 deg. There the cheeses were kept two or three weeks, when they were either shipped to the market, or placed in an unheated storeroom to stay till wanted, perhaps eight months or a year.

The figures vary slightly according to the kind of cheese made; a much cooked cheese being harder, requiring longer to cure, and keeping much longer than a softer cheese. When great keeping qualities are desired, the curd is put through a still further process, called "cheddaring."

After the whey is run off, the curd is packed on the sides of the vat, turned and broken in pieces by the hands every five minutes, until the whey is very thoroughly strained off. Then it is passed through a machine, that grinds or cuts it very fine before being put into the press. This curd is kept until the whey is much more acid than ordinary cheese, which also helps to harden it. The cheese maker will tell you that he keeps it till it is "one quarter to one half inch acid." And this phrase will puzzle you, until he shows you what it means. He takes an iron and heats it quite hot. To this he applies the lump of curd. Fresh curd will not stick at all, only sizzling when it is pressed against the hot iron; but if it be old enough to be covered with sour whey, it will adhere more or less firmly to the iron and when pulled away a little, will cling to it by a multitude of fine filaments. The length at which these break, whether one half or one quarter of an inch, is the test of acidity which the cheese maker uses.

Of course each cheese maker has his own special notions in regard to times and temperature and the details of the process, but this account has been taken from the practice of one of the best cheese makers in the neighborhood of Gilroy, a country given over almost entirely to cheese making. The special distinction that this dairyman enjoyed among his fellows was that they always referred to him as "the man that milks in a barn." The others milked in open corrals, and had no shelter for their animals.

The "barn" man made 330 pounds of cheese a day from 140 cows, whereas one of his neighbors told me that he was making but six 25 pound cheeses a day from 200 cows, and he explained apologetically that he had "been milking his cows all winter;" but more than that was evidently the reason of the difference in product, for the cows of this second man showed by their pinched and scrubby appearance that no attention had been paid to selecting of stock, and as little to the feeding and care of them. The calves at this place were fed mostly upon whey with perhaps a little oil-cake or corn meal added to it, and what could a calf do, but present a starved appearance on such diet?

The best calves that I saw near Gilroy were those that were allowed to obtain their food in the most natural manner. Hard milkers or restive or unruly cows were chosen for the calves, and often made the most devoted guardians, sometimes allowing as many as four calves to snuggle at one time.

The Gilroy dairymen, as those elsewhere, were of many minds as to the best stock for cheese purposes, but most of them preferred the Durham, though a few the Holstein. One reason, it seems to me, for this diversity of opinion, lies in the fact that different strains of cattle of the same breed have diverse productive powers; there is the beef strain of the Durham, cows of which I have been told are often unable to provide milk enough for their own calves; and there are milk strains that have high milk records. Careful breeders learn exactly the product of each animal; and if any given cow, no matter of how good a pedigree, falls to come up to a set standard, she is ruthlessly weeded out of the herd; but since it requires rather more nerve than most men have, to send a thoroughbred animal to the butcher, I am afraid that oftentimes weeding out is accomplished by selling such animals to less observant neighbors, who wish to try the virtues of thoroughbred stock. The trial, of course, proves entirely unsatisfactory to the purchaser, and he can never be induced, after that, to see anything good about that particular breed.

In cheese making, as in everything about the milk industry, the utmost cleanliness is necessary. There must be good milk, which of course implies good stock, well fed; and there must be all proper appliances to promote cleanliness; that is, for example, the milkers must pour the milk into a strainer on the outside of the cheese room, to avoid the necessity of coming into the room with the odor of the curd about them. And this is only an example of the thousand little details that must be well managed to produce a gilt-edged result.

## Preserving Milk.

Many devices have been tried to so preserve milk as to retain as near as possible its natural condition. The latest effort is described by the *Scientific American* as follows: Fresh and sound milk not later than one hour after milking is placed in jars made of a suitable material.

The jars are made in three parts. The bottom part, in which eventually the milk is preserved, is first filled; the other two parts together form what is called the mediator. This is screwed into the bottom can and acts as a filler. For this purpose, even after the bottom can is filled, the top filler is kept three parts full.

When a number of cans and mediators have been fixed in a tray, they are filled, and the whole lowered into water in a suitable boiler. The milk is heated up to about 200° F. As soon as the mediator and can are full, by the milk expanding, a tap at the top of the mediator is turned, and the whole is thus hermetically closed. The water in the boiler is then raised "to an intense heat, and this will keep the milk for another 50 minutes at a somewhat high temperature." The jars are next deposited upside down in a cooler, and left in this position for 60-80 minutes. This insures the mixing of the milk, as it is in the nature of the milk that its fatty particles, and therefore the buttermilk will rise to the surface. The cans are finally placed in an upright position. The vacuum above the milk in the mediator is caused by the contraction of the milk. The air-tight stopper between the can and mediator is now turned, and as the ordinary temperature is rather higher, the can will be full, and there is little chance of the fat coagulating, should the cans be shaken. The mediator is opened, and the milk in it having been run off, it is taken off and the process is complete. The milk is said not to lose its freshness, pureness and sweetness, even after 18 months or two years in hot countries, and when opened tastes like new milk, fresh and sweet.

## Feeding Value of Whey.

Four trials were conducted at the Wisconsin Experiment Station during the fall of 1890-91, for the purpose of ascertaining the value of sweet whey for pig feeding. The results of these trials show:

First—We were not successful in maintaining pigs on whey alone.

Second—Pigs fed on cornmeal and shorts, with water, required 552 pounds of the mixture for 100 pounds of grain.

Third—When whey was added to the cornmeal and shorts mixture, it produced a marked saving in the amount of grain required for good gains. This was true of mixtures varying from two pounds of whey to one of grain up to ten pounds of whey to one of grain.

Fourth—It was found, when using whey as a partial substitute for grain, that 760 pounds of whey effected a saving of 100 pounds of cornmeal and shorts mixture.

Fifth—Using these figures, if cornmeal and shorts are valued at \$12 per ton, then whey is worth eight cents per hundred pounds; at \$15 per ton for the cornmeal and shorts, whey would be worth ten cents per hundred weight.

Sixth—Shorts, pea meal and oil meal, or like feeds, should be mixed with whey for growing animals. Some corn may be fed at all times, the proportion increasing as the animal approaches maturity.

## HORTICULTURE.

### San Diego Horticulture.

EDITORS PRESS:—We hear of pencils being sharpened at Tulare, which is a reminder that San Diego pencils need sharpening as well. Since the Itata episode and the Presidential visit, nothing exciting of a public nature has occurred until last week a cablegram from London announced that satisfactory arrangements had been made with an English company to build a railroad from San Diego bay to Yuma and San Quintin, Lower California.

During the past year, considered very quiet, much of the county's best development has been made. Over 600,000 fruit trees have been planted out since the first day of last January, and the bulk of citrus fruit trees are yet to be planted. Millions of orange trees are yet in the seed beds, and large quantities of seed are being planted. At this rate we shall soon be independent of Florida, a "consummation devoutly to be wished."

The County Horticultural Society met last week and held one of its most profitable meetings. The first day was spent in discussing the World's Fair, plans for exhibition, appointing committees, etc. The second day was devoted to miscellaneous topics. Lemon culture occupied considerable time, as it is a subject in which San Diegans take especial interest. Dr. Frank Blaisdell read a very instructive and interesting paper on "The Relation of Entomology to Horticulture." Although a young man, he knows a great deal about insects, having made entomology a life study. He has one of the largest collections of insects in the State. R. H. Yonng of the *Great Southwest*, who

took charge of San Diego's Orange Carnival at Chicago, made an interesting report of the same and gave important facts learned while there with regard to marketing fruit. Mr. Herman Copeland gave an excellent address on "Fertilizers" of great value to the fruit-grower who believes the soil inexhaustible. The "Seedless Sultana," "Public Highways" and "Olive Culture" were the subjects of other papers.

Mr. Williams of Fallbrook read a finely written article on "Local Horticultural Societies," and suggested the idea of the county society holding some of its sessions in the fruit-growing districts instead of San Diego City. An excellent suggestion.

Mrs. Carrie Williams, President of the Silk Culture Society, gave the history of the industry this year established in San Diego. She is assisted by two Japanese experts who are giving the ladies practical instruction in sericulture preparatory to enlarging the business. Sixty thousand little spinners have finished their work and are hidden away in their houses of silk. The Japanese pronounce this the ideal climate for silk worms. The society is ambitious to furnish an elegant silk flag entirely home product for the World's Fair. Many thousand mulberry trees were planted in the county last year on Government claims, and many are planting a few in their grounds in anticipation of raising silkworms next year, so the supply of food will in a short time be unlimited.

National City.

F M K.

### Santa Maria Fruit Notes.

EDITORS PRESS:—Santa Maria valley has already gained considerable notoriety as a fruit producing region, especially for large growth of trees and fruit, and this time she comes to the front with a walnut tree which breaks the record. Mr. Jos. Kaiser, who has a large orchard in the upper part of the valley, has a walnut tree two years old from the seed that is fruiting this year.

In May, 1889, Mr. Kaiser planted some 200 pounds of improved, soft-shelled, English walnuts to raise trees for his own use; they all grew well, but five of the little trees made such rapid growth as to excite his attention, and he decided to let them remain in the nursery, and to ascertain, if possible, the cause of their superior growth. They have continued to outstrip all their surroundings, and to-day one of them measured nine feet two inches in height, seven and one-fourth inches in circumference at the surface of the ground, and bears on its topmost limb a cluster of three walnuts as large as cherries. The tree has a dense foliage. The leaves are dark green, long, thin, more slender than those of the ordinary soft-shell and indented or saw-shaped edges. The other trees of this group of five are not quite so tall, and have a wider spread of branches, the largest one measuring 11½ inches in circumference.

This marvelous growth and early fruiting seem almost incredulous. They have equalled the eucalyptus in rapid growth, and for early fruiting they stand without a parallel; should they prove to be a new variety and true to present characteristics, they will be the most valuable addition ever made to the walnut family.

Fruit trees throughout our valley generally are making a fine growth this season. There is much more moisture near the surface of the ground than at this time last year. Several young orchards here are just coming into bearing, and promise exceedingly well except prunes, which seem to be dropping, supposed to be on account of the trees being too young to mature the fruit; the older prune orchards are very full of fruit. We hope to produce enough fruit another year to require a cannery and a railroad to handle it. Our grain crop promises to be the largest and best for many years. The acreage planted to beans and other summer crops is greater than ever before, and it all looks well. With good prices offered for everything, the outlook for our farmers and fruit men is surely encouraging. O. W. MAULSBY, Hort. Com.

Santa Maria.

[We are glad to hear of these promising walnuts, and hope to be kept informed of their progress.—EDS. PRESS.]

## ENTOMOLOGICAL.

### Lights for Destroying Insects.

[Written for the RURAL PRESS by C. W. WOODWORTH, University of California.]

Many insects, especially of the night-flying species, have the unaccountable habit of flying toward a light. To take advantage of this peculiarity has been a favorite theme with theoretical entomologists, and collectors of insects habitually employ this means to add new species to their cabinets.

Nor have practical farmers entirely neglected this subject, and we often read their enthusiastic approval of this plan of destroying insects. Inventors, too, have exercised their ingenuity till there are a goodly number of "new and improved" lantern traps which threaten to exterminate the insect kind.

### The Original Method.

Originally the plan was to destroy the insects by the fire which served to attract them.

Thus in the cotton fields of the South, before the war, great fires were built to destroy the cotton worm moth, and torches were carried through the fields by the negroes. What the result of such work was must, from the nature of things, always remain to a great extent a matter of conjecture. Some insects were undoubtedly destroyed, but what and how many we cannot tell. The fact is, nevertheless, that it was no evident brilliant success.

### The Modern Trap.

Something more economical and effectual than the fire method was found necessary, and the modern light trap was the result. This consists of two essential parts, the light, and the vessel for killing the insects to which inventors have added various forms of reflectors to modify the direction or character of the light, and what we may call deflectors which serve to throw the flying insect into the vessel below.

To kill the insect, the plan that I believe is now uniformly adopted, is to partly fill the vessel with water, and to pour upon it a thin layer of kerosene oil.

The size of the vessel has varied from that of a pan of perhaps a foot in diameter to a wash-tub of perhaps three feet, the intensity of the light from a torch with scarcely one candle power to an electric light of several hundred, a marked change in either respect making a perceptible effect in both the number and the kind of insects captured. When the electric lights were first introduced for lighting cities, entomologists were often surprised by the abundance, about the lights, of insects often of considerable size, the existence of which in that locality had been unknown to them, and collectors have often remarked to me the great difference in character of the collections taken about electric lights and those about a common oil lamp.

The addition of reflectors and deflectors to a lamp certainly does increase the number of insects captured, but I have not found a lantern trap yet that would capture anywhere near one quarter more than the simplest form of light trap, and unless the addition of these reflectors make a noted increase in the effectiveness of the trap, the additional first cost will prevent their economical adoption.

### A Cheap Light Trap.

The trap that has been most extensively used by cotton planters and which seems to be the most economical when one considers first cost, cost of maintenance and quantity of insects killed.

It consists of a pressed tin basin, with a capacity of about one-half gallon, a plain tin torch holding about one-half pint, which is soldered in the pan, and a tin tube soldered to the bottom beneath the pan. By means of this tube the trap is set upon a stake driven into the ground. The basin is partly filled with water, the torch filled with oil, and a little of the latter poured on the water, and the trap is ready for the night. The torch will burn eight or ten hours, when it goes out, thus requiring only to be filled and lighted each evening.

Such a trap can be put up, I suppose, for about 25 cents, and the oil will cost about 50 cents a month. Besides this, there is the cost of the care of the traps, the filling and lighting, which will naturally be the largest item.

### Does It Pay?

Whether light traps really pay is still a matter for experiment. The present knowledge of the subject would not enable one to safely say that it did not pay, and with still less safety could he contend that it did pay.

As used against the cotton worm moth, they have proven a most decided failure. I have seen these traps used by the thousand and kept going each night for weeks with no apparent results. Early in the season, great quantities of insects were captured, many of which the planters could not distinguish from the cotton worm moths. A careful examination at this time showed that a hundred traps would not average a moth a night. Later in the season, when the worms had about destroyed the cotton, these moths filled the basins, but by a careful estimate they were being produced at least ten times as fast as they were being killed even in the little field in which the traps were situated, that were under observation.

The fact that lights failed so completely to check this particular insect does not prove that it may not be useful in other cases.

Under ordinary circumstances, fully one-half, often nine-tenths of the insects captured by these light traps are insects not known to be injurious to cultivated crops, and some of the parasitic insects are attracted to a light in great numbers. These facts should be carefully weighed, and the results of the captures of the traps most carefully scanned before one expresses himself in favor of this method of treatment.

Berkley June, 1891.

IRRIGATION AT YUMA.—It is reported from Yuma that the large pumps of the Yuma Irrigation Works are running successfully and supplying an immense amount of water from the Colorado river. The Yuma pumping plant for irrigating is the first ever used in Arizona. It will irrigate a large acreage of land on the west side of Yuma. This land is planted in vineyard and citrus fruit. The Black Hamburg grapes are ripe, and other varieties will be ready for shipment from here within a few days.

## PATRONS OF HUSBANDRY.

## Our Grange Edition.

The Grange news of most general interest is given through all editions of our paper on this page. Several supplemental pages, devoted to Grange interests, are added in our Grange edition, which any subscriber can receive in lieu of the regular edition WITHOUT EXTRA COST, by addressing the publishers.

## The Master's Desk.

R. W. DAVIS, W. M. S. G. OF CALIFORNIA.

Deputies will be expected to push the work of organization and reorganization as soon as the rush of harvest work is over. Please prepare, brothers and sisters, to do some Grange work about the first of August. Who will organize the greatest number of Granges before October 1st? The cause is just, the work pleasant, the associations elevating, and the reward sufficient to warrant any one to work for an Order that believes: "In essentials unity, in non-essentials liberty, in all things charity."

## Be aggressive for the right.

Half the good done by the Grange is not known to the general public. It seems to me this is a fault our own people should correct. It is not necessary to brag, nor is it well to tell all one knows, but it is well and right and proper to tell some of the successes of life, that others may be profited thereby. If your neighbor knew one-half as much of the good done by the Grange as could be written, he surely would want to join. Tell him through the paper, tell him from the rostrum, tell him on the street or highway, yes, go to his home and tell him some of the good work done by the Grange. By so doing, he may be (almost) persuaded to join an Order where the welfare of each is bound up in the good of all.

One dollar and a good name secures a farmer's wife or daughter membership in a subordinate Grange. How can a dollar be more profitably expended?

It would be a pleasing and profitable experience to see a short communication from every Grange in California in the same edition of the RURAL PRESS. To that end the Master suggests that the Secretary of each Grange in this jurisdiction write a few lines for insertion in the RURAL of July 4th next. Be sure to mail the letter in time to reach San Francisco by the 1st of the month. This done, we will have a grand Independence Day Grange paper. The writer will watch with anxious eye to see who responds to this request.

Do you want a Farmer's Institute in your county? If so, file an application, at once, with Prof. E. J. Wikson, Berkeley, Cal.

Read a Grange paper, if you want to keep posted about what the Grange has done, is doing and proposes to do.

If you believe in rural life and rural pursuits, be sure to read a rural paper for rural information. There is no better rural journal than the San Francisco RURAL PRESS, published once every week by Dawsey & Co., at 220 Market street, San Francisco, Cal.

Bro. Hiram Hawkins, W. M. of the Alabama State Grange, and W. O. of the National Grange, has been elected President and Manager of the Alabama State Fair. This looks very much as if Alabama is going to have an agricultural fair. Other States in the Union, not a thousand miles from the Pacific ocean, might well profit by this example.

The Grange, in its wisdom, knows no partisan, political or sectarian religious ties. Yet there is no better politics than is to be found in the practices and purposes of the Order of Patrons of Husbandry, nor is there more religion or better morals practiced by any fraternity than is advocated by the Grange. Are farmers unwilling to join such an Order? Don't they know what power comes from thorough organization? This is a day of organizations, and the vocation that makes most social, financial and political success is the one that has the most intelligent and thorough organization. Won't the farmers of California, knowing the power that union gives, unite with the Grange? Why don't the thousands of soil-cultivators come at once into the ranks of the oldest, truest and most thoroughly tried of all agricultural organizations—the Grange.

There will be some social, literary and musical surprises for those who attend the next session of the State Grange. We can't tell any more now.

Most satisfactory reports come from the recent annual sessions of the Oregon and Washington State Granges. This is what we expected to hear. It could hardly be otherwise when such valiant and competent Patrons as Worthy Master H. E. Hayes and Worthy Master D. L. Russell are at the helm. May they live many years to do and continue to do good work for the Order of Patrons of Husbandry. And as our sister States, Oregon and Washington, are sure to grow in wealth and population, may these zealous Captains, aided and encouraged by thousands of thrifty Patrons,

plant the Grange seed in every nook and corner of their respective jurisdictions, till the farmer shall be in fact the "leader of them all."

There are few subjects that more directly and more seriously affect the farmers of this State than the subject of highways, their construction and maintenance. Every farmer is heavily taxed that roads may be built and (supposedly) kept in order; yet not one-half of the roads in California are in proper condition for heavy hauling. This condition of things is all wrong. Money enough is collected in every county to put and keep the roads in splendid condition if the money were fully and honestly expended on the highways and not put into the pockets of too many ornamental overseers. Let each subordinate Grange look to the public roads and the public schools within their respective jurisdiction. By so doing the Grange will do great public service and no one will be wronged, for right wrongs not even the weakest and poorest one. Public money must be honestly and economically expended.

"Steady! Front!" is the position every Patron should now assume. This is a very critical time for the farmer. Schemers of all kinds are trying to throw a bombshell of discord into the ranks of the Grange soldiers. The very fact that the industrial classes are aroused shows that there is something wrong. In financial, political and social circles this uprising has a deep significance.

Everybody has this question on his lips: "What does this uprising of the farmers mean?" The politician sees that it means his downfall, provided he cannot create a rumpus in the ranks. The man who lives by his wits knows it means that he must go to work for a living unless he can create a row in the ranks of the laborers, and so we find it everywhere.

All know that the Farmers can, if they will, dictate terms. How exceedingly important, then, that we proceed cautiously. Now is the time the Grange and all kindred organizations should stand by the principle—the greatest good to the greatest number—faithfully, honestly, intelligently. Let's make no mistakes. We ought to know just what to do, and what not to do.

Good men everywhere are looking with sympathy, but with apprehension, upon this uprising of the industrial people. Let us rise to the importance of the case, and, forgetting self, act for the good of all. We cannot afford to strike out blindly and ask for everything, if we hope to succeed. Let clear, honest, precise demands to right wrongs now existing, be made, and we will have helpers outside of our own ranks. "Let us be honest, be just and fear not," avoid all sorts of excesses, and the victory is sure to be ours.

The sunlight of reform will warm into life a new lot of statesmen, financiers and philanthropists, if we but act unitedly, cautiously, openly, sincerely and honestly. We must take good counsel, give and follow good example and not be hoodwinked by outside flatterers or pretended friends.

## The Granges and the State Fair.

The subordinate Granges are especially invited to organize county exhibits to compete for the \$2500 which will be awarded for county exhibits at the coming State Fair at Sacramento, Sept. 7th to 19th. We find the following paragraph in the premium-list just published:

The State Board of Agriculture earnestly desires the hearty co-operation of the various subordinate Granges throughout the State, in making this exhibition of California's products a success, whereby the varied products of different localities may be fully shown. We would ask the appointment of a committee from the Grange in each county to call upon and urge the Patrons to make a display representing their respective counties.

FOR REDUCTION OF DUES.—The Secretary of the State Grange has been notified by Bro. A. A. Krul, Secretary of Sacramento Pomona Grange, that at a regular meeting of that Grange, by motion of Bro. David Rea, the Executive Committee of the State Grange is requested to submit to the subordinate Granges for their consideration a proposed amendment to the Constitution and By-laws of the State Grange, providing for the payment of 10 cents instead of 20 cents, as now required for quarterly dues from subordinate Grangees to the State Grange.

A YEAR or so ago the winter vegetable-growers of Oahuenga valley, near Los Angeles, made one-third more profit by combining, chartering a car and shipping to Chicago instead of to San Francisco. Perhaps the wheat-raisers of California could do the same way. What we need to do is to combine to reach better markets, and thus destroy local control of our wheat and other crops. We must find how to deal more directly with those who need our products.

THE MEMORIAL SERVICES, on Decoration Day, at Watsonville Grange were patriotic, pathetic, pleasurable and pleasing. The overcrowded hall attested the general interest, and all were visibly moved to grander exploits and more loyal adherence to our innumerable country and undying flag. Bro. Osborne, a member of the G. A. R., warmly eulogized the Grange in words that came from the heart.

## From Overseer Roache.

## A Delayed Communication—Fresno and Tulare.

EDITORS PRESS:—The next day after the glorious Tulare picnic found us on our way to Visalia and surrounding country (which, thanks to Bro. John Tnoby, whom we found a genial, companionable, well-informed gentleman, who placed us under many obligations by his thoughtful consideration, not only of us, but of Grange interests as well) of which we saw much to admire. In the course of our ramblings we called on Judge Cutler, a constant reader and admirer of the RURAL, and a wealthy land-owner. When asked the number of acres he owned, he had to stop and count up and then was not sure he gave the proper number. But, best of all, he bought it and honestly paid for it, so that one cannot but feel well pleased in noticing the contentment with which he and his devoted wife and large and interesting family enjoy it. Bowed by the fruits of 73 winters, he felt unable to assume the responsibility of a Grange leader.

Monday noon found us in the growing village of Selma, which, by the way, has a future little dreamed of at present. If I were a young man, desiring to found a home, which, agriculturally speaking, means first a piece of land, and next, a true-hearted woman for an equal life partner (a house doesn't signify), I would not go to the older or most populous portions of the State, where prices of land are far beyond the reach of the ordinary home builder. I would go straight to Selma, or Tulare, with a slight leaning toward Selma, for land that is cheap, rich and well watered, but with a decided preference toward Tulare for the partnership. Splendid farms and homes are being daily carved out of the once wild wastes of both these thriving, busy places, which must be seen to be appreciated.

At Selma, I visited an open meeting of the Grange where I met some of the progressive farmers and business men of that energetic community. After the open meeting a closed meeting was called and some needed instruction given in Grange work.

Sister Roadhouse, Master of the Grange, daughter of a learned college professor, wife of one of the rising farmers of the valley, herself a successful teacher, and a natural leader in everything, is using her fine abilities with marked effect in behalf of her Grange.

We remember with pleasure the names of Bro. and Sister Holton, Bro. and Sister Dudley, and a few others whose names we cannot this moment recall, who are "True Blues," "dyed in the bone," who are bolding Selma Grange with a grasp that knows no relinquishment and a steadfastness of purpose which must triumph.

While a faithful few are holding the fort against all odds, there are numbers of able Patrons in close call who are willing to let them do so, who, when they get over their rush, if they ever do un this mundane sphere and their Grange should still exist, may drop in occasionally and see how it gets along, that is, if they have nothing else to do. Brothers and sisters, such actions are

Not in Keeping With Your Obligations. Not in keeping with the spirit of the Grange, not in keeping with the dignity and needs of agriculture, and not in keeping with the progress of the nineteenth century, with whose advance columns you are daily and hourly confronted. Surely life should not all be given to the selfish accumulation of wealth to the exclusion of all the higher and better sentiments of the mind and soul!

Remember the true man or woman is only what one is when divested of all that wealth and position can give.

## Let the Soul Shine Forth

Alone, untrammelled by aught but boundless love for all humanity, and with an innate desire that this love shall onlimate in some good to some wayfarer on the great "ocean of life." Stand by those who are so faithfully and fearlessly standing by your interests, while you, through indifference, are neglecting them. Support your officers as you should; fulfill your obligations as men and women should any other debt of honor, and your poor neglected Grange, responding to the spirit of progress which everywhere surrounds it, will not be only a pride and benefit to the community, but a lasting monument of your labors and worth which your children and children's children will inherit with thanksgiving and gratitude.

A. P. R.

GRANGE PICNIC AT APTOS.—The Grange picnic at Aptos was a pleasing affair. The attendance was large, and the old hotel grounds, that have been so long deserted, echoed with the shouts of happy children and the sounds of merriment. The literary and musical exercises of the day were of a high order, and the "feast of reason and the flow of soul" was followed by a feast of good things such as can only be found in the Granger's larder. After a jolly day's amusement the crowd returned home in the evening well pleased with the world in general.—Rustler.

WATSONVILLE GRANGE will initiate a large class in the first and second degrees, June 20th, and confer third and fourth degrees, June 18th, Harvest Feast, and Pomona Day, July 25th,

## How Shall the Grange Use the Farmers' Institute?

The Institute has been fitly named the Farmers' University—the most successful means of awakening thought and improving practice along the lines of more careful agriculture.

On page 576 of last RURAL, plans of Institute work are outlined and local co-operation recognized as a necessary factor.

## Here is the Opportunity of the Grange.

It was wisely said: "A community will do for a church in proportion as the church benefits the community." Now that is equally true of other organizations. In no way can a Grange so benefit its community as by planning, sustaining and securing necessary co-operation for a live Institute. You can't send men home each with a new-coined \$20 piece in his pocket, but it is not so hard as you might think to send him home with a new idea that he can coin into a \$20 profit.

In the Grange you already have, or should have, the very best material in the vicinity to lead an enterprise of this kind.

## Here is a Place to Begin.

Appoint some member who will post himself to prepare an essay upon plans, purposes and results of Institute work. If he lacks for material or information to prepare such an essay, a letter to Prof. Wikson at Berkeley would doubtless draw out suggestive pamphlets and statistics. Question him for half an hour after the reading and draw out all further information possible. One question will suggest another, and very soon your members will see the design of Institutes. Perhaps at next meeting some will be willing to prepare an essay upon some such subject as Testing dairy cows, Packing fruit for shipment, Relation of drainage to irrigation, Uses and abuses of irrigation, Caring of dried fruits and Co-operation in Marketing.

## More Practical Farming Wanted.

The writer has observed in Grange gatherings that we are political economists of no mean pretensions; that we seem to have imbibed statesmanship with our mothers' milk, but that we have very little to say about practical farming. Now is the time and here is a way to remedy that. The question box is another. It ought to be on every Master's desk and freely used at every meeting. Feel around in these ways, and you will soon learn what talent you have to depend upon in your Grange, and can resolve yourselves into a committee of the whole to enlist outside co-operation. When you feel prepared for a public Institute, and write to Berkeley for help, tell Prof. Wikson what subject would most interest your citizens and who can be depended on to assist and in what way. That will aid him greatly in arranging a program. Then get out your posters. Spread the good news. Let every brother farmer in whom you feel an interest know that you are going to have something worth bearing.

Don't carry the idea that we have heard some express that the University is to send us a Professor to teach us how to milk or plow. He may study out some plan to get us to tell one another how to turn the milk to most profitable account, or under what conditions the soil can be plowed to best advantage. We want to know how to use the scientific information within our reach.

Our Government has a Department of Agriculture, endows universities, establishes experiment stations, gathers statistics and makes elaborate surveys, all for our benefit; and many of us are in the position of the small boy who only eyed the table while the company ate all the rare delicacies. We help pay for that Department. It is our share of Uncle Sam's feast. Let's sit down at the table. When Uncle Sam sends his representative to serve the banquet, call for the best in the house.

## How These Thoughts Were Suggested.

These thoughts were partly suggested by hearing from a Grange in which the writer had taken great interest and proposed many new members, that they had met but not come to order because there was nothing to do. To think that he has recommended as suitable material for a Grange those with too little gumption to find something to do! It is too bad. Here is something to do and keep doing until we all know everything that another member is capable of teaching us and have secured all new members that can be made to give a new idea.

To prepare a subject for the Grange puts it more clearly before the writer's mind. The Institute plan of questioning draws out from others ideas that the writer did not have, and it is unusual for any one to sit an hour in such a meeting without learning something.

Don't try to cover too much ground with your subject. Cream separation is a far better subject for an hour's talk than dairylug. Get some one up on the specialty in which he is posted, and choose, if possible, one who can about his ideas straight at the mark with the force given by the powder of successful experience. You can get a great many interested in the Institute who would never come to the Grange, and there learn what material you want and how to approach them. That is how the "Institute booms the Grange," as Bro. Hale says. It keeps your old members at work and interested and pays them for coming, and shows outsiders that ours is an active society, prepared to get and give good things, and so brings in the very cream of the crowd.

F. S. C.

## FARMERS' ALLIANCE.

## Alliance Edition.

Subscribers can receive our FARMERS' ALLIANCE EDITION WITHOUT EXTRA COST, by applying for the same. That edition contains several supplemental pages of Alliance matter, in addition to that which appears on this page through all editions.

## A More Christian System of Co-operation.

The Farmers' Alliance has two plans of business co-operation: one suited to exchange or buying and selling business, and another for manufacturing or other business not of an exchange nature.

As has already been explained, the first consists simply of a state agent, paid a salary, giving bonds, purchasing goods at wholesale prices on orders from members of the Order accompanied by cash, and attending to complaints regarding goods when there are any. He may also act as a selling agent. When the resources of the State organization are sufficient, this plan contemplates that all expenses of its enforcement will be paid out of the fees and dues of the Order, out of that portion of them remitted to the State Alliance treasury, so that a member, paying his \$2 a year dues, has nothing further to pay, and is entitled to all the benefits of the system. In this system each member keeps his own accounts. The plan is capable of including any number of people on equal terms and offers its benefits equally to all, the only requirements from each being payment of the dues and cash with orders. No more capital stock, and assessments, and intricate book-keeping, and a few getting rich and the many making nothing, for Alliance men.

The plan for a manufactory or mill is this: The cost of it is ascertained; is apportioned to the male members in a local Alliance, or in a county or a State, so as to show the cost to each one if the enterprise goes on and all contribute; and the opinion of the membership is then asked as to the advisability of the proposed undertaking with information as to how many will contribute and how much. Response being favorable, the money is collected, but such money is treated as a contribution, a gift; there is no stock, but the money is used directly to put up the factory or dock or whatever it may be, which, when erected, is operated for the benefit of all the members of the Order in the jurisdiction within which the enterprise was undertaken, whether they contributed or not, for new members who come in afterward as well as for those who were members when the enterprise was undertaken. Title to such enterprise vests in a board of trustees, as trustees, for the whole membership of the Order in the jurisdiction within which the enterprise was undertaken. The price of the product is put at just sufficient, or a trifle more, to cover operating expenses and repairs. Consequently, members get the product at practically cost; they receive their dividends in the shape of reduced prices, in a direct way, instead of round about through the absorbent device called "stock," upon which "assessments" are heaped. The enterprise is under the general management of the trustees, who should be selected because of the sincere earnestness previously manifested by them in all the affairs of the Order. They may hire a competent manager. The board may be completely changed each year or other stated term, so that there is but small opportunity for dishonesty, especially if a detailed printed monthly statement is required.

By this plan starting with a "contributed sum," a small amount of generosity or Christian spirit of voluntary helpfulness to all is put with the selfish spirit of money-making, modifying it, and modifying the system of co-operation by excluding "stock" from it, making a new system, the benefits of which may be extended to all members, and on equal terms to all, which terms are: Payment of the dues of the Order, and cash payment for the product. "Capital stock" is the starting point of all the evils which attend the ordinary form of business co-operation. Upon it are founded the frequent and expensive assessments by which poor men are "frozen out," and by which, with the aid of an intricate and easily manipulated system of bookkeeping, the money benefits of co-operation are acquired in each case by a few in the long run. The "stock company" system invites dishonesty on the part of managers by the opportunities for dishonesty which it offers. "Capital stock" and "credit" are the two great evils of the stock company system of co-operation when its use is attempted by reform movements, and an elaborate system of bookkeeping or credits is a most efficient ally to them.

The Alliance plan is a step forward in the science and art of co-operation. Eschewing "stock," all things else are easy, and better ways become plainly apparent:

FRANK P. COOK.

A BUSY PRESIDENT.—In response to a request calling for President Cannon's absence from home, he lately writes as follows: "I am very busy all the time. My correspondence has increased so much lately that if I miss a few days I am swamped with letters. I have a large correspondence, East, that must be attended to promptly," etc.

## A Prominent National Alliance Man Coming.

## Pushing the Insurance Work.

Bro. Alonzo Wardall, of Huron, S. Dak., has been in Washington the past week in attendance upon the semi-annual meeting of the National Alliance Executive Board, of which he is an active member. He goes from here this week to meet the State Committee of Indiana and Illinois, to arrange for the location of the place for holding the next annual session of the Supreme Council, the selection of the place having been left to the Executive Board by the last Council, with the condition that it be located either in Indiana or Illinois. From there he goes with President Polk and Hon. Jerry Simpson to La Crosse, Wis., to attend the annual meeting of the open Alliance of that State by invitation, and from there to Portland, Or., where he is to assist in organizing the

## Oregon State Alliance

On July 8th. He will, while on the coast, visit the Alliance in California, and if Washington is ready, organize the State Alliance there.

Bro. Wardall, as most of our readers know, has charge of the life-insurance feature of the Alliance work, and is seeking to introduce it in all the States as rapidly as possible. His plan is to have it adopted as an official feature by each State, by means of a co-operative degree, to be known as the State Branch of the National Alliance Aid Association, to be conducted by a manager selected by the President and executive of the State Alliance and approved by the management of the National Aid Association, who shall in turn be under the control and supervision of the National Alliance officers.

The plan is almost identical with the Anolent Order of United Workmen, except that it is optional instead of being compulsory, and no one will be accepted unless able to pass a careful medical examination.

By this means, our members can carry their own insurance (and none need it worse than the farmer) at simple cost of actual death losses, and a minimum expense account for clerical labor performed, keeping the money all at home, in their own State, under their own control and management, and greatly build up and strengthen the Order.

It is proposed to issue \$1000 and \$2000 policies at present, assessing for one death loss in advance, so that the money will always be on hand to pay a loss as it occurs. Long years of experience with society companies show that the average annual cost per \$1000 of insurance carried is from \$9 to \$12, while in old-line companies it is (partly according to age, at date of application) from \$20 to \$60.

The plan has been in operation two years in some of the Northwestern States, and they have a membership large enough to pay a policy in full, and it is growing rapidly. Several States have already approved of it, and it will be presented during the summer to the rest of them for examination. It meets with the hearty approval of the officers of the National Alliance, most of whom carry policies in it; and the plan is recommended to the thoughtful consideration of the Order.

Arrange to hear Bro. Wardall on the subject; he has it all at his tongue's end.

The Executive Committee are also zealously engaged on a plan for a national mutual farm fire insurance company, as directed by the last Council, and hope to have it in shape for the annual session. There is no one reform in our entire system of doing business of more financial importance than in insurance. We waste annually hundreds of millions of dollars on a system that brings almost as much disappointment as relief, and we pay three dollars where the actual loss is only one, and worse, if possible, we send nearly all the insurance money, three or four hundred millions of dollars annually, to New York, London and other great money centers, where it accumulates and is sent back to us on mortgage loans, thus becoming a great instrument of oppression.

One of the objects of the Order is to remedy these things, and Bro. Wardall should be encouraged in the good work.—*Nat. Economist*

## Nevada County Alliance Organized.

EDITORS PRESS:—The farmers of the hills are fully alive to the great movement of the wealth-producers and tillers of the soil, and though somewhat removed from many of the grievances that affect our brothers of the plains, we are still gathering and send fraternal greetings. Bro. Cornell, State Organizer, has been with us for the past three weeks and doing good work. He organized five Sub Alliances, with two more to come in in the near future.

On Monday, June 8th, with a full representation from the Sub Alliances, Bro. Cornell, at Rough and Ready, organized the Nevada County Alliance. The following officers were elected: Bro. S. A. Winn of Lone Valley Alliance, Pres.; Sister M. B. Church of Indian Springs, V. P.; Hattie May Winn of Lone Valley, Sec.; Bro. W. H. Davy of Pleasant Valley, Treas.; Bro. E. E. Black of Rough and Ready, Lect.; Sister S. A. Barnes of Lone Valley, Chap.; Bro. F. Morrill of Indian Springs, D. K.; Bro. I. Sworts of Pleasant Valley, Asst. D. K.; Bro. W. J. Sanford of Pleasant Ridge, Stew.; Bro. T. Horton of Indian Springs, Sgt. After installation of officers, a vote of thanks was tendered Bro. Cornell, when the Alliance

adjourned to meet on the first day of July next, at 2 o'clock P. M.

From the enthusiasm of the delegates, it was evident that all thought it the inception of a movement that was destined to go marching on, until it embraced within the fold every agriculturist in the county whose eyes were not turned inward and whose neck was clear of the collar marked "C. P. R. R."

HATTIE MAY WINN.

Grass Valley, June 10.

## Alliance County Notes.

## Fresno.

A basket dinner was held June 14th, under the auspices of the Selma Farmers' Alliance, at the I. O. O. F. hall, Selma. A general good time was enjoyed by all present. At the regular meeting of the Alliance at 2 P. M., the President, S. B. Holton, proprietor of the Selma Packing House, introduced for discussion, "The Future Prospects of the Raisin Industry." He was followed by J. L. Gilbert, E. Dudley and other large vineyardists.—C. F. WALKER, Sec., Selma, June 14.

## Lake.

The next meeting of the Farmers' Alliance will be held at Frasier's Hall at 2 P. M. on Saturday, June 20th. All the farmers of the county are extended a cordial invitation to attend this meeting. Business of importance and other matters of interest will come up.—*Lakeport Avalanche*.

## Los Angeles.

Members of the Farmers' Alliance and the I. O. F. have in rehearsal the two-act drama, "The Last Leaf," and the farce, "Thirty Minutes for Refreshments," which will be presented on the evening of June 26th, for the joint benefit of the above societies.—*Long Beach Breaker*.

## Nevada.

Organizer B. Lette Cornell formed a branch of the Farmers' Alliance at Pleasant Ridge on June 1st with 14 members. The officers are: R. McKelvey, President; W. J. Sanford, V. P.; Mrs. M. M. Mason, Sec'y; S. J. Ware, Treas.; Mrs. Flora McKelvey, Chaplain; A. W. Reed, Lecturer; R. Ridinger, Doorkeeper; Mrs. J. L. Bishop, Asst. D. K.; A. C. Mason, Steward.—*Grass Valley Tidings*.

## San Diego.

The San Ignacio Alliance is a model of what such an organization should be. Instead of wasting precious moments in bickering and debating over points of order and other useless and profitless questions, as soon as the beautiful opening ceremony was over, the Divine blessing implored on the great Order and the mighty work it has undertaken to do in behalf of humanity—and the initiatory ceremony gone through with, and two young farmers and a farmer's wife added to the great army of reformers—a discussion followed on some of the great questions of the day.—*Winchester Plowshare and Pruning Hook*.

## Santa Barbara.

Pleasant Valley Alliance, at their last meeting, accepted the invitation to join in the procession on the Fourth of July and take part in the general festivities of the day. The Alliance had quite an interesting session. Many subjects of interest were discussed, and for want of time, much was left over until next meeting. On Wednesday evening, 24th inst., the election of officers for the ensuing year will take place, also delegates to the County Alliance—to be held a Lompoo July 1st—will be voted for. The State Lecturer will be present at Lompoo and will deliver a public address.—*Santa Maria Times*.

## Santa Clara.

The Lincoln Alliance, No. 6, on June 12, gave an entertainment in Cupertino. The following program was presented: Music by the Cupertino band; recitation, "Poor Little Joe," Melvin Vandine; piano solo, Miss Mabel Crossley; violin solo, Miss May Williams, selections on violinello, Gus Williams; cornet solo, A. E. Williams; recitation, Miss Ella Glendenning; vocal duet, Ella Lydrand; piano solo, M. O'Connell; recitation, Wm. Heney. After the program the floor was cleared and dancing inaugurated. Refreshments were served at midnight by the ladies of the Alliance.—*Mercury*.

## Solano.

The Dixon branch of the Alliance held a meeting last Saturday, at which there was a good attendance. The membership now numbers 25, and a large number of applications have not yet been acted upon. It is probable that the Alliance will attend the open meeting of the Grange on the 20th inst.—*Dixon Tribune*.

## Ventura.

Siml boasts of a Farmers' Alliance which has a membership of 40 or more members, which meets every two weeks.

## Tulare.

The Lemoore Alliance Enrlt Packing Co. filed articles of incorporation on June 4. Principal place of business, Lemoore; capital stock, \$100,000, divided into 4000 shares of the par value of \$25 each; amount actually subscribed, \$1600, as follows: M. P. Hatch \$100, G. W. Sterling \$100, A. B. Buckner \$100, W. F. Burton \$25, J. W. Harris \$50, J. F. Johnson \$50, W. V. Buckner \$100, Joel W. Williams \$100, E. J. Gibson \$100, Z. D. Beall \$50, A. M. Field \$100, John L. Kurtz \$300, Stiles McLaughlin \$100, A. D. Cridge \$25, J. H.

Fleener \$25, D. P. Nidiffer \$50, J. A. Beaver \$25, H. W. Byron \$200.—*Visalia Times*.

Yuba.

EDITORS PRESS:—Having received a letter from the Secretary of Wheatland Alliance asking me to meet with them at their next meeting (June 13) and instruct them in the secret work of our Order (Bro. Cornell having been called away on account of sickness), I accordingly was on hand. Nine candidates were initiated and several applicants elected. All the members seem interested in the cause and are pressing onward with eagerness. The Alliance in Sutter county is progressing slowly but surely.—W. W. STEWART, Yuba City, June 14.

## Farmers' Alliance Demands.

As there is considerable interest just now in the policy of the Alliance, I give below a brief statement of all the demands but the first, which is taken verbatim from the *National Economist*, the official organ of the F. A. I. U., published in Washington, D. C. Becoming tired of petitions that were treated with contempt, or pigeon-holed into obscurity by a committee to whom they were decorously referred for that express purpose, the Alliance formulates demands in the name of the people and proposes to vote them into laws. The Alliance is in dead earnest—means business. Its demands are not promulgated for fun. They ask and should receive a fair consideration and discussion by every thinking, honest voter, and in the near future will require a decision pro or con at the ballot-box.

Further, the Alliance is "non-partisan" and does not intend to become a third party. It will not put up a ticket unless that last resort is forced upon it. It asks for justice, but will not accept a stone, an excuse, not be wheedled or side-tracked from its purpose. But let the demands speak for themselves—the spirit of '76 lives in every word and principle.

Demand 1st—We demand the abolition of national banks. We demand that the Government shall establish sub-treasuries or depositories in the several States which shall loan money direct to the people at a low rate of interest, not to exceed two per cent per annum, on non-perishable farm products; and also upon real estate, with proper restriction as to land and amount of money. We demand that the amount of the circulating medium be speedily increased to not less than \$50 per capita.

2d. A law to effectually prevent dealing in futures on all agricultural and mechanical products.

3d. Free coinage of silver.

4th. A law prohibiting alien ownership of land; also the reclamation of all lands now held by aliens and foreign syndicates, and by railroads in excess of their actual needs, that the same may be held for settlers only.

5th. The repeal of all laws that build up one industry at the expense of another; removal of tariff tax on necessities of life; graduated tax on incomes; revenue of Government limited to an honest and economical expenditure.

6th. The Government control of telegraphs and railroads and removal of existing abuses.

A remark on demand 1st. It embodies a financial policy. It wishes the Government to put its money directly to the people instead of compelling them to pay interest for the simple privilege of using their own money. If money is not the peoples' whose is it? The Alliance does not object to paying interest, or a tax, from 8 to 25 per cent on money the whole people use, if that tax were paid to the Government, thus diminishing other taxes; but the Alliance objects to paying this tax (interest) to a mere private corporation, thus unjustly enriching a few individuals at the expense of the great mass of the people. It believes that there is a fair, safe method of distributing money to the people direct. If Government can loan money to the banks on good security at two per cent (which it does, it can do the same thing to the whole people direct. The fact is, the so-called national banks were suggested by a few Jews and London bankers who took an unpatriotic advantage of the Government during time of war, and need not longer be perpetuated. S. P. Chase is on record as saying their establishment was the greatest mistake of his life.—*G., in Kern Co. Echo*.

## Alameda County Alliance.

EDITORS PRESS:—The Executive Committee of the Alameda County F. A. & I. U. met at Niles on June 6th and transacted the necessary business which came before it. The most important was fixing a date for the County Convention which is to be held at Niles.

The Fourth of July cuts such a wide swath in the first week of July that it was found rather difficult to pick a satisfactory date; however, July 1st was selected finally as the most suitable.

Invitations are extended to the delegates of all Sub Alliances to bring basket lunch. Niles Alliance will provide coffee, tea, dishes, etc.

A program or order of business was arranged, and among other things each Sub Alliance is requested to furnish five minutes' entertainment—speaking, recitation, singing, dancing, etc., after the County Lecturer is through.

To sum up briefly, the County Convention meets at Niles town hall Wednesday, July 1st, at 10 o'clock, and a good turnout is expected.

H. OVERACKER JR.,  
Centerville, June 13. Sec'y Ex. Com.

### Contrasts.

I shall not come to the heavenly court  
As I enter your ball to-night,  
In tissues wreathed with flowery sport  
And jewels of haughty light.

Bearing on shoulders stiff and straight  
The marble of my face,  
Moving with high and measured gait  
To claim my yielded place.

Poor narrow souls! your easy spite  
Moves this enforced disdain,  
I cannot vanish from the fight  
Other than crowned or slain.

The russet garb of penitence  
For me was lighter wear  
Than all a queen's magnificence,  
A prince's merrivere.

Unloose, unloose your chains of pride,  
Set my vexed spirit free,  
That I may follow my angel guide  
In glad humility.

For I would hearken the sentence deep,  
Abide the lifted rod,  
And sink, like a chastened child, to weep  
In the fatherhood of God.

—Julia Ward Howe.

### Ethel's Chaperon.

[Written for the RURAL PRESS by ELSIE ANGEL.]

"Just a month ago," sighed Miss Nash as she glanced dejectedly at the rocking-chair where her sister had been accustomed to sit, "and how I miss you, Prue." Then she wiped the tears from her eyes and resumed her knitting, thinking of the years when they had been inseparable and so happy in each other's companionship. As girls, they had been quiet and sedate, and unappreciated by the sterner sex; and at thirty-five, they had settled into a state of mature spinsterhood, as women are apt to do who take life seriously in their youth. It never entered into their thoughts that any change would come, and one evening, they plodded off to a church social with their usual donation of sponge-cake, expecting to sit together and talk together and walk home together as usual, when the pastor surprised them by introducing a gentleman, who, instead of courteously greeting them and then rushing off to devote his attention to younger and prettier women, had remained with them all evening, escorted them home, and, after a few weeks' acquaintance, had succeeded in winning Prudence for his wife, and taken her to his home in another State. A month had passed, the dreariest, saddest month in her life for the sister left in her loneliness, behind. She could not get accustomed to her solitary walks or to the silence of her room. She shrank from going out of evenings alone. The sighed and wept almost continually; but found some consolation in building air-castles, which, at times, checked her tears and brought the color to her cheeks. If Prudence had been sought and admired, why should not she, Rachel Nash, hope? She *did* hope. It was the one drop of sweetness in her bitter cup. But Prudence had been gone a month, and Miss Nash had not been out one evening since. To night, the Reading Circle met. How she would love to be there! If she only knew of some one to go with; but the people in the "Wilmington" (the house where Miss Nash stayed) were gay and fashionable and fond of more exciting pursuits. If she knew of some neighbor—the Johnsons were the nearest. Yes, there was Cora. Miss Nash meditated for a moment, and shook her head. Well, there was Myra Brooks; but unfortunately she was engaged. Miss Nash sighed, leaned back, closed her eyes and built another air-castle, in which figured a loaf of sponge-cake, a church social, the pastor introducing a gentleman, a wedding! Then she came back to her neighbors. The next nearest after the Brooks were the Fletchers. Miss Nash threw down her knitting and jumped up with energy. "Ethel Fletcher!" she exclaimed. "Yes, she is so bright and intelligent. I shall ask her."

In a few moments, Miss Nash was ready for walking, and on her way to Mrs. Fletcher's pretty home in a retired tree-shaded street. As she opened the gate and entered the garden, she heard soft strains of music, so she stepped gently on the porch and looked in the parlor window. Yes, Ethel was there, and alone. How lovely she looked in her white gown, with a pink fleecy shawl about her shoulders! What a charming profile! What a shining mass of golden-brown hair! Miss Nash stood and admired, reluctant to disturb her, and then tapped gently on the window. Ethel turned to see the lady smiling at her. "I thought I wouldn't ring, as I heard you playing," she said, as Ethel met her at the street door. "I hope I am not unwelcome, dear."

"No, no!" answered the girl vivaciously.

"I am only too glad to see you, Miss Nash. I feel so stupid this evening."

"Indeed!" exclaimed the visitor, sinking into the proffered chair, and glancing from Ethel's bright face around the pleasant room. "How can you feel stupid in such a cheerful home?"

"Nevertheless," answered Ethel, shrugging her shoulders, "I don't believe any one suffers from dullness as I do. Since I left school, I don't know what to do with myself, and the evenings are tiresome, in spite of music or books to enliven the time. I wish that mamma did not have such strict ideas of propriety, and that she would let me go out once in a while with Laura Grey and other friends, but mother thinks that young girls should be attended by a chaperon—just as though we can always have one at our command! I wish I had a homely brother that no other girl would look at, or a rich old uncle that idolized me—" At this point, Ethel burst out laughing. "I know you think this very ridiculous, Miss Nash, but the very moment you tapped on the window, I was dressed for a party and just stepping into a carriage provided by the rich old uncle. I love to build air castles, don't you?"

Miss Nash's face was unusually rosy, but it may have been from laughing. At all events, she did not answer the question, and said she was grateful for Ethel's confidence, and thought she could suggest a remedy for dull evenings spent at home. How would Ethel enjoy her companionship to lectures, concerts and church entertainments? Ethel assured Miss Nash that she would be delighted, and even called that lady an angel for coming so opportunely to her rescue.

"And that reminds me," said Miss Nash, "that I came this evening to invite you to join our reading circle. We meet every Monday evening in one of the parlors of the Lowell Square church. I have attended two years, and find it very interesting and profitable. I am sure an intelligent girl like you would enjoy the circle exceedingly."

Ethel was profuse in her thanks, and Miss Nash expressed her gratification at having a friend and neighbor who was so fond of to accompany her. It might help to reconcile her to her sister's marriage.

"I miss Prudence so much," said Miss Nash sadly, while the tears gathered in her eyes. "We depended so entirely upon each other, and I thought we would never be separated."

"Yes, her marriage was a great surprise to every one," answered Ethel honestly; "and it was so natural to see you together, that I always feel like asking: Where is your sister? But, never mind, Miss Nash, I will try to fill her place."

"Thank you, dear," smiled the visitor appreciatively, at the same time rising to take her leave. "Your mother, of course, is out, or I would have seen her."

"Yes, she went to Aunt Louisa's to tea, and after tea, whilst. Tea and whilst are always the program there," said Ethel ruefully. "I escaped going because my last cold still lingers affectionately. It hates to leave me." Miss Nash smiled.

"You are a droll girl, Ethel, and it is evident that your mother will never make an English woman of you, although she will never be anything else herself. She is as reserved and exclusive as when she came here a bride, but very charming in her home life, as it has been my good fortune to discover. Remember me kindly to her and tell her that I shall call in a day or two to have a talk about our reading circle. Good night, Ethel."

Then the friends parted in the heat of spirits, each feeling that she would suffer less in the future from loneliness or dullness.

Mrs. Fletcher gave a ready consent. "I have no objection whatever to have you chaperoned by Miss Nash," she said. She is a well-bred, dignified woman, and so much older than you, Ethel, that I believe her companionship will be far more beneficial than that of a spoiled, flighty girl like Laura Grey."

Henceforth there was a change in Ethel's life. Miss Nash was often at the Fletcher's street door, "Just to see Ethel for a moment, if you please," or Ethel was sitting up the stairways and through the halls of the Wilmington to Miss Nash's room to ask if she could go to the Charity fete on Friday night, or to make arrangements for attending an art exhibition or an Orange Tea farther off in the future, and Miss Nash never once said that dreadful word—no. Then there was the reading circle, with its agreeable president and intelligent members that were so delightful to meet. Ethel's air castles were not so numerous as formerly, for there were papers to be prepared on historical, philosophical, literary or art subjects.

How wise Ethel felt as with tablet and pencil she jotted down items from books of reference in the great libraries of her city! How pityingly she glanced at the girls in search of the frothiest novels! With what pleasure she prepared her papers and with what a glow of delight she received the approbation of the circle when she read them! Mr. Harold, the president, lingered by Ethel's chair during the recess, and some way he fell in the habit of escorting her and Miss Nash to their homes, and succeeded in making a very favorable impression upon both the ladies.

Ethel in her enthusiasm tried to get Laura Grey to join the circle, but in vain. Laura said airily that she wanted to get rested from her school studies first, and when she had forgotten everything she had learned, which she was

trying to do, she might take the reading circle into consideration. But Laura was also jealous of being supplanted by Miss Nash, and said such spiteful things about her, and wrote notes to Ethel as an excuse to insert something sarcastic about *Miss Nash*, that the two girls so warmly attached in their school days, almost became strangers, for Ethel loved Miss Nash with the fervor so often felt by a younger for an older friend.

Six months passed away very pleasantly, and then Ethel became conscious that a feeling of bitterness was gaining a mastery over her sunny nature. At first she was surprised at discovering a certain disagreeable trait of disposition in Miss Nash which she generously tried to overlook. Falling in this, she became amused and irritated by turns, and then thoroughly annoyed and indignant, she carried her troubles to her mother.

"Miss Nash speaks as though I am the same age as herself, yet she knows better," said Ethel. "When gentlemen are attentive, she says they are sensible to prefer our society to that of chits of girls. She refers to things that took place when she was a child as though I had been her playmate. You know, mamma, I cannot be so rude as to contradict her, for she is so kind and pleasant otherwise."

Mrs. Fletcher explained that Miss Nash belonged to a class of women that made themselves ridiculous by being foolish about their age, and that she probably wanted people to believe that she was as young as Ethel.

"I notice she is more vivacious than she used to be," continued Ethel thoughtfully; "and she seems young to me, yet you would think that she would occasionally refer to herself as my elder when I am so much younger than she is."

"Perhaps Miss Nash prefers to deceive herself," rejoined Mrs. Fletcher, quietly.

"Yes," thought Ethel, lapsing into reverie. "And she deceives herself about Mr. Harold also. He never called to see her, or escorted her home until I joined the circle, yet she talks as though she were the attraction. Well, if she succeeds in making him believe that I am as old as she is, he will drop us both before long."

Mrs. Fletcher had not been blind all these months since Miss Nash had become her daughter's chaperon. She had noticed a growth of sprightliness in her step and bearing, a vivacity in her eyes and smile, a tendency toward youthfulness in her dress, all of which would have been commendable if it had only been accompanied by common sense.

Six months before, Miss Nash had been a staid woman looking fully her thirty-seven years in her prim black or gray costumes. She had discarded them, and become an imitator of her fair young friend. If Ethel wore blues or greens Miss Nash did likewise. Her shawls and wraps were exchanged for jaunty jackets and pretty shoulder capes; her plainly parted hair, and mature bonnets had given place to elaborate bangs surmounted by stylish toques, or feather-laden hats. A few months' intimacy with Ethel Fletcher had transformed her into a younger, brighter, more attractive woman, and Miss Nash knew it and rejoiced. But she spoiled it all by becoming silly and sending Ethel, as we have seen, with irritated complaints to her mother.

No one had noticed the transformation in Miss Nash's appearance with greater surprise than Mr. Harold and he came to the conclusion that she must be much younger than he had supposed, especially as she was in the habit of speaking of herself and Ethel as having been children together. The latter he considered very youthful looking but he thought both ladies were older than he was. Ethel, however, had captured his heart, and as he could only approach her through the influence of her chaperon he valued Miss Nash's friendship highly. He never saw Ethel save in her presence. Even the calls he had made upon the latter in her home, had been in the company of the elder woman, for she had given him to understand that such were Mrs. Fletcher's strict ideas of propriety that he would not be admitted otherwise. She little dreamed, poor woman, that his appreciation of Ethel only increased because there were obstacles in the way, and she became confidential to Ethel, and hinted of delicate attentions that Mr. Harold was paying her, and that when a certain event took place, Ethel must witness the ceremony as maid of honor.

But the time came for the circle to adjourn for the summer. The members bade each other good-bye, and Mr. Harold walked home as usual with Ethel and Miss Nash. In some way the conversation turned upon a recent wedding which had excited much comment on account of the disparity of years between the couple, but in this instance, it was the seniority of the bride that created the stir and gave people something to talk about.

"Is it true that the lady is so much older than her husband?" asked Ethel. "Yes," answered Mr. Harold. "She is over forty, and he is just of age."

"What shocking bad taste!" exclaimed Ethel.

"I don't agree with you Ethel," said Miss Nash. "It may be a very happy marriage like Burdette Count's, Lord and Lady Beaconsfield's and scores of others."

"My mother is my father's senior in years," rejoined Mr. Harold, "and there never was a more devoted couple."

"There!" exclaimed Miss Nash in triumph. "That may be," said Ethel; "but for myself,

I think the husband should be the elder. I would not marry a man younger than myself."

"Are you sure of that, Miss Fletcher?" asked Mr. Harold earnestly. "Yes," Ethel answered with emphasis. After that a change came over the spirits of the three. Ethel made a gay remark, but there was no response from Mr. Harold. He seemed attracted. Miss Nash laughed joyously, and became unusually talkative; while Ethel groaned in spirit and wondered if she and Mr. Harold were going to drift apart from this time. It seemed so.

"Well, here we are at your gate, Ethel," said Miss Nash sweetly.

"I want to ask a favor, Miss Fletcher," said Mr. Harold, very seriously. "Will you go on to Miss Nash's? We will soon return."

"Do, Ethel," I shall be charmed," echoed Miss Nash politely, "that is, if you are sure your mother will not object."

Ethel simply assented to her escort's appeal and continued her walk, and she noticed when she bade Miss Nash good-night that there was an unmistakable sharpness in that lady's demeanor toward herself.

"Now," said Mr. Harold, as they retraced their steps toward Ethel's home, "I trust you will take something back you said to-night. Will you?"

"What is that?" she asked, rather faintly.

"That you would not marry a man younger than yourself, for you must know that I love you, Ethel."

"Mr. Harold," asked Ethel, "Will you tell me your age?"

"Twenty-five," he answered in a despairing voice.

"Then how old do you suppose I am?" she inquired rather petulantly.

"I don't know; but if you and Miss Nash are of the same age, you must be older than I am."

"So I look thirty or more?" (very reproachfully).

"No indeed," answered Mr. Harold warmly. "I thought you were about twenty, until Miss Nash informed me to the contrary." Then as a sudden light seemed to break upon his mind, he continued: "Is it possible that she —"

"Well," interrupted Ethel, "here we are at our gate again, and I can't take back what I said, for" (laughing and blushing) "it is not necessary. You are four years older than I am." Then Ethel extended her hand with charming frankness. "And if you will speak to mamma —"

Well, they became engaged, and in course of time there was a wedding in which Laura Grey figured as maid of honor, and she and Ethel ever afterward remained warm friends; but Laura always entertained a lurking dislike for Miss Nash, for whenever her name was mentioned she said sarcastically:

"Miss Nash? Ah, yes! She was one of us 'in the days when we all went gypseying,' you know."

But Ethel was too kind-hearted to cherish resentment, and always treated her former chaperon as an old friend. Indeed, it was in the Harold's home that Miss Nash met the man whose name she now hears; but to this day she speaks of herself and Ethel as having been girls together, and she has persuaded both herself and her husband that Mr. Harold was one of her rejected suitors.

### Blackboards for the Children.

EDITORS PRESS:—If you have children, be sure and have a small blackboard nailed upon the wall in a convenient place. A good wide board, say 18 inches and about 2½ or 3 feet long, makes an excellent one, or two 12 inch boards with a cleat at the ends will do. Have it well planed on one side and then paint with black paint, two coats. This makes a good board for chalk, or there is a preparation to put on wood or pasteboard that is good for slate-pencil. They are so nice to put the golden text on for the children to learn, and if father or mother wants to learn some charge or quotation for the Lodge, there it is to catch the eye when in the house, or when we are all interested in some mathematical calculation, it can be done before all eyes. Be sure and have chalk or pencil close to the board, and you will never want to be without the board if you once have one.

Los Alamos.

MRS. J. HILTON.

### Chaff.

THE man who lives by his brains certainly has not a visible means of support.

COBWIGGER—Boscowan is very good to his wife. He keeps two nursemaids to look after the children. Brown—He has to. His wife keeps three dogs.

MISS OLOMAID—Your room is very pretty, Miss Rosebud, but I wish you would drop in and see mine. It's a perfect museum of curios. All presents, too. Miss Rosebud—Birthdays presents?

MRS. GRUBBS—"And so your daughter's wedding is set? Don't you think she is too young to marry?" Mrs. Dabbs—"No, indeed. She has ruled the whole family for three years."

MISS DE PRETTY—I don't see how you whistle through your fingers that way. I could never do it in the world. Mr. Goodheart (wishing to compliment her delicate little hands)—No, Miss De Pretty, if you should try it your whole hand would slip into your mouth.

## YOUNG FOLKS' COLUMN.

## The Crooked Man's Story.

[Written for the RURAL PRESS by MARY E. BAMFORD.]

Little Jack Horner was sitting on the stile. It was the same crooked stile where the crooked man found a crooked sixpence, you remember. Jack Horner was resting there, when, on looking up the road, he chanced to see the crooked man himself coming toward him.

"Why, how do you do?" said Jack cordially, as the Crooked Man drew near.

"I'm not very well to day," said the Crooked Man, sitting down with a sigh. "I've been helping Peter Piper pick his peck of pickled peppers, and I'm tired."

"And how is the crooked oat that you bought with the crooked sixpence?" asked Jack.

"She's very well," said the Crooked Man. "She's gone over to the House that Jack built to see if there's another rat getting at the malt."

"I hope no dog will worry her this time," said Jack.

"Oh, no," said the Crooked Man, "that dog won't bother her any more, for he has been tossed by the cow with the crumpled horn. Didn't you hear about that? The dog's dead."

"It is strange that oats and dogs don't like one another better. They almost always quarrel," said Jack. "What do you suppose is the reason?"

"Oh, I know," said the Crooked Man, "my crooked oat told me that story."

"What is it, please?" said Jack Horner.

"Well," said the Crooked Man, leaning back on the stile, "I'll tell you. You know, long ago, it used to be the fashion in a certain country to like oats very much, and some folks even went so far as to make mummies of oats after they died. Well, in one of the cities of that country, there lived a fine oat, and all this cat's ancestors had been mummied away back to the tenth grandfather and grandmother. This made this fine oat of great importance indeed in the eyes of those oats that only had ancestors mummied back to the second or third grandfather and grandmother, and such cats called him the Ten-Ply Cat, to distinguish him from the common crowd of Two and Three-Ply Cats."

It was a fine sight indeed, to see the shelf on which Ten-Ply's ancestors sat all in a mummied row.

One day, when Ten-Ply had gone to look at this shelf, he discovered with horror that one of his mummied ancestors had been tipped over.

"Whoever has done that deserves to have no oatnip for a month," said Ten-Ply, as he crawled up to the shelf and carefully clawed the mummy back into position once more. "I shouldn't be a bit surprised if it were one of those good-for-nothing 'Three-Ply cats.'"

"Neither should I," said a voice, and, looking around, Ten-Ply saw a curious creature standing near by.

"Who are you?" said Ten-Ply.

"I am a person much older than the ancestor that you have just picked up," said the visitor, bowing politely. "In fact, I should hesitate to tell you, my friend, how old I am. I belong to a most noted gentleman who allows me, once in a while, to ramble out alone. But I must tell you that I have in past days seen all of your lamented ancestors while they were yet living. Ah, they were fine cats!" and the visitor sniffed tearfully at the recollection of past days.

"My, how old you must be!" exclaimed the astonished Ten-Ply. Then, horrified at his own impoliteness, he confusedly said: "Please excuse me, but have you really known all my ancestors?"

"Ah, yes!" said the visitor. "In fact, my friend, I think I will tell you who I am. I am a Dog. I do not suppose you recognise me at once, but I think you have seen me before. I am the Man-in-the-Moon's Dog."

"Why, I do believe you are," said Ten-Ply, after taking a good look at him. "Excuse me for not knowing you, but how came you down here?"

"Well," said the Man-in-the-Moon's Dog, "you know once every few weeks the moon is smaller than at other times, and then there isn't room enough in it for the man and me, too, and so he lets me go visiting till it gets big enough for us both again; and so I thought I'd come and see you this time."

"I'm glad you did," said Ten-Ply. "I'll try and make your real visit pleasant," and so Ten-Ply did, having no prejudice against dogs. The Man in the Moon's dog said he was almost starved, and indeed he looked so, and while Ten-Ply hunted up refreshments the dog explained that it was hard work to get food for dogs in the moon. "You see," said he, "we journey along so fast that we don't have time to stop for refreshments except at just one station. That's the Milky Way, and we don't stop there long enough for me to get more than a few laps of milk before we must be going again. If it wasn't for these rambles of mine once in a while I'd starve to death."

"It's too bad," said Ten-Ply, sympathetically placing before him the best bones to be found. During the few days that the Man in the Moon's dog stayed there was great excitement among the neighboring cats. They all came to

see the stranger, and they looked at Ten-Ply with greater respect than ever on account of his having such a distinguished visitor. The dog, too, flattered Ten-Ply, and went with him daily to see the ten mummied ancestors, and told such wonderful stories of the great things that he had seen those ancestors do, that Ten-Ply's self-esteem grew at a tremendous rate.

At last, one day, the dog said: "I am sorry, but I see that the moon is getting bigger and I think I must be going home. The men will be expecting me. I only wish I could do something for you, my friend, in return for all your kindness to me."

"Well, I think you can do something for me if you will," said Ten-Ply.

"What is it?" asked the dog.

"Take me home with you to the moon," said Ten-Ply, "and let me ride with you in it; that will be something that none of my ancestors ever did."

The dog hesitated. "Well," said he, at last, "if you want to do so I suppose you can."

And so Ten-Ply, in high spirits, bade goodbye to all the common Two-Ply oats, who looked at him with greater admiration than ever. "How great you will be," said they all. Ten-Ply very proudly accepted all compliments paid him, and the two travelers set out the next afternoon on their journey.

They hurried onward, for they wished to be on top of the eastern mountains by the time the Man-in-the-Moon arrived there. They succeeded in reaching their destination in time, and as soon as the Moon appeared, they stepped on board.

The Man-in-the-Moon rather objected to taking Ten-Ply at first.

"I'll be glad to have you back," said he to the Dog, "but I'm almost afraid the extra load will make the Moon too heavy."

However, the Dog asked him to try, and so Ten-Ply was received on board, and they all sailed on.

Ah, how proud was Ten-Ply that night, as he looked down from the sky and saw all the Two and Three-Ply cats gazing up at him in undisguised envy! Ten-Ply's vain soul was greatly pleased.

"This is as it should be," said he to himself. "I am far superior to common cats," and he put on such airs that the Man-in-the-Moon was much disgusted.

But Ten-Ply could not be satisfied with one night's sailing. He refused to get off the next night, and the next, and the next. The Dog was thoroughly angry, for every time they passed by the Milky Way there was not time for more than one of them to get any supper. Sometimes Ten-Ply got the milk, and sometimes the Dog did. The Man-in-the-Moon unscrewed the lower part of his lantern and gave it to them to dip up some milk with. This was the only piece of tin-ware in the Moon, since both the Big and the Little Dippers were hung too far away for the Man-in-the-Moon to reach them.

So things were very uncomfortable indeed. The Dog plainly told Ten-Ply that he was one of the most conceited cats that ever lived, but Ten-Ply did not care as long as he saw the Two and Three-Ply cats admiring him from below.

At last, one night, as they were sailing along, Ten-Ply said, "There is the shelf with my ten mummied ancestors on it."

"Do you see them?" asked the Dog, peering over the edge of the Moon.

"Yes," said Ten-Ply.

"Then go and look at them a little nearer," said the Dog, and he gave Ten-Ply a violent push. Ten-Ply staggered, clawed at the Moon, missed his hold, and fell into the depths of air beneath. Down, down he fell, swifter and swifter, through the tremendous gulf of air, toward the earth. Ten-Ply could hear the wails and cries of the frightened Two and Three-Ply cats as they saw him coming.

Nearer and nearer he came. He was aiming straight for the shelf of his ancestors. Ten-Ply shut his eyes, there was a loud thump, and the shelf and the ten ancestors fell in a heap on the remains of their last descendant, a descendant indeed, from a far greater height than they had ever thought of. Ten-Ply was dead.

Great was the mourning among the Two and Three-Ply cats. They each wept eleven tears over Ten-Ply, and solemnly vowed that from thenceforth they would all bring up their children to hate dogs and to have nothing whatever to do with them. "And they've kept their word," said the Crooked Man, as he ended his tale.

Little Jack Horner thanked the Crooked Man for telling the story, and then, leaving the Crooked Man nodding sleepily in the sun, Jack rose and continued on his way toward Mother Goose's house, where he was going to get another pie, and as he went, he sang:

When folks begin to make a muss

About something that's past,

The smaller reason for a fuss

The longer it will last.

AN Irishman, traveling on one of the railways the other day, got out of the carriage for refreshments at a station, and unfortunately the bell rang and the train was off before he had finished his pie and coffee. "Hould on!" cried Pat, as he ran like mad after the train, "ould on, ye spluttering old stame engine—ye've got a passenger aboard that is left."

TEACHER.—You tell me what a secret is Little Girl—Yes'm. It is something somebody tells everybody else in a whisper.

## GOOD HEALTH.

BANANAS AS FOOD AND MEDICINE.—Dr. John Dougall of St. Mungo's College, Glasgow, has a letter in a recent issue of the *Glasgow Herald* on the bananas. He quotes from Stanley's "In Darkest Africa," showing that "for infants, persons of delicate digestion, dyspeptics and those suffering from temporary derangements of the stomach, the flour, properly prepared, would be of universal demand." During Stanley's two attacks of gastritis, a slight gruel of this flour, mixed with milk, was the only material that could be digested. It is odd, also, as pointed out in Stanley's book, that in most banana lands—Cuba, Brazil, West Indies—the valuable properties of the banana as an easily digested and nourishing food have been much overlooked. Dr. Dougall has made some experiments in making banana flour. He concludes that it should be made from the ripe fruit at its place of production. In trying to make it from bananas purchased in Glasgow, he obtained on drying the pulp a tough sweet mass like toasted figs, an appearance probably due to the conversion of starch into sugar. Bananas contain only about 50 per cent of pulp, and of this about 75 per cent is water. They would yield, therefore, only one eighth part of flour.

HUNGER AND INFECTIOUS.—It is a well known fact that hunger predisposes to certain diseases, but it has been reserved to two Turin doctors to demonstrate the increased liability experimentally. Their observations were carried out with the virus of bacillus anthrax on pigeons, a disease to which these birds are, under ordinary circumstances, refractory. They found, however, that six days' total deprivation of food rendered the birds amenable to the virus, on condition that food was still withheld. If, however, food was given at the same time as the virus, then they still successfully resisted infection. Further, when starvation was continued for two days after the inoculation, and food then given, the development of the disease, though not prevented, ran a slower course. Lastly, the virus proved capable of infecting birds well fed up to the date of inoculation, but starved subsequently. The line of investigation is evidently one which admits of further research, but the moral is obvious.

SANITARY SCIENCE.—Sanitary science, says the *Sanitary News*, is a science that does not relate to the earth we live on, or to the heavens we live under, but to the conditions of the homes we live in. We can live on the earth or under the heavens, without knowing much about them, but to live best in our homes, we must know them well. Geology cannot change the conditions of the earth beneath us, or astronomy those of the heavens above us, but sanitary science can change from unhealthy to healthy the conditions of the homes we live in. Is it not, then, a science worthy of study? It touches the highest interests of mankind, cleanses and purifies the present generation, and will strengthen and will glorify posterity. The effects of obedience to its laws are not remote, but immediate. They touch the everyday life of all, and enter into all the relations of life. They give strength and vigor to whatever capacity in which human endeavor is put forth.

TO PREVENT "SOUR STOMACH."—Some physicians prescribe the following as a preventive of "sour stomach": Avoid eating foods which ferment easily, such as sugar, potatoes, and the like. Drink hot water to wash the stomach out, say one cup about one hour before eating. This prepares the organ for the kindly reception of the food. Avoid fluids at meals, unless it be peptonized milk, which really is a semi-fluid food. It might be well to use the peptonized milk for a few days and eat nothing else. Should this not agree with you, eat scraped beef, broiled, using with it but little salt, and dried wholewheat bread. Be careful to not eat too much meat in hot weather, as it is quite heating. You may try for a drink a half-cup of cold skimmed milk, filling the cup with boiling water. Should you not be relieved by following the above, you had better hunt a sanitarium.

THE DOCTOR WHO SUCCEEDS.—A physician who understands human nature, who plays with the baby, makes friends with the children, and listens to the woes of the good wife and mother, says a medical journal, is the fellow to whom the master of the house most cheerfully pays the largest bills. It isn't the medicine that's bottled up, but it's the comfort and consolation that are unbottled that mark the broad line between an unsuccessful and a popular physician.

WE lose about two pounds of water in 24 hours by perspiration, and the more we perspire the cooler we become. There are 27,000,000 pores on the surface of our bodies, which, if placed in line, would extend 28 miles in length.

"GERTRUDE, I see you rejected the head clerk last night." "Why, papa, how did you find out?" "Easy enough—he did the biggest half-day's work this morning that he's done in five years."

THE more wealth a man has the louder his children talk.

## DOMESTIC ECONOMY.

## Cornstarch or Custard.

EDITORS PRESS:—I have a great dislike to soiling milk on the stove, as it sticks so to the pan, so I make cornstarch pudding or custard by wetting up the starch with sweet cream and then pouring boiling water upon it. To our taste it is nicer than with milk. Here is the formula for custard: Two tablespoonfuls of starch made quite moist with sweet cream; three heaping tablespoonfuls of sugar, two eggs well beaten, all added to the starch; then pour boiling water on the mixture (stirring well) till thin enough to suit. Eat without flavoring or add what you like best. MRS. J. HILTON, Los Alamos.

COFFEE.—Tie four tablespoonfuls of coffee in a piece of coarse cheesecloth. Put it in a coffee-pot with one pint of cold water. After it has boiled five minutes, add one pint of boiling water, and keep it hot ten minutes. Keep the spout closed with a cork or paper, if there be no tin cover.

LOAF CAKE.—Five cupfuls of light dough, 4½ cupfuls of sugar, 2½ cupfuls of butter and four eggs. Cream the butter and sugar together and add the eggs, then mix with the dough; add any kind of spices and fruit to taste; put in a mold and set to rise for a short time and then bake like bread.

LEMON SAUCE.—The following is a good recipe for lemon sauce: Cut a lemon in three slices, discarding the tip ends. Boil the slices in one pint of water for a few minutes, having the water brought to the boiling point before putting in the lemon; add one tablespoonful of corn starch, one cupful of sugar and two tablespoonfuls of butter.

MOCK OYSTER BISQUE.—One cup codfish, soaked in cold water and picked into half-inch bits. Put it with one pint of cold water and one pint of strained tomato and boil 20 minutes. Add one saltspoon of soda, one pint of milk, one tablespoon of butter melted and mixed with one tablespoon of cornstarch, one saltspoon of white pepper. Boil up once and serve with fried bread.

SUGARED ORANGE.—Select the lightest colored oranges for this purpose, as they are more acid than the dark. Peel off the rind and slice them, latitudinally or crosswise, about the eighth of an inch in thickness. Strew over them some powdered white sugar, in the proportion of a teaspoonful of sugar to each slice. Let them stand 15 minutes. They are very palatable in fevers, as they serve to cleanse the mouth and keep it cool.

OATMEAL.—Put a teaspoon of salt and a scant quart of boiling water in the top of the double boiler and place it on the stove. When the water boils, add gradually one cup of coarse oatmeal. Cook ten minutes, then place it in the bottom of the double boiler and let it cook one hour. Put a tablespoon of salt in the water in the lower boiler. When done, remove the cover, stir with a fork to let the steam escape. Serve it on a platter.

TRAVELER'S BISCUIT.—Two pounds of flour, three-quarters of a pound of sugar, a quarter of a pound of butter, one teaspoonful of dissolved saleratus, milk sufficient to form a dough. Cut up the butter in the flour, add the sugar, and put in the saleratus and milk together, so as to form a dough. Knead it till it becomes perfectly smooth and light. Roll it in sheets about the eighth of an inch thick; cut the cakes with a cutter or the top of a tumbler. Bake in a moderate oven.

KALE WITH PORK.—Put a piece of salt pork into a kettle of cold water, allowing it to boil fifteen minutes to the pound. Three-quarters of an hour before it is done, have ready, washed and picked over, the necessary quantity of kale, put it on with the pork, without covering the kettle, and boil thirty minutes. When done, drain, put the pork in the center of the dish and the kale around it; garnish with hard boiled eggs. French dressing may also be poured around it.

MACAROONS.—Three eggs, three-quarters of a pound of powdered white sugar, half a pound of sweet almonds, two ounces of bitter almonds. Whisk the eggs till they are very dry, then add gradually a teaspoonful of the sugar at a time, for if too much is put in at once, it will thin the egg. Beat it hard until all the sugar is in. Have your almonds blanched and bruised in a mortar, but they must not be pounded to a paste. Then stir in the almonds, drop a spoonful in a place, on sheets of white paper laid on tins, and bake them in a cool oven till they have just a tinge of brown.

GRAHAM PLUM PUDDING.—Take one and one-half cupfuls of graham flour, one cupful of New Orleans molasses, one cupful of sweet milk, one cupful of raisins and currants (half of each), one tablespoonful of butter, one-half a grated nutmeg, one teaspoonful of soda, one-half teaspoonful of cinnamon, and one well beaten egg. The soda should be dissolved in a little hot water and stirred into the molasses, the spices added, then the butter, milk and flour, and lastly the egg and fruit. Dust a little flour over the fruit before stirring it in. Butter a tin pail well, turn in the mixture after heating it sufficiently, and steam three hours. Turn your pudding out on a pretty plate or small platter when it is done, and serve with lemon sauce.

Imported Stallions—Holbert & Conger, Los Angeles.  
See Advertising Columns.

## The Week.

The rain promised as our last issue went to press came in rather unusual volume, and wrought much perturbation in fields and orchards, though probably because of the drying weather which followed, the damage to exposed crops and ripening fruits has proved less than was feared. The last few days have been warm and the Signal Service reports another storm at the North, but little is expected of it in this State except along the northwest coast, where they are need to such things in summer, and owe to them their exceptionally late growth of grass and forage crops.

Harvesting is progressing apace. Except in some regions of very slight rainfall, the out-turn of grain is proving better than was anticipated and a respectable surplus is to be counted on, for it is now too late for moth and rust to come in to any extent.

The regular outing season is on, and the country resorts are well patronized.

**ORANGE TREES FROM TAHITI.**—Alexander Craw, the entomologist of the State Board of Horticulture, left on Tuesday, for Los Angeles, to inspect a shipload of orange trees from Tahiti. The ship, the Lena Swaysey, was chartered by some Los Angeles nurserymen to bring over these trees, of which it is said, there are about 1,000,000 on board.

## Will You Favor Us?

We desire as many renewals of subscriptions from subscribers as possible during the next 30 days. As we specially need the money at this time, we hope that those whose subscriptions have hitherto expired, or may soon expire, will make a little effort, if need be, to favor us at this time. Such a settlement, with several hundred subscribers, although the amount is small from each, is, in the aggregate, considerable to an enterprising publisher.

We have placed the price of our paper very low, rating less than \$2.50 per annum, when paid in advance. Yet we much prefer to receive the low rate in advance to \$3.00 per annum later.

We hope also to receive many additional subscriptions from new comers and others who have not yet tested the value of a home weekly farm companion, in this new and progressive field of agriculture. Therefore, let all who can, speak a good word to their neighbors for the RURAL PRESS.

## Better System in the Raisin Trade.

On Monday afternoon there was held in this city a meeting of raisin producers and dealers for the purpose of devising means to overcome some of the difficulties experienced in the raisin trade last season. One of the chief of these was the fact that during a spell of dullness in the Eastern market there were considerable rejections made by Eastern buyers on the alleged ground that the fruit was not up to sample. There was an apparently well-grounded suspicion that had the market continued active throughout the season there would have been few if any rejections.

It was the opinion of those present, according to the *Chronicle* report of the meeting, that the only feasible means for coping with this difficulty was to organize and establish a system of grading. Inspectors appointed by the organization should be maintained in the raisin growing sections, who should carefully examine all raisins offered and brand them in accordance with the rules adopted. When raisins so marked were sold it would be a guarantee that their quality corresponded with the brand, and no rejections would be tolerated of such goods. The grading should properly commence in the vineyards, when the fruit is first gathered, and should be followed up in the packing house. With such a system in vogue the honest packer would be protected against the dishonest one, and the buyer would likewise be assured that his purchases made by sample were up to the quality agreed upon.

Nothing was said at the meeting as to fixing prices for the different grades of fruit, but it is not impossible that some such step may be taken. The proceedings are in direct line with the steps taken recently in Fresno by the producers for the organization of an exchange, by which the fruit will be graded and at the same time prices maintained.

## The Ramie Business.

As it now stands the money appropriated for the promotion of ramie cultivation is not available for that purpose. The Superintendent of Ramie Culture appointed by the State Board, Mr. W. H. Murray, sued the State Controller for his salary before Superior Judge Catlin of Sacramento county, and the Judge upholds the Controller in refusing to pay out money under the Act of the last Legislature, on the ground that the Act making the appropriation for such salary is contrary to the 34th Section of Article 4 of the Constitution, which provides as follows:

"No bill making an appropriation of money, except the general appropriation bill, shall contain more than one item of appropriation, and that, for one single and certain purpose to be therein expressed."

Judge Catlin cites the title of the bill which is this:

"An Act to encourage the cultivation of ramie in the State of California, to provide a bounty for ramie fiber and to make an appropriation therefor; to appoint a State Superintendent of 'Ramie Culture,' and make an appropriation for his salary."

In concluding his decision Judge Catlin said:

"It would be difficult to frame an Act more clearly in violation of the section of the Constitution above quoted. It needs no reasoning nor argument to make it apparent. The mere reading of the Act and the Constitution is sufficient. It is imperative upon the court to disregard the Act, and to hold it null and void."

We are informed that Mr. Murray proposes to carry the matter to the Supreme Court in

the hope of securing a decision which will enable the carrying out of the evident spirit of the law in spite of the technicality which now seems to stand in its way.

## Fruit Shipments.

Refrigerator car companies are exerting a marked influence in the eastward movement of California fruits. It was recently announced that there was a competing company in the field, and now the *Report* gives details of a third which has started in vigorously.

This is the American Refrigerator Transit Company, which has opened business in the Missouri Pacific and Texas Pacific headquarters, 132 California street. The Transit Company has been established in the East since 1881, in connection with the Missouri Pacific. It differs from the other refrigerator companies in that it handles its cars itself, having stations along the line for that purpose. The building of ice-houses, in which the ice in the refrigerator cars is renewed, was begun simultaneously in San Jose, Sacramento, Stockton and Los Angeles. The company appoints sub-agents at each of these places, and, its agents say, guarantees the fruit, etc., from damage. It has 2500 cars in use in the United States, and this coast is to be supplied at once with all required.

The shipments will be made mostly by way of Ogden, according to the present outlook. The route from the southern part of the State will be by way of Los Angeles and El Paso to the Texas & Pacific; thence to the Missouri Pacific, and thence to the destination. But from the northern part of the State the route selected will be, for deciduous fruits in particular, to Ogden and thence to the Union Pacific or Rio Grande Western—probably the latter, as the cars will have to be billed over the Missouri Pacific for part of the way, and the Rio Grande will make this connection at Pueblo. This makes three powerful refrigerator companies competing for the State's fruit freight.

## Experiment Stations at the World's Fair.

The exhibit of the agricultural experiment stations of the United States promises to be not one of the least interesting features of the Chicago Exposition. One portion of the proposed exhibit, which will be likely to attract general attention, is an *experiment station in operation*, with its office, laboratories, etc., illustrating how the indoor work of a station is actually carried on. In another portion of the exhibit each station will present, by means of maps, diagrams, pictures, sets of publications, etc., a full statement of its location, equipment, lines of work, etc., so that the visitor can, if he desires, follow out in detail the history and the work of any particular station.

The main feature, however, will be a topical exhibit of the work of the stations as a whole. In this it is not proposed to make a full showing of the work of any single station, but to make a unified exhibit showing the kind of work done by the stations, the way in which they do it, and some of the more important results which they have reached. The preparation of the exhibit is in the hands of a Committee of the Association of American Agricultural Colleges and Experiment Stations co-operating with the United States Department of Agriculture. Assistant Secretary Willis of the Department has taken a deep interest in the matter, and has promised substantial aid on the part of the Department to the Stations in making the exhibit.

At a meeting of the Committee held recently in Chicago the preparation of the different departments of the exhibit was assigned to the following gentlemen:

Experiment Station in Operation—Director of the Office of Experiment Stations.  
The Exhibits of the Individual Stations—H. P. Armby, Penna.  
Soils—E. W. Hilgard, California.  
Manuring—C. E. Thorne, Ohio.  
Crops—C. S. Plumb, Indiana.  
Horticulture—E. A. Popenoe, Kansas.  
Botany—S. M. Tracy, Miss.  
Animal Nutrition—W. H. Jordan, Maine.  
Feeding Stuffs—W. A. Henry, Wisconsin.  
Dairying—W. W. Cooke, Vermont.  
Veterinary Science—Paul Paquin, Mo.  
Entomology—S. A. Forbes, Ills.

This list of departments will give some idea of the scope of the exhibit and the variety of subjects covered by the work of the stations. The Committee has resolved promises of co-operation from practically all the stations and the success of the undertaking seems to be well assured.

## Buildings for the Columbian Exposition.

(Continued from page 589.)

put up very near the shore of Lake Michigan, and will be almost surrounded by the lagoons that lead into the park from the lake. The building is to be 500 by 800 feet, its longest dimensions being north and south. The north line of the building is almost on a line with the south pier leading out into the lake, on which heroic columns, emblematic of the 13 original States, will be raised. A lagoon stretches out along this entire front of the building.

For a single-story building the design is bold and heroic. The general cornice line is 65 feet above grade. On either side of the main entrance are mammoth Corinthian pillars, 50 feet high and 5 feet in diameter. On each corner and from the center of the building, pavilions are reared, the center one being 144 feet square and those at the ends 64 feet square. The corner pavilions are connected by ornate, forming a continuous arcade around the top of the building.

The main entrance leads through an opening 64 feet wide into a vestibule, from which entrance is led to the rotunda, 100 feet in diameter. This is surmounted by a mammoth glass dome, 130 feet high. All through the main vestibule statuary has been designed illustrative of the agricultural industry. Similar designs are grouped about all of the grand entrances in the most elaborate manner. The corner pavilions are surmounted by domes 96 feet high, and above these tower groups of statuary. The design recommended for these domes is that of three women of bercelean proportions supporting a mammoth globe. At stated intervals other groups of statuary have been arranged around the building, principally near the eight minor entrances, each of which is 20 feet wide. The roof of the building is of glass, and the entire cornice is highly ornate.

Inside broad staircases lead to a gallery 28 feet wide that extends around the building. About 400,000 feet will be available in the building, and by the widening of the gallery 90,000 square feet of additional space may be secured.

## Prison Bags.

At the meeting of the State Prison Directors, June 13, Warden Hale read his report in which he stated that 151,225 of the 300,000 jute bags, ordered sold at the last meeting, had been sold. The output of the jute-mills had been slightly increased during the past month.

The Board decided to order a cessation of night work in the jute-mill from and after July 1, next, and the warden was instructed to have plans and specifications prepared at once for the erection of an addition to the jute-mills, for the building of which the Legislature, four years ago, appropriated the sum of \$160,000. It is expected, by the erection of this addition, to double the capacity of the jute-mills, making the annual output about 6,000,000 bags. It is proposed to tear down the old building formerly occupied as a furniture factory, and to erect the new jute-mills on the site.

## The Chautauqua Assembly.

The sessions of this well-known exhibition will open at Pacific Grove, on Thursday, June 25th, with the organization of the various classes, which will occupy the morning hours from that date until the Assembly closes, Friday, July 10th. Each afternoon and evening there will be the usual lectures, concerts and entertainments for which the Assembly is famous. Our readers who desire to obtain full particulars and the right of a two-thirds' rate of railway fare to and from Pacific Grove should write at once to the efficient Secretary, Mrs. M. H. Field, San Jose.

**HORTICULTURE AT THE WORLD'S FAIR.**—There is much trouble in getting a chief for the Horticultural Department of the World's Fair. Mr. Maxwell was confirmed by the National Commission and rejected by the Local Directory. Gen. Chipman was confirmed by the Local Directory and rejected by the National Commission. Mr. Forsyth of Fresno was then confirmed by the National Commission and is now in the hands of the Local Directory. We trust the matter will soon be adjusted. These issues are engendering much ill feeling which is not auspicious.

## The Grasshoppers.

## Various Ways of Fighting Them.

Reports constantly arriving from the foothills and lower lands on the east side of the great valley indicate a continuous hatching out of the grasshoppers, and that many are still wingless, which indicates that they still have something of a future. The arsenic-bran remedy, which was fully described in the RURAL of May 30th as so effective in 1885, is proving useful this year also, but it does not meet all cases, and many other means of destroying the pests have to be employed. As this is so, we propose at once to describe the various methods which have heretofore proved more or less useful, in the hope that some of them may be of avail to our readers.

Perhaps the most effective mechanical means for reducing the pests are the long pans which are hauled or pushed by a horse, the pan having a blazing fire kept burning in it, or else a bath of crude petroleum into which the insect jumps or tumbles as the pan goes forward. There are several kinds of these contrivances similar to those shown on this page, which are taken from the Report of the U. S. Entomological Commission which dealt with the Rocky Mountain locust invasion of the great west some years ago. Readers can choose which style of pan will suit them best.

At the Natoma vineyard at Folsom, Sacramento county, in 1885, they used a modification of the pan shown in the engraving on this page. They added side wings, made of canvas, on a light iron frame, which extended about 12 feet, in order to cover as wide a space as possible, and so that everything in front would be forced back into the pans filled with petroleum. They went far enough in their experiments to demonstrate that millions of grasshoppers could be killed in this way. It cannot be worked in an orchard or vineyard, but a different kind of extirminator must be devised for that purpose, as it is a very difficult matter to run anything between trees and vines.

The best way to do if a district is threatened

similar apparatus will surely be destroyed by the red-hot sheet iron. If one trough is found to be insufficient, others can be added, as they can be constructed cheaply.

## Barriers.

As to barriers to grasshopper progress, a small stream is no protection whatever, but rather the reverse, as the insects float down and land wherever there is food, and then go off again; but a large river being too wide to float across is a great protection. A small ditch can, however, be made available by covering it with a film of petroleum. By rigging a can of kerosene so it will leak about four drops per minute upon the slowly moving water, will spread a deadly film of oil over the surface of the ditch.

Other barriers which can be used to protect orchards and vineyards which are in the path of the invasion, may be described as follows: One of the best ways to kill the young insects is by ditching or trenching. Simple ditches, two feet wide and two feet deep, with perpendicular sides, offer effectual barriers to the young hoppers. They accumulate in such ditches and die in such masses that the stench

to one point, the orchard. Of course, that was the next thing in order after the alfalfa was finished, and they attacked it in full force. It then occurred to me that I had 120 hogs that might know how to eat grasshoppers. In the chill of the morning, I invited the hogs into the orchard to breakfast, and waited on them by jarring the hoppers off the trees while they were too cold to fly. Half an hour of four consecutive mornings left me and the hogs masters of the field. But nine-tenths of the fruit was gone which might have been saved had we been early on the ground. The fruit buds for this year's crops were also destroyed, thus making a double loss.

## How to Burn the Hoppers.

From a gentleman familiar with the grasshopper ravages in Kansas, the Bee learns that the laying of long lines of straw, as practiced by the Natoma Company, was found to be the most effective means of stopping the march of the pests. The straw was laid in long lines, and 10 or 20 feet wide. The hoppers in their march, or on being driven from other places, would take shelter under the straw, seeming to prefer it to grass, brush and all other things.

VARIOUS DEVICES FOR CATCHING AND KILLING GRASSHOPPERS.

and there are crops of considerable value is to select as a vantage ground an open, level tract, if such can be obtained, lying between the cultivated fields and the direction of the threatened invasion, and make that mutual territory, and there operate the machines. Nothing can be of much value unless a neighborhood act in combination, or a man of large means should undertake the work extensively.

The machine is perfectly simple—an old horse, almost unfit for work, and a steady boy could run it all day long, and with the side-arms it covers a great deal of ground, as when extended by wings it will pass over about the same amount of ground in a day as an ordinary header. The materials of its construction are simple and the cost trifling—not more than \$12 to \$15, including labor. The tank containing the petroleum is of wood, lined with light sheet iron, and the cost of canvas for the wings is very little. If a man is ingenious, he can construct one himself at a cost of about \$6 for materials. Crude petroleum is used in the vat, and can be used over again after the insects have been strained off.

The way they used a fire-pan in Kansas for destroying the pests before they get wings is as follows: Plow two deep trenches, about 50 feet apart, outside of the fields you wish to protect. Construct one or more troughs of sheet iron, say 4 to 6 feet long and 6 to 12 inches deep. Attach a long chain thereto, and which can be drawn by a horse, with a boy rider. Throw a few stores into the trough to give it weight, and build in it a fire of any light material. Keep the outfit moving up one trench and down the other. What grasshoppers might have escaped being crushed by the weight of a

from them is intolerable, and the practice is to bury them with soil. In order to keep the main trenches open, it is customary to dig pits here and there in the trenches, which are filled up as soon as full of hoppers, and other pits dug for new-comers. Another plan is to bore holes in the bottom of the trench with a post-hole auger, and cover with earth as soon as these holes are nearly filled, packing down the soil, so as to leave the bottom of trench smooth as before. One of the most successful operators with this plan of destruction, noticed in the report of the Commission, was F. J. Adkins of Kansas City, Mo., who saved 160 acres, and his neighbors, seeing how well his ditches worked, sent others through their growing grain, and saved parts even after the edges of fields had been invaded.

Prof. Riley says that where ditches are not easily made, and where lumber is plentiful, a board fence two feet high and with three-inch batten nailed on the top or side from which locusts are coming, the edge of it smeared with coal tar, will answer as an effectual barrier, and prove useful to protect fields or gardens.

It is stated that when the hoppers commence to fly they need not be feared in the vineyards, since by building fires and making a smoke, such as is used as protection against frost, the pests can be prevented from lighting on the vines.

## Hogging the Hoppers.

A correspondent from Lowrey's sends to the People's Cause the method he pursued to rid his orchard of invading grasshoppers: I have a small orchard with alfalfa on three sides of it. The green alfalfa drew the hoppers from the adjacent dry hills and led them from all sides

They could scarcely be driven out of it. When the straw was efficiently full of them it was fired, and the destruction of almost every grasshopper in it was assured.

## Sulphur Smoking.

A Nebraska farmer furnishes one of our San Francisco contemporaries with what he claims is an infallible means of driving away the grasshoppers. He thus describes it:

"Take hay, straw or rubbish, and dump it off in forkfuls a rod apart over the field on the windward side. Next, sprinkle from one-fourth to a half a pound of sulphur on each pile, and in the evening set the substance on fire. About sundown, the air being sufficiently heavy to keep the smoke down close to the ground, the wind will roll it all over the field. The smoke will scent everything growing upon the field to such an extent that grasshoppers will never come there again during the season that the sulphur is applied. I tried this method for three seasons in succession when the grasshoppers swarmed in myriads from the Rocky mountains, and it always proved successful. The fourth time I applied the sulphur smoke the troublesome insects had been hatched upon the field and had out of the crop of wheat clear to the roots, but after being 'smoked' they disturbed nothing further. For about 80 acres of land from 40 to 50 pounds of sulphur are required."

## Natoma's Experience This Year.

Superintendent Schussler, says the Sacramento Bee, is not seriously alarmed at the outlook. The only damage so far done in the main vineyard tract is along the first row or two bordering the roads and avenues that trav-

erse the tract, and by firing the grass along those roadways and all grassy patches and driving the pests into the flames and ditches, the interior rows have been kept clear from them. The great attack was from the foothills outside the ditch that encircles the vine tract, and so far they have been kept out. The trouble has been that the appearance of the locusts this year has been different from that of '85. In that year they seemed to all hatch out at about the same time, but this year they have been coming out for four weeks and keep the forces fighting them constantly on the alert. At the extreme eastern end of the vineyard, referred to above, a few table grapes have been destroyed. The attempt is made along the eastern border of the vineyard to keep the destructive hordes moving southward, and to this end a gang of Chinamen is kept beating the ground with longhairs and sacks. In their present stage they are hard to drive, but when their wings come they can be moved more easily, unless an unfavorable wind should prevail. Arsenic poisoning has proved of little avail. The greater dependence on the Natoma estate is put in driving them into the open water courses and by firing the grass on the hard and baked hatching-grounds.

## QUERIES AND REPLIES.

## Hints on Seeds.

EDITORS PRESS:—The cotton seed I got last year came too late to do much here, so I saved some of it and planted it this spring. As the seed was old I scalded some as an old darkey told me to. Then I planted some of the wet and some of the dry seed in the same bed the rows of wet seed came up in four days, and the other was three weeks in coming.

Several of my neighbors planted beet seed last year that had matured from roots in their garden, and the beets were not good and did not pay for the trouble. When you want to raise good cabbage and beet seed, always pl-

## Cement Cisterns.

EDITORS PRESS:—I noticed an inquiry some weeks ago in your paper, asking for information about cisterns made by plastering on the sides of the excavation without walls of brick or stone. We construct cisterns in that manner here and find them not merely as good, but much better in all soils, even gravel and sand, than those walled up. Plaster with mortar made of six parts sharp clean sand to one part Portland cement. Apply two coats, and white-wash with clear cement and water.

Arch the top over with common brick in lime mortar, plaster the outside with cement and you have an everlasting affair, as good as can be made. Should it crack and leak, use your wash and brush again.—E. M. WARDALL, Monrovia, Cal.

THINNINGS FOR PIES.—We read in an English exchange urging gardeners to thin the oaks on their trees which grow against the garden walls, and give as one inducement the fact that the thinned fruit is not a loss, but "the cook can make good use of it for pies." What a chance for pie-bakers there would be in California apricot, pear and peach orchards at thinning time!

THIRTY-FIRST AGRICULTURAL DISTRICT FAIR.—The first annual fair of the Thirty-first Agricultural Association will be held at Hueneme on Oct. 6th, 7th, 8th and 9th, 1891.

## AGRICULTURAL NOTES.

## CALIFORNIA.

## Butte.

**ALFALFA YIELD.**—Oroville Register: Fred Paul has ten acres of land sown to alfalfa. From this he has just cut a crop of hay. He will irrigate the land and cut a crop about the middle of July, another the first of September, and a fourth the middle of October. This will average him, he says, about 60 tons for the ten acres and then give pasturage for some time, but he means to cut the grass and feed it while green, for the last crop, rather than let any stock run on the land. Six tons to the acre, and then green feed besides, means a handsome profit of about \$50 an acre.

## Kern.

**PUMP IRRIGATION.**—Bakersfield Echo: Pump irrigation is taking root in Tulare county as well as in Kern. One gentleman's plan for securing water was this: He dug a big well, about 20 feet square, as deep as he could for the first stratum of water. But not finding water enough he bored down until he struck the artesian vein when it raised into the big square well. This gave him an inexhaustible supply. It has been demonstrated in several instances here that under this whole valley there is artesian water. It will not always flow out at the top of the well, but it will rise to within easy pumping distance. So where an adequate supply cannot be obtained otherwise, this stratum or vein may be tapped without very heavy expense. But very fortunately there is little or no difficulty in securing all the water needed by boring less than 100 feet.

## Los Angeles.

**EDITOR RURAL PRESS:**—The fruit crop in Los Angeles, Orange and San Bernardino will be very light: Peaches two-thirds crop; apricots one-half or less; prunes one-third or less. These are the reports from a dozen or more places Saturday last. Let every fruit-grower govern his contracts on this basis. All agree that the quality will be good and the crop short.

E. M. WARDALL.

## Monrovia, Cal.

**SOUTHERN CALIFORNIA POTATO CROP.**—Los Angeles, June 12.—The yield of potatoes in Southern California has been greatly underestimated. An officer of the Southern California Railroad Company says that in a recent trip within a radius of eight miles of this city he saw 15,000 acres of potatoes. They will average 60 sacks to the acre and 200 sacks to the carload, which would make 5000 carloads in the immediate vicinity of Los Angeles. There are immense tracts in Orange, San Bernardino and San Diego counties. In fact, the freight men think the total will reach 18,000 carloads.

**POTATO BLIGHT.**—Monrovia Messenger: Several reports have come to us of a blight in potatoes, particularly in the Early Rose variety. From present appearances, the crop will be a light one. In most cases, the potato has not matured, and the vines are dying. Scarcely more than half a crop is looked for.

**FRUIT CROP.**—Pomona Progress, June 11: From reports concerning the condition of deciduous fruit crops in all parts of Southern California we find that apricots, which will be ready for the canneries and driers within 30 days, will be about 20 per cent more than the average yield. There is a heavy crop in Pomona valley. Peaches will be about the average crop, but less than that of last year. In Orange and San Diego counties peaches will give a small yield, and the same is true of parts of Ventura and Los Angeles counties. Of prunes there will be the smallest yield of that fruit since 1883. In many orchards there will be less than half of the average yield, and some think it will be less than one-fourth of the average. In some localities where the profits were \$550 an acre last year there will be less than \$50 worth of prunes on an acre this season. No prune-grower seems to be very blue. Every one believes that last year's extraordinary crop caused the small crop this year, and all look to another immense yield in 1892.

## San Benito.

**HAY NOTES.**—Hollister Advance, June 13: Along in the latter part of April, it was whispered about that the hay crop, especially volunteer, was very short. At that time, grain hay cut no figure in the case, as it was too early to determine what prices would range at, or how much oats were in the grain, two important factors in cutting grain for hay. Old hay was all cleaned up at high prices, ranging in San Francisco from \$17 to \$23 per ton. Early in May, our local dealers offered \$11 per ton for grain-fields, if cut for hay in first class order, then in reality did haying begin, for more than 50 per cent of the grain-fields within a radius of eight miles of Hollister have been cut to hay. Several thousand tons were contracted as above stated. It is rather a hard matter to determine the amount of the crop which will come to Hollister, for at this writing farmers are still cutting, but from a close estimate and from facts gathered from our local warehousemen, we put it at 18,000 tons, which will come to Hollister, and probably 4000 tons at other points. Our hay this year is of superior quality.

## San Bernardino.

**BEEF CROP NOTES.**—Pomona Times: The outlook in the Chico beet-fields is more than encouraging. Those planted in February and

March now cover the ground completely, and the work on them is done. The later-planted fields require constant attention, and a large force of men and women. They go down on their hands and knees, and, taking two or four rows at a time, follow them through, thinning them down to what the ground can mature, and rooting up every weed. After this they have to be hoed and weeded, the idea being to work them until the plants cover the ground. The best experts say that the promise of a splendid crop was never better, and the tests made last year prove that the quality of Chino-grown beets is up to and ahead of any yet raised in any part of the world.

## San Joaquin.

**WATER FLOWING IN THE WOODBRIDGE CANAL.**—Stockton Independent: The big irrigating canal running from Woodbridge toward Stockton is now carrying water a distance of ten miles to the point where the railroad line will be crossed. In the other branch of the canal, running in the direction of New Hope, water is running a distance of 1½ miles from the headgates. Farmers who live in that section of the county say the canal is a great success and the engineering work is correct in every particular. It was believed when the route was laid out for the canal to run toward Stockton that the company was attempting to make water flow uphill in the direction of Lodi, but now that the ditch is completed for ten miles, acknowledgment is made that the engineer knew his business. At the south end of the canal, distant ten miles from Woodbridge, the water is 4½ feet deep, but it is the intention to carry a larger volume when the embankments have become settled so there can be no possible danger of an overflow.

**TALL WHEAT.**—Independent: George Mosher measured some of his summer fallowed wheat a few days ago and found the stalks more than seven feet high. The wheat heads are not longer than in former seasons when the stalks were four feet high, but there are more kernels than usual and the general yield will be very large.

## Santa Barbara.

**DISTRICT FAIR DATE.**—Santa Maria Times: The Board of Directors of our new agricultural district held a meeting at Santa Maria and fixed the dates for holding our next fair—Sept. 1st, 2d, 3d and 4th. Our farmers and fruit-growers should begin to stir themselves early to make preparations for the coming dates. We should endeavor to make our fair superior in every respect to any of its predecessors. It has been demonstrated many times in the past that our valley is capable of getting up an exhibit that will vie favorably with anything of the kind ever placed before the public in Southern California, and, considering our State appropriation and the enlargement of the district, we ought to be able to get up an exhibit that will excel any effort in this direction in the past. Each one must remember, to make an unqualified success of the fair, there must be a co-operation and all interested pull to that end.

## Sonoma.

**PEACH STEMS.**—Bakersfield Californian: One of the Hunt brothers, now visiting here from Santa Rosa, has recently made a tour through the fruit regions of Delaware, and also inspected many canneries there. He reports that almost the entire demand in Delaware is for freestone peaches, very few cling now being raised, and they finding little favor. This year he was told 5,000,000 four-year-old trees would come into bearing, with every prospect of yielding largely. The canneries there do not order in advance, but buy peaches by the wagon-load as they are brought in from day to day, and each day's price may vary more or less, according to the supply. At his home in Santa Rosa, his firm expects to can about 3500 tons of peaches this year, chiefly the Early Crawford. One peculiarity of this variety of peach is that, like the apricot, they all ripen at once; and as the crop there this season will amount to some 8000 tons, it is going to be a great undertaking to handle them all, especially as the cannery will require about all the labor to be had. Mr. Hunt remarks especially that a late cling, like the Georges or Orange, is pre-eminently the peach to be raised here, as it has no Eastern competitor, nor, for that matter, any rivalry in this State. Kern valley is admirably fitted for its growth, and as it keeps so well, and ripens gradually, there is no need for the high pressure haste which attends upon an Early Crawford or apricot.

**THE DISTRICT FAIR AT PETALUMA.**—Santa Rosa Republican: The present season's races and exhibit at the District Association at Petaluma promise to excel all former efforts there. The track has been materially improved, and many useful and convenient additions have been made to the grand stand and buildings upon the grounds. Many of the noted horses of the State will participate in the races, and the exhibits of products and live-stock will be particularly fine. It is proposed to run excursion trains from all points in the county, on particular days during the fair, for the purpose of taking the school-children to see the fair. Neither effort nor expense will be spared by the management in making this a success. Prizes of \$100 down to \$20 will be offered for best exhibits. The fair is to occur the last week of August.

## Stanislaus.

**THE POTATO CROP.**—Oakdale Leader: Early in the season it was predicted that the potato crop this year would be good, and people planted largely; but notwithstanding the

abundance of rain, the crop in these parts is a partial failure. It is our experience that the crop raised on the first plowing or breaking up of the ground is always the best. Be this as it may, the potatoes this year on sand land are almost a failure, and such as did grow are small and unmarketable. Whether or not irrigation would have benefited the crop is not certain, as there is plenty of moisture in the ground up to this date to mature a good crop. There may be something in the kind of seed planted, or in the rotation of crops of the same kind, on the same ground, but we think the sandy soil is not adapted to the successful raising of this sort. Abundance of manure and plenty of water might be made to produce a good crop of this much-needed esculent.

## Sutter.

**EARLY PEACHES.**—Yuba City Farmer, June 12: The peach trees are bending beneath the weight of the large, luscious fruit, which, on the early varieties, are now being picked for shipping. The Briggs Red May is the principal variety, are being picked from the orchards of H. P. Stabler, J. L. Duncan, B. F. Walton, J. B. Wilkie, Geo. Brittan, C. Weeman, Sutter County Orchard Company, Abbott & Phillips, and others. A lot from Geo. Brittan's orchard at Sutter City have been already shipped to Portland. The Earl Fruit Company will load a car at the depot here and ship the same East next Monday, the fruit to be supplied from the above-named orchards. Apricots are being picked by a few for shipping but are rather green yet. The cannery will start operations about a week from next Monday on apricots, of which there are large quantities engaged.

## Tulare.

**VISALIA FRUIT NOTES.**—Times, June 11: A quantity of apricots were shipped from this city on Monday last to Portland, Seattle, Denver and other points. The fruit was secured from Visalia orchards, and was purchased at 1½ cents per pound. Next week several carloads will be shipped to Denver and Chicago. The apricot crop is good in the Lucerne valley; that is, at Hanford, Grangeville, Lemoore and Armona, and much of it will be shipped East in a green state. In the spring of 1890, W. F. Kelsey planted 1000 grapevines, of the Thompson Seedless variety, which have made such a growth this year that it is now impossible to run a cultivator between the rows of vines. More remarkable still is the fact that these vines are now heavily laden with bunches of grapes, and there is promise of a yield of 50 pounds to the vine. Every vine is not bearing so heavily, but the majority of them will give the yield stated.

**STANISLAUS CO. DISTRICT FAIR.**—Modesto News: The first annual meeting of the Stanislaus Stock-Breeders' Association near Modesto, on October 14, 15, 16 and 17, 1891. The directors will secure a pavilion in the city of Modesto.

## Ventura.

**FIG CULTURE.**—Downey Champion: Among the many varieties of fruits in the mammoth orchard of D. C. Cook, Ventura county, the fig stands at the head of the list. Mr. Cook has shown his confidence in the value of the fig as a paying crop by devoting to that fruit alone 650 acres of his orchard. In 1887 the fig production of the State was 90,000 pounds; in 1889 it was 100,000 pounds, and in 1890, 200,000 pounds. With this increase in production came an increased demand, and the receipts from abroad in 1887, 8,724,583 pounds were swelled to 10,649,049 pounds in 1889 to meet the demand. Of the many varieties of figs in cultivation in Southern California, the White Smyrna for drying and crystallizing has been given the preference by experienced growers, not only on account of its excellence, but its superior habit of ripening its fruit at the most favorable season for drying and the shortness of its picking season. During the past two years, in the southern tier of counties, hundreds of acres of fig orchards have been planted, which will soon come into bearing. In a very few years Southern California will send East her train loads of dried figs, as she is now doing with her raisins and other fruits.

**A SHORT HONEY CROP.**—Free Press: From W. F. Richardson of the Simi, who was seen a few days ago, it was learned that the honey crop will be light this year because of the unfavorable weather in May. Mr. Richardson has four or five bee camps, and is one of the most prominent bee men in Southern California. The cold weather during May kept back flowers and made the bees rather heavy.

## NEVADA.

**CATTLE FOR WASHINGTON.**—Reno Gazette, June 11: George Wright will ship another train load of cattle to Washington on the 13th. Mr. Wright has been picking up small lots here and there for the past two weeks, until he has about all he wants.

**CATTLE POISONED.**—Tuscarora, May 25: Quite a number of cattle in Smoky and Monitor valleys and Meadow canyon, Nye county, were recently poisoned by eating wild parsnip. The Anderson brothers of Meadow canyon have lost about 20 head of steers.

"My father, at about the age of 50, lost all the hair from the top of his head. After one month's trial of Ayer's Hair Vigor, the hair began coming, and, in three months he had a fine growth of hair of the natural color."—P. J. Cullen, Saratoga Springs, N. Y.

# THE CALIFORNIA STATE FAIR OF 1891

WILL OCCUR AT SACRAMENTO, The STATE BOARD OF AGRICULTURE

September 7th to 19th Inclusive

(TWO WEEKS).

**See That Your County  
Is Represented.**

LOCALITIES that exhibit their capabilities are attracting buyers. PRODUCTS speak for themselves if given an opportunity.

TO LAND OWNERS that desire to establish colonies we say, Make your showing at the State Fair, where people congregate to make comparisons.

No Productions Shown,  
No Visitors Call.  
No Visitors,  
No Sales.  
No Sales,  
No Progression.  
No Progression,  
No Nothing.

ANY COUNTY that earns a Premium as a County, at the State Fair attracts attention of home-seekers, which means NEW BLOOD, NEW IDEAS, and ADVANCEMENT in all industrial lines, as well as general progression throughout.

BEGIN YOUR PREPARATIONS WITH HARVEST. It is a year of Agricultural Prosperity. TAKE ADVANTAGE OF IT.

Devotes Over \$5000 This Year to

PREMIUMS FOR AGRICULTURAL PRODUCTS

(EXCLUSIVE OF LIVE STOCK).

THE FIRST PREMIUM IN COUNTY EXHIBIT DEPARTMENT IS \$750.

A NEW FEATURE by way of a Special Award for Farm Products grown by individuals will be given this year. The first premium is \$350; second, \$150.

### THE CYLINDER GRADER

Has Proven the most Rapid Working Machine that has ever been introduced. Its capacity is practically unlimited, as it will grade the fruit as fast as it can be fed into the machine.

SEND FOR CIRCULARS AND PRICES.

D. D. WASS, 141-143 First Street, San Francisco.

FOR GRADING ORANGES, PRUNES, OLIVES,  
WALNUTS, PICKLES, ETC.

Will Grade Green or Dried Fruit Equally Well.

TUSTIN, Sept. 17, 1890.—MR. D. D. WASS, San Francisco.—Dear Sir: The Grader arrived the 3d inst., and I had no trouble in putting it up and operating it. It worked like a charm, and I could easily grade five tons of fruit a day. I have finished and shipped my crop. I wish you would now explain the attachments or screens for grading oranges. If they grade oranges as nicely as prunes, I want them. Please describe them and state the price. Yours, etc., J. H. CREW.

DIPPING BASKET.

Heat. An original design, better than anything in the market. On rollers, so that the whole structure can be easily turned, any side to the sun. Built with a view to taking it to pieces for jacking and shipment. Price only \$100. Apply to JOSEPH H. DORETY, 527 Commercial St., San Francisco.

## Stockton and Her Industries.

[By J. C. H.]

A RURAL reporter visited Stockton last week and spent a whole day examining the great industries and agricultural plants now in full operation in that city. Within six months over \$500,000 worth of agricultural machinery has been built in that city, and the most gratifying part of it is, that at this moment it is all under contract for delivery or has been delivered. The combined efforts of the four large agricultural machinery plants that make a business of manufacturing combined harvesters are now sold out, and the Stockton O. H. & A. Works have put on the stocks ten new machines, under special orders as a favor to some of their friends, hoping that by putting on an extra force of men to get them ready for the harvest. At the depot and in the yards the bright-painted machinery was scattered in every direction, and on the cars the most that could be seen for freight was combined harvesters, headers, wagons, and one California thresher, built under Laufenberg's patents by the S. O. H. & A. Works especially for the Salinas valley. Four of these threshers or separators have been built this year under order, and orders were placed for four more, which could not be completed this season.

The Matteson & Williamson agricultural works, Holt Bros., wheel factory, and Houser, Knight & Haines were almost completely sold out of combined harvesters, and were repairing old ones to meet the pressing necessities of the farmers.

The new mammoth flour mill was up to its full height and is now being made ready for putting in the machinery. The new wooden flour mill near the depot was running, and has a fine local reputation for making extraordinary fine flour.

The San Joaquin Valley Agricultural Association has nearly enough money subscribed for making their kite-shaped track, and it is expected, with the fine program that they are offering, that their District fair will fairly eclipse anything that has ever been seen in the San Joaquin valley.

Mr. R. F. Wilson, manufacturer of the improved Davis wind-mill, has erected a factory on his block of land that he purchased last spring, and has a 20-horse power vapor engine, which he expects to run by natural gas, as it is situated close to a large well that has a superabundance of natural gas. He has a full force of men at work on a county order of six wind-mills, duplicates of the ones he built last year for San Joaquin county.

The new court house in Stockton is finished, and the grounds around it are now being ornamented.

The H. C. Shaw Plow Works have had a large volume of business, and their force of men was quite busy preparing agricultural implements to send into the interior. Their spading harrow has proved one of their drawing cards this year.

In every part of the city of Stockton there are neat cottages going up, suitable for the working men, and the city seems destined, as we always considered that it would, to become the great manufacturing center of the Pacific Coast. One feature of the San Joaquin Valley now, as compared with former years, is that during the last two or three years large houses have been built at the expense of knock-down rookeries, for families to live in, costing from \$3,000 to \$4,000 and up to \$10,000 each. With the very fine depot that is about to be erected in the city, and with the large demands for the new addition to Stockton which has been added, known as Fair Oaks Tract, on all sections of which new houses are going up, it is safe to say there is no city in the State to-day that has more substantial and progressive prosperity than the city of Stockton.

THE RURAL PRESS has taken a deep interest in the development and growth of the manufacturing for improved agricultural implements and machinery in the city of Stockton, and joins with her citizens in commending the enterprises as a signal triumph for California.

## Alameda Co. Farmers' Institute.

The first session of this body will be held at Haywards, opening at 2 P. M., Friday, August 7th, and continuing during Saturday. Farmers are invited to contribute original papers on subjects of direct interest to farmers and horticulturists in Alameda county. A more complete report of the organizing meeting at Niles last Saturday will be given later.

All farmers, their families and friends interested in the subjects to be discussed, are expected to attend and enjoy the occasion.

FINE STOCK FOR JAPAN.—J. H. White of Lakeville, Sonoma county, sold six choice Holsteins last week at satisfactory prices. There were three thoroughbreds, consisting of two cows and one bull, and three more of high grade. They were bought to be shipped to Japan.

It is conjectured that a specific may yet be found for every ill that flesh is heir to. However this may be, certainly the best specific yet found for diseases of the blood is Ayer's Sarsaparilla, and most diseases originate from impure blood.

APIARIAN SUPPLIES.  
Italian Queens, \$2.50 each; Black Queens, \$1 each. Swarms from \$2.50 each; Smoker, \$1. Comb Foundation, \$1.25 per pound; V-groove Sections, \$4 per 1000. Comb Honey wholesale and retail; Hives, etc. W. STYAN & SON, The Homestead Apiary, San Mateo, Cal.

## List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey &amp; Co., Pioneer Patent Solicitors for Pacific Coast.

- FOR THE WEEK ENDING JUNE 9, 1891.  
456,767.—TOOLS FOR CUTTING HOLES AND WASHERS.—Jas. Addison, S. F.  
453,963.—PENDULUM BAR TREADLE.—E. A. Cochran, Pasadena, Cal.  
453,768.—SAFETY GUARD FOR CARS.—L. J. De Puy, Phoenix, A. T.  
453,859.—FRUIT-SLICER.—Flickinger & Graham, San Jose, Cal.  
453,902.—PLUMB AND LEVEL.—Garner and Connaughton, LaJourell Falls, Or.  
453,769.—ORE FURNACE.—J. L. Giroux, Jerome, A. T.  
453,636.—BAG HOLDER.—E. Henretty, Portland, Or.  
453,841.—SAFETY CHECK-REIN HOOK.—A. Kempkey, S. F.  
453,658.—DEVICE FOR STEAMING FRUIT.—Phelan & Eldridge, Portland Or.  
453,915.—DOOR CHECK.—David Rankin, Pasadena, Cal.  
453,778.—ADDING MACHINES.—A. E. Shattuck, S. F.  
453,765.—SHUTTER FOR FIRE GRATES.—W. H. Vance, S. F.

### Horse Liniment

Is certainly the best preparation of its kind in the market. Ranchers, Stock Raisers and Horse Owners of every description will tell you that it does good work every time.

Messrs. H. H. Moore & Sons, Stockton, Cal.—GENTLEMEN: In answer to your inquiry, would state that I used your H. H. H. Liniment on my Holland prize-winning cow, "Lena Menlo," for a wrenched shoulder, and it relieved her very much. She calved the next day, and while still suffering from the sprain gave the largest authenticated quantity of milk ever given on this coast (10½ gallons per day), showing conclusively the great relief received from your remedy. I consider it a necessity in my stables, and when away from home feel perfectly safe, as inexperienced men can do no harm with it, as they can with the more powerful liniments. Respectfully yours, FRANK H. BURKE, Breeder of Registered Holsteins and Berkshires, Menlo Park, Cal., January 22d, 1889.

MANUFACTURED BY

VETERINARY SURGEON,

Member of the Royal College of Veterinary Surgeons,

London, England.

GRADUATED APRIL 22, 1870.

Advice by Mail, \$2.

OFFICE AND PHARMACY:

631 O'Farrell St., cor. Hyde, San Francisco.

Open Day and Night. Telephone No. 2094.

## Educational.

## Van Ness Young Ladies' Seminary,

1222 Pine St., San Francisco.

A FIRST-CLASS PRIVATE SCHOOL UNDER THE ownership and direction of DR. S. H. WILEY, aided by a corps of 12 experienced teachers. Numbers limited; home care; instruction the choicest; music a specialty. Only a few vacancies; apply soon. Term begins August 3d. Send for circulars.

## Bowens Academy,

University Ave., Berkeley.

BOARDING AND DAY SCHOOL FOR BOYS AND YOUNG MEN.

Special university preparation, depending not on time, but on progress in studies.

T. S. BOWENS, M. A., Head Master.

## School of Practical, Civil, Mechanical and MINING ENGINEERING,

Surveying, Architecture, Drawing and Assaying,

728 MARKET ST., SAN FRANCISCO, CAL.

Open all year.

A. VAN DER NAILLEN, President.

Assaying of Ores, \$25; Bullion and Chlorination Assay, \$25; Blowpipe Assay, \$10. Full Course of Assaying, \$50. ESTABLISHED 1864. Send for Circular.

## IRVING INSTITUTE.

A Select School for Young Ladies.

Fifteenth Year. Eighteen Professors and Teachers. For Catalogue or Information address the Principal,

REV. EDWARD B. CHURCH, A. M., 1036 Valencia Street, San Francisco, Cal.

## The Only Actual Business College ON THE PACIFIC COAST.

This popular institution stands upon its merits as the live, progressive, practical Commercial Training School of San Francisco.

Individual Instruction given in the English Branches, Commercial Law, Penmanship, Commercial Correspondence, Shorthand, Typewriting, and Book-keeping in all its forms.

Expert Accountants of wide experience only, employed as teachers of Book-keeping and Commercial Customs.

First-class board at the College Boarding Hall, under the management of members of the faculty, at \$13 per month.

ENDORSED BY THE FARMERS' ALLIANCE OF THE STATE OF CALIFORNIA.

Send for Illustrated Catalogue, and copies of our College Journal. Address

San Francisco Business College, Cor. Market and Jones Sts., San Francisco, Cal.

IF YOU WANT A FIRST CLASS THOROUGH SCHOOL and a pleasant, refined, safe home for your boys, send them to

## HOPKINS ACADEMY,

OAKLAND, CALIFORNIA. Next term begins August 5th, 1891. Send for Catalogue to W. W. ANDERSON, Principal.

BUSINESS COLLEGE, 24 POST ST., S. F.

FOR SEVENTY-FIVE DOLLARS THIS College instructs in Shorthand, Type Writing, Book-keeping, Tel-graphy, Penmanship, Drawing, all the English branches, and everything pertaining to business for six full months. We have sixteen teachers, and give individual instruction to all our pupils. Our school has its graduates in every part of the State.

Send for Circular.

E. P. HEALD, President.

C. S. HALEY, Secretary.

TUITION ONE YEAR (52 WEEKS).....\$75 00  
TUITION SIX MONTHS (24 WEEKS).....50 00  
EXCELLENT BOARD PER MONTH (4 WEEKS).....10 00

Course Thorough, Rates Lowest, Instruction the Best, and School the Most Reliable.

Address W. C. RAMSEY.

## GRANGERS' BUSINESS ASSOCIATION, SHIPPING AND COMMISSION HOUSE.

OFFICE, 108 DAVIS STREET, SAN FRANCISCO, CAL.

Warehouse and Wharf at Port Costa.

CONSIGNMENTS OF GRAIN, WOOL, AND ALL KINDS OF PRODUCE SOLICITED.

Money advanced on Grain in Store at lowest possible rates of interest.

Full Cargoes of Wheat furnished Shippers at short notice.

ALSO ORDERS FOR GRAIN BAGS, Agricultural Implements, Wagons, Groceries and Merchandise of every description solicited.

E. VAN EVERY, Manager.

A. M. BELT, Assistant Manager.

## CARBOLINEUM AVENARIUS.

[REGISTERED.]

Preservative Against Rotting, Decay, Fungus, Etc., of Wood &amp; Stone. REMEDY AGAINST DAMP WALLS. PROOF AGAINST TEREDOES.

WHAT WE GUARANTEE CARBOLINEUM AVENARIUS TO DO:

1. To preserve any kind of Wood above or under ground of water, and prolong its life at least one hundred per cent.
2. To prevent moisture from penetrating into brick or stone walls and preserve them same as wood.
3. To keep off all sorts of Insects, Vermin, or other enemies or wood or objectionable and destructive agencies.
4. To prevent Rats and Mice gnawing wood coated with Carbolineum Avenarius.
5. To disinfect barns, stables or residences and destroy Mice.
6. To force all moisture out of the wood without closing the pores.
7. To prevent shingles coated with Carbolineum from rotting, warping or cracking.
8. To prevent Rope treated with Carbolineum from rotting, causing it to remain pliable and excellent Tar Coating.
9. IMPORTANT!—Teredoes will not attack Timber coated with Carbolineum Avenarius.
10. It does not contain any acids or other poisonous ingredients injurious to fibers of wood.
11. It is the cheapest and best Wood Preserver in the World.

All the above statements are facts, and all our testimonials to that effect are genuine and indisputable.

CARBOLINEUM WOOD-PRESERVING CO.,

MUECKE &amp; CO., Pacific Coast Agents, 319 California St., San Francisco, Cal.

## SPECIAL!

## P. &amp; B. Fruit Papers

(PATENTED.)

ESPECIALLY ADAPTED FOR FRUIT DRYING.

No need of expensive wooden trays. No need of turning fruit. Costs much less than any other method. SAMPLES AND CIRCULARS FREE.

## PARAFFINE PAINT COMPANY,

116 BATTERY STREET, SAN FRANCISCO.

S. F. OFFICE, 29 STEUART ST.

## Poultry and Stock Book

Niles's new manual and reference book on subjects connected with successful Poultry and Stock Raising on the Pacific Coast. A New Edition, over 100 pages, profusely illustrated with handsome, life-like illustrations of the different varieties of Poultry and Live-Stock. Price, postpaid 50 cts. Address PACIFIC RURAL PRESS Office, San Francisco, Cal.

BUSINESS CHANCE, FOR MAN OR WOMAN Address, C. R. ORCUTT, Orcutt, California.

## S. E. MARKET REPORT

## Market Review.

## DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, June 17, 1891.

The weather continues favorable in nearly all parts of the State for growing crops. Harvesting of barley is well underway, and that of wheat is enlarging. The general outlook to the acre, so far as obtainable, indicates that it will be larger than claimed. Fruit is being marketed at exceptionally good prices, considering the increased crop. Money generally easy, with no stringency looked for, even when the movement of cereals is at its height. The Eastern and European wheat markets fluctuate, being largely governed by weather influences. The following is a copy of to-day's press telegram.

LIVERPOOL, June 17.—Wheat—Firmly held. California spot lots, 8s 4d; offcoast, 4s 6d; just shipped, 4s 4d; nearly due, 4s 3d; cargoes off coast, steadily held; on passage quiet, but steady; Mark Lane wheat, quiet, English country markets, slow; French country markets, steady; wheat and flour in Paris, quiet; weather in England, brilliant.

## Liverpool Wheat Market.

The following are the closing prices paid for wheat options per cwt. for the past week:

	June	July	Aug.	Sept.	Oct.	Nov.
Thursday.....	88 3/4	88 3/4	88 3/4	88 3/4	88 3/4	88 3/4
Friday.....	88 3/4	88 3/4	88 3/4	88 3/4	88 3/4	88 3/4
Saturday.....	88 3/4	88 3/4	88 3/4	88 3/4	88 3/4	88 3/4
Monday.....	88 3/4	88 3/4	88 3/4	88 3/4	88 3/4	88 3/4
Tuesday.....	88 3/4	88 3/4	88 3/4	88 3/4	88 3/4	88 3/4

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday.....	44 3/4	44 3/4	44 3/4	Quiet but steady.
Friday.....	44 3/4	44 3/4	44 3/4	Inactive.
Saturday.....	44 3/4	44 3/4	44 3/4	Slow.
Monday.....	44 3/4	44 3/4	44 3/4	Sellers offer concessions.
Tuesday.....	44 3/4	44 3/4	44 3/4	Quiet but steadier.

## Eastern Grain Markets.

The following shows the closing prices of wheat at New York for the past week, per cental:

	June	July	Aug.	Sept.	Oct.	Jan.
Thursday.....	177	175	170 1/2	170 1/2	170 1/2	170 1/2
Friday.....	177	175	170 1/2	170 1/2	170 1/2	170 1/2
Saturday.....	177 1/2	175 1/2	170 1/2	170 1/2	170 1/2	170 1/2
Monday.....	177 1/2	175 1/2	170 1/2	170 1/2	170 1/2	170 1/2
Tuesday.....	177 1/2	175 1/2	170 1/2	170 1/2	170 1/2	170 1/2

The closing prices for wheat have been as follows at Chicago for the past week, per cental:

	June	July	Sept.	Dec.
Thursday.....	160 1/2	160 1/2	160 1/2	160 1/2
Friday.....	160 1/2	160 1/2	160 1/2	160 1/2
Saturday.....	160 1/2	160 1/2	160 1/2	160 1/2
Monday.....	160 1/2	160 1/2	160 1/2	160 1/2
Tuesday.....	160 1/2	160 1/2	160 1/2	160 1/2

NEW YORK, June 17.—Wheat—1.09% for June, 1.06% for July, 1.01% for August, 1.01% for September, 1.02% for December.

CHICAGO, June 17.—Wheat—95 1/2c for July, 92c for September and 93 1/2c for December.

## Foreign Grain Review.

LONDON, June 15.—The *Mark Lane Express* says: English wheat shows a tendency to decline. Prices of foreign wheat show an average decline of 6d. Dealings in American red for future delivery show prices are maintained, being quoted at Liverpool at 8s 1d for September delivery. Oats declined 6d. At to-day's market the tone was quiet. English wheats were held for 40s. Trade in foreign was slow. Flour was dull.

## Dried Fruits.

NEW YORK, June 14.—Late in the week there were large forced sales of foreign dried fruit in settlement of an estate. As the goods went to the distributors the tendency will be to keep trade quiet for a time. Apricots wind up weak. In prunes, there is no improvement in bids for new, which are deemed well sold at 8 1/2c. Raisins, 1000 boxes of three-crown, on the wharf, sold at 1.25. Some loose Muscatels went at 80c. The best layers are not plentiful here. It is likely that some parcels will be recalled from Boston. Price unchanged.

NEW YORK, June 15.—Commercial Bulletin: The annual June drop in California prunes on the coast is a subject of more or less interest, but New York seems more affected just now by the June drop in the demand for futures, while spot goods are almost neglected. However, the trade hopes for better things later on. A small line of strictly fancy quality evaporated California peaches, in boxes, sold at 11c per lb. Ordinary stock would do relatively as well at present, although supplies latterly have got into better shape.

## Eastern Wool Markets.

BOSTON, June 12.—The demand for wool is more active. The largest business has been in Spring California, some 590,000 lbs having been sold on private terms, but at low price, supposed to be in the neighborhood of 50c for clean. Considerable Territory wool has also been sold at an average of 22 1/4c, as to quality, and on a scoured basis at 62 1/2c fine, 60 1/2c for fine medium; 55 1/2c for medium new Spring.

NEW YORK, June 12.—Bradstreet's trade in the wool market continues quiet. Manufacturers are taking very little wool and sales are mostly of small lots. The markets are well cleaned out of good wools and inferior grades are not in demand. Values have again declined, owing partly to the inability of dealers to dispose of the stocks at old figures and London cables, which have announced lower prices for some grades. It is said that 348,000 bales are now offered at London. Choice wools are firm at the prices ruling during last sales. Inferior wools show a decline of five per cent. New domestic wools are coming forward slowly. It is impossible as yet to form a correct estimate as to the character of the clip in different States, but judging from that which is already here, it will not be up to that of last year, though the amount will probably be larger. Ohio and Michigan fleeces are still dull and lower. Domestic are all quiet, though choice lots are regarded as good property. Sales of Australian have not been as large as those of last week. Values of best grades are still firm. Very little is doing in carpet wools.

NEW YORK, June 15.—There was a livelier movement in new wool, but no stiffer condition of prices, at any seaboard market. Manufacturers have no large prompt needs, but have begun to take repu-

table marks of unwashed, which they can hold and feel safe as to cleaning cost. Good quantities of old Texas wool are now out of Boston's way; much of it was at buyers' favor. New York's dealings are chiefly in cheap foreign goods. Late English sales supported rates for anything of interest in American use.

## Visible Supply of Grain.

NEW YORK, June 15.—The visible supply of grain in store and afloat, as compiled by the New York Produce Exchange, is as follows: Wheat, 15,502,000 bushels, a decrease of 956,000 bushels; corn, 4,956,000 bushels, a decrease of 651,000; oats, 4,263,000 bushels, an increase of 236,000; barley, 115,000 bushels, a decrease of 33,000.

## New York Fruit Crop.

ROCHESTER, N. Y., June 8.—The *Democrat and Chronicle* has authentic reports from 48 fruit-growing districts of Western New York, which give a most discouraging outlook for fruit this season. The apple crop is again, for the third successive year, almost a complete failure. Of 6000 trees in one Wayne county orchard but 800 blossomed. Reports from Lockport, Medina, Albion, Batavia, Attica and Mt. Morris all tell the same story of short crops. In the Tonawanda valley frosts have destroyed the entire crop. Niagara county will not have a fifth of an average crop because of frosts and apparent exhaustion of trees. The crop of Bartlett pears will be insignificant. A fair yield of Duchesse d'Angouleme pears and a good crop of white cherries in some localities may be looked for.

## Miscellaneous.

NEW YORK, June 13.—Lima beans, choice spot better at \$2.70-\$2.75 per bushel.

In hops the situation is the same, 32c top for all best spot. English crop conditions are reported unfavorable.

## Local Markets.

	Buyer	Season	Seller
Thursday.....	163	167 1/2	163
Friday.....	163 1/2	163 1/2	163 1/2
Saturday.....	163 1/2	163 1/2	163 1/2
Monday.....	163 1/2	163 1/2	163 1/2
Tuesday.....	163 1/2	163 1/2	163 1/2

## \*After August.

	Buyer	Season	Seller
Thursday.....	105 1/2	105 1/2	117 1/2
Friday.....	105 1/2	105 1/2	117 1/2
Saturday.....	105 1/2	105 1/2	117 1/2
Monday.....	105 1/2	105 1/2	117 1/2
Tuesday.....	105 1/2	105 1/2	117 1/2

## \*After July.

BAGS—Large importations, with more consignments near at hand, combined with free supplies held in this State, cause a weak market at 7 1/2c for hand sewed, standard size.

BARLEY—A systematic movement appears to be making to break the spot market. In futures dealing is light. The following are to-day's Call Board sales: Morning Session: Seller 1891—100 tons, \$1.05 1/2; Buyer 1891, after July 1st—100 tons, \$1.17. Buyer 1891, after August 1st—100 tons, \$1.13 1/2. August, 200 tons, \$1.06 1/2; 200, \$1.07 1/2; 100, \$1.07 1/2. Afternoon Session: Seller 1891—100 tons, \$1.05. Buyer 1891, after August 1st—100 tons, \$1.13 1/2.

BUTTER—Warm weather from Saturday up to last night Tuesday, caused holders to be more anxious to sell. With the first signs of weakness buyers were offish. There is more offering for shipment from the Central States.

CHEESE—Continued free receipts and an offish demand cause a weak feeling to prevail.

EGGS—The market is weak and lower under free receipts from the East, with more en route together with the lessened local consumption that always obtains in June and July.

FLOUR—The market is steady at current quotations.

WHEAT—The local sample market is strong under light available supplies and evidences that a corner is being run in buyer options. Press cablegrams from Germany report that the crop will certainly be below an average. France's crop is also short. Trading in our market in futures has been quiet. The following are the reported sales made on to-day's Call:

Morning Session: Seller 1891—200 tons, \$1.54 1/2; 100, \$1.54 1/2. Buyer 1891, after August 1st—700 tons, \$1.62 1/2. Afternoon Session: Buyer 1891, after August 1st—100 tons, \$1.62 1/2; 100, \$1.62 1/2.

## Market Information.

## Cereals.

London *Agricultural Gazette*, June 1: The wheats have not been well suited by the cold nights and violent changes in temperature which have occurred since the first rains, and there has been more or less loss of color, particularly on poor clays and on the thinner light soils. The same remark will ap-

ply in less degree to the barley and oat crops. In fact, the growing cereals have "gone a Maying" about a month later than usual, but there is no serious harm to be apprehended if they get plenty of sunshine from now forward.

H. Kains Jackson in *London Farmer and Stock Breeder* June 1: In addition to a threatened shortage in the wheat crops of Northwestern Europe, which stimulates free buying of stocks offered, the adopted policy in France of making a Government reserve of 700,000 to 800,000 quarters of wheat, has emphasized demand, and probably will suggest to other governments to go and do likewise.

The local wheat market has held to fairly strong prices throughout the week, considering the strong bear pressure that is being brought against futures. The light supply of available wheat in this State, Oregon and Washington is in favor of holders, and also of the first receipts of new crop, while confirmed advices of a shortage abroad causes the bears to fight shy of too strong a raid. Our exchanges from the East and also from abroad indicate that many farmers will, as usual, market their crop as soon as harvested, which, if correct, will tend to keep values down during the first three months of the harvest year. There are those who believe, and whose opinion is based on statistical information, that before May 1, 1892 we will witness higher prices than have been reached at any time in this year. Crop advices from the East are favorable for a large outturn. In this State the prospects continue of a flattering character, taking the State as a whole. The Oregon Weather Bureau, June 13th, reports as follows: Western Oregon—Fall wheat has lodged in places, but on the whole, never presented better prospects for a large yield. Spring wheat has been greatly benefited by the weather conditions and promises an unusually good crop. Warmer weather and sunshine would be of great benefit. Eastern Oregon—The rain was of great benefit to growing crops. The hot winds of May 25th burnt considerable wheat, but the rains have done far more benefit than the hot winds did damage. Through the wheat districts the rains were not as heavy as in the other sections, but some fell through the entire wheat area. In the Grande Ronde valley, spring wheat is late in coming up, but the present moisture insures the crop. Entire Eastern Oregon and Washington have been favored with suitable weather conditions to further improve the good prospects for an abundant harvest. Free offerings of new barley have caused buyers to bid down. It now looks as if some of the so-called commission houses are trying to force prices to as low a level as possible, but it is only just and right to say that there are other houses trying to sustain the market. The samples exhibited so far on Call are a much better average than was shown in the commencement of the season last year. There can be no doubt but the crop will not equal the requirements although the outturn will be more than it was in 1890. In Eastern Oregon and Eastern Washington, it is feared that the crop will be injured by hot weather, notwithstanding the promising outlook at this writing. In 1889, hot weather at about this time burnt up the bulk of the crop. There, as in California, farmers are seldom out of the woods until after the grain is harvested.

Notwithstanding the available supply of oats is light the market is weak in sympathy with barley. Crop prospects are good in this State and Western Washington. Corn is barely steady. The light available supply, causes the market to be extremely feverish. Forced purchases have to be made at higher prices than we quote, while force sales are difficult to make at quotations. Heavy receipts of rye cause the market to rule easy.

## Feedstuff.

Poor pasturage creates a good demand for feed, and as the supply of grain and middlings are never very large at this season of the year, millers have marked up prices another fraction. Ground barley is weak at lower prices. Feed meal is steady.

Poor to fair hay is offering more freely, and for which concessions are obtainable. Choice to extra choice grades are strongly held. Some heavy contracts are reported, but the prices agreed on are not divulged. It is claimed they average about 10 per cent more than at a like time in 1890.

## Live-stock.

The market for bullocks, mutton sheep, calves and hogs does not show any material change. The liberal supply of fruits and vegetables and fears of warm weather are against sellers. In both Nevada and Arizona, bullocks are appreciating.

The market for dressed cattle is quoted as follows [to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent]:

HOGS—On foot, light grain fed, 5 1/2c @ 5 3/4c # lb. dressed, —@—c # lb.; heavy, 5 1/2c @ 5 3/4c # lb.; dressed, —@—c # lb. Stock hogs, 4 1/2c @ 4 3/4c # lb.

BEEF—Stall fed, 6 1/2c @—c # lb.; grass fed, extra, 6 @—c # lb.; first quality, 5 1/2c @—c # lb.; second quality 5 @—c # lb.; third quality, 4 @—c # lb.; bulls and thin cows, 2 @ 3c # lb.

## Fruits.

Warm weather the past week is forcing the ripening of berries, cherries, peaches and apricots, which naturally creates freer shipments to this city. Blackberries and raspberries are in liberal supply and at lower prices. Canners will soon be able to handle the former. It is claimed that they will put up this year largely increased quantities of blackberries. Peaches are coming in freely. The receipts indicate that the quality this year will be unusually good. Pears and apples are improving slowly. Australia sent us by the last steamer nearly 2500 boxes of good to extra choice.

Canners are paying the following prices per ton: \$40 @ 50 for Clingstone peaches; \$35 @ 45 for Free-stones; \$30 @ 37.50 for apricots; \$35 @ 42.50 for Bartlett pears; \$25 @ 42.50 for canning plums, and \$50 for drying plums.

The bulk of this year's cherries have been marketed, as is that of currants. As cherries are riper, shipments to the East are falling off.

Raisins are still dull and heavy. It now looks as if last year's pack in this State was fully 2,500,000. Had those packers who did not sell in the forepart of the season, not been misinformed by papers working in the interest of San Francisco buyers

(buyers who wished to sell their early purchases, while getting packers who did not sell to hold), they would have sold before the 1890 holidays and made money by it. We gave the pack at over 2,000,000 boxes, while other papers gave it at from 1,200,000 to 1,500,000 boxes.

Oranges are going out. Good-keeping seedlings and Mediterranean sweets are wanted, but over-ripe are slow of sale.

## Vegetables.

Garden truck continues to come in freely. Canners are running on peas and beans. Bay cucumbers are coming in, which means lower prices. Summer squash and other late truck are making a better showing.

As onions improve in quality, the demand enlarges, causing a stiffer market to rule.

Old potatoes are taken chiefly for feed. New potatoes are generally of good quality—better if anything, than last year. Free shipments overland are continued.

## Miscellaneous.

Poultry is generally firm at a slight advance. Receipts from the East are slower.

New crop honey is arriving. It sells in comb at a slight advance. It is now conceded that this year's crop in California will fall short of last year's yield.

Beans are slow. The supply is light, but the acreage planted this year is fully 25 per cent larger than in last year. The growing crop looks promising.

Old hops are virtually out of the market. Contracts are making for new at from 18c to 20c. It is claimed by some that some contracts have been made at an advance on the latter figure.

Wool continues to go out slowly. Stocks are large and assortments good, but buyers' views are not up to those of holders. The outlook promises better prices before the fall months pass.

Overland shipments in last month aggregate as follows, in pounds, over the Southern Pacific railroad route: Beans, 734,950; brandy, 358,230; fruit, dried, 302,700; deciduous, 489,970; deciduous and citrus, 5,929,280; hops, 91,240; potatoes, 4,751,490; raisins, 319,100; vegetables, 1,438,190; wine, 5,880,690; hay, 51,020; wool, grease, 3,869,360; pulled, 77,850; scoured, 162,640.

From reliable advices up to June 17, the following summary of tonnage movement is compiled:

	1891.	1890.
On the way to		
San Francisco.....	317,780	241,003
San Diego.....	26,018	13,535
San Pedro.....	14,642	1,384
Oregon.....	27,164	26,136
Puget Sound.....	30,050	32,323
Totals.....	415,654	314,381

## In port at

San Francisco, disengaged.....	15,526	9,593
" " engaged for wheat.....	28,984	26,600
" " for new crop.....	27,300	—
San Diego.....	2,581	—
San Pedro.....	2,009	5,999
Columbia River.....	13,447	—
Puget Sound.....	—	—

Totals..... 89,847 42,192

To get the carrying capacity, add 65 per cent to the registered tons as given above.

From July 1, 1890, to June 11, 1891, the following are the exports from this port: 1891. 1890.

Wheat, cts.....	13,425,019	13,393,578
Flour, bbls.....	1,107,685	1,082,178
Barley.....	257,248	952,248

## Auction Sales of California Fruit.

CHICAGO, June 12.—Sold one carload of Tartarian cherries at \$1.10 to \$1.25. Some in poor order were sold for less. Another sale of a carload Black Tartarian cherries sold for 90 cents to \$1.30; Royal Anne cherries for \$1.35 to 1.50, and Black Bigarreau for \$1.05 to \$1.50.

NEW YORK, June 12.—One carload of choice Black Tartarian and Black Bigarreau varieties of cherries from the California Fruit Union. They sold by auction at prices ranging from 65 cents to \$2 per box.

CHICAGO, June 13.—One carload black cherries sold for 65c @ \$1.20. White, 55c @ 90c.

NEW YORK, June 14.—Peaches—The first brought \$3 per box for such as would ripen up well. The Delaware crop is assured heavy. Cherries—A good feature; very showy tartarians quick at \$4.75; running range 65c @ \$2.50; fancy white, \$3.50. Philadelphia will hold auction sales of California fruits this season. As New York parties are interested the system may be turned to account when the excessive surplus is here.

CHICAGO, June 16.—One carload cherries at 65c @ \$1.10. The entire carload arrived in very bad condition, the fruit being over-ripe, soft and some of the boxes leaking. Two carloads sold as follows: Clyman plums brought \$3.65 @ 3.70; cherry plums, \$1.65; cherries, 75c @ \$1.50; Royal apricots, \$2.05 @ 2.15; peaches, \$1.50 @ 1.85.

## Fruits and Vegetables.

PACIFIC COAST WEATHER FOR THE WEEK.

(Furnished for publication in this paper by officer in charge of branch Signal office, Division of the Pacific.)

DATE. June 16.	Olympia.				Portland.				Eureka.				Red Bluff.				Sacramento.				S. Francisco.				Fresno.				Keeler.				Los Angeles.				San Diego.			
	W.	T.	F.	N.	M.	T.	Rn.	Weather.	Wind.	Temp.	Rn.	Weather.	Wind.	Temp.	Rn.	Weather.	Wind.	Temp.	Rn.	Weather.	Wind.	Temp.	Rn.	Weather.	Wind.	Temp.	Rn.	Weather.	Wind.	Temp.	Rn.	Weather.	Wind.	Temp.	Rn.

# THE RELIABLE CYCLONE WINDMILL.

No story need be told of the Cyclone or of the number that have been sold. They can be seen working in every inhabited part of the Pacific Slope whilst hundreds are exported every year. The Cyclone mill is not an experiment, but acknowledged by all who have used it to be the most powerful and durable mill on the market. It is simple in construction, has no cogs or complicated gearing to get out of order. Has only three principal bearings, heavily babbitted boxes and self oiling apartments. The wheel and vane of the Cyclone (which are the most durable parts of any solid wheel mill) are made strong and of well seasoned wood finished with the best lead and oil which neither blister in the sun nor is consumed by rust. Send for Illustrated Catalogue to

## Pacific Manufacturing Company,

575 MISSION ST., SAN FRANCISCO, CAL.

Manufacturers and Jobbers of Windmills, Pumps, Tanks, TUBULAR WELL TOOLS, Pipe, Fittings, Etc., Etc.

# INSURE YOUR DWELLING, BARN and GRAIN

WITH THE

INSURANCE COMPANY OF SAN FRANCISCO, CAL.

HONEST LOSSES PAID IN CASH.

# WASHING FREE!

The best bargain ever offered in Washing Machines for Hotel use is the celebrated

## HUMBOLDT WASHER,

Which always sold for \$10 and \$12, but is now offered at

\$5.00 CASH.

It is a Western machine, controlled by a live man, who is not ready to admit that California must take a back seat in manufacturing. It is worth any three \$5 Eastern machines.

Bargains in every line for everybody. Shoes, 40 per cent reduction on regular prices. Dress Fabrics at 5c, 8c, 10c, 12c, and upward, that are worth almost, or quite, double. Send for samples and find this true. Canned fruit from \$1 per dozen up. Raisins from 4 cents per pound to 7 cents. Our Home Circle mailed free. ask for it.

## SMITH'S CASH STORE,

416-418 FRONT STREET.

## JAPANESE INSECT DESTROYER

For the protection of Cabbage, Squash, Cucumbers, in fact all vegetation from destructive insects. Contains no poison. Price by mail 25c. Stamps accepted. Friend Medicine Co., Graham, Neb.

# THE JUDSON RABBIT-PROOF WIRE & PICKET FENCE.

fence colored RED by boiling in a chemical solution that preserves the wood. Address JUDSON MANUFACTURING COMPANY, 14 and 16 Fremont Street, San Francisco.

# "PRESERVATIVE"

ACKNOWLEDGED THE BEST AND ONLY

## Pure Preservative

—FOR—

## MILK, CREAM, BUTTER AND CHEESE.

Will keep Milk and Cream sweet and fresh even in the warmest and muggiest weather. Butter and Cheese kept fresh in their original condition for many months.

It has been the aim of science these many years to counteract the disadvantageous influence exercised by heat and atmospheric changes upon animal and vegetable food. The experiments have been many and the remedies proposed very numerous, but all were found to be ineffectual, impracticable and useless until the discovery of Preservative was made.

## A Simple Experimental Test.

Persons who wish to convince themselves of its effectiveness should send for sample, which we mail free, and by taking two separate quarts of new milk; into one put 1/4 of a teaspoonful of Preservative; put nothing into the other, and set them side by side so that the temperature of the milk may be the same. See which keeps sweet the longer and which raises the more cream.

Preservative is the only genuine preservative that has ever been discovered. It is the cheapest, because it is not only the BEST, but because, at the same time, it is Harmless, Tasteless, Odorless, Simple, Economical, and, above all, absolutely Effective.

Circular giving full directions how to apply Preservative, as also prices and other information desired, can be had of

## G. G. WICKSON & CO.,

## WORTH'S PATENT

Combined Screw and Toggle Lever

## WINE, CIDER AND OLIVE PRESS.

Using two baskets so that while one is under the press the other can be emptied and filled ready to move under the press as soon as the first basket is pressed. First Premium awarded at all fairs wherever exhibited. Parties desiring a press combining Power, Speed and ease to handle, can see them at the leading wineries on the Pacific Coast.

The following extracts from well known wine-makers are quotations from letters received by us:

"I find your press as it was represented to me; will continue to use it as long as I need one."—S. C. STONEY, Bennett Valley, Santa Rosa P. O.

"It is my choice of any wine press yet seen by me." L. A. NORTON, Healdsburg.

"We have, in addition to two other presses, one of your make, and can testify that it gives entire satisfaction."—HAMER & FIELDMEYER, Geyserville.

"The wine press I purchased of you has given complete satisfaction. I think it is one of the best wine presses made."—A. P. KERCKHOFF, Los Angeles.

"The new elevator works well and is a great improvement on the canvas elevators that we used last year." I. DE TURK, Per W. H. L.

"The wine press I bought of you gave entire satisfaction. It is the best wine press I have ever used and would recommend it to any wine men."—W. I. HOTCHKISS, Healdsburg.

Also Worth's Improved Grape Elevators, Improved Continuous Pressure Hydraulic Presses, Worth's Patent Power Grape Stemmer and Crusher, Worth's Patent Ho se Power, and all kinds of machinery for wine-makers. The Large Toggle Lever and Screw Press is capable of a pressure of 206 tons or 300 pounds to the square inch, the small press has 36 tons or 540 pounds to the square inch.

CHEAPER and BETTER than Ever. Their 2-ft. high 8-cable fence has taken the trade. Farmers put barbed wire above it and have the CHEAPEST GOOD Fence that can be made in ANY WAY. Rabbits cannot get through. Hogs cannot break it and Horses or Cattle cannot get over it. All our

## Cause of Forest and Other Fires.

The increasing frequency and wide devastation caused by forest fires is causing much uneasiness in the Eastern States. To assign the cause of such fires as a general thing is impossible. But there is a practical unanimity about the excessive carelessness. Many forest fires are supposed to be started intentionally in sparsely settled districts by whortleberry pickers, as it is well known that land where that berry flourishes furnishes a largely increased amount of such fruit for several years after being burned over.

Farmers often debate the following question: "Is it better to refuse a tramp lodging, and incur his hatred, or let him sleep in a barn, and burn it by smoking?" Mining accidents have often been caused by carelessness, but wise supervision has resulted in a marked decrease in explosions. The way matches are scattered about in private houses and business offices is appalling. Without knowing, it is reasonable to suppose that many forest fires are due to the carelessness of smokers, or to the thoughtlessness of men who fail to see that their campfires are thoroughly extinguished. There will always be incendiaries, but they form only a small fraction of society. It is not deliberate crime so much as carelessness that is responsible for these outbreaks.

The annual statements of sums paid out by fire-insurance companies seem large, but the actual marvel is that the number of fires is not much larger than it really is. Recklessness seems to be the rule, and prudence the exception. Boys scatter explosives for weeks before and several days after the Fourth of July. In nearly every factory, the careless manner in which kerosene is handled rouses dread apprehensions among the timid. Constantly, half-consumed but still-burning cigars are thrown away. Thrown on a pavement, they are probably extinguished by the heel of the next pedestrian, but if thrown on the dry leaves of the forest, they may do terrible damage.

## Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

## NEWSPAPER AGENTS WANTED.

Extra inducements will be offered for a few active canvassers who will give their whole attention (for a while at least) to soliciting subscriptions and advertisements for this journal and other first-class popular newspapers. Apply soon, or address this office, giving address, age, experience and reference. Special inducements to old agents.

DEWEY & CO., Publishers,  
No. 220 Market St., S. F.

THE MOON AND THE BAROMETER.—By a comparison of records extending over a number of years, it has been concluded that the moon has an influence in lowering the height of the barometer in the months from September to January, at the time of full moon, and in raising it during the first quarter. No effect has been perceived in the other months.

## Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and as far as practicable aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription, paid in advance, 5 mos. \$1; 10 mos., \$2; 15 mos., \$3. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

DECREASE OF MOUNTAIN HEIGHT.—No less than four different mountain peaks in Idaho are now from 13 to 23 feet lower than they were 15 years ago. This settling is supposed to be going on in many others. The cause of the settling is generally supposed to be the presence of quicksands at their base.

\$500,000

TO LOAN IN ANY AMOUNT AT THE VERY LOWEST market rate of interest on approved security in Farming Lands. A. SCHULLER, Room 8, 420 California St., San Francisco.

\$3,250,000

TO LOAN ON MORTGAGE ON RANCHES AND CITY real estate below market rates. HOWE & KIMBALL, 508 California St., S. F.

## Good News!

No one, who is willing to adopt the right course, need be long afflicted with boils, carbuncles, pimples, or other cutaneous eruptions. These are the results of Nature's efforts to expel poisonous and effete matter from the blood, and show plainly that the system is ridding itself through the skin of impurities which it was the legitimate work of the liver and kidneys to remove. To restore these organs to their proper functions, Ayer's Sarsaparilla is the medicine required. That no other blood-purifier can compare with it, thousands testify who have gained

## Freedom

from the tyranny of depraved blood by the use of this medicine.

"For nine years I was afflicted with a skin disease that did not yield to any remedy until a friend advised me to try Ayer's Sarsaparilla. With the use of this medicine the complaint disappeared. It is my belief that no other blood medicine could have effected so rapid and complete a cure."—Andres D. Garcia, C. Victoria, Tamailpas, Mexico.

"My face, for years, was covered with pimples and humors, for which I could find no remedy till I began to take Ayer's Sarsaparilla. Three bottles of this great blood medicine effected a thorough cure. I confidently recommend it to all suffering from similar troubles."—M. Parker, Concord, Vt.

## TO SHIPPERS!

## California Ventilated Barrel

EXCELS ALL OTHERS!

IT IS LIGHTER, STRONGER, MORE DURABLE AND BETTER VENTILATED THAN ANY OTHER BARREL.

This engraving of the CALIFORNIA VENTILATED BARREL makes plain to the practical shipper its points of superiority over the common barrel, which may be enumerated as follows:

It weighs from five to seven pounds less than the ordinary barrel, making a material saving in freight charges.

It costs less than one-half for trimming, and does not require an experienced hand to cooper it.

It is the only thoroughly ventilated barrel made, a very important point.

The heads are warranted not to come out in transit, and no liners are required.

It is stronger and more durable than any other barrel.

Never varies in size, even to the extent of a quart.

—ALTOGETHER MAKING IT—

**The Cheapest and Best Barrel on the Market.**

It is Made of the Best Quality of Spruce, Woven Together with Copper Wire, And can be furnished in any size desired.

THE CALIFORNIA BARREL IS ADAPTED TO SHIPPING THE FOLLOWING ARTICLES:

Apples,  
Oranges,  
Onions,  
Potatoes,

Sweet Potatoes,  
Dried Meats,  
Bottled Goods,

Glassware,  
Canned Meats,  
Crockery,

Eggs,  
Poultry,  
Walnuts,  
Almonds,

And Vegetables of All Descriptions.

A factory making these barrels is now in operation in San Francisco, with a capacity of 4000 barrels a day. The success of the barrel is almost unprecedented, and it is bound to become the package in a very short time. EVERY ONE USING IT IS ENTHUSIASTIC IN ITS PRAISE. IT HASN'T A FAULT. When shipped in knock-down form, about 2500 barrels can be placed in a single car. Special rates given on car lots. WRITE FOR PRICES AND PARTICULARS.

## MERY'S IMPROVED PIONEER BARLEY CRUSHER

— USING —

The Benoit Corrugated Rollers,

STILL AT THE FRONT.

This Mill has been in use on this Coast for 10 years, TAKEN THE PREMIUM AT THE STATE FAIR

Four years in succession, and has met with general favor, there now being

Over 250 of them in use in California, Nevada and Oregon.

It is the most economical and durable Feed Mill in use.

I am sole manufacturer of the Corrugated Roller Mill. The Mills are all ready to mount on wagons.

GRAINLAND, BUTTS CO., CAL., June 9, 1887.  
MR. M. L. MERY—Dear Sir: We have used one No. 2 Roller Barley Crusher now for eight years and have used it steady during that time; have crushed 45 tons a day and the Crusher is as good to-day as when it came out of your shop. I am satisfied that it is the best mill made. You may reconstruct this testimonial to the best advantage for you and sign our names, for you cannot overrate the merits of your mill.  
F. E. KEAM.  
JNO. P. SUTTON.

DURHAM, May 21, 1887.  
MR. M. L. MERY—Dear Sir: In reply to yours of the 19th, would say that I crushed from two to two and a half tons per hour, but could crush three and a half tons if my elevators were large enough to carry the barley from the machine. The No. 1 machine I used at Gridley was run on a sack a minute, but if we got behind we could run through five tons an hour and do good work. The machine I use here is a No. 2. Yours,  
WM. M. TAYLOR.

I thank the public for their kind patronage received thus far, and hope for a continuance of the same.

M. L. MERY, Chico Iron Works, Chico, Cal.

## THE APIARY.

### Fixed versus Hanging Frames.

EDITORS PRESS:—When I first commenced bee-keeping, I bought several of the best works on bee-culture obtainable; I also subscribed for the two leading bee-papers published. I studied them all well. The bee papers and books advised the use of swinging or hanging frames, claiming that they were far superior to any fixed or closed-end frame. The result was that all my hives were of the swinging frame style. The swinging frame gave good satisfaction as long as the hive remained stationary; but when I moved them, then trouble commenced. In a location like mine, I have to move bees considerable, and I have always dreaded the job; it takes a great deal of time and work to go over each hive and fasten the frames in securely; and even after that, when the bees are placed on a wagon very careful driving must be resorted to, or the frames will become loosened, the combs get jammed together, and the honey commences to flow; which generally means the destruction of the colony.

In this part of the world, we have very rocky and rough roads, and all frame hives must be fixed up extra well in order to stand the journey.

With box hives, it is quite easy to move bees; the hives can be inverted, and a piece of wire cloth tacked across the bottom, which generally insures sufficient ventilation; the hive being inverted, there is no strain upon the combs, and of course there is no danger of their breaking down.

Hanging frames are all right in a location where bees do not have to be moved, and where a bee-keeper only intends to keep a certain number of swarms; but if a person starts in the bee business with the intention of starting out apiaries and otherwise going in pretty extensively, I am sure that the fixed frame is the best. With fixed frames, it is a comparatively easy matter to arrange 100 colonies for moving; while with swinging frames, each frame has to be fastened in separately, and as a natural consequence, considerable time is consumed fixing one hive, and the less time that is consumed on one hive the more hives you can fix.

Fixed or closed-end frames can be handled collectively, which is a great point in their favor and which is of considerable moment in a large apiary; besides, when replacing the frames no time is required to give the proper spacing as with hanging frames.

Fixed frames are also a great disuader of brace and burr combs, which in most swinging frame hives is a great nuisance.

I have long looked for a hive that I thought I could make a success of, in moving bees over our rough mountain roads; and I am firmly convinced that the fixed frame hive will come nearer accomplishing it than any other style of hive.

Great credit is due Mr. E. R. Root of Medina, Ohio, the associate editor of *Gleanings in Bee Culture*, for reviving this subject of fixed versus hanging frames. I think he is certainly on the right track.

To satisfy himself on the superiority of fixed frames, he personally visited some of the most extensive bee-keepers of New York State, and he found that the bee-keepers with their fixed distances and closed-end frames, managed to handle larger apiaries with less labor than those using the swinging frame.

These apiarists of New York State, that prefer fixed frames, are the most extensive bee-keepers in the world outside of California.

P. H. Elwood manages 1000 colonies with only two assistants in the height of the honey season, and Mr. Hoffman manages 600 colonies almost alone, except for a few days in the swarming season.

I do not think there is any bee-keeper in California using the Langstroth hanging frame, that can handle 1000 colonies with so little assistance.

I have had a great deal of experience in moving bees in swinging frame hives, and I have always had more or less trouble, and if I had only commenced using fixed frames, nine-tenths of the trouble would have been avoided.

Let me present to your view a few facts concerning fixed frames—a few facts from the pen of Mr. P. H. Elwood, who gives them in "Gleanings in Bee Culture." He says: "Our hive is portable. No cumbersome rack is needed in moving bees, for two hives sit side by side in the bottom of the wagon, and one hive files on top of another without need of sticks between. In preparing a colony for moving, we shove out the entrance slide in the bottom of the hive and put in its place a wire cloth slide to give the necessary ventilation. Then two screens are put in—one through each side of the bottom-board into the edge of the hive—an average man will consume about 100 minutes from the time he reaches a yard until he drives out with a load of 33 swarms. The two screens mentioned fasten the bottom on so securely that we have had no accidents on the road serious enough to warrant unhitching the team from the wagon. Our bees are usually drawn over rough, stony roads, but we have no queens or bees killed from frames dropping together, nor do we have any combs broken.

Not only is our hive movable, but our frames

are also movable. In walking up to a hive, one motion lifts the hives proper from its bottom-board and places it at the side of the exposed frames, where it forms a seat of convenient height. The iron roof is nailed to the hive, and of course always goes with it. Only in the hottest weather is there a shade-board to be removed. Another motion with one hand removes the quilts covering the frames, and the other hand blows a puff or two of smoke from Jumbo, while the first removes the cord holding the frames more tightly together. You are then ready for business. If you are looking for the quantity of brood in the hive, you can remove the frames in pairs, for they are easily and rapidly handled in this way, and one side of a comb is usually a duplicate of the other side. The bottom-board is large enough so that the frames removed can be hooked on the bottom near you, and far enough away from the others to have ample room to get a good look at the next comb. This is a valuable feature of the hive, as you can have always a good place for combs without setting them upon the ground, where you are in danger of losing queens and damaging brood, besides other annoyances.

It is generally admitted by those who have seen the workings of a Hetherington Ormby hive that queens can be found more readily than in spaced frame hives. S. L. WATKINS.

Grizzly Flats Cal.

## THE IRRIGATOR.

### Support of the Wright Law.

At the monthly meeting of the State Board of Trade, held June 12, an important report was submitted by a special committee, consisting of J. W. Davis, J. P. Irish, C. C. Hutchinson, Tyler Beach, N. P. Chipman, John Boggs and W. H. Mills, appointed in April last to investigate the value and validity of irrigation bonds issued under the Wright law. The report in full was as follows:

To the State Board of Trade: The special committee appointed to consider the value and validity of bonds issued by irrigation districts organized under the Wright law, beg leave to report as follows: This committee conceived its first duty to be action in conjunction with the State Irrigation Association to secure the conclusive judgment of commercial and financial organizations in San Francisco upon the character of irrigation bonds as commercial paper.

Meetings with the Chamber of Commerce were secured, and the question was referred to a committee of that body. The discussion in the Chamber and before the committee disclosed a general feeling of confidence in the bonds as ample and valid security. The discussion was addressed first to the legal questions involved, and these were regarded as settled in the several decisions of the Supreme Court of the State, which cover all points that arise under the Wright law, and affirm its constitutionality upon each.

The second branch of the inquiry went to the capacity of the lands irrigated to sustain, without discouragement or decay of the industry that makes them fruitful, the debt represented by the bonds. In support of the affirmative of this proposition your committee and others who considered it had for assistance the familiar and well-known examples and experiences of the irrigated districts of the State. The development of these began in advance of the Wright law. They are found from extreme Southern California to the northern limits of the Sacramento valley. Their history is one of high farming, of continual progress from the nobler to the noblest utilities of the soil, of the certainties of agricultural and horticultural industry, and of satisfying profits to the tiller of the soil.

Your committee states merely as a well-known fact that the desire to extend to other land-holders and other lands these demonstrated benefits and permanent profits of irrigation was the motive of the Wright law. The pioneer irrigators had secured the union of water rights and land titles. The Wright law simply put within the reach of any community the power to do the same thing.

Your committee has no doubt of the ability of the land-holders of these bonds to carry them to final liquidation without harm or oppression to the land-holders. Nor do we doubt that in every district the lands will, upon completion of irrigation, show an aggregate advance in value far in excess of the volume of bonds required to construct the works. We are sure that these views are concurred in by all the organized bodies which were co-ordinated in this inquiry.

The results and conclusions reached were referred to the financiers of the Clearing-house Committee of San Francisco. The members of that body as individuals expressed their concurrence with the view that the bonds are legal and amply secured, but were compelled to withhold such expression as a corporate body, because as such they were not endowed with the required power.

In conclusion, your committee reports its satisfaction with the result of this great inquiry, which was begun and stimulated by the State Board of Trade, and we further request that your adoption of this report be taken as

the indorsement by the State Board of Trade of the legality of the irrigation bonds and the amplexes of their security as commercial paper.

The report was at once adopted and W. H. Mills urged its publication in the financial centres of the world, suggesting that steps should be taken to have it printed in New York city.

## FRUIT PRESERVATION.

### Another Fruit Drier.

EDITORS PRESS:—Referring to the Oregon discussion on fruit driers which appeared in your issue of the 6th inst, I trust that a few additional words on the subject will not be unwelcome to those who are interested in fruit drying and fruit driers. I have carefully read the articles presented to the Marion County Fruit Growers' Association on the subject referred to, and I observe that each of the writers claims that the drier of which he is owner or inventor is the *ne plus ultra* of perfection while all the others are inferior or worthless. Now I am disposed to accept all of the dispraise which each has bestowed upon the others, for it is in confirmation of my own opinion and experience. Nine-tenths of these so called evaporators are not worth the space they occupy and are utterly worthless so far as their employment in the profitable evaporation of fruit is concerned. It must be a matter known to everyone who has at all studied the question, that the absolute essentials for the rapid and uniform evaporation of fruit are:

First—The application of the greatest degree of heat possible without scorching or baking.

Second—A free, rapid and unobstructed current of dry air passing constantly and uniformly over the surface of the fruit.

Heat alone will not evaporate; heat simply extracts the moisture, while the rapid current of hot dry air passing over the surface of the fruit sucks up the moisture like a sponge in its flight upward and outward. If a drier is not provided with this rapid and continuous air current, it is simply an oven in which fruit will bake at 225 degrees, but with it, 300 degrees will not even overheat it. To obtain this current of hot dry air, blowers, suction-fans and other appliances have been resorted to in order to force the air up and through the fruit, but without any appreciable results; for in spite of every effort, the fruit drips and sweats, and the heated air, in its endeavor to escape, will rush to the places offering the least resistance, overdrying the fruit at such places, and leaving the balance comparatively green.

Has any individual ever combined, in a drier, the two essentials above named? Yes, and the feat has been most successfully accomplished in the following manner: The drier is constructed upon a circular plan. Two circular brickwalls are built, one within the other, to the height of eight feet. From this point, the outer wall is carried up, to any required height, of framework, and lined with well-seasoned, narrow-tongued and grooved lumber, and finished with a conical roof, in the center of which is placed the escape flue. The space between the inner and outer walls is equal to the depth of the trays. In the circular inclosure thus formed are placed the furnace and heating drums. From the back of the furnace, the drums *T* off to the right and left, forming a circular coil, and coming out at front, where it unites with the smoke-stack. On top of the inner brickwall, a turntable attachment is built, with arms extending over the heating chamber to within an inch of the outer wall. The inner wall is carried up to the desired height, resting and revolving upon the turntable. Upon that portion of the arms of the turntable which extends over the heating chamber, a framework is built to reverse the trays. The trays incline six inches in three feet, and wind up and around the inner wall, edge to edge, resembling a winding-stair, or the spiral twist of an auger. The trays form a series of these spiral twists, and are so arranged as to leave a space between each twist of four inches, equalling an unobstructed flue, or series of flues of four inches by the width of the trays.

The machine is put in motion by means of a small engine, and revolves at any rate of speed required, forcing a current of hot, dry air through the flues and under and over the entire fruit surface, carrying off every drop of moisture as fast as extracted, and drying the fruit with astonishing rapidity and uniformity. It will be seen that the instantaneous removal of the moisture as fast as the heat brings it out renders sweating and dripping impossible, and thereby prevents the fruit from sticking to the trays, and also leaves the fruit clear, bright and of excellent flavor. It will also be seen that the rapid rotary motion of the trays, through this confined, heated air-chamber, gives to every portion of the fruit surface the same degree of heat and same force of current. This machine was invented by a gentleman at present living in Watsonville, Cal., and its remarkable success is the result of the intelligent arrangement of its working conditions.

909 Dolores St., S. F. JOHN A. MADDEN.

### A New Cannery in Oakland.

The Oakland Tribune gives the following description of an establishment recently opened in that city:

When the well-known J. Lusk Canning Co., whose cannery was at Temescal, failed several years ago, one of the most important industries, that of fruit canning, was sorely crippled in this county. Nobody doubted for an instant that a fruit cannery in Oakland would pay from the very start, but Oakland capital was a little wary of such an investment, and it has remained for a party of San Francisco capitalists to give this city a cannery which will not only employ several hundred men, women and children, but one which has even a larger capacity than the old Lusk cannery.

The Oakland Preserving Co. is the name of the new corporation, and to show what an energetic concern it is, it is only necessary to state that the company was organized, buildings were erected and the work of fruit canning commenced all within eight weeks, and the cannery is said to be the most complete one in the United States, too. The buildings of the company occupy half a block of land, and are located on First street, between Filbert and Linden streets. The cannery proper occupies the Linden-street side, and the immense warehouse where the canned goods will be stored occupies the Filbert-street end of the lot, with the engine and boiler rooms situated in the rear on Linden street. On First street a sidetrack has been run the entire length of the block, and fresh fruit may be unloaded at one end and the car laden with canned fruit at the other end. Yesterday a Tribune reporter was escorted through the new cannery and shown the workings of the new institution by Supt. Stevens. Possibly a better idea of fruit canning could be learned by following the fruit through the different stages of preparation than any other way, with an incidental description of the different departments through which it passes.

When the green fruit is received, it goes into the green-fruit room at the corner of Linden street. This room is 60x130 feet in size, and 100 persons may be employed in this department if occasion demands. Here the green fruit is graded, cleaned and assorted for the packing-room adjoining. This is the main department of the institution. The room is 80x100 feet in size, and is divided into two sections. On one side there are accommodations for 435 girls and women, who sit at long tables divided into individual sections. On this side, the fruit is prepared for the cans according to its kind, and as each girl fills a box she drops a little tin number into it corresponding with the number of her table, which serves the dual purpose of keeping a record of her work and as a means of identification if the box of fruit is not prepared well. The boxes are gathered up by boys and carried across the room to other tables, where it is canned. Arrangements have been made on this side for 140 operatives.

The green fruit is carefully packed in the cans by the girls, who stamp their individual number on each can as a future means of identification in case the work is not well performed. From here the cans are carried to the syrup-tape in the same room, which consists of a number of machines so arranged that a tray of 12 cans can be filled at one operation. Each machine supplies a different kind of syrup from tanks in the upper story, or all may be used with water where syrup is not used. And from here the fruit goes to the sealing and boiling room.

A feature of the room just described is its complete drainage. The tables used by the girls are grated and contain drains leading to spouts, which in turn connect with a main gutter under the floor, and thus all water spilled during the process of canning is carried away. Connected with the syrup machines are two drains, one which conducts the water used in washing the cans to the pipes under the floor, and the other which conducts the waste syrup that may be spilled into a tank, from which it is pumped back into the filters and reservoirs for use again.

In an adjoining room, the lids are soldered to the cans as they rotate, a dozen at a time, in a machine which heats them. After the lid is sealed down, a hole is punctured in the center, which allows the hot air to escape, and then a drop of solder over the hole finishes the job. The purpose of this latter operation is to force all the air from the can, and prevents the canned goods from spoiling.

The cans are next set in a tray, which is picked up by a derrick and dropped into the boiling vats, where the fruit is cooked, a clock dial being set on each tank to show when the cans are to be lifted out. Some fruits require but a few moments' immersion in the tanks and others several hours. A feature of this department is an invention of Mr. Stephens. It is a mechanical crane which will swing in any direction and perform its work, while the engine is stationary on the floor. Other cranes do not have the advantage this one does, as it has been necessary heretofore to put the lifting mechanism either on the arm of the crane or on a turntable which turns with the derrick. The floor of this room is open, so that all the water spilled will run into the drains below.

The upper story of the building is used to store empty cans in, and a gallery leading from it contains the syrup tanks for the machine on

the lower floor. A powerful hydraulic elevator runs from one floor to the other.

Across the alley is the warehouse, made of corrugated iron, fronting 60 feet on First street by 234 feet on Filbert street. Here the cans are labeled, packed and stored after they come from the hoiling vats. In one end are the general business offices and the private offices of the president and manager.

In the yard to the rear of the building are the engine-house and the hoiler-rooms and the air pump for the oil furnace. The oil furnaces are used to heat the soldering irons in the hoiling room, the oil being fed into the furnace on the principle of the atomizer. A 25 horse power Corliss engine runs the machinery in the buildings, all the shafting and belting being placed under the floors.

The capacity of the new cannery is about 65,000 cans a day, and when running full from 750 to 800 employees will be hired; the number of persons employed of course being regulated by the quantity of fruit on hand.

The accounts with the employees are kept by the check system, thus doing away with much unnecessary book-keeping. The check slips are similar to those used by street car conductors. Those of the piece workers are punched according to the number of boxes they fill, and those of the day laborers are punched when they commence work and when they quit each day. Saturday night the girl takes her slip to the office and is paid according to the punch holes in it.

The cannery is the most complete of its kind on the coast and will turn out all kinds of canned fruits, preserves and jellies.

F. H. Green is superintendent of the work-ing department.

The manager of the institution is W. A. Stevens, who is interested in the salmon canneries of Alaska. Mr. Stevens has been engaged in the canning business for 20 years, and has mastered it in every detail. The Dawson Packing Co., and San Jose Fruit Cannery were both established by Mr. Stevens.

All of the Oakland Preserving Co.'s business will be transacted in this city, and here will be located the general offices. The directors of the Oakland Preserving Co. are all San Franciscans. They are: Frederick A. Tillman (president), John H. Mangels (treasurer), Ernest A. Denicke, Frederick Tillman Jr., L. A. Marshall and Charles N. Pike.

At present the company employs about 300 people.

## FRUIT MARKETING.

### Will There Be Over-Production of Raisins?

As stated in last week's RURAL the State Board of Trade will discuss the production of raisins.

General Chipman of Red Bluff submitted the following compiled report relative to the discussion:

As we must look to diversified agriculture to lift us up to our true level, and as fruit-growing is the most promising branch now engaging attention, it is pertinent to answer the doubts expressed upon the question of over-production.

George West, by his conspicuous relation to grape culture in this State, has by his pessimistic view of the raisin grape sent a thrill of dismay over the State. He suggests that we have now probably reached the maximum of profitable planting. This is important and serious, if true, for by the same reasoning we would cease almost all other plantings, especially the orange. The subject is worthy our attention.

Mr. West says that in 1895 we shall have 7,600,000 boxes of raisins, which he estimates as 3,600,000 boxes in excess of the then demand. I am indebted to Gustav Eisen for some of my statistics, which I have taken from his excellent work on raisin-growing.

The raisin crop of the world for 1889 was 312,000 tons. Of this California produced the comparatively insignificant amount of 10,000 tons. Greece and Smyrna alone produced 245,000 tons and Valencia and Malaga over 28,000 tons.

The raisin districts of the world are not large and are limited by climatic and other conditions. The present advancement of the industry dates from comparatively recent years. The generous consumption of the raisin of today fairly represents the growing disposition to eat more fruit and less meat.

Our importations of the raisin (and so of most fruits) have increased in striking proportion to increase of population. In 1873 we imported of Valentias and Malagas 17,776 tons. In 1882 we reached our highest importation, 31,268 tons. In 1873 California added 60 tons to consumption; in 1882 she added 1152 tons. In 1873 the United States consumed 17,836 tons and in 1882 we consumed 32,420 tons.

Our population increased about 25 per cent, and our consumption of raisins 100 per cent. In 1860 we consumed a little over 1,000,000 pounds. In 1890 we consumed over 66,000,000 pounds. In 1860 we consumed less than one-thirtieth of a pound per capita. In 1890 we consumed one and one-third pounds per capita, or 40 times as much per capita in 1890 as in 1860. In 1884 it was found that we consumed of raisins and currants 1.70 pounds per capita,

while Great Britain consumed 4.38 pounds per capita.

Is there any reason why we may not consume as many raisins per capita as the people of Great Britain? If we should (and everything indicates rapid increase of consumption) we will require four times our present output to supply this need; and we must double our present output to displace importations and reach present needs.

But we must add to this the requirements of about 1,500,000 annual increase of population. It will require 100,000 boxes to be added to our output each year to keep pace with this increase of population. It is my belief, expressed with all respect for Mr. West's opinion, that California is not likely to overtake the demand in the United States alone. When planters are content to make from \$50 to \$100 profit on an acre, we will see consumption leaping to 10 pounds per capita, and that means 31,000,000 boxes instead of 3,300,000 as now. But what of the 312,000 tons produced on the globe, only a small part of which will hereafter come to the United States? Where is your American enterprise that shrinks from attacking this foreign demand? The United States produces nearly 50 per cent of the world's deficiency of wheat. We push our wheat into foreign markets against great odds—may we not our raisins?

The plantings of all ages of raisin vines in the State to-day, based upon Mr. Eisen's figures, are:

Fresno district, acres.....	30,000
Balance of San Joaquin valley.....	10,000
San Bernardino district.....	5,000
San Diego and El Cajon.....	6,000
Yolo and Solano.....	8,000
Balance of the State.....	7,000

Total.....66,000

I think this estimate is not much in excess of the actual plantings. Mr. West states that in the San Joaquin valley alone there are 56,430 acres. Mr. West estimates three tons of green grapes or one ton of raisins per acre, equal to 100 boxes per acre, as a fair average yield; and, I think, he understates the yield rather than overstates it. But on his figures you will see that a consumption of two pounds per capita will dispose of these. By the time these vines are all in bearing we shall have six million more mouths to feed.

Wherever raisins have been introduced the consumption has rapidly increased. Our fruit is superior and must make its way in foreign markets. I see no cause for alarm. Nearly all the raisins now grown are consumed in Great Britain and her colonies, and in France and the United States. A vast area of the civilized parts of the globe have not yet been exploited for foreign markets.

I have examined the question of alleged raisin over-production at some length, because of the doubt created by Mr. West. The rapidity with which raisin vines may be brought to maturity, and the exact data we have as to product and consumption, give more color to the claim of over-production than in other fruits. But we have heard this plaint for ten years as to all fruits, but we haven't yet penetrated the outer edge of our vast markets for fruit.

In 1879 we imported three and one third million pounds of figs. In 1888 we imported nearly ten million pounds and this ratio of increased consumption to increase of population embraces all fruits. In 1860 we imported and used in the United States about 3,000,000 boxes of oranges. Our home product was nothing worth mentioning. This was a consumption of about one box to 100 inhabitants.

In 1889-90 we imported about 3,500,000 boxes; Florida produced 2,200,000 boxes; California produced 850,000 boxes, making a total of 6,550,000 boxes, which is a consumption of one box to about every nine inhabitants, and this is only about one orange a month per capita or 12 oranges during the year. Let us not worry over the question of markets.

It was decided after some further discussion, to invite Mr. West, Dr. Perrin, Gustav Eisen and all persons interested in the raisin industry to meet for a discussion of the subject at the September meeting of the Board of Trade. This will be held September 8th at the State Board of Horticulture room, Sutter street.

WHERE THE IRON GROWS.—In the city of New York there are about 500 miles of paved streets, and it is estimated that there is in constant wear upon these streets about one billion tons of iron, in the shape of wheel tires, street car rails, horseshoes, etc.; not more than one-half of which ever gets back to the puddling furnace or rolling mill. Tons of iron are worn off from horseshoes every day, perhaps 20 times the amount is lost from tires of ordinary vehicles. The surface roads give off tons from the rails and car wheels; the elevated roads also lose tons from their rails and car wheels. The pedestrians grind off tons of nails in the heels of their shoes, and not an ounce of all this is saved. It becomes dust and is blown everywhere, but the great majority finds its way to the bed of the ocean with street dirt and garbage, and until some great revolution shall make a radical change in ethereal matters the millions of tons of iron which are thus deposited in the wild waste of waters will not again enter into the useful arts of which they were once such an important factor.

It is poor management to use one machine for half a dozen different things.

## THE VINEYARD.

### Mr. Wetmore's Plan for Disposing of Wine Grapes.

At the last meeting of the State Viticultural Commissioners, Charles A. Wetmore made a report regarding the extension of the market for grapes. He states that it is of importance to the wine-growers of California that the Sweet-wine law should be construed so as to permit Eastern wine-makers to make wines out of grapes only, and where it is impossible to obtain sufficient saccharine strength in one place it is presumed that they will be permitted to obtain it in another, provided that the material used comes solely from the grape, and is used in connection with legitimate fermentation of the grapes produced in the vicinity of the wine-maker. He desires that Eastern wine-makers be permitted to use condensed or boiled grape juice from California whenever their necessities require it. If such a ruling is made by the department in Washington the Eastern wine-maker will be enabled to use not only our condensed musts, but also our pure brandies, in making sweet wines out of Eastern grapes, and our interests as well as the interests of all growers, whether East or West, will be subserved by preventing the necessity of resorting to adulteration or imitation. The intention of the law was simply to prevent the use of free spirits in the manufacture of hogs, imitation or adulterated wines.

Mr. Wetmore proposes to increase the market value of wine grapes in California as follows: By drying; by establishing brandy distilleries, established on the co-operative principle in vineyard districts. His plan is as follows:

Let some one man or committee of men having business qualifications, in each district, go immediately to those vine-growers who have grapes to sell and procure from them contracts promising to deliver a certain number of grapes to a trustee, who shall be authorized to proceed for them to organize a company, the cost of which shall be paid for by the brandy which shall be distilled from the grapes contributed. Let us suppose that contracts amounting to 2,000 tons of grapes or more have been procured in one locality; let there be a nominal price fixed for these grapes with a certain standard of sweetness, say \$10 per ton for grapes with 22 per cent or more of sugar, price to be reduced proportionately as the sugar shall fall under 22 per cent, but no variation in price for sugar contained above the standard. If variation in price should be fixed for grapes above the standard it would probably defeat the purpose of the organization by causing growers to refuse to pick early when required.

Practical men will be free to say that grapes distilled and sold within six months after vintage, will return an income of more than \$10 per ton, so that this figure for nominal prices is within reason.

As soon as the grapes have been by these trustees fermented, distilled and sold, the distillery buildings, cooperage and other appurtenances which have been created in order to work this plan, may be then out of debt and transferred to the proposed company and stock issued to those who furnished grapes in proportion to the nominal value, as agreed. In this way, an effective plan for distilling can be created and paid for within six months from the time of vintage, and there would probably be also a profit out of which a dividend might be declared, or which might be better used in adding further facilities and cooperage, so that during the next year, if deemed advisable, a portion of the crops offered by the stockholders might be kept as wine without distilling.

Now, as to the practical method of perfecting this plan in different localities, the trouble with the vine-growers is that not many of them can pay assessments in cash, but nearly all of them could furnish from one half to the entire amount of their crops in lieu of cash; some might not be able to furnish more than half, reserving the other half for sale elsewhere to cover their current expenses. The trustee, or trustees, who undertake to carry out such a plan after they have procured valid contracts for the grapes with authority to dispose of them, as has been suggested, would find little difficulty in procuring capital or credit to create the necessary plant, with the assurance that they could give that the product in a bandy would be realized upon within six months; in fact, I know now that contracts with responsible parties could be procured for the sale of this brandy before the vintage, so that those who would be lending credit to these associations would take no risks.

Now as to the probable cost of such an operation: Roughly estimated, \$15,000 would be ample to secure land, construct cheap buildings for fermentation only, tanks for fermentation, together with an adjacent distillery of the most improved and effective pattern, capable of managing 2000 tons of grapes in one season. Three 2000 tons of grapes would realize, when sold as brandy, within six months not less than \$20,000, so there would be a surplus for management and expenses of operation. It is more than probable that there would be an income of at least \$5000 more, which could be used to increase the facilities of this winery and distillery for future use. Having obtained stock in this company after the goods have been sold by the trustees, each stockholder would have an interest free of debt which would be good col-

lateral in case he needs money in his vineyard operations.

By adopting this plan in many different districts simultaneously, and by pushing it forward vigorously in time for the next vintage, the difficulties now besetting our vine-growers would be practically overcome, and next year there would be active demand for grapes at good prices.

## FLORIST AND GARDENER.

### Two Remarkable Plants.

(Read at the June meeting of the State Floral Society by EMORY E. SMITH.)

All vegetation is more or less remarkable, but some plants, from their striking beauty of flower and leaf or peculiarities, particularly attract our attention. Among the most remarkable are the Compass plant and the Mosquito-catching plant.

The Compass plant (*Silphium laciniatum*), commonly known as the Roman plant, which is found as an ordinary weed in the Western and Southern States, is not particularly attractive for beauty of foliage or flowers, but has the remarkable peculiarity of pointing the edges of its leaves due north and south, the faces of the leaves having an eastern and western exposure. This is always true of the younger leaves, the older ones, however, fall around in different directions by their own weight, the magnetic influence not being of sufficient strength to hold them in position. Just why the leaves of this plant should turn due north and south has never yet been clearly understood, although many causes have been offered for it. There are two distinct varieties of the plant which show the same peculiarity. One form has the stems covered with glandular pubescence; the other is simply rough covered with bristles, white hair, and one variety blooms a month later in the fall than the other. Botanists are somewhat confused regarding their identity, and any member of the society who should accidentally run across the plant would do well to closely watch its singular polarity and note the localities in which it is found.

### Mosquito-Catching Plant.

The Mosquito-catching plant (*Vincetoxicum acuminatum*) is a native of Japan and belongs to the milk-weed family. It is also a near relative of the hoya and stephanotis. In addition to its mosquito catching qualities, it is a pretty, hardy, herbaceous perennial, well worth having as a garden plant. It grows about 18 to 24 inches high and forms a good bushy clump of somewhat slender shoots that have opposite leaves and axillary loose clusters of starry-white blossoms that are borne abundantly in May and June and scattering all the summer.

In the center of the flowers in the clefts of the corona is secreted a viscid juice which is peculiarly attractive to mosquitoes and some kinds of flies; but woe be to the unwary, for whoever dips his proboscis into the alluring liquid never draws it out again, for it is held fast and no amount of tugging and plunging and huzzing will free the insect from its cruel captor. Mosquitoes often live for two days or more in this trap, but once caught they never escape.

The flowers will soon wilt after being out and the plant is not valuable for this purpose; but anyone who has children would do well to secure specimens and grow them for their benefit if for no other reason. The way in which it snags up mosquitoes never fails to attract the attention of the little folks and leads them to further investigations in nature's wonderful storehouse of knowledge.

### Heliotrope, or Turnsole.

[By Mrs. B. TOWNSEND, Before California State Floral Society.]

A plant which follows the sun with its flowers and leaves; the heliotropes are indigenous mostly to tropical and sub-tropical regions, but a few species are natives of Europe, as *H. europaeum*, L., which is also a naturalized species in the southern parts of North America. *H. indicum* (of the section *Heliohythum*) is to be met with in Equinoctial Africa, America and Asia, but apparently not in Australia.

Of 23 Australian species that have been described, 16 are endemic. The common heliotrope of English hothouses, *H. peruvianum* (popularly known as "Cherry pie") on account of the delicious odor of its flowers is a great favorite with florists. It was introduced into Europe by the younger Jussieu, who sent seeds of it from Peru to the Royal Garden of Paris. About the year 1757, it was grown in England by Mr. P. Miller from seed obtained from St. Germain.

The plant has been known to occur with double flowers. The species commonly grown in Russia is *H. suaveolens*, which has white, highly fragrant flowers.

Heliotrope may be propagated either from seed or as commonly by means of cuttings of young growth taken two or three inches in length and planted in sand. The plants require in hot weather a plentiful supply of water, and in winter careful protection from frost which easily kills them. If favored with a light, rich soil and a warm conservatory in which they may be grown in a border or against a pillar, wall or trellis, they bloom all the year round. There are very numerous varieties of heliotrope now under cultivation.

## PATRONS OF HUSBANDRY.

## Our Grange Edition.

The Grange news of most general interest is given through all editions of our paper on this page. Several supplemental pages, devoted to Grange interests, are added in our Grange edition, which any subscriber can receive in lieu of the regular edition WITHOUT EXTRA COST, by addressing the publishers.

## The Master's Desk.

R. W. DAVIS, W. M. S. G. OF CALIFORNIA.

Past Master S. T. Conlter paid a fraternal visit to Sebastopol Grange at its last meeting. He also visited Bennet Valley Grange at the regular meeting Saturday evening, June 20th. His words of wit and wisdom fell in good soil and will surely bring forth a bountiful harvest in due season.

Deputies will please prepare to organize at least one Grange in their Jurisdiction before the first of October.

A big harvest of grain and fruit, ought to bring a big crowd to the State Grange.

A sprinkle of pepper and salt adds a tone to the appetite and a flavor to the food. So a sprinkle of friendly discussion—a bit of pepper and salt as it were—will add a tone and interest to your Grange meetings. We stir the food when cooking to keep it from burning and for the purpose of assimilating the condiments. So, we must stir the mind, if we hope to have it assimilate the food furnished it by the thoughts of others. A friendly difference of honest opinion will sharpen the wits of all. Attend your Grange and participate in all the business, not with a desire to create a disturbance, but with a fixed and steady purpose to awaken life and thought.

It is strange, but true, that golden thoughts may fall from a silver tongue, and especially is this true, if there is a mine of thought behind both.

Did you ever think, since you joined the Grange and were taught the lessons about the Hoe, that it is more than ever your duty to "hoe your own row?" The row may be a long one and full of weeds, but persevering labor will eventually clear the track.

Let the stars and stripes float from every Grange hall on the Fourth of July. It is Independence Day, and what class of people are more independent than the farmers, and especially the farmers of our own dear California.

The Alliance and the Grange at Sebastopol will jointly celebrate the Fourth of July. They promise a jolly time to those who attend.

Doesn't Southern California want a few subordinate Granges?

How many million dollars will California get or the crops of 1891?

Ridicule is a sharp instrument. Be careful how you use it! Like all edged tools, it has its use, and if improperly applied, it will cut to the core, and perhaps will poison the whole life of the one on whom it is used.

If you must speak, tell the truth. Better be silent than to tell an untruth.

If you are 14 years of age, and are eligible, better join the Grange. Three dollars is the fee for a man; \$1 pays the bill for a woman.

There is no reason why your Grange should not add largely to its membership this summer. An abundant harvest ought to help each Grange. Join the Grange and co-operate in selling and in buying. Try the trade-card plan. It will save you coin.

Before these lines will appear in print the Annual Commencement of the University of California will have been held, and the class of '91 will have gone forth with their diplomas to honor and benefit themselves, posterity and their *Alma Mater*, or to bring reproach on all above named.

The responsibility attending the departure from college, and the entrance into the busy scenes of life, is much greater than many young persons comprehend. No longer the watchful eye, trained mind and moral example of the loved professor are over the every act and thought of the student. For the first time in life the graduate is alone. Parents, school-mates, college chums and professors are elsewhere. And though the day of graduation has been anxiously awaited, it has come, alas! too soon.

A visit to the University of California during the past week brings up afresh these thoughts. The busy days of twenty years have been passed in review. The associates of 20 years ago have had the silver threads freely mingled with the gold. Professors who were then young in years and experience are now ripe with age and honored for experience, while some of them have been garnered to the Last Harvest. Is it any wonder that the tearful eye should be moved when revisiting these scenes and meeting a few of the many who used to be the counterpart of one's daily life? But the mind wanders from the original thought intended to be expressed in

these few words. It is: That the University is a State institution with many colleges, among them the College of Agriculture. An excellent faculty of men learned in the theories and practices of life have charge of these colleges. Tuition is free to both sexes. The class of '91 has gone. Its place is to be filled. Have you a son or a daughter to become a student, the first duty of a citizen? If so, remember that education is a fortune no thief can steal—an attendant no person can intimidate, a friend in prosperity or in adversity, and a safe companion on sea or land, in solitude or in the multitude. We must educate our boys and girls. There is no better place on the Pacific Coast than at the University of California, at Berkeley, Alameda county, California.

## Florin Grange.

(By Past Master Flint.)

The above Grange invited everybody and their relations to be with them on the 13th, when they would exhibit their largest and ripest strawberries, their best looking girls and most prudent mothers, knowing full well that the grey and bald heads would be there also.

I invited Bro. McKune to ride down with me and the distance seemed far too short as he entertained me with rare stories, bits, witticisms, sarcasm and sober solid advice. We started early and drove leisurely along and took in and commented on nearly everything in sight. We passed our splendid county hospital, and learning that there were a good many inmates and more or less contagious diseases we thought it prudent to follow the old adage, that an ounce of prevention is worth a pound of cure and fortify us against the worst. We procured the requisite antidote, at a wayside inn, without the certificate of a physician, and it worked like a charm. In such cases I would recommend an internal application, against the deadly fangs on the external.

We had hardly arrived on the ground when noble Hiram Johnson leaped forth into the arena and struck an attitude like the first wrangler of an Oxford man, and pointing to the stars and stripes on the Grange Hall, delivered himself of a peroration that did credit to the descendants of '76. I tried in vain to keep his youthful enthusiasm bottled up until we opened under the good of the Order, but it flowed on with an irresistible force like the falls of the Yosemite.

The Master, just recovering from a severe illness, requested the writer to preside over the deliberations of the day. Then arose a struggle between ambition and duty—duty to preside, ambition to deliver a telling speech, that has been threatening the destruction of my head for the last ten days.

Three sisters and one brother were instructed in the 3d and 4th degrees; after which a grand banquet was spread, which did honor to the sisters of Florin Grange. To see the grace and smiles of these fair sisters, as they waited upon the table, was a good tonic as well as appetizing exhibition. I think the tables had to be set two or three times to accommodate the large number present. Strawberries were in abundance, high colored and delicious. Florin has a very enviable reputation for her small fruits as well as her fragrant flowers. It is no wonder that the people of Florin have such a high color and modest blush on their cheeks.

## Alive to Their Duties.

The officers did their work promptly and well, and the two taking features of the occasion were the youngest and smallest sisters that I ever saw taken into the Grange and one of the oldest of Grangers presiding as Chaplain on this occasion. Bro. Davenport, Chaplain of Sacramento Grange, 90 years of age, was asked to serve as Chaplain, which he did without a book, giving his part most readily and effectively.

Bro. Davenport hitched up his horse and drove to Florin unattended, and seemed to enjoy the meetings as well as a good many that are much younger, and, in fact, it seems to be food, drink and raiment to him. May his last days be full of peace and quietude, and when he is called to lay down his implements of husbandry, may it be as quick as

"Dies the gale along the shore,  
Or sinks the summer sun to rest."

Quite a nice program was arranged, consisting of instrumental and vocal music, reading and recitations, that were interspersed by speeches and comments by the entire Grange. The speeches took more of an interesting and practical turn to-day than I have seen for a long time. Different methods of harvesting hay and grain were discussed; wages and cost of labor; location of hay market and erection of sheds.

Sister Hull introduced an earnest discussion on the evils of promiscuous immigration and apathy among politicians and statesmen.

It is just such entertainments and discussions that took place to-day that educates, makes happy, contented and thrifty. It drives care from the mind, wrinkles from the cheek, gives confidence and decision, elasticity and firmness to the step, and old age from a too familiar acquaintance.

Improvement, discovery and progression are stamped upon everything animate and inanimate, but I fear the farmer does not improve his golden opportunity. Farmers, contemplate your situation and take active measures to improve it.

D. F.

## In Favor of Postal Telegraphy.

When Postmaster General Wanamaker visited San Francisco with the Presidential party, the Secretary of California State Grange had the pleasure of an interview with that able friend and advocate of postal telegraphy. Mr. Wanamaker seems without doubt thoroughly in earnest in his recommendations and efforts to have the Government adopt the best system that Congress can be induced to endorse.

The main points of his recommendations to Congress were contained in an article published months ago in the RURAL PRESS, and sent in orolnar form for the consideration of each Subordinate Grange in California. So far as heard from, the recommendation of Bro. Webster for the P of H to petition and use its best efforts in favor of postal telegraphy was received with favor by all Granges.

We are so much impressed with Mr. Wanamaker's sincerity in this matter, that we feel we cannot too strongly urge Patrons of Husbandry, and all our people who believe in advancing the interests and protecting the rights of the masses, to make haste in using every effort to influence members of Congress, newspapers and all officials that can help in the matter, to stand hard by Mr. Wanamaker in his recommendations and efforts to have Congress pass an enabling act to speedily introduce a postal telegraph system in the United States. It is a fact unfortunate for the people of this country that the leading governments of Europe are so far in advance of ours in this great public convenience.

In our desire to forward this movement, we wrote to the Master and the Executive Committee of the National Grange, recommending that the Legislative Committee should take up this subject and push it speedily and earnestly, while we have an earnest friend of the cause in the most influential position that any officer can hold for the establishment of a U. S. postal telegraphy. We cannot expect to have as able and practical a business man in the same position long, who will take so bold and strong a position, sincerely, in favor of this branch of the people's interests.

We are satisfied that Mr. Wanamaker has sacrificed his own business interests to the tune of not less than \$50,000 to \$100,000 per annum to work for the Government, and we have the assurance from his own lips that he will not serve another term in the office he has actually devoted very hard labor to.

The following is in response to a letter sent to the Executive Committee of the National Grange. It was written by the chairman of the committee and Master of Pennsylvania State Grange, a man known to many as one of the most able and effective leaders in the National Grange:

A. T. Dewey, Worthy Sec. Cal. State Grange:—Your copy of letter to the Master of the National Grange has been received in reference to "postal telegraphy." I will cheerfully do all I can to promote the project, and will advocate it before the Legislative Committee. Any papers or information you can send me on the subject will be much appreciated.

Our people are also interested in better postal facilities in the rural districts; that is, a better distribution. They are really more interested in better delivery than cheaper postage. Fraternally,

LEONARD RHONE.

On a recent visit to Washington State Grange, we had the pleasure of stating some facts before the Grange on the subject of postal telegraphy, a portion of which, at least, we will publish later in continuation of this subject.

## Children's Day At Tulare.

EDITORS PRESS:—Children's Day was celebrated on June 20th by a literary and musical entertainment, followed by ice cream, cake, fruits, nuts and candy:

## LITERARY PROGRAM.

Vocal duet. . . . . Miss E. Maples and E. H. Trescott  
Recitation. . . . . Miss Myra Parish, Children's Hour  
Banjo duet. . . . . E. H. Trescott and Ollie Hareless  
Recitation. . . . . Miss Anna Briggs  
Banjo and organ duet. . . . . Miss Julia Maples and E. H. Trescott  
Recitation. . . . . Roscoe Maples  
Organ duet. . . . . Miss Edith Cairns and Walter Cairns  
Recitation. . . . . Miss Elma Merritt  
Organ solo. . . . . Miss Edith Cairns  
Recitation. . . . . Miss Pearl Talbot  
Organ solo. . . . . Walter Cairns  
Song. . . . . Edith and Walter Cairns

The program was well rendered, and in some features of remarkable merit. Refreshments were first-class, well suited to the occasion and tastefully served.

It was a typical Grangers' family gathering, rendered remarkable by a souvenir from the Master of a fine badge to each of our guests. To enter into details and give the prominence to individuals that their efforts merited and that would be suitable for a local paper seems too much to ask of your valuable space. As so many similar reports appear in these columns, we are sometimes called to regret that Webster has so few adjectives and that new-coined words are not recognized without the stamp of the mint.

To meet all our wants we must demand some amendment to our sub Treasury plan to provide more adjectives as well as more coin. Please give us an editorial note on this point to serve as a guide in future accounts of such gatherings. In planning exercises of this

nature, the writer thinks it important to impress upon every guest the features which make the Grange an institution that we hope may be a blessing to them after we have been followed one by one to our long homes. We want to make these occasions of joy to be looked forward to from year to year, yet at the same time show how deep and solemn a feeling is inspired by the teachings of our Order, and that among our best wishes for our loved ones is that they may become pillars among Patrons and live on the grand old gospel of the Grange.

FRANK S. CHAPIN.

## Combines the Destroyer of Liberty.

The law enacted by Congress and some State Legislatures, within a few years, to protect the public against monopoly and extortion of powerful trusts and combinations of wealth, and the manufacture and sale of spurious and adulterated food, will acquire amendments, and the vigilant power of the governments must be exerted for their enforcement. The full effect of the organization of powerful monopolies in the country is not yet manifest; our nation is too young, and their growth too recent, to show their full possibilities. Onerous as their exactions may be to individuals, their greatest danger will be political. The first intention of their organization was for an honest advantage in business. But avarice knows no bounds, and as they developed and strengthened, new fields opened and opportunities multiplied; accumulated wealth must be invested and greed must be satisfied, even at the expense of individuals and the public. Such concerns, powerful in energy and enormous wealth, with the inspiring motives of money getting and the powers which it controls, seek only the main chance, regardless of the sufferers, and it has been charged that, to accomplish their ends, they do not hesitate to corrupt and control Legislatures. It is no secret that Legislators are furnished with railroad passes; and so rampant is this cheap corruption that in some States laws have been enacted to prohibit the giving of railway passes—however much good such laws do! Observing people know how easily great corporations and moneyed monopolies can obtain whatever legislation they require, and how difficult it is for the people to secure adverse legislation to restrain such corporations, and not content with controlling Legislatures for their pecuniary interests, newspapers have publicly charged that some enormous moneyed corporations have entered the political field in support of special party measures, and even in the election of United States Senators. We boast of wealth, and are proud that ours is the richest of all nations; but if concentrated wealth oppresses the people, corrupts legislators and debases our politics, it is high time we look at the consequences, for history repeats itself, and the germ of destruction of our free institutions may nestle in gold, stocks and bonds, when in unscrupulous hands. As business men and patriots, farmers are interested equally with other citizens in this important question, not only because of the extortions of trusts, but also on account of the dangerous possibilities of enormous wealth. Hence the continued condemnation by farmers of monopolies, and their demand for timely legislation, to control and suppress such powers before they become too many and too strong.

## Reduced Railroad Fares to State Grange.

SOUTHERN PACIFIC CO.

San Francisco, May 27, 1891.

Mr. A. T. Dewey, Sec. State Grange of California:—DEAR SIR:—Replying to your letter of recent date, in regard to excursion rates on account of State Grange session of 1891, to be held at Haywards, Oct. 6. I beg to say that the same rates as in effect last year will apply for the coming meeting.

The return tickets must be purchased within 48 hours after the close of the meeting, and they will be limited to two days from date of sale. Very Respy,

J. H. GOODMAN,  
Gen. Passenger Agent.

Last year Patrons paid the full, unlimited rates, going (securing receipts for fares paid), and one-third rates returning, with stop-over privileges only while going.

## Information Wanted.

FARMERS' MILLS, PA., May 24 1891

A. T. Dewey, Sec. Cal. State Grange—DEAR SIR AND BROTHER: I inclose to you copy of By-law of Eagle Insurance Society of your State, and kindly ask if you know anything about it. Do you know if it is responsible? They have sent me quite a lot of their printed matter, and, not knowing anything about them, I take the liberty of asking you. Any information you can give will be thankfully received and held strictly confidential. Yours in F., H. C., with F.,

W. F. REARICK.  
Although pressed with other fraternal and business duties, we have investigated sufficient to find that there is no institution of the name mentioned that we can recommend, and advise Bro. W. F. R. to step with care and have nothing to do with any such concern.

The Secretary has received this week from Lookford and Woodbridge Granges their reports for quarter ending June 30 '91. Let other Granges be as prompt as possible.

## FARMERS' ALLIANCE.

## Alliance Edition.

Subscribers can receive our FARMERS' ALLIANCE EDITION WITHOUT EXTRA COST, by applying for the same. That edition contains several supplemental pages of Alliance matter, in addition to that which appears on this page through all editions.

## An Ominous Conclave.

One of the most significant of meetings as regards the financial operations of the Government has just been held in New York. At this meeting, the result of the bond-purchasing conspiracy was fully disclosed. The people have demanded the abolition of the National banking system for years, and have been quieted by the friends of that system in both the old parties, with the assurance that when the bonds were paid, the banks would of necessity be eliminated. It has been clearly demonstrated that the National banking system could not be perpetuated by congressional action without precipitating a revolt among the people against the perpetrators of such legislation. In order to serve the banks and defeat the expressed will of the people, the scheme of bond-purchasing was inaugurated. Premiums to the amount of about \$70,000,000 have been paid out since such purchase was begun by President Cleveland; and now when the bonds are about due, the National Treasury cannot meet them, and, as a consequence, they are to be extended. This is not the result of accident, but the end of a well-laid conspiracy. These two-per-cent bonds can be extended under the present ruling of the Treasury for an indefinite time. In fact, they are payable at the pleasure of the Government. The following is the resolution adopted at the meeting of the bankers and Secretary Foster:

*Resolved,* That this meeting, composed of representatives of banks, trust companies and bankers of New York, hereby expresses to the Secretary its unanimous opinion that in view of the necessity for an increase of circulating notes for the movement of the abundant coming crops of every variety, it is to the interest of the country to extend the maturing 4½ per cent bonds at the rate of two per cent interest, payable at the pleasure of the Government, and that a lower rate of interest would tend to contract the currency at a time inconvenient to all business interests.

The press dispatches further say.

Secretary Foster reserved his decision and made no announcement as to what his policy would be, but it is generally understood that he will act in accordance with the resolution. The National banks represented, notified the Secretary that they stood ready in case the bonds were extended, to buy them in the open market, and take out circulation against them. This would increase the amount of the currency in the country by \$28,000,000. In relation to the export of gold, the Secretary gave it as his opinion that the Government had sufficient power to maintain gold payments, even by the purchase of gold if necessary.

Let no one be deceived in this matter. Not a single dollar will be added to the volume of currency. The banks will sell the four-per-cent bonds that they hold, at a premium of 25 to 28 per cent, and purchase two-per-cent bonds at par to take their place as a basis for present circulation. They will in this measure reap the benefit of the high premium, and retain their grip on the volume of circulation. This is the scheme, and nothing else. But there is something beyond all this in the remarks made by the Secretary concerning the purchase of gold. If gold shipments continue for the next six months, as it has for the past six months, Mr. Foster will be compelled to go into the market and buy gold or abandon the financial policy of the past quarter of a century. This resolution, as given above, is another acknowledgment of the correctness of the sub-Treasury plan. It assumes that more money is not only needed, but is imperatively necessary at the season of year when the crops are being moved. This is a fundamental argument for a flexible volume of currency, and made use of by every one who understands the principles of that measure. Such statements as these confirm the belief that the money-owners of the country understand fully the benefits of the sub-Treasury plan, and are entirely willing to put it into practice, but are determined to be the beneficiaries themselves instead of the people. There is going to be some important development in matters of finance during the coming 12 months, and the friends of the sub-Treasury plan can afford to wait with patience and be confident of the result.—*National Economist*.

Wonder what complaint Secretary Foster has that he felt obliged to call a council of the (money) doctors of New York.

The fact that the Government dares not call in its bonds that are due, or issue the money of the country without first consulting Wall street, is evidence that there is something "rotten in Denmark."

The Comptroller of the currency should be compelled by law to remove his office from New York City to Washington.

## Estimated Reform Voting Power.

The New York *Herald*, having made an investigation for the purpose of ascertaining the voting strength of the Farmers' Alliances and their allies, reports from official sources that in Colorado the strength of the Farmers' Alliance

and Industrial Union is about 3000 members, nearly all of them having come in since the Ocala Convention. In California there are 20,000 Alliance men, of whom 8000 are new members. Georgia has about 80,000 on the rolls and is thoroughly organized. Iowa has added 10,000 members to the 5000 who were in the Order in December last; Kansas pays dues on 120,000 men and women; Kentucky has nearly 100,000; Missouri about 90,000; Maryland from 6000 to 8000 (mostly in the eastern shore counties); Mississippi, 40,000; Virginia, 60,000; and there are about 15,000 in the Territories. These are all the States that have perfected State organizations. Work is vigorously pushed in Oregon, which now has 100 Sub Alliances, with about 4000 members; in New Jersey with 50 Sub Alliances and 2500 members; and in Wyoming, Idaho, Minnesota, Washington and Wisconsin. The total strength of the Farmers' Alliance and Industrial Union, therefore, is about 1,270,000, but from this number must be taken about 20 per cent, representing the women and minors, which would leave the voting strength of the Order at about 1,016,000.

In addition to the Farmers' Alliance and Industrial Union, there are, according to Colonel R. M. Humphrey, 800,000 voters in the Colored Farmers' Alliance, almost wholly in the Southern States. Then there are the Northwestern Alliance, with its strength in Nebraska, Minnesota, Iowa and Wisconsin, about 175,000 members; the Farmers' Mutual Benefit Association, strong in Illinois, Indiana and Ohio, with 150,000 members; the Patrons of Husbandry, with about 200,000 members; the Knights of Labor, with 300,000 members; and the Citizens' Alliance, the membership of which is problematical. Making a reduction of 20 per cent in these organizations for non-voters, and to the strength of the Farmers' Alliance and Industrial Union must be added 1,460,000 voters, making the total voting strength of the combination 2,476,000 throughout the country.

## Spirit (of Some) of the Press.

The following from the N. Y. *Sun*, is a specimen of the spirit that is manifested toward the movement of the industrial classes to free themselves from the political and economic serfdom, under which they have been existing, for these many years.

The conference, congress, or confabulation which began at Cincinnati yesterday, includes the largest variety of cranks, corner-grocery economists, plough-tail socialists, out-at-the-elbows politicians, thinkers with a screw loose, and patriots waiting for something to turn up, that has ever been on exhibition.

Yet how many of us are supporting papers that, at the behest of our oppressors, are daily giving vent to such specimens of venom and ridicule, while we cannot afford to subscribe for our county, State and National organs.

These organs, together with the many valuable Lieutenants they have in the dozen or more of our county papers, that are fearlessly proclaiming the truth, are struggling to establish and maintain the right against all the opposition that money can command or the ingenuity of men and devils invent. These papers need our support and deserve it. We should maintain them in preference to any and all others.

When the farmers and laborers cease to reward those who persecute them; persecution may cease.

## State Lecturer's Announcements.

Members of the Alliance, and we hope thousands of other farmers and friends of the cause, will turn out for a good treat from the able and faithful State Lecturer, Bro. J. L. Gilbert, who writes June 18th as follows:

"I will speak at Lompoc on the 31 and 4th prox., at Ventura on the 6th, and at Los Angeles.

I had arranged for Paso Robles for the 1st, but after the President had made the appointment, the Secretary wrote me they had adopted a Constitution that provides that it must be on the 7th, and that they were powerless to change it, so if I can find a Co. Alliance down the coast that meets on the 1st, I will attend it. I want to see Bro. Pedlar and may stop over there. Do you know of any County Alliance that meets on the 1st?"

Remembering that Bro. Gilbert has to be in Lompoc on the 2d let any Alliance near enough to make a visit feasible on the 1st, write or telegraph him.

## County Alliance Meetings.

County Farmers' Alliances will meet as follows:

Alameda, at Niles, Wednesday, July 1st, 10 A. M.  
Santa Clara, at Murphy's Hall, San Jose, Friday, July 3d, at 8:30 A. M.  
San Benito, at Palmdale, Monday, July 6th, 9 A. M.  
Contra Costa, at Walnut Creek, July 2d.  
Nevada, at Rough & Ready, July 2d.  
Santa Barbara, at Lompoc, July 2d, 3d and 4th.

NOTE.—The Secretaries of County Alliances are requested to notify us of the date of county meetings.

BURDETTE CORNELL, the Nebraska Boy Lecturer, will help enliven the Alameda County Farmers' Alliance at Niles, July 1st.

## Alliance County Notes.

## Butte.

An enthusiastic meeting of the Palermo Alliance took place June 15, at the school house. Nominations were made for the various officers of the organization, which will be voted on at the next regular meeting, which occurs on the 29th inst. Those nominated were: H. A. Clark for president; G. W. Smith, vice-president; J. Armstrong, secretary; S. B. Onyett, treasurer; Geo. K. Hooper, lecturer; Mrs. Mitobell, chaplain, and Philip Hawley, Sergeant-at-arms. The delegates nominated to attend the Butte County convention at Biggs on July 7th, were Messrs S. B. Onyett, H. A. Clark and Geo. K. Hooper.—*Progress*.

## Humboldt.

The Table Bluff Alliance folks propose an old fashioned clam-bake on the beach on the Fourth of July. At the quarterly meeting of the County Farmers' Alliance to assemble in this city on July 7th, the officers for the ensuing year will be elected and installed. At this time a good level-headed set of officers will do much to build up the Order in this county. Send your best men as delegates.—*Western Watchman*.

## Orange.

At the last open meeting of the Farmers' Alliance, held in Bank hall, there were enough farmers present, with their families and invited guests, to comfortably fill the hall. The program consisted of songs, recitations, readings and tableaux. Mr. and Mrs. Henri Fairweather gave a number of vocal selections, which were received with delight by the audience. Miss Daisy Shaffer told "How Me and Betty Killed the Bear," and acquitted herself bravely. Mr. Clyde Bishop also recited very creditably. The tableaux were "The Season," "Mortgage on the Farm," and "Mortgage off the Farm." Mr. Hiram Hamilton, in a brief address, explained the political, financial and social plans of the Alliance.—*Orange Post*.

## Placer.

J. J. Morrison, county organizer writes: Auburn, June 19. EDITORS PRESS:—I organized to-day at Edgewood School District, three miles from Auburn, the Edgewood Alliance. The following officers were elected: F. M. Varden Pres. F. L. Smith, V. P.; O. D. Storrs, Sec.; C. A. Young, Chap.; James Orr, D. K. The Alliance is located in the olive district, and will be a strong body of active and earnest workers.

## San Benito.

Dr. Hart of Hollister in *Garden City Alliance* says: Hollister Alliance is on the boom; we have a large class ready for initiation the first Saturday in July. We will not take in new members at the end of the quarter, as we have to pay back dues on male members initiated at the end of the quarter; will have a class of about 25. The citizens of Hollister are raising a large bonus to have the Alliance mill located at this place, and the citizens of Gilroy will have to raise a good large bonus or lose the mill; let them go to work and work with a will, for the mill will be a success, as everybody is in favor of a new mill.

## San Diego.

There are now 55 branches of the Farmers' Alliance in Southern California—26 in Los Angeles, 14 in Orange, nine in San Diego and six in San Bernardino county. The Alliance movement will be quite a factor in California politics in 1892.—*Olay Press*.

## San Luis Obispo.

Arroyo Grande will celebrate the Fourth of July under the auspices of the Alliance and Grange organizations. There will be exercises, consisting of an oration, reading and music, etc., followed by a basket picnic and barbecue at Greene's grove. A program of games and races has been arranged, for which valuable prizes are offered. Officers of the day—Pres., Judge Steele; Vice-Presidents, W. G. Jones, W. Ballagh, J. V. N. Young, J. S. Gregory, J. G. Stevenson, G. Shinn, E. Leedham, W. D. Sevier, W. T. Lane; Marshal, Frank Conrad. There will be a parade in the afternoon and fireworks in the evening.—*Herald*.

## Santa Clara.

The Alliance Co-operative Milling Co. filed articles of incorporation for the purpose of handling orchard products, for the buying and selling of supplies, carrying on a general mercantile business, manufacturing, milling, packing, canning, drying and preserving fruits and vegetables, and buying, selling and exchanging general merchandise and orchard, farm and vineyard products; handling real estate and personal property necessary for the business of the corporation. The directors are: A. R. Ellis, Hollister; P. L. Nash, Hollister; R. Buckledge, Hollister; J. F. Phegley, Gilroy; C. W. Pedlar, Gilroy; George B. Johnson, San Jose. The capital stock is \$50,000, divided into 5000 of shares of \$10 each. The amount already subscribed is \$1480. No one not a member of the Farmers' Alliance and Industrial Union, shall become a stockholder, and no person hold more than 50 shares.—*Gilroy Gazette*.

## Sutter.

The Farmer's Alliance of Yuba City, are making arrangements for a big time on the third of July when the County Alliance will hold its quarterly meeting in Yuba City. Reports from the various Alliances in the county, are that the Order is growing steadily and doing considerable work. At the meeting of the

County organization next month a large amount of business will be done and a full attendance is expected.—*S. Co. Farmer*.

## Tulare.

The Tulare County Alliance will convene at Visalia, July 1st. Each Sub Alliance is entitled to a delegate for their charter, and one for each 20 members and majority fraction thereof. Important business will come up, and though it will be a busy time with farmers, each Sub Alliance should see that a full delegation is present.—*Farm View*.

## Not for Charity's Sake.

State President Cannon in a personal letter recently written says:

"I receive hundreds of applications to flood the Alliances with free reading and they are promptly consigned to the waste basket. New York, Boston and Philadelphia have offered to supply the Alliances of this State with an unlimited quantity of their big dailies. Now, these gentlemen do not publish their papers for Charity's sake. Somebody is putting up millions of dollars to educate the 'ignorant farmer,' as they claim, and we understand pretty well who they are. They have befuddled the brains of the people for 25 years with their literature, which has helped the government to hatch out tens of thousands of millionaires. We now serve notice on those gentlemen that this government incubator must cool off a little so that some of the eggs will not hatch. They have tried all other means and now they try to use the Congressmen. Our friends can all depend upon receiving prompt information on all matters affecting our interests. But old line politicians need not apply. We may expect these assaults from this time on until after the election in 1892. Their only hope is to counteract the revolution started at Cincinnati and if money will do it, it will be done. When we grapple with these monster corporations and the corrupt politicians, stirring times may be expected. But I have an abiding faith in the honesty and integrity of the people and when the question is fairly put to them, whether the almighty dollar or the almighty man is to rule this country, the man will prove victorious.—*Garden City Alliance*.

## Put on the Armor.

EDITORS PRESS:—In your issue of June 20th I saw an article from W. S., and after reading the last part, "I am watching the Alliance to see which it will do," was reminded of school-boy days, when it was "Hit him, Johnny! Hit him! and if you don't get whipped I'll try him."

Now I may be doing W. S. an injustice. He may not be eligible; yet there are those in my own neighborhood who like Alliance principles and would join, but are waiting to see what it is going to do.

Come, W. S., give us some more such pieces in "our RURAL PRESS," and sign your full name, so that the world may know you. Be not ashamed of those principles you advocate, but put on your armor of defiance, and, if eligible, join the ranks of those who are fighting for honest and genuine protection.

E. N. PIERCE, Lect. Union Alliance.

## Our Nebraska Farm Boy's Appointments.

Bro. Burdette Cornell announces the following appointments:

Place.	Day	Date.
Danville,	Saturday,	P. M. June 27
Tassajara,	Monday,	evening June 29
Niles,	Wednesday,	July 1
Walnut Creek,	Thursday,	July 2

WHAT ORGANIZATION ACCOMPLISHES.—The farmer's Alliance of Maricopa county numbers now over 150 members. At their last regular meeting, action was on the shipment to them of a carload of defective grain sacks. They ordered through some Sacramento house, 31,000 first class San Quentin sacks. Those received were in many cases imperfectly woven or poorly sewed. Unless the sacks are made good, the Farmers' Alliance of California will join in punishing the offenders. One farmer's wrongs these days are righted by 10,000 other farmers acting in unison.—*Phoenix, Arizona, Herald*.

PROTESTING AGAINST LAWS FAVORING MONOPOLISTS.—Inasmuch as efforts have been made by Walla Walla (Washington) Local Alliance to buy sugar in carload lots for use by our people, in New York, and have failed because the great dealers have divided territory, so that this coast must buy in San Francisco and eastern people can buy in New York, we protest against all laws which make it possible to thus farm out the business of our country in such a manner, as this is to the detriment of all consumers.—*Union Journal*.

OUR STRONG COUNTIES.—We learn from Brother Pedlar that we now have 416 Sub Alliances, 29 counties being organized. Monterey is the banner county, so far reporting 23 Subordinate Alliances. This speaks volumes for their President, D. G. Wright, who is a live man and whose heart beats responsive to every good work. San Luis Obispo reported 21 Subs, Tulare 20, San Joaquin 18.—*Garden City Alliance*.

### Crystal Faith.

A Crystal-Wedding Poem.

(Written for the RURAL PRESS by L. H. S.)

The gods one day to gentle converse came,  
And with each other vied some gift to name  
To be bestowed upon the mortal few,  
Who fifteen years of wedded life pass through.  
And all agreed great honor to confer,  
"When men are true where gods are prone to err."  
And some brought gifts and heaped them in a place,  
And thoughtful Juno named them o'er with grace:  
"Here's home and riches, honor and content,  
And radiant wisdom by Athena sent.  
Ye generous gods, what else is there to give!  
For more than this what mortal dares to live!"

But all were silent and none gave acclaim.  
And then rose Thetis, silver-footed dame,  
(She who by gentleness maintained her part),  
"Incomprehensive is the human heart,  
In secret loving most, in silence thrilled  
With thoughts unutterable, in silence filled  
With wordless song and rich warm rifts of light,  
That none know of; for human sight  
Forever doubts because it sees no more.  
And love forever fails to claim its hidden store."

"Now some devise we should perfect and give  
To them who fifteen loving years do live  
In wedded bliss—something supremely fair,  
And yet invisible as the ambient air;  
A crystal gem, translucent, heavenly pure,  
Which, given to them whose love we would insure,  
Shall show to each the other's inmost thought,  
The faith unaltered, the loving deeds unwrought."

And then the gods the thought immortal took,  
"Olympian Jove his locks ambrosial shook,"  
And gave assent. Aurora lit the sky,  
And every god a jewel lifted high;  
There, aflame, the wondrous gem was born;  
First, like a star it shone before the morn,  
From heights immeasurable, it fell, and then,  
Came this Soul Seeing to the hearts of men.

Soul Seeing do they live, when fifteen years  
Of wedded care, of mingled joys and tears  
Have made their love so pure, their eyes so clear,  
That faith in trial lives without a fear;  
And sorrow finds surcease; this soul light fair  
Surrounds the sufferer with uplifting care;  
Each other's pain is known without the word,  
"And every sigh supported e'er 'tis heard."

Soul Seeing do they live, doubt dies away,  
And crystal love grows dearer day by day;  
Their crystal confidence, their crystal truth  
Supplants the little joys of giddy youth;  
And from such crystal peace there does outflow  
The light of charity for friend and foe;  
Good words and deeds their tranquil days employ,  
And Heaven responsive addeth joy to joy.

### My Fellow-Traveler.

(Written for the RURAL PRESS by CHARLOTTE PARKER STETSON.)

I little thought, when I set out in the morn-  
ing, and that woman came down the steps of a  
house on our street, and scudded along with  
feeble speed just ahead of me, that she was  
going to be just ahead, or just behind, or just  
beside me all day. If I had suspected it I  
would have gone to New York instead of Bos-  
ton—or to Attleboro.

If there is any one thing in this world which  
wears on me more than another, it is an  
ordinary woman. I like handsome women,  
of course, and good women, of course, and  
smart women I have a great respect for.

Of my own women, I am extremely fond,  
having a good wife, a handsome daughter, and  
a sister as smart as a steel trap.

This woman just ahead of me was neither  
young nor handsome, nor smart, I am sure, nor  
especially good either, for her expression  
showed temper, and so did her voice, so she  
screamed a few last directions in leaving her  
house.

This is a habit women have which I don't  
like. You don't see a man stand at his gate or  
the door of his factory either and yell out part-  
ing directions. He sees to his work while he's  
inside, and when he goes out he goes out.

I suppose women carry their household cares  
about with them everywhere. I know they  
always talk about them everywhere. I've  
noticed it in my wife again and again—always  
something on their minds.

To run a small house and a few children  
oughtn't to take a whole human life. A man  
can keep a hotel and have some spare time.  
And a man can manage a whole orphan asylum,  
and yet not talk in his sleep about it. I  
never knew a man to do both, though. I  
wonder if it is the multiplicity and variety of  
their little cares that makes women so wearing.  
But I've forgotten the one in front of me.

She hurried all the way down the street, and  
I walked slowly and kept easily behind her.  
How absurd it is to see a woman hurry! They  
can't run—that is worse than absurd; it is  
awful! But just to walk fast spoils their  
looks. Their feet go skittering along in no  
kind of step, and their skirts bob and waggle  
about in no kind of time with their feet.

A woman's clothes never look well unless she

is quiet—either sitting still or walking slowly.  
I suppose that is one reason they keep quiet so  
much; and if it were possible to dress in any  
other way, I suppose they might move better,  
but I shall never finish my particular woman at  
this rate.

I was going to stop at the postoffice, but I  
quite forgot it till I saw her turn in there, and  
then I hurried, but it was too late. I had to  
stand and wait for that woman to deposit on  
the stamp window—all an umbrella, a gossamer,  
a bag, one of those everlasting supplementary  
pouches that most women carry nowadays,  
and various little packages. What a mass of  
stuff women do carry about! That ever-pres-  
ent gossamer and umbrella! Why are they  
so afraid of a little rain? I suppose it is partly  
delicate health, poor housed-up things, for the  
most part, but still more a judicious care of  
their dry goods. I'm a family man myself,  
and I know what a sorry sight a wet woman is,  
and how long it takes or how much it costs to  
make their spoiled clothes over again. If  
they'd only wear plain, heavy goods, that rain  
wouldn't spoil. But that would be an awful  
weight, made as they make their clothes. They  
might make them plain and scant, but that  
looks awfully—salvation army and dress re-  
form! What a nuisance women's clothes are,  
anyway, from a practical point of view!

My digression is all right this time—I had  
time for 20 such, while that woman struggled  
with her stamps and her bundles. If a man  
had twice as many things to carry he wouldn't  
obstruct the stamp office window with them.  
He would take out what he wanted and leave  
the rest in his pockets. Why don't women  
have pockets? Breast pockets!

Hip-pocket, tail-pocket, what am I thinking of?  
Of course they can't, with their clothes. Hang  
their clothes? No wonder they flourish those  
bags!

Well, I waited till that woman had bought  
her stamps and stamped her packages, and  
argued confusedly with the clerk, and finally  
picked up all her duds and come out the way  
she went in; so I had to back out before her.

Then I got mine and was through in time to  
see her skipping up Weybosset street.

I wish somebody would start an academy to  
teach women some knowledge of business meth-  
ods, if only enough to travel with.

They'd save themselves years of worry, if  
they only knew the difference between a check  
and a ticket, and that knobs and things usually  
open from right to left.

If women would only use a little sense—  
they've got sense enough, too, of a sort—and  
learn to do these little things with an air of cool,  
easy assurance—no; I don't mean assurance,  
but simply and naturally, like a man—  
no; I don't mean like a man, of course, nor like  
a woman, heaven knows, but like a reasonable  
being. I suppose they act so because of really  
having so little experience in these matters,  
always having had these things done for them,  
and not liking to appear bold and forward,  
which this woman certainly was not.

I saw her go wavering along Weybosset  
street, and stop a moment to look in at Clapp &  
King's. You never can tell by a woman's looks  
whether she is going to buy or not. I wonder  
what mental process goes on while they look  
at strawberries, or lace collars, or children's  
shoes. It's like that joke—"the difference  
between a man and a woman is, a man will pay  
a dollar for a fifty-cent thing he wants, and a  
woman will pay fifty cents for a dollar thing  
she don't want." They never seem to know. I  
suppose they are thinking something like this:  
"Those strawberries look pretty good—thirty  
cents a box. That's too high. William likes  
them, but he hates extravagance. Jennie likes  
them, too—I've a great mind to—no; I won't  
either. It's too early," and so they go off, after  
all.

Now a man would only think of one thing,  
whether he wanted those strawberries or not,  
and secondary whether he had the money to  
pay for them. I suppose it is partly having  
to consider so many tastes and opinions that  
makes them so uncertain—women I mean.

The one in question got out of right just  
then, and I went comfortably to the station  
and got a good seat in the ten o'clock train.  
I read my paper peacefully, the train filled as  
it always does, and we were about to start  
when I heard a timid voice at my elbow—"Is  
this seat engaged?" and there was that woman  
again!

I made room for her, of course, there was no  
other seat in the car, and she sat down by my  
side. So I had an opportunity of verifying my  
former hasty judgment. I was quite right.  
Not young, not handsome, not smart, not even  
extra good.

About thirty-five I should judge. Singular  
how old most women look at thirty-five! Now  
a man of thirty-five is young, just about old  
enough to marry wisely. Then if he marries a  
girl of eighteen or so, there is some chance of  
her keeping even with him.

I wonder what does age them so? It must  
go rather hard too, for they naturally care  
more about being young—or at least, looking  
young.

Now a man at 50 or even 60 can still rise in  
the world and enjoy it, but a woman's fling  
seems to end at about 30. After that they are  
treasures at home, of course, but don't seem to  
have much individual life or ambition. Some-  
times now when they value youth and beauty so much,  
they might keep it at least as long as we do.  
They just seem to blossom and then fade—mar-  
riage and the home; there's no other safe place  
for 'em. But my sister looks ten years younger

than my wife, and really, she's five years older.  
I wonder if it is because she isn't married and  
teaches—is independent, larger interests,  
broader life? But they must marry, and I'm  
sure I wouldn't want my wife to go around and  
see to things in general, as my sister does. A  
married woman can't; and yet the married  
women seem to value their looks more than the  
old maids. We'll I'm thankful the world isn't  
on my shoulders!

We rode to Boston together, and I should  
have been very glad of a little conversation  
with my seat-mate, but that, of course, was  
out of the question. She would have thought  
herself insulted, and called the conductor, no  
doubt, if I had tried to talk to her. How  
sensitive and foolish women are about being  
spoken to! As if one human being could not  
speak to another without evil intention! Still,  
of course, one wouldn't want his wife or daugh-  
ter talking to strangers! You never know  
what sort of persons they are, or what advan-  
tage they may take of a woman's kindness.  
It's a bad world.

I had an errand or two to do in Boston and  
took lunch at a restaurant and got along very  
comfortably with my other business; but all  
day long that woman kept turning up, anxious,  
hurried, adding constantly to her bundles,  
nervously looking at every clock and scrambling  
through a poor little lunch in about a third the  
time I took for mine.

It is astonishing how women neglect them-  
selves in that respect. I don't remember  
ever seeing a single woman order a square meal  
at a restaurant. Always tea and toast, or  
coffee and an omelette, or one plate of soup  
and an ice—never enough to feed a person. I  
wonder if it's money? No, they will get good  
things if they have people with them—that is,  
if it's a man—but then he usually pays—yes,  
and orders too. Still I don't think it's money;  
I think it is instinctive asceticism. Most  
women are self-denying on principle, and yet  
they're extravagant enough, goodness knows!  
I cannot make it out.

She ate her pitiful little lunch and paid for  
it with only one mistake, and started off to ac-  
cumulate more bundles. I took the 5.30 home,  
and so did she. Such a weary, bedraggled  
creature (it rained, of course, before night).  
She sat just in front of me. I had a seat  
turned backward, and I could really watch her  
better than before. She was tired enough to  
have taken a cat nap, but I've noticed that  
women don't do that as men do. I suppose  
they think it is beneath their dignity in  
public.

This woman did try to rest her head—it  
ached I could have sworn—against the win-  
dow frame, but she couldn't even do that on  
account of her bonnet.

Why couldn't she take her bonnet off then?  
Women won't do that in public either, and be-  
lieve their bonnets are still a matter of dress to  
them—not a shelter. All that remains of the  
coif and veil.

And then she couldn't lounge. If they only  
knew what a rest and comfort there is in simple  
freedom of motion—to lay your arm over the  
back, and put your feet up on the opposite seat  
—but then their clothes don't allow of that!  
And, no, I shouldn't like to see my wife sit so.  
But I suppose she feels just as tired of sitting  
one way as I do. No, I don't believe that either.  
They must get used to it, else they would  
die. All the way to my house almost I had  
that woman before me, for she took the same  
horse car, and I declare I felt actually tired  
just watching her. Women are a drag after  
all, most of them, and yet that don't seem fair,  
or real true. I give it up!

### Why He Doesn't Smoke.

Everybody knows that Chauncey Depew  
doesn't smoke, says the *Detroit Tribune*, but  
the reason of his abstinence forms an interest-  
ing story.

"I used to smoke twenty cigars a day," said  
Mr. Depew, "and I continued it until I be-  
came worn out. I didn't know what was the  
matter with me, and physicians that I applied  
to did not mention tobacco. I used to go to  
bed at two o'clock in the morning and wake up  
at five or six. I had no appetite and was  
dyspeptic. I was in the habit of smoking at  
my desk, and thought that I derived material  
assistance in my work from it. After a time  
I found that I couldn't do my work without  
tobacco. I could prepare a brief or an argument  
without smoking, but still I was harassed by  
feeling that something was amiss, and the re-  
sult was not up to the mark. I also found that  
I was incapable of doing any great quantity of  
work; my power of concentration was weakened,  
and I could not think without a lighted cigar  
in my mouth. Now it is perfectly clear that  
without this power of concentration a man is in-  
capable of doing many things. It is this which  
enables him to attend to various and  
multifarious affairs, to drop one absolutely and  
take up another and give it full attention."

Mr. Depew illustrated his meaning by  
spreading out the fingers of both hands and  
making them dodge in opposite directions with  
great rapidity.

"One day I bought a cigar and was puffing  
it with a feeling of pleasure which is only pos-  
sible to the devotee. I smoked only a few  
inches, and then I took it out of my mouth and  
looked at it. I said to it: 'My friend and  
bosom companion, you have always been dearer  
to me far than gold or woman. To you I have

ever been devoted, yet you are the cause of all  
my ills. You have played me false. The time  
has come when we must part.'

"I gazed sadly and longingly at the cigar,  
and then threw it into the street. I had be-  
come convinced that tobacco was ruining me.  
For three months thereafter I underwent the  
most awful agony. I never expect to suffer  
more in this world or the next. I didn't go to  
any physician or endeavor in any way to pal-  
liate my sufferings. Possibly a physician  
might have given me something to soften the  
torture. Neither did I break my vow. I had  
made up my mind that I must forever abandon  
tobacco or I would be ruined by it. At the  
end of three months my longing for it abated;  
I gained 25 pounds in weight. I slept well for  
seven or eight hours every night; I require that  
amount because of my excessive cerebration.  
When I don't get it I am liable to rheumatism  
or sciatica. I have never smoked from that  
day to this, and while no one knows better  
than I the pleasures to be derived from  
tobacco, I am still willing to forego them,  
knowing their effect."

### A Letter Which Contains Much Good Advice.

Following is a letter from Henry Ward  
Beecher to his son Herbert, former collector at  
Port Townsend.

BROOKLYN, N. Y., October 18, 1878.

MY DEAR HERBERT:—You are now for the  
first time really launched into life for yourself.  
You go from your father's house, and from all  
family connections, to make your own way in  
the world. It is a good time to make a new  
start, to cast out faults of whose evil you have  
had an experience, and take on habits the want  
of which you have found to be so damaging.

1. You must not go into debt. Avoid debt  
as you would the devil. Make it a fundamen-  
tal rule. No debt—oath or nothing.

2. Make few promises. Religiously observe  
even the smallest promise. A man who means  
to keep his promises cannot afford to make  
many.

3. Be scrupulously careful in all statements.  
Accuracy and perfect frankness, no guess-work.  
Either nothing or accurate truth.

4. When working for others sink yourself  
out of sight, seek their interest. Make your-  
self necessary to those who employ you by in-  
dustry, fidelity and scrupulous integrity. Self-  
ishness is fatal.

5. Hold yourself responsible for a higher  
standard than anybody else expects of you.  
Demand more of yourself than anybody else ex-  
pects of you. Keep your personal standard  
high. Never excuse yourself to yourself. Never  
pity yourself. Be a hard master to yourself,  
but lenient to everybody else.

6. Concentrate your force on your own  
proper business; do not turn off. Be constant,  
steadfast, persevering.

7. The art of making one's fortune is to  
spend nothing. In this country any intelligent  
and industrious young man may become rich if  
he stops all leaks and is not in a hurry. Do not  
make haste; be patient.

8. Do not speculate or gamble. You go to  
a land where everybody is excited and strives  
to make money. suddenly, largely and without  
working for it. They blow soap-bubbles.  
Steady, patient industry is both the surest and  
the safest way. Greediness and Haste are two  
devils that destroy thousands every year.

9. In regard to Mr. B——, he is a Southern  
gentleman; he is receiving you as a favor to me;  
do not let him regret it.

10. I beseech you to correct one fault—  
severe speech of others; never speak evil of any  
man, no matter what the facts may be. Hasty  
fault-finding and severe speech of absent peo-  
ple, is not honorable, is apt to be unjust and  
cruel, makes enemies to yourself, and is wicked.

11. You must remember that you go to Mr.  
B——not to learn to manage a farm like his.  
One or two hundred acres, not 40,000, is to be  
your future homestead, but you can learn the  
care of cattle, sheep, the culture of wheat, the  
climate, country, manners and customs and a  
hundred things that will be needful.

12. If by integrity, industry and well  
earned success you deserve well of your fellow  
citizens, they may in years to come ask you to  
accept honors. Do not seek them, do not  
receive them while you are young—wait; but  
when you are established you may make your  
father's name known with honor in halls of  
legislation. Lastly, do not forget your father's  
and your mother's God. Because you will be  
largely deprived of church privileges you need  
all the nerve to keep your heart before God.  
But do not despise small churches and humble  
preachers. "Mind not high things, but con-  
descend to men of low estate."

Read often the Proverbs, the precepts and  
duties enjoined in the New Testament. May  
your father's God go with you and protect you.  
HENRY WARD BEECHER.

When night has let her curtains down, with low and  
plaintive hum,  
Mosquitoes thirsting for our blood around our pil-  
lows come.

We watch, we wait with bated breath, while strikes  
the midnight chime,  
And hit our cheeks a stinging slap, and miss 'em  
every time.

YOUR very late in returning from church;  
you must have had a long sermon." "Oh, yes;  
Dr. Sixthly gave us a great discourse on 'The  
Evil of Talking Too Much.'

## Chautauqua Circle.

## Program for the Assembly at Pacific Grove.

The following is the daily program for the coming C. L. S. C. Assembly at Pacific Grove:

Wednesday, June 24th—Opening evening entertainment—Pantomime, "Story-telling in Sign Language," by Prof. T. d'Estrella of Berkeley Deaf and Dumb Institute and two assistants.

Thursday, 25th—Morning; organization of classes in botany, zoology, art, cookery, elocution, English literature, photography, languages, conchology, pedagogy. These classes will occupy every morning of the session. Thursday afternoon, lecture on "Water-color Art," by Prof. J. Ivey, art instructor of the assembly. Thursday evening, lecture, "Shakespeare's Heart," by President Homer B. Sprague.

Friday, 26th—Morning classes; 2 P. M., Sunday-school normal work under Dr. H. H. Rice of Oakland for the first week, and afterward under Dr. J. E. Gilbert of Indianapolis—session every day free to all; 3 P. M., lecture, "Hawthorne's Myths," by Mrs. Florence Williams, assembly lecture on "History and Literature." Friday evening, lecture, illustrated, "Recent Photographic and Visual Astronomy," by Prof. E. E. Barnard of Lick Observatory.

Saturday, 27th—Morning classes; 3 P. M., lecture, "Shakespeare's Brain," Pres. H. B. Sprague; evening lecture, sign-language entertainment by Prof. d'Estrella.

Sunday, 28th—Morning sermon by Rev. W. W. Faris, D. D., of San Francisco; evening sermon, by Rev. W. H. Withrow of Toronto, Canada.

Monday, 29th—Morning classes; 2 P. M., Sunday-school work; 3 P. M., lecture, "Our Food," by Mrs. S. W. Knight, assembly teacher of culinary art; evening lecture, "Away Down South in Dixie," by Selah W. Brown.

Tuesday, 30th—Morning classes; 2 P. M., Sunday-school work; 3 P. M., lecture, "Physiognomy," by Mrs. M. O. Stanton of San Francisco; evening lecture, "The Catacombs," by Dr. W. H. Withrow.

Wednesday, July 1st—Morning classes; 2 P. M., Sunday-school work; 3 P. M., lecture, "A Hurried Glance at Mother Earth," by Prof. J. Dickinson of Los Angeles; evening lecture, illustrated with stereopticon, "The Blood," by Dr. J. H. Wythe.

Thursday, 2d—Morning classes; 2 P. M., Sunday-school work; 3 P. M., illustrated lecture, "The Catacombs," by Dr. Withrow; evening lecture, "Uncle Sam's Warts and Wens," by Dr. F. F. Jewell.

Friday, 3d—3 P. M., lecture, "A Closer View of Mother Earth," by Prof. J. Dickinson; evening lecture, "Fools," by Dr. P. S. Henson of Chicago, the assembly's star lecturer. Free to all.

Saturday, 4th—Patriotic address at 3 P. M. by Dr. Selah W. Brown; evening, grand concert and entertainment by Berkeley Glee Club, Mrs. Mariner Campbell and other famous vocalists.

Sunday, 5th—Morning sermon, Rev. P. S. Henson, D. D., of Chicago; 3 P. M., Sunday-school mass meeting, led by Rev. J. E. Gilbert, D. D. Evening sermon, Rev. A. J. Nelson, D. D.

Monday, 6th—3 P. M., lecture, "Grumblers," by Rev. Dr. Henson. Evening, popular concert by Berkeley Glee Club and others.

Tuesday, 7th—3 P. M., lecture, "Women in Heathen Lands," by Rev. Selah Brown. Evening lecture, "Money," by Rev. Dr. Henson.

Wednesday, 8th—3 P. M., lecture, "With Whom to Keep Company," by Prof. W. S. Monroe, assembly teacher of pedagogy. Evening, "The Other Half," by Dr. Henson.

Thursday, 9th—3 P. M., lecture, "The Sunrise Kingdom," by Selah Brown. Evening, popular concert.

Friday, 10th—Closing day; graduating exercises in the morning, with address by President Hirst. Evening, closing entertainment, "The District School," under capital management.

A two-weeks' intellectual feast. Everybody should go. All who attend the Assembly can go on a two-thirds rate of railroad fare, whether they are Chautauquans or not, by applying to Mrs. M. H. Field, C. L. S. C. Secretary, San Jose, for a certificate. One certificate takes an entire family. Circulars of full information at all the book stores.

## Chaff.

So many people, when they find they are fit for nothing else, try to be good.

MRS. P. KAY (calling): Does your husband ever sleep in church? Mrs. D. Lane: Well, I hardly know what to answer. I tell him he does, and he declares he doesn't.

"FATHER," said Willie, "Did Columbus discover the Atlantic ocean?" "Why, certainly not; what made you ask such a question?" "My joggery says he came across it."

YOUNG HUSBAND: Isn't there something peculiar about the taste of these onions, my dear? YOUNG WIFE (anxiously): Oh, I hope not, my dear. I took snob pains with them. I even sprinkled them with Jockey Club before I put them to boil to take away the unpleasant odor.

A NEW YORK man visited the family of a relative in the country where he was not a welcome guest by any manner of means. After the visitor had spent a couple of weeks, his much-disgusted host said one morning at the breakfast-table: "Dear cousin, don't you think your family will miss you painfully? You ought not to leave them alone so much." "By Jove, that's so," exclaimed the New Yorker; "I'll telegraph them to come right on here."

A CLAIM TO SOCIAL PRECEDENCE.—Hostess: You must give your arm to Mrs. Malecho, William—and put her at your right, and make yourself as agreeable as you possibly can! Host: Why, she's a person of no consequence whatever. Hostess: Oh, yes, she is! She's very ill-natured, and tells the most horrid lies about people, if they don't pay her the very greatest attention!

## YOUNG HOLKS' COLUMN.

## An Intelligent St. Bernard.

[Written for the RURAL PRESS by SAMUELLETTA DICKSON.]

In one of the valleys of California lived a fine Newfoundland-St. Bernard dog named George Washington. The milkman who owned him had five boys; they would have said six, for they considered the dog one of the family. Their mother said she did not know which made her the most trouble, for when a puppy, George pulled the clothes off the line, tore them to pieces, carried off every hat and boot he could find, and dug up her choice plants in the flower-garden. But she ought not to have blamed the puppy, for he really wanted to help all the while. When the boys brought in an armful of wood, he took a stick in his mouth and carried it in, too.

Once when his feet were muddy, and ma would not let him into her clean kitchen, he went and brought a stick of wood and laid it down by the door, and then barked, as if to say: "Please let in such a useful little fellow," and ma did.

In the morning, long before the stars disappeared from the sky, the milkman and his boys were out milking, and George went, too. The cows lay about in the corral, but each, as her name was called, got up and went to the shed where she was milked, and got her bucket of bran. When the milking was done, John, Laurie and George, with the wagonful of cans, went to town. If ever a can-cover or the milk-measure dropped off the wagon, George picked it up and brought it to John.

Often after the milk was delivered and the boys were on their way home, they allowed George to sit on the seat beside them, with the reins in his month, and drive the horses. How grandly he sat up as tall as the boys; if any one spoke to him, he just rolled his eye around, as if to say, "Don't you see I am engaged?" but he never would turn his head. After they returned home, Walter and George took the band of cattle to the creek, and herded them till it was time to milk again.

Walter made himself a booth in a clump of willows, where he read and studied or worked with his scroll-saw, while George kept watch of the cattle that none got into mischief nor strayed away. Sometimes John and Laurie came down with their guns to hunt jack and cottontail rabbits, then they roasted them and had a fine feast. When it was noon, Walter would say, "George Washington, it is time we had some dinner," and off the dog went to the house a mile away, and took the tin pail which ma gave him in his month, and carried it to Walter; then they had dinner together. George was in the habit of doing errands.

One day he was on his way home from market with a piece of meat in his basket, when two little dogs barked very saucily at him, seeming to think he could not hit them with a basket in his month.

George deliberately set down his basket by the fence, and gave the little dogs a severe whipping, then he went on with his business.

Once John took George on to the stage in some amateur play at the Hall, and while he was in the dressing-room, he was boasting of his dog's intelligence, and declared that he understood language. The other boys did not believe it.

"You shall see," said John.

"Come, George, let's go home."

The boys and the dog went up the street a ways, when John suddenly said: "George, I've left my hundle in the hall; go get it and bring it here."

The dog went back to the hall, passed through the crowd, got the bundle and brought it to his master.

"There, now, don't he understand?" cried John triumphantly.

In the summer evenings, after the work was done, pa and ma used to set out on the piazza while the boys and the dog had a game of romps till they were tired; then they would lounge about the steps while George gave a "show."

"Whom will you die for?" one of the boys asked.

George sat up straight and rigid.

"Will you die for me?" Not a muscle moved.

"Will you die for General Grant, the greatest general?" Still no sign of dying. "Will you die for George Washington, whose illustrious name you bear?"

Then down he dropped, limp and motionless, and lay with closed eyes till some one snapped his fingers and said: "Arise!" when he was suddenly reanimated; then ma put a piece of meat on his nose, which he tossed up and caught in his month as it fell.

Sometimes the boys brought home other dogs, but George was so jealous that he would not come inside the yard while the other dog remained.

Once Hal, the oldest son, came home with a fine puppy. George immediately retreated to the road and lay under the ypress hedge, and no amount of coaxing could induce him to come near the house, even to eat.

One day the puppy ran out into the road where George was; this was more than he could bear, and picking up the little offender he walked to the watering trough, and tried to hold him under the water the way he was in the habit of doing with squirrels, but the pup

was so fat and heavy that he could not keep him under. Hal heard his puppy crying and came just in time to save him.

After that Hal kept his puppy shut up till he took him away.

George did not live to be very old. Once when hunting, a snake hit him on his foot, which ever afterward caused him much suffering. His death was considered a family bereavement, and he was buried under an acacia tree.

## DOMESTIC ECONOMY

## School Luncheon.

In filling the lunch basket, and a pretty one should be provided for every child, a clean napkin, a small knife, fork and spoon, with a little china or plated cup, should be placed in the bottom. The bread should be cut thin, and buttered neatly, next a slice from the lean part of the joint, the fat and ragged edges trimmed away. Cakes and pies, folded in clean white paper, custards and jellies put in pretty cups. We were once much amused by hearing a grown woman, the mother of a family, whose fastidiousness had survived her childhood, in speaking of a former schoolmate, "Oh, she was the girl who always brought horrid chunks of bread and meat, wrapped in brown paper, to school for lunch. She sat close to me, and the sight of it took my appetite for the contents of my own dainty basket. I do not wonder, notwithstanding her educational advantages, that she grew up coarse and unrefined." And, indeed, snob indifference on the part of a mother to the preparation of food to be eaten by a child is well calculated to produce such a result. Mothers, then, who have the health and welfare of their children at heart, should do all that is possible to give the school luncheon an appetizing and dainty appearance to the little people who depend so largely on it for the brain force and working powers of their long, tiresome school day.—Table Talk.

MUTTON CHOPS WITH LEMON.—Wash the chops, wipe them dry, grease the bars of your gridiron, and broil them over hot coals. When they are done, lay them on a dish and season them with pepper and salt, and haste them with butter; peel and slice lemons, lay a slice on each chop and send them to the table. This is the French method of serving them.

ICE CREAM CAKE.—Beat one-fourth pound butter to a cream; add gradually one and a half cups of sugar; then add a half-pint lukewarm water, two and one-half cups flour; beat thoroughly and stir in carefully two even teaspoonfuls baking-powder and the well-beaten whites of four eggs; bake this in three layers. Put it together with a hotted icing.

FRIED CHICKEN.—Singe; cut at the joints; remove the breastbones. Wipe each piece with a clean wet cloth; dredge with salt, pepper and flour, and saute them in hot salt-pork fat till brown and tender but not burned. Arrange on a dish with boiled cauliflower or potato balls and pour a white sauce over them, or dip in egg and crumbs, and fry in deep, hot fat and serve with tomato sauce.

COLLEGE PUDDING.—One pint soft bread-crumbs, one pint warm milk, one tablespoon soft butter, two tablespoons sugar, two table-spoons cream, one saltspoon salt, one-half nutmeg, two eggs, one cup currants. Use the inside of a loaf of bakers' bread; soak it half an hour in the milk. Dry the currants in a little flour. Mix in the order given, and bake in custard-cups. Stir once or twice while baking, to prevent the currants from settling.

ICING FOR CAKES.—Beat the whites of two eggs till they are very dry, then add gradually ten ounces of pulverized white sugar. Dredge flour over the top of the cake and wipe it off, to make the icing adhere. Put it over with a broad-bladed knife; it should be put on quite thick. When this coating is dry, dilute the remainder of the icing on your dish with a little rose-water, and put another coating over the top, which will have a glossy appearance.

FROTHED EGGS.—Separate the eggs carefully without breaking the yolks; heat the whites until they are very fine and stiff. Then arrange them neatly in small onatard-cups, making up a place in the center to hold the yolks. Slip one yolk carefully into the center of each cup, stand the cups in a pan of boiling water, and cook in the oven for about two minutes. Dust them with salt and pepper, and put a small piece of butter on each one and serve immediately.

STRAWBERRY SHORT CAKE.—To one quart of flour add two heaping teaspoonfuls of baking powder, half a teaspoonful of salt and one teaspoonful of powdered sugar. Sift all together in a deep bowl and chop into it three ounces of butter. Beat one egg and add to it one large onpful of sweet milk. Stir this into the other ingredients as quickly and lightly as possible. Roll into two sheets, each about half an inch thick, and bake in well-greased pans. When done pull the cakes apart and spread them with softened butter. Sprinkle thickly with powdered sugar and cover well with strawberries or raspberries, well sprinkled with sugar and slightly mashed. Put on the other half of the cake, crust side down, and pile berries and sugar on top; to be eaten hot with sugar and cream. This will make two cakes two layers each, or one with four layers.

## GOOD HEALTH.

## The Physician as a Despot.

Without any pretense of faith in any doctor who is not regular, and without prejudice to a sincere intention of calling in a thoroughly instructed and expert practitioner whenever occasion demands, it is still permissible to smile amiably at the professional jealousy of quacks. The successful physician, with exceptions which happily are much more numerous than they were, is the most intolerant despot on earth, and we encourage him to be so. We are vaguely aware of the limitations of his knowledge. We know that he has to guess first what is the matter with us, and next what will do us good, and, that though there are facts his acquaintance with which help him to guess right, many theories that regulate his professional action are still hypothetical and may or may not be correct. We know that he has discovered that many of the methods his father used were unwise and deleterious, and that the doses his grandfather gave often hastened the result they were intended to prevent, and hindered what they were designed to induce. We know not only that he is a man, and therefore fallible, but that his professional science, like his father's and grandfather's, is progressive and is still very far from being exact. Nevertheless, when anything ails us, in spite of all we know of his limitations, we fly to him as though he were all wise, and do as nearly what he tells us to as our flesh and our pockets permit, for we believe that, erring and inadequate as he is, he knows more than we do, and that his knowledge is, on the whole, the best that is at our command.

This childlike trust in our physicians is a phenomenon which is creditable to us and to our doctors, and from which we both get benefit. Undoubtedly our physicians do us good; and indeed they ought to, even if they knew less and guessed less fortunately than they do, else were faith a much less potent virtue than it is declared to be. But it is one thing for us to flock of our own accord to the doctors, and quite another thing for those professional gentlemen to hold that we shall come to them and to no one else, and that we may neither be legitimately born nor die legally except with the concurrence of the learned faculty.—Scribner.

SKIN GRAFTING BY MACHINERY.—The practice of skin-grafting has become so common of late, and the pain, difficulty and slowness of taking grafts by the usual process of pinching up the skin and clipping it by scissors is so great that Dr. Mixer, of the Massachusetts General Hospital, has set himself to devising machinery to accomplish this purpose. He has succeeded in producing what is pronounced to be a wonderfully successful device, the first use of which is described substantially as follows: The patient had been etherized and had undergone an extensive surgical operation on her breast. The instrument for the removal of skin was applied to the anterior portion of the right thigh, and three strips, about an inch wide by six long, were taken off and transplanted to the exposed surface of the breast. The operation of removing the skin and transplanting it to its new quarters did not occupy more than six minutes. A very few days will suffice to restore the denuded surface of the thigh to its normal condition, leaving few traces of the reparative process, while the portion of breast removed will heal over rapidly by first intention. The thickness of skin removed does not exceed one-sixteenth of an inch. The advantages of the new over the old method of epidermic detachment are obvious. It is expeditious, the sections of shaved outicle are much larger and of a more uniform thickness than can be obtained by the most dexterous manipulator, and the chances of successful grafting are enhanced by the fact that the skin is transplanted while the cellular elements are in their full vital activity.

HEALTH OF THE STATE.—Reports to the Board of Health from 66 towns and villages, having an aggregate population of 608,945, show a mortality during the month of June of 945, a percentage of 18.60 to the 1000 per annum. Among the causes of deaths and the number of decedents we find the following: Consumption was fatal in 140 cases, being a reduction of 24 since April. Pneumonia was the cause of death in 91, bronchitis in 21, and congestion of the lungs in 11. There were 15 deaths from diarrhoea and dysentery, 8 from cholera infantum, and 34 from other diseases of the stomach and bowels. Diphtheria caused 33 deaths, orup 13, scarlatina 2, measles 3, and whooping-cough 8. Typho-malarial fever is accredited with 3 deaths, typhoid fever with 20, remittent and intermittent fevers 7, and cerebro spinal fever 3. Cancer caused 24, erysipelas 3, heart diseases 58, alcoholism 8, and all other causes 420.

CHANCES IN MEDICINE.—A doctor says that 75 out of every 100 persons who fall into a physician's hands would get well without any help, and the majority of the remaining 25 are past all human aid and the physician gets the blame for not saving their lives.

#### The Week.

Just as the vacation season is at its height in city and town, and social affairs are light because of the numbers of absentees at seaside, mountain-top and springs, the producing regions are in a state of the greatest activity. It is almost impossible to secure adequate help to gather the fruit and the grain which demands immediate attention.

It is feared that losses must occur unless every available arm is raised in the producers' service. It is claimed that there are labor supplies available in the city, but there is lack of system for the bringing of the supply and demand together.

Much has been done in the smaller cities and towns adjacent to fruit regions by employing the boys and girls and women and every effort should be made to use this supply to the fullest this year. The schools should defer opening until the press of the work is over, and there should be the fullest recognition of the fact that to help in such an emergency is honorable. We trust by a general disposition to help there may be no losses through inability to harvest the bounty which the generous season gives.

#### Close of the Volume.

This issue of the RURAL brings another volume to its close, and again we pick up the big Roman letters to stamp Vol. XLI as it goes upon the shelves alongside its two-score of fore-runners. As these letters multiply, we find ourselves more and more apt to allude to our history, for a California journal being such numbers is really old and must have a history. Fortunately it has not been eventful from a sensational point of view, for the original pair of proprietors who started the outfit on a clear road in 1870 are still speeding it along. They have younger forces to help pull now, it is true, but the old leaders are still in the traces and are responsible for the the unchanged course of the paper, which gives it the enthusiastic and generous support of the producing classes of the Pacific Slope. As neither of these leaders happens to be around while this pen is being pushed by a junior, let us all take occasion to express satisfaction that the founders are still rich in health if not in wealth, and to hope that they may remain healthy till they become wealthy. This will certainly mean long life to them and incidentally a heap of good to the public.

But we did not intend giving this paragraph such a personal turn when we wrote the first line. We would call attention merely to the successful termination of another main division of our journalistic life and to the fact that if there is anything in the RURAL for the last half year which you don't see, ask the index for it. On the last page of this issue may be found this carefully prepared key to the contents of the volume. If you have kept the current issues and have no "patent blinder," just punch holes through the bundle carefully along the rear margin, work back and forth with a shoe-string or corset lace or a piece of stout hemp twine, cover the whole with stout brown wrapping paper, and you will have a volume on rural affairs in California more comprehensive and more full in practical details than you can elsewhere obtain. And now for the future. With the first issue of July will begin Vol. XLII. It is an excellent time to start in with a subscription. The publishers have brought the subscription rate down to a low notch and have still increased the size and improved the contents of the journal. New agriculturists are coming into nearly all neighborhoods. As you form their acquaintance, and as they ask you as to how they can best learn the details of California agricultural practice, will you not tell them of your experience with the RURAL PRESS and invite them to send us their subscription or to apply for sample copies that they may judge of the applicability of our work to their needs. We desire the RURAL to grow and improve as the coast is developed. We aim to command success by deserving it. Our request, then, of our friends is, give the stranger a hint that the RURAL is published to minister to and to show forth progress in California agriculture. If each friend will do this for us, we shall be able to largely increase and improve our work during the coming months.

#### Farmers' Institute at Malaga.

The Fresno County Farmers' Institute will hold its first quarterly at Malaga on Monday, July 6, beginning at 10 A. M., and holding through the day and evening. We urge all our readers in the region to attend these meetings if possible. The program as published in the Fresno paper shows that the committee has been very successful in securing the co-operation of both gentleman and ladies in bringing forward subjects of importance, and in providing plenty of music, recitations, etc., all of which will enliven and add charm to the proceedings. Col. McGilney will speak on co-operation and J. M. Martin upon raisin production. The Fresno plan is to hold quarterly meetings in different parts of the county, and once a year have an annual Institute, which shall be a general round up, at some central point. Don't forget to be in Malaga on Monday July 6, day and evening.

**IRRIGATION INQUIRY.**—Col. R. G. Hinton of the U. S. Department of Agriculture is now in California collecting all the information possible on the subject of irrigation, both from personal observation and examination and from those who have collected data.

#### California Raisins and Foreign Markets.

The large and yearly increased production of California raisins admonish packers that they must exercise the utmost vigilance in sorting, selecting and packing the fruit, so as to enable them to successfully compete with the products of other countries in their efforts to enlarge the outlet. Shipments made to Australasia have met with favor. This is attested in the increased exports to that country; this is largely due to new California raisins being the first received. Experimental shipments made to England were brought into more direct competition with the more choice brands of Spanish raisins. The criticism that these shipments provoke, furnish, if rightly applied, information calculated to help our packers in their efforts in securing a foothold in the foreign markets. According to the New York *Fruit Trade Journal*, California raisins never would become popular or gain a foothold in the English markets in competition with Spanish raisins, until the fruit was better cured and in larger bunches than is now the case. Besides this the "dressing" must be made more attractive to the eye, another important point which needs to be improved upon. It is further argued that the grading of every lot is different in degrees of quality—a great drawback in every large market. There can be no doubt that as the raisin production increases, the packers and growers, too, will find it absolutely necessary to use the foreign markets for an outlet for the surplus. To gain a profitable foothold, the above points must be observed, together with the establishing of a good reputation for a brand, which must always be kept to a very high standard of excellence. Growers of every kind of product, only are sure of best results, when they have made a "good name" with the buyers in the large markets.

The outcome of the appeal for a reduction of overland rates for raisins is rather small. The railways will grant a reduction of five cents per cwt., making the rate \$1.50 instead of \$1.10, which the producers asked for. It is a case of small favors—will they be thankfully received? We hardly think so, in view of the fact that the raisin-producers claim the present rate is a clear case of discrimination against raisins. In a report of a recent Fresno meeting is the following:

A glance at the rates charged per hundred-weight from Fresno to points beyond the Missouri river will show the injustice of the present schedule. The railroad men do not claim that it is justice to the raisin shippers, but say that these rates are necessary to help along the other industries of this valley that are not so valuable as raisin-growing, and that stand in need of encouragement and assistance. The rates on four of the chief articles shipped over the railroads East from California is as follows:

	Per cwt.
Wine.....	\$1.00
Canned fruit.....	1.10
Oranges.....	1.25
Raisins.....	1.55

This schedule is an object-lesson in discrimination which is not hard to learn. There is no good reason why one of these products should be shipped any more cheaply than another. A hundred pounds of wine weighs as much as a hundred pounds of raisins; and it is as difficult to handle. It costs the railroad company as much to haul a ton of wine from here to Chicago as it does to haul a ton of raisins. Yet a great difference is made in the charge.

It seems to be simply a case of the application of the old principle—"what the traffic will bear." This doctrine does not seem to suit producers.

**IMMIGRATION CONVENTION.**—The Immigration Convention will commence in this city, on Monday, Aug. 24, and will be composed of 200 delegates drawn from the various counties, in proportion to population. No proxies should be accepted unless handed in by a resident of the same county as the regular and duly appointed delegate. A call was formulated, and it will be sent to the Boards of Supervisors in the 54 counties, asking them to appoint to the convention only men who have the full confidence of the community.

**LARGE WOOL SALE.**—It is telegraphed from Albuquerque that William McIntosh, the largest grower of merino wool in the Territory, has sold his spring clip of nearly 200,000 pounds, the highest bidder being A. J. Crawford, the local representative of Krillie & Nichols of Trinidad, Col., for 18 cents per pound. Ten firms had bids in for this year's clip, for it is considered a great stroke of enter-

prise to secure the McIntosh wool on account of its quality and the fact that it is entirely merino wool. The wool season is practically over in the Southwest, and the dealers claim that the spring clip will not come within the output of last year by one-third. This is owing to sales of sheep to outside parties and losses during the past severe winter.

#### Dairy Pictures.

We give on our first page this week another group of very interesting California dairy scenes from the *Overland Monthly* for May. We have several times alluded to the commendable enterprise of our California literary magazine in laying before its readers the industrial features of the coast, and those we give this week are quite characteristic of the State. The chute or milking-way one cow wide by which a long line of "bosses" are held down to business while the milkers gain access to their udders through the openings in the fence, is, we take it, a device which, for originality at least, we admire is without superior. The waterwheel at Shasta shows how the ingenious settler can make his brains save his back by knocking together a home-made waterwheel to do his churning. Quite a number of our dairymen have found the centrifugal separators so valuable that they are using two or more. This sketch shows how two are used in connection with one supply reservoir. A mammoth churn, barrel pattern, moving end over end, shows what the Stoddard churn is when it gets to its larger sizes. The cheese curing room, with its economy of space by many shelves and its stove for maintaining an equable temperature is illustrative of our cheese dairies, as also is the view of vats and presses. Two new themes are the scenes in the lower corner pictures. The flume for conveying milk from corral to dairy must require considerable scaffolding to keep it sweet. The dairyman's bedchamber beneath the trees is suggestive of the season, and the harn in the distance show that the men sleep in the open air out of regard for the climate and not because the proprietor does not believe in good buildings.

#### First Cargo of Wheat in Bulk.

According to the Tacoma (Washington) *Ledger*, the British iron ship Ben Mac Dhui is taking in a cargo of wheat at that port in bulk, which, if the voyage to England is successfully made, promises to revolutionize the carrying trade of this coast, and largely in favor of farmers, by doing away with the necessity of sacking their grain for export. It has been contended by underwriters, ship-owners and also wheat exporters that the shipment of grain hence in bulk could not be successfully accomplished, owing to the length of time in transit and consequent fear of the cargo heating, and also danger of the cargo shifting, and foundering the vessel. Against these dangers every precaution has been taken. The vessel's hold has been separated by bulkheads into four large compartments or bins. A layer of sacked wheat, nine sacks wide, was placed around these walls to hold the loose grain more securely. Canvas was spread upon the floor for additional protection against moisture. The vessel was loaded in a very short space of time and claimed to be a great success.

**HORTICULTURAL SHOW AT SAN JOSE.**—Active preparations are in progress for the horticultural display to be made in San Jose during fair week in August, to be under the District Agricultural Association and co-operated in by the Santa Clara Valley Agricultural Society and Horticultural Hall Association. It is proposed to give liberal prizes for fruit exhibit and form a nucleus for the display at the World's Fair. Captain Frank Dunn has been appointed manager.

**CANNED CHERRIES SCARCE.**—The N. Y. *Commercial Bulletin* says: We learn of contracts for California canned cherries having been purchased from jobbers this week for canners who are unable to secure stock to fill the orders on hand. Eastern packers, in all probability, will find a market for their cherries this season.

**TOO MUCH SOAP.**—There is evidently something wrong in the spray formula given under Yolo county in our Agricultural Notes on page 618 of this issue. No doubt it should be five pounds of soap, not five barrels.

## Buildings of the Columbian Exposition.

We gave last week views and descriptions of two of the buildings to be erected for the Chicago World's Fair of 1893. We continue with other engravings upon this page.

The United States Government Exhibit building was the first Exposition structure to be planned. It will occupy a site near the Lake Shore, south of the main lagoon and of the area reserved for foreign nations and the several States, and east of the women's building and of Midway Plaisance. The Government Building was designed by Architect Windrim, now succeeded by W. J. Eihrooke. It is classical in style, and bears a strong resemblance to the National Museum and other Government Buildings at Washington. It will cover an area of 350 by 420 feet, will be constructed of iron, brick and glass, and will cost \$400,000. Its leading architectural feature is a central octagonal dome, 120 feet in diameter and 150 feet high, the floor of which will be kept free from exhibits.

The south half of the Government building will be devoted to the exhibits of the Postoffice Department, Treasury Department, War Department and Department of Agriculture. The

imitation battle ship of 1893 will be erected on piling on the lake front in the northeast corner of Jackson Park, at the pier which forms the prolongation of Fifty-ninth street. It will thus be surrounded by water, and will have the appearance of being moored to a wharf. The structure is to have all the fittings that belong

top of which will be placed two circular "tops" as receptacles for sharpshooters, and rapid firing guns will be mounted in each of these tops. The light from the water line to the summit of this military mast will be 76 feet, and above it will be placed a flagstaff for signaling; this staff will be 24 feet long.

U. S. NAVAL EXHIBIT.

to the actual ship, such as guns, turrets, torpedo tubes, torpedo nets and booms, with hoists, anchors, chain cables, davits, awnings, deck fittings, etc., together with all appliances for working the same. Officers, seamen, mechanics and marines will be detailed by the

The battery, mounted, will be four 13-inch breech-loading rifle cannon, eight 8-inch breech-loading rifle cannon, four 6-inch breech-loading rifle cannon, twenty 6-pounder rapid-firing guns, six 1-pounder rapid firing guns; two Gatling guns, and six torpedo tubes or tor-

MACHINERY HALL AT THE WORLD'S COLUMBIAN EXPOSITION.

north half will be devoted to the exhibits of the Fisheries Commission, Smithsonian Institute and Interior Department. The State Department exhibit will extend from the rotunda to 24,000 square feet; Postoffice, 9000 square feet; Fishery, 20,000 square feet, and Smithsonian Institution, amount of space unsettled. There can be no doubt that the exhibits which the United States Government will make will constitute one of the

Navy Department during the Exposition, and the discipline and mode of life on our naval vessels will be completely shown. The detail of men will not, however, be as great as the complement of the actual ship, the object being mainly to have expert janitors and showmen for the valuable public property. It is expected, however, to give certain drills, especially boat, torpedo and gun drills, as in a vessel of war.

pedo guns. The entrance of the vessel will be from pier at foot of Fifty-ninth street to the main deck, thence down companion or hatchways to the berth deck, where a spacious room, the whole length and width of the vessel, is to be filled with the naval exhibits.

The pier entrance will have a register turnstile to record the number of visitors. The exit will be from another point of the structure. On this (exhibit) deck may be seen the man-

THE U. S. GOVERNMENT BUILDING.

most extensive, complete and interesting features of the whole exposition.

## The U. S. Naval Exhibit.

The naval exhibit will be, perhaps, the most unique of all. It will be in a structure which, to all outward appearance, will be a faithful, full sized model of one of the new coast-line battle ships designed by the Bureau of Construction and the Department of Justice from the rotunda to the west end of the building. The allotment of space for the several department exhibits is: War Department, 23,000 square feet; Treasury, 10,500 square feet; Agriculture, 23,250 square feet; Interior, 23,000 square feet; and Navy Department, and now being built at a cost of about \$3,000,000 each by Oramp & Son, Philadelphia, and the Union Iron Works, San Francisco. This

The structure will, therefore, serve the double purpose of housing the naval exhibit and illustrating the manner in which the men of our navy live.

The dimensions of the structure will be those of the actual battle ship, to wit: Length, 348 feet, and width amidships, 69 feet 3 inches, tapering to a point at the bow and stern. From the water line to the top of the main deck, 12 feet, on top and in the central position of which is a superstructure 8 feet high, with a hammock berthing resting on the same, 7 feet high, and above these will be the bridge, chart-house and the boats.

The battle ship of 1893 will not carry spars or sails, but depend entirely on steam for motive power. But at the forward end of the superstructure there will be a cone-shaped tower, called "the military mast," near the

ner in which torpedo tubes are manipulated, the mechanism for working the larger turrets and guns and the handling of ammunition.

Beneath the berth deck and directly below the turrets of the 13 inch guns are to be the magazine, showing the stowage, lighting and flooding, according to the navy regulations.

The superstructure will show the cabins, staterooms, lavatories, latrines, mess-rooms, galley and fittings, mess-table for crew, lockers, berthings, etc., also the methods in which officers and enlisted men live, according to the rules of the navy. It will present a complete object lesson for the American people, and a convincing proof of the statement that the sailors of the United States Navy are the best paid, the best fed and the best treated men of any navy in the world.

## The Machinery Building.

The central engraving on this page presents a view of a portion of Machinery Hall. This building will be 850x500 feet and cost \$450,000. It is located at the extreme south end of the park, midway between the shore of Lake Michigan and the west line of the park. It is just south of the Administration Building.

The building is spanned with three arched trusses, and the interior will present the appearance of three railroad train-houses side by side, surrounded on all the four exterior sides by a 50-foot gallery. In each of these long naves there is to be an elevated travelling crane for mining machinery. Steam power for this building will be shipped from a power-house adjoining. The two exterior sides adjoining the grand court are to be rich and palatial in appearance. The two facades of Machinery Hall on the court are rich with colonnades and other features.

The design follows classical models throughout, the details being followed from the renaissance of Seville and other Spanish towns, as being appropriate to a Columbian exposition. An arcade on the first story admits passage around the building under cover. A colonnade with a cape at either end forms the length between Machinery and Agricultural halls.

## The Illinois Building.

The State of Illinois, being the host, and having made the largest appropriation of any of the States, will have a specially fine building. The structure in the main is 160 feet wide by 450 feet long, with the school house about 75 by 60 feet, taken out of the east end and within the building. The dome will be 72 feet in diameter and about 200 feet high, with a lookout about 80 feet high and another in the lantern about 175 feet high. The side walls are 47 feet high, while the centre wing on the south will be 72 feet high, and both ends 54 feet, with a still higher projection in the centre.

On the north the Memorial Hall will form a wing 50 by 75 feet, while on the south will be placed the executive offices in a wing 75 by 23 feet, carried up three stories, with a public hall in the third story. In addition to these offices there are to be others in each of the four corners for the departmental officers. The building is to be embellished with fine carving and statuary, the material to be cast blocks of some approved composition. In front of the entrance there will be stone terraces with railings, statues, and stone steps leading down to the roadway.

A NORTHERN IRRIGATION ENTERPRISE.—Work has been commenced on the outlet which is to tap Eagle lake, in Lassen Co., and convert the lake into a reservoir which will irrigate a large tract of sage-brush land in Honey Lake valley. Eagle lake has an area of 28,000 acres, and lies in the Sierra sugar pine belt, at an altitude of 5000 feet, with no outlet. The enterprise is said to be backed by ample local and San Francisco capital.

DISCUSS THE RAISIN INDUSTRY.—At the last meeting of the State Board of Trade, D. J. Perrin challenged the statement of State Viticultural Commissioner George West, who recently predicted a surplus in the United States of over 3,000,000 boxes of raisins in 1895. He thought West meant well, but was grievously in error, and had done the State a great injustice. N. P. Chipman took up the matter, reading a

BUILDINGS OF THE STATE OF ILLINOIS.

statement which showed a surprising increase in the per capita consumption of raisins in late years. It was decided to request the presence of Mr. West, Dr. Perrin and other experts at the September meeting to discuss the matter more thoroughly. It was the sentiment of the board that this theory of overproduction was the same old bugaboo that had always menaced California's future, and that it was in this, as in all former cases, without foundation.

AMERICAN POMOLOGICAL SOCIETY.—We have received from G. B. Backett, Secretary, Denmark, Iowa, the announcement that the 231 session of the American Pomological Society will be held at Washington, D. C., on the 22d to 25th of September, 1891. An official program will be issued at an early day.

# AGRICULTURAL NOTES.

## CALIFORNIA.

### Butte.

**AN AVERAGE CROP.**—*Oroville Mercury*: Barney Minsboldt, one of Butte's largest and most prosperous farmers, says that it is now quite certain that Butte will harvest an average crop of grain—about 14 sacks per acre on the adobe lands. This is gratifying, as the outcome of the wheat has been very doubtful for a month or two. On the redlands, the yield will also reach the average—from three to five sacks per acre.

**POTATO SHIPMENT.**—*Mercury*: W. R. Strong Co. are shipping potatoes from the Palermo depot, raised on the old Ouyett ranch, near this place. Two carloads have been shipped, and they have about 30 more to follow as fast as loaded; these potatoes are bound for Oregon, Washington, Idaho, Montana and other States east of the Rockies, one carload being sent as far east as St. Joseph, Mo.

**BIGGS FRUIT SHIPMENTS.**—*Argus*, June 18: On Wednesday, June 17, there was shipped from the Biggs depot, the first carload of peaches from the first orchard planted on Rio Bonito by Hatch & Rock (on the west side of the river) for market purposes, and this orchard scarcely three years old. As near as we can learn, the proprietors of the orchard will have about 40 carloads to ship this season. Fruit raising in this section is now just fairly begun and with a wonderfully favorable outlook for future prominence, not only in quantity but in variety and quality. The trees that were planted three years ago and which are now permitted to produce their first crop, are not only unusually thrifty and prolific but they are all symmetrical in shape, clean and free from pest. W. Treat & Son's orchard comes next in bearing and from this orchard quite a large shipment will be made this season. The fruit to be shipped in baskets of which large numbers have been received at the orchard, ready for the ripening fruit. Of the orchards now growing on Rio Bonito, 1750 acres owned by Hatch & Rock, 250 acres by Hammond & Alexander, 150 acres by Treat & Son, 500 acres by Reed & Johnson, 60 acres by M. Goldman, 50 by Mr. Seybold and other orchards ranging from 10 to 20 acre tracts, owned by Capt. P. G. Brown and others, will soon be in bearing.

### Fresno.

**ACREAGE TO GRAIN.**—*Reedley Exponent*: There are 23 combined harvesters, not to mention headers, which are now running in the vicinity of Reedley. The machines cost on an average \$1700 each, or \$39,100 in all. The rule is 26 animals to each machine, or 598 for the whole number. It is a fair estimate to say that harvesting will continue 80 days, and each harvester will cut on an average 28 acres daily. This gives a total of 644 acres daily, or a total of 51 520 acres of grain which will be harvested here this season. These figures do not include an acre of the vast area which will be out by headers.

**GRAIN CROP.**—*Fresno Republican*: Grain is beginning to come into the warehouses, and a few weeks more will see them the busiest places in the city. M. W. Muller says: "It is not going to be near as bad as it was thought some time ago. The fact is that though we had no rain we had some excellent cool weather and the cool nights brought some moisture, so that the grain kernels filled out nicely to make perfect wheat. We will have about three-fourths as much grain as last year, and those who have wheat will get more money than they got last year. Then wheat was worth one cent a pound or \$1 a hundred, now it is worth all the way from \$1.45 to \$1.60. Under those circumstances the wheat will find immediate shipment. Barley is likely to be stored awhile for shipment in the fall."

**PRICE FOR RAISINS IN SWEAT.**—*Republican*: At a meeting of the directors of the recently organized Producers' Raisin Packing Co., there was action fixed a rate to be paid to members for their raisins in sweat boxes. After a careful consideration of the subject it was resolved to fix the price at five cents, which, it is thought, will be the prevailing price this season.

### Lassen.

**CROP AND FAIR NOTES.**—*Editors Press*: While the season is backward in this portion of the State, crops, nevertheless, look well. We are getting more than the usual number of sprig showers for this season of the year. The grain, hay and fruit crops promise, at this time, to be over an average. Present indications show that we will have a big crop of apples—and by the way, Lassen county apples have a State reputation—which, together with our large and delicious peaches, pears, neotarlues, apricots, plums, etc., will make a good showing at our coming District Fair (the 34th district), which will be held on the first Monday in October at Susanville, the officers of which association are Wm. Brockman, president, and C. E. Emmerson, secretary. We expect and think that the coming 34th District Fair will excel all other district fairs of the State—in the way of agricultural products, fruits and stock exhibits.—*H., Susanville, June 22.*

### Los Angeles.

**LARGE CROP OF POTATOES.**—*Los Angeles*, June 18: Railroad officials now estimate the potato crop of Southern California at the large total of 22,500 carloads. In the four counties

of Los Angeles, Orange, San Bernardino and San Diego these would net the growers at the present prices about \$3,000,000, but it is doubtful whether all can be marketed.

### Kern.

**FRUIT CROP AND SHIPPING FACILITIES.**—*Bakersfield Echo*: Kern Co. fruit crops, especially the fall shipment, has reached such magnitude as to attract the attention of freight agents of Eastern roads. Within a month two agents of the A. T. & S. F. road have been here soliciting business for that line, which is now equipped with the latest improvements in the way of fruit cars. Conservative estimates of the late peach crop place it at 70 carloads, practically all of which will go East. Nearly everyone who planted vines, one year ago, expects to have enough raisins to pay all the expenses of cultivation and irrigation this year. The Rose-dale Vineyard Co., which has 320 acres of vines, is thinking of erecting a packing-house, and if it does the colonists will have their crops packed there.

**POTATO CONTRACT.**—*Bakersfield Californian*: Alex Mills has contracted for 100 carloads—25,000 sacks—of potatoes for shipment to the East. From all accounts, this is but the beginning, although a large one, of the movement of vegetables eastward, as there will probably be at least 8000 tons of potatoes of the very best quality raised here this year.

### Orange.

**HOW TO PAY FOR A PLACE.**—*Anahelm Gazette*: A year ago H. L. Brewster purchased for his wife 60 acres of land in the tract which is now the 900 acre walnut grove south of town. This week he visited the tract and was greatly surprised. A year ago he saw a tract of land covered with mustard and other weeds. Now he finds a walnut grove of trees ten feet high, and a potato crop between the trees that will come near paying the purchase price of the land. Potatoes are being dug on the entire tract at the rate of six carloads daily. While the gatherer is sowing up one sack, he may gather up another sack directly in front of him. The land is literally covered with potatoes.

### San Luis Obispo.

**LARGE CROP ASSURED.**—*San Miguel Courier*: The farmer generally has reason to feel jubilant over the prospects of a bountiful yield. The Farmers' Alliance mill to be erected at this place will afford him opportunities that he has never before enjoyed. There will be thousands of cents more of wheat and other grains produced in this valley this year than ever was in any previous year, and the quality of the grain is as good as can be produced anywhere.

### Santa Cruz.

**PAJARO VALLEY CROPS.**—*H. B. Robinson in Rualter*: In Pajaro valley proper, that is, within a circle commencing at Vega Station and running close to the eastern foothills, along Elkhorn slough to Moss Landing, thence north-west along the coast to Camp Goodall, thence north to Watsonville, five miles, northwest around and including Green valley, thence east along Gilroy foothills to point of commencement, there has been about 30,000 acres sown to grain, of which 15,000 acres are in wheat, about 8000 in barley, about 4000 or 5000 in oats, and about from 2000 to 3000 acres will probably be out for hay. The above figures were given me by the best posted and oldest resident grain-buyer in Watsonville, who also told me that not over 600 or 700 acres in the valley have been planted to potatoes, and not over 600 acres to sugar beets this year. The crops on Spreckels' Aptos ranch, thence to Sequel (four miles) and to Santa Cruz (four miles), are all above the average. The acreage sown to wheat, barley and oats are about equal.

### Shasta.

**GRAIN CROP.**—*Anderson Enterprise*, June 18: Harvesting grain will begin in some fields in about a week, and the crop all round promises the best of any ever out, the late rains and cool weather being just the thing for plumpness and preventing shrinkage.

### Tulare.

**DISEASED GRAPEVINES.**—*Hanford Journal*, June 16: N. W. Motheral brought several bunches of green grapes which had been attacked by mildew. They were picked from vines in his own vineyard, some eight years old, and he says that the young ones have suffered worse than the old. He states that he is not positive whether it is the Collet, a French name for what is known as Powdery mildew in America, or whether it is some other fungus. His vines have been heavily sulphured this spring, but it seems to have no effect in getting away with the disease, as nearly all his vines, young or old, are affected by it. On the bunches of grapes shown us, half the grapes were gone, and Mr. Motheral stated that on some of the stems not a single grape had set. Mr. Motheral states that the disease makes its appearance first on the leaf of the vine, forming a white ring round the edge of the leaf; afterward it attacks the flower when it is in bloom, preventing the fruit from setting. He thought that a solution of sulphate of copper (blue-stone), if applied to the vine early in the season, would in a measure check the disease.

**GOSHEN CROPS.**—*Visalia Times*, June 18: A Times reporter visited the Kelsey ranch, three miles west of Visalia, and was astonished at the wonderful growth made by vines planted 14 months ago. The Thompson seedless variety has the appearance of four-year-old vines

and are loaded with grapes. Mr. Kelsey has something over 100 acres in Muscat vines, now 14 months old, that cannot be surpassed in the State. The orchards of the Hayes brothers, farther west, are object lessons to strangers, and from this time forward it will be only necessary to show visitors their places to convince them that Tulare county is the greatest fruit county in the State. The trees look healthy and are making a fine growth. Not a weed can be seen, and two-year-old peach and apricot trees are loaded with fruit. At Peter Malloch's place, in addition to vines and trees such as were observed at the places mentioned above, we saw a dozen olive trees of the Mission variety, three years old, some of which had considerable fruit on them. The trees are about ten feet in height, and are making a rapid growth. The next place visited was the Ourtles ranch, southwest of Goshen, which was recently sold to German American Investment Association, and by them resold in small tracts to people in Minnesota. The tract comprises 1360 acres and has probably the best wheat and barley crop on it of any place in the county. The grain stands nearly six feet high and will yield 35 bushels to the acre.

### Yolo.

**HOW HE GOT HIS LARGE CROP OF PEARS.**—*Winters Express*: A. B. Ish has a fine crop of Bartlett pears this season, which he attributes to his manner of spraying. He used a half-pound of Paris green, five barrels of home-made soap in 109 gallons of water. He also tried the solution a second and third time, making it a little stronger each time, and found that the weaker solution was as efficacious so far as destroying the slugs were concerned, as the stronger, and that it did not injure the fruit. Try the formula given and see if Mr. Ish's theory is not correct.

### Yuba.

**FRUIT CONTRACTS.**—*Marysville Democrat*, June 20: The Sutter cannery resumed operations Thursday on the Royal, Peach and Early Golden variety of apricots. There are over 800 tons of fruit contracted for in this county, which comprises a whole or a part of all the principal orchards here. This will insure a fair run for the season. A drier will be run this summer to handle fruit which is over-ripe for cannelling. Bleachers, trays, etc., are being made for this department. With the starting of the cannery, trade will be revived here to some extent, especially among the stores.

**GRAIN CROP.**—*Wheatland Four Corners*, June 20: Heading will be general next week. Many farmers have been working on their barley this week. The crop gives signs of being extra fine all around, the kernels being plump and the stand above the average. Near Nicolau and along the Feather and Bear rivers south of Wheatland, extraordinary yields are expected. The price of grain does not vary to speak of. Several farmers have contracted for 1½, which is considered a good price by the majority.

**HOP CROP.**—*Four Corners*, June 20: The Bear river hops are looking extra fine. The cool weather, with occasional rains, has aided the yards to make a fine, heavy growth. Although it has put the maturity of hops back several days, the yards, we predict, will make an astonishing yield this season.

**FRUIT SHIPMENTS.**—*Marysville Democrat*, June 17: Mr. French, the representative of Earl Fruit Co., says that the second through car load will leave for Chicago tomorrow, and the latter part of next week a car of Bartlett pears will leave here. The practice of shipping cars direct from here is new, and is meeting with much favor. Mr. French thinks that the canneries that bought fruit early in the season are fortunate, as the prices will be considerably higher. Very little fruit is raised in the East this summer, and the demand for California fruit will, he thinks, be as great as last year. The demand for good apricots in the East is unusually good. Only inferior grades have been shipped so far, and the three carloads which he will ship within the next week will be the first good apricots sent East this season. Other growers and fruit-dealers have shipped large quantities to various places. Several carloads of potatoes have also gone East, and yesterday a carload of onions were sent to New York.

### Ventura.

**VENTURA-GROWN OPIUM.**—*Free Press*: In the yard surrounding the county hospital, Dr. Marks has a collection of poppies under cultivation. He has been experimenting with them as to their opium producing qualities, and has become convinced that as an industry, it will pay to raise them for that purpose. He has quite a lot of opium extracted, and is watching the matter with interest. The manner in which the opium is extracted is to either prick the bulb just after the leaves fall off or to cut them off entirely. The juice which exudes and runs down the stalk and forms into little lumps is the crude opium.

### ARIZONA.

**MESA FRUITS.**—*Tempe News*: While the raisin grape is a partial failure, the product of stone fruit will in all probability be very large. The yield of the plum tree is most abundant and of an excellent quality. The apricot yield was never so abundant, both early and late. While the apricot is abundant, the peach, of every name and variety, seems to have surpassed it in producing, the trees being literally

hending beneath the weight of swelling fruit. We hope that no mishap may destroy the fair prospect for an abundant yield of superior fruit.

### NEVADA.

**RAISING SNOW PLANTS.**—*Truckee Republican*: For years, S. P. Johnson has been endeavoring to propagate snow plants. He succeeded in raising a large bed of them in Plumas last year, but being away from the lines of commerce, he found no profit in the undertaking. This year he came to Truckee, and after hunting around, found a desirable location about 3½ miles from town. As soon as the snow was off the ground, he prepared about an acre of rich soil and started a snow-plant bed. The red tips of the plants are now pushing themselves through the ground, and in another week he will commence supplying the market. He has orders from San Francisco florists to take all of this year's crop at good figures. The plant is an eatable vegetable, resembling, but surpassing the cauliflower in tenderness and flavor. When they have no value as flowers, they will be worth considerable as vegetables, and will be in demand by all epicures.

**LARGE BAND OF ANGORA GOATS.**—*Central Nevada*: C. P. Bailey is soon to start a band of 3000 Angora goats on route to his Angora goat ranch, 20 miles south of Battle Mountain. Although Mr. Bailey has ample grazing lands in California, he has made this change because the Nevada flock are heavier wool producers and show a greater per cent of increase.

How well we remember Grandmother's attic, so fragrant with medicinal roots and herbs! Poor old soul, how precious they seemed to her! And yet, one bottle of Ayer's Sarsaparilla would do more good than her whole collection of "varbs."

Preservative Against Rotting, Decay, Fungus, Etc., of Wood & Stone.  
REMEDY AGAINST DAMP WALLS. PROOF AGAINST TEREDOES.

WHAT WE GUARANTEE CARBOLINEUM AVENARIUS TO DO:

1. To preserve any kind of Wood above or under ground of water, and prolong its life at least one hundred per cent.
2. To prevent moisture from penetrating into brick or stone walls and preserve them same as wood.
3. To keep off all sorts of Insects, Vermin, or other enemies of wood or objectionable and destructive agencies.
4. To prevent Rats and Mice gnawing wood coated with Carbolineum Avenarius.
5. To disinfect barns, stables or residences and destroy Microbes.
6. To force all moisture out of the wood without closing the pores.
7. To prevent shingles coated with Carbolineum from rotting, warping or cracking.
8. To prevent Rope treated with Carbolineum from rotting, causing it to remain pliable and excellent for Coasting.
9. IMPORTANT!—Teredoes will not attack Timber coated with Carbolineum Avenarius.
10. It does not contain any acids or other poisonous ingredients injurious to fibers of wood.
11. It is the cheapest and best Wood Preserver in the World.

All the above statements are facts, and all our testimonials to that effect are genuine and indisputable.

Will Grade Green or Dried Fruit Equally Well.

TUSTIN, Sep. 17, 1890.—Mr. D. D. WASS, San Francisco.—Dear Sir: The Grader arrived the 3d inst., and I had no trouble in putting it up and operating it. It worked like a charm, and I could easily grade five tons of fruit a day. I have finished and shipped my crop. I wish you would now explain the attachments or screws for grading oranges. If they grade oranges as nicely as prunes, I want them. Please describe them and state the price. Yours, etc., J. H. CREW.

DIPPING BASKET.

### THE CYLINDER GRADER

Has Proven the most Rapid Working Machine that has ever been introduced. Its capacity is practically unlimited, as it will grade the fruit as fast as it can be fed into the machine.

SEND FOR CIRCULARS AND PRICES.

## List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey &amp; Co., Pioneer Patent Solicitors for Pacific Coast.

FOR WEEK ENDING JUNE 16, 1891.

- 454,195.—VENTILATOR—P. Abrahamson, S. F.  
 454,195.—TAG AND PARCEL TYER—W. H. Anderson, Riverside, Cal.  
 454,199.—RIVETING MACHINE—M. Arnold, S. F.  
 454,202.—SAFETY GUARD FOR SLEEPING CARS—Nathan Brown, Oakland, Cal.  
 454,206.—STEAM GANG-PLOW—N. L. Darling, Benecia, Cal.  
 454,033.—BURGLAR ALARM—C. C. Davis, Los Angeles, Cal.  
 454,340.—FILTER—J. A. Fulton, Astoria, Or.  
 454,213.—AXLE-SETTING MACHINE—G. W. Hunter, Fresno, Cal.  
 454,218.—GOVERNOR—J. F. Kirby, S. F.  
 454,219.—WRENCH—H. H. Love, Sacramento, Cal.  
 454,220.—RULING PEN—H. H. Love, Sacramento, Cal.  
 454,221.—WRITING PEN ATTACHMENT—David Lubin, Sacramento, Cal.  
 454,180.—PUMP—W. McLennan, Port Angeles, Wash.  
 454,225.—HARVESTER—J. & W. Paterson, Stockton, Cal.  
 454,226.—WALL FIXTURE FOR ELECTRICAL CONDUCTORS—Pieper & Watson, San Jose, Cal.  
 454,228.—ROCK DRILL—E. A. Rix, S. F.  
 454,230.—THRASHER—E. F. Sanford, Merced, Cal.  
 454,235.—CABLE RAILWAY GRIP—J. C. H. Stut, S. F.  
 454,238.—ELECTRIC POLE IN GAS OR VAPOR EXPLOSIVE ENGINES—Tremper & Eisenbuth, S. F.

The following brief list, by telegraph, for June 10 will appear more complete upon receipt of mail advices:

California—Ulrich Bachmann, San Francisco, fermenting vat; Willis G. Dodd, San Francisco, water-wheel bucket; Carl A. Erlanson, San Francisco, saw setting and filing machine; Henry P. Holland, assignor to J. A. Fisher, San Francisco, wave-power motor; Louis M. Howe, Greenwood and L. A. Gates, assignors to H. J. Postel, San Francisco, apparatus for extracting gold and silver from ores; Frederick Lampert, San Francisco, assignor of one-half to A. J. Leake, Tacoma, Wash., coating for piles, etc.; Benjamin Marshall, assignor to Marshall Improved Window Furniture Company, San Francisco, sash balance; Walter N. Sherman, Merced, electrical pessary. Washington—George Brown, Walburg, pump. Arizona—Dudley I. Craig, Silver King, adding machine.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast Inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

## The Alameda County Farmers' Institute.

The first meeting of the committee to arrange for a Farmers' Institute in Alameda county was held in the Arlington hotel at Niles, June 13th. There were present representatives of the farmers who belong to the Grange and to the Alliance, and also representatives from the farmers in general who belong to no organization at all. The following were present: A. T. Dewey of Oakland, W. C. Blackwood, Mrs. Munson of Haywards, H. P. Valpey of Warm Springs, and Jas. Shinn and J. C. Shinn of Niles.

Prof. Wikson of Berkeley, who was delegated by the Board of Regents of the State University to attend this meeting and assist in the good work, was present.

A. T. Dewey was elected President of this committee and J. C. Shinn Secretary, and Howard Overaker Jr. was seated as a member in place of an absent member.

It was decided to hold the first meeting of the Farmers' Institute in Haywards on August 7th and 8th, and W. C. Blackwood and Mr. Munson were appointed a committee to attend to obtaining a hall for the days mentioned.

The Committee on Program is A. T. Dewey, J. C. Shinn and H. Overaker Jr.

The following were appointed a committee of arrangements to promote the undertaking in all desirable directions. H. P. Valpey, H. W. Meek, I. B. Haines, J. C. Whipple, T. B. Downing, W. Renwick, L. E. Osgood, A. B. Montrose, C. C. Scott.

A good deal of informal talk was then had on program and a great variety of subjects were suggested, the feeling seeming to be that a number of short papers on live subjects connected with farming that would lead to free discussion and talk by those present would be better than a few long papers. The program in full will be announced later.

THE PUBLIC DOMAIN.—It is telegraphed from Washington that Commissioner Carter, the new head of the General Land Office, is accomplishing wonders in the way of issuing land patents, and the settlers on the public domain throughout the great West will before long discover that the new Commissioner, coming as he does from one of the new States, fully understands their wants, and sympathizes with their efforts to get titles to the lands they have entered upon for homesteads. Yesterday there were issued from the General Land Office a total of 736 patents, and the day before there were 2000. This is an unprecedented number for two days, almost as many as were issued during the entire period of the last administration. It is expected at the present rate of progress the General Land Office will speedily catch up with its work.

## Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

GEO. WILSON—Sacramento Co.  
 J. C. HOAG—San Francisco.  
 F. W. KNAPP—Amador Co.  
 G. B. GILL—San Luis Obispo Co.  
 E. L. RICHARDS—Escondido, Cal.  
 FRANK S. CHAPIN—Tulare Co.  
 B. F. BELT—Shasta Co.  
 J. H. P. WILLIAMS—Tulare Co.  
 A. S. COOLEY—Tehama Co.  
 SAMUEL E. WATSON—Sonoma Co.  
 HERMAN STANLEY—Modoc Co.  
 C. J. WADE—San Bernardino Co.  
 J. H. CROSSMAN—San Bernardino Co.  
 J. G. UNDERWOOD—Solano and Yolo Cos.  
 E. H. SCHAEFFLER—Central California.  
 F. B. LOGAN—Arizona.  
 WM. M. HILLARY—Oregon.  
 ARTHUR M. MITCHELL—Oregon.  
 N. M. NEWPORT—Oregon.

HOP LOUSE.—An emergency bulletin, covering the main facts in the life history of the hop plant louse, and the best remedies against its ravages, has just been issued by the U. S. Department of Agriculture. The insect is appearing in alarming numbers in the hop regions of New York, and is causing considerable anxiety to the hop-growers of Oregon and Washington, also. The bulletin may be obtained by applying to the Secretary of Agriculture, Washington, D. C.

## A California Cyclone.

Very different from the howling windstorms of the Middle and Southern States, scattering death and destruction in their paths, are the cyclones of the Pacific Coast. There, dread and terror precede their approach, and warnings for loss of life and property follow in their wake. Here, their coming is hailed with gladness, both by man and beast, and the thirsty earth as well. In fact, on this coast they are regarded as a good investment by a large number of people, who have full knowledge of their unusual merits from daily experience.

Go where one may, from the British line on the north to the Mexican line on the south, their graceful towers are seen rising from the valleys and standing in bold relief upon the hilltops, while high above, clear and sharp against the blue sky, the single word Cyclone proclaims the thrill and progressive spirit that dwells within their shadows. Noiseless and responsive to every breeze, be it strong or gentle, the great fans revolve around under perfect control and doing the work of many hands in raising water for stock, or irrigating, grinding feed and grain, turning machinery of all kinds, and doing hundreds of useful tasks that busy men require of them.

The truth is, that the Cyclone windmills are in such universal use, and are so well known on the Pacific Coast, so highly appreciated for their lasting and many other good qualities, that little need be said for them, other than to suggest to those who may be in need of cheap and reliable motive power, the wisdom of sending for a catalogue containing illustrations and all particulars, and giving it careful study, comparing the details of their simple construction with that of others, and discovering for themselves the merits and advantages the Cyclone has to offer. The Pacific Mfg. Co., whose extensive works are located at Santa Clara, builds these mills, and they are eminently a home production.

The Pacific Mfg. Co. is composed of men in whom ability, force and enterprise is quickly recognized. Their financial standing is strong while their reputation for promptness and reliability is unsurpassed. In connection with the Cyclone Wind Engine the company carries a line of steam pumps and well-boring tools. The city office and warehouses are at No. 575 Mission St., San Francisco, where applications for catalogues should be sent.

## Petaluma Notes.

A RURAL reporter visited Petaluma and vicinity last week. He reports a great deal of enthusiasm over the coming district fair. The large and varied purses offered for the racing program, and the various breeds from the leading stock-raisers and horsemen of all the different grades of draught, roadsters and thoroughbred horses to be exhibited, has given them high hopes of the coming fair at Petaluma. Several horsemen were up from San Francisco looking at the track, and the string of horses that are being driven for the coming contest. They pronounce the Petaluma track very much improved, and one of the best in the State.

D. M. Worth's wine press manufactory is making preparations to turn out a goodly number of machines, several of which are being built under orders. A hydraulic press was nearly completed, and Mr. Worth has high expectations of its success for large wineries. A fine woodcut with a full description of this hydraulic press will appear in the RURAL soon.

Altogether, in and around Petaluma, there are evidences of thrift. A large number of farmers whom we conversed with say that this has been, prospectively, the best year they have known in ten years.

There has recently been formed a company known as the Sonoma Preserve Co., incorporated by some of the leading citizens. Their

object is to preserve all kinds of fruits, and enter largely into pickling fruits.

Mr. L. C. Byoe, proprietor of the Petaluma Incubator Factory, has had a very prosperous season, and is preparing to enlarge his factory. He informed our reporter that he has now sold 8555 machines since he commenced manufacturing, and the demand for these incubators is increasing monthly.

## Unitarian Literature

Sent free by the CHANNING AUXILIARY of the First Unitarian Church, cor. Geary and Franklin Sts., San Francisco. Address Mrs. B. F. Giddings as above.

## California Inventors

Should consult DEWEY & CO. AMERICAN AND FOREIGN PATENT SOLICITORS, for obtaining Patents and Caveats. Established in 1850. Their long experience as journalists and large practice as Patent attorneys enables them to offer Pacific Coast Inventors far better service than they can obtain elsewhere. Send for free circulars of information. Office of the MINING AND SCIENTIFIC PRESS and PACIFIC RURAL PRESS No. 220 Market St., San Francisco. Elevator, 12 Front St.

## APIARIAN SUPPLIES.

Italian Queens, \$2.50 each; Black Queens, \$1 each. Swarms from \$2.50 each; Smoker, \$1. Comb Foundation, \$1.25 per pound; V-groove Sections, \$4 per 1000. Comb Honey wholesale and retail; Hives, etc. W. STYAN & SON, The Homebased Apiary, San Mateo, Cal.

## The New Dutton Mower Knife Grinder.

The New Dutton Mower Knife Grinder, made by the Higginum Mfg. Corporation, of which the accompanying cut is an illustration, contains all the valuable features of any of the previous machines made by these well-known manufacturers, and has in addition some important improvements peculiar to itself, some of which are the following:

A "hinge" is substituted in place of a "slide" used on the U. S. Grinder. The hinge is simpler, not liable to wear, and in using it the position of the crank wheel and crank will not be changed. The adjustable spring so connects the knife holder with the hand lever as to cause uniform pressure from the bottom of the top of the section on the wheel while it is being ground. The space for holding water has been enlarged. The gearing has been changed and will turn with greater ease and smoothness. The above, with other minor improvements not here described, enable us to offer the farmer as near a perfect Mower Knife

Grinder as can be made. This new machine has a "Corundum Grinding Wheel" which works perfectly. It wears but little, and it will last, according to the amount of work done, from three to five years, and probably longer.

The grinder is readily clamped to the wheel of any mowing machine, and with it any kind of a mower knife can be ground, whether the sections are long or short.

The gearing is so arranged that while the operator is grinding a knife he stands facing one side of the grinding wheel and over the knife clamp, instead of at the rear, thus bringing the knife section, when ground, directly under his eye.

The knives can be ground several times a day without delaying the work, as it can be done while the team is resting.

"Keep the knives sharp" is what every manufacturer of mowers directs.

It requires but little skill to use this grinder; the directions sent with each machine will, if followed, enable any one to work it without trouble.

The New Dutton Mower Knife Grinder is manufactured by the Higginum Mfg. Corporation of Higginum, Conn.

## INSURE YOUR DWELLING, BARNs and GRAIN

San Francisco, Cal., April 1, 1891. PETER SAXE & SON, Lick House, S. F.

### Walnut Grove Herd of Poland China Hogs

JOSEPH MELVIN,

Proprietor,

DAVISVILLE, CAL.

BREEDER

— OF —

Strictly Bred  
POLAND CHINA  
SWINE.

At the head of the herd stands PERFECTION KING, No. 7579; KING OF THE WEST, No. 8921; HOOSIER BOY 2d, No. 8923. Breeding Sows as fine individuals and as strictly bred as any in the land; also recorded in the C. P. C. R. record with pedigrees full to standard. Breeders for sale at all times. I have first-class Pigs of both sexes at reasonable prices. Residence 1 1/2 miles northeast of Davisville, Cal. Personal inspection solicited. All inquiries promptly answered. Yours truly, JOSEPH MELVIN.

### AMERICAN RIVER BREEDING FARM.

Importer and Breeder of ABERDEEN ANGUS CATTLE. Proprietor, J. E. CAMP, Sacramento, Cal.

### THE BEST FENCE YET!

Cheap, Durable, Portable and Safe.

THE SPALDING HUMANE WIRE FENCE is composed of eight No. 12 galvanized steel wire, woven into four cables of two wires each; interwoven every five feet is a corrugated iron stay or guard, and held in place by the cables, thereby holding the cables firmly in place, preventing them being spread apart and letting stock thrugh. The stays or guards are corrugated and an inch and three-quarters in width, making the fence as visible as a board fence, which is a very essential point. Write for circulars and prices. Address BIRD-TURNBULL MFG. CO., 105 La Salle St., Chicago.

## MANHATTAN

### STOCK FOOD

Saves One-Quarter of Grain Feed.

623 Howard St., San Francisco, Cal.

### COLTS BROKEN.

THE SOUTHER FARM,

One and a half miles northeast of San Leandro, Alameda County, has every facility for Breaking Colts properly. Rates very reasonable. Horses boarded at all times.

Horse Liniment

Is certainly the best preparation of its kind in the market. Ranchers, Stock Raisers and Horse Owners of every description will tell you that it does good work every time.

MESSES. H. H. MOORE & SONS, Stockton, Cal.—GENTLEMEN: In answer to your inquiry, would state that I used your H. H. H. Liniment on my Holland prize-winning cow, "Lena Menlo," for a wrenched shoulder, and it relieved her very much. She calved the next day, and while still suffering from the sprain gave the largest authenticated quantity of milk ever given on this coast (104 gallons per day), showing conclusively the great relief received from your remedy. I consider it a necessity in my stables, and when away from home feel perfectly safe, as inexperienced men can do no harm with it, as they can with the more powerful blisters. Respectfully yours, FRANK H. BURKE, Breeder of Registered Holsteins and Berkshires. Menlo Park, Cal., January 22d, 1889.

# WORTH'S PATENT Combined Screw and Toggle Lever WINE, CIDER AND OLIVE PRESS.

Using two haskets so that while one is under the press the other can be emptied and filled ready to move under the press as soon as the first hasket is pressed. First Premium awarded at all fairs wherever exhibited. Parties desiring a press combining Power, Speed and ease to Handle, can see them at the leading wineries on the Pacific Coast.

The following extracts from well known wine-makers are quotations from letters received by us:

"I have been using two of your presses, a small one and the large sized one. They have given perfect satisfaction."—J. L. BEARD, Warm Springs.

"The cider press I purchased of you for the Rancho Chico Fruit Co. has given entire satisfaction and has fulfilled all the promises made for it."—JOHN BIDWELL.

"We very cheerfully recommend your wine press and shall continue using it, as it is every way satisfactory."—VAN ALLEN PACKING CO., Healdsburg.

"Allow me to state that as far as we have gone with it, it has given us complete satisfaction."—MRS. A. P. FURNISS, Per A. F. Cushing, Jr.

"I consider your press superior to all others I have seen. They are powerful, and easily and speedily operated."—H. L. GORDON, San Jose.

"The wine press bought of you proves satisfactory."—C. WELLS, Warm Springs.

Also Worth's Improved Grape Elevators, Improved Continuous Pressure Hydraulic Presses, Worth's Patent Power Grape Stemmer and Crusher, Worth's Patent Ho se Power, and all kinds of machinery for wine-makers. The Large Toggle Lever and Screw Press is capable of a pressure of 266 tons or 300 pounds to the square inch, the small press has 36 tons or 140 pounds to the square inch.

## Poultry and Stock Book

Niles's new manual and reference book on subjects connected with successful Poultry and Stock Raising on the Pacific Coast. A New Edition, over 100 pages, profusely illustrated with handsome, life-like illustrations of the different varieties of Poultry and Live-Stock. Price, postpaid 50 cts. Address PACIFIC RURAL PRESS Office, San Francisco, Cal.

**BUSINESS CHANCE, FOR MAN OR WOMAN**  
Address, C. R. ORCUTT, Orcutt, California.

# DRAPERS, GRAIN CARRIERS, AND STRAW CARRIERS,

For Headers, Threshers and Combined Harvesters.

We have manufactured the MARYSVILLE DRAPER for 15 years, and our trade extends all over the Pacific Coast.

Excellence of workmanship and the use of the best materials are appreciated by farmers, as indicated by our large and growing trade.

Encouraged by the great success of our draper trade, we have begun the manufacture of GRAIN and STRAW CARRIERS, and feel confident that the same attention to detail and careful management, if applied to these goods, will soon place them in the same high position as our drapers.

## S. F. MARKET REPORT

## Market Review.

## DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, June 24, 1891.

Harvest returns coming in are generally of a more favorable character than heretofore claimed they would be. The berry averages plumper, while there are more to the head. The yield to the acre will average about 25 per cent more than it did in 1890. Many farmers have contracted their new crop wheat at \$1.50 per cental delivered in this city, which is about \$5 a ton higher than were contracting prices in this month, 1890. The fruit season is well under way. The crop is being marketed at good prices. Farmers, taken as a whole, have very little cause for complaint. The money market is reported fairly easy. Large sums of money are under engagement for crop-moving purposes. The Eastern and European markets for wheat have fluctuated to lower prices. The following is to-day's cablegram:

LIVERPOOL, June 17.—Wheat—Rather easier. California spot lots, 8s 2½d; off coast, 43s 6d; just shipped, 43s 6d; nearly due, 43s; cargoes off coast, inactive; on passage slow; Mark Lane wheat, very quiet; French country markets, slow.

## Liverpool Wheat Market.

The following are the closing prices paid for wheat options per cwt. for the past week:

	June.	July.	Aug.	Sept.	Oct.	Nov.
Thursday.....	88½d	88½d	88½d	88½d	88½d	88½d
Friday.....	88½d	88½d	88½d	88½d	88½d	88½d
Saturday.....	88½d	88½d	88½d	88½d	88½d	88½d
Sunday.....	88½d	88½d	88½d	88½d	88½d	88½d
Tuesday.....	88½d	88½d	88½d	88½d	88½d	88½d

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday.....	44½d	43½d	44½d	Inactive.
Friday.....	44½d	43½d	44½d	Very Inactive.
Saturday.....	44½d	43½d	44½d	Buyers hold off.
Sunday.....	43½d	43½d	43½d	Rather Easier.
Tuesday.....	43½d	43½d	43½d	Inactive.

## Eastern Grain Markets.

The following shows the closing prices of wheat at New York for the past week, per cental:

	Day.	June.	July.	Aug.	Sept.	Dec.	Jan.
Thursday.....	180	174½	166½	165½	163	163	163
Friday.....	180	174½	166½	165½	163	163	163
Saturday.....	181	175½	167½	167½	169	169	169
Sunday.....	181	175½	167½	167½	169	169	169
Tuesday.....	178½	173½	165	164	166½	166½	166½

The closing prices for wheat have been as follows at Chicago for the past week, per cental:

	Day.	June.	July.	Sept.	Dec.
Thursday.....	158	150	152	152	152
Friday.....	157½	151	154	154	154
Saturday.....	158½	151	153	153	153
Sunday.....	158	150	152½	152½	152½
Tuesday.....	159	147½	151	151	151

NEW YORK, June 24.—Wheat—\$1.06½ for June, \$1.03½ for July, 98½c for August, 97½c for September, 99½c for December, and \$1.04 for May.

CHICAGO, June 2.—Wheat—92½c for July, 87½c for September and 89½c for December.

## Visible Supply of Grain.

NEW YORK, June 22.—The visible supply of grain in store and afloat, as compiled by the New York Produce Exchange, is as follows: Wheat, 14,657,000 bushels, a decrease of 944,000 bushels; corn, 4,418,000 bushels, a decrease of 637,000; oats, 4,028,000 bushels, a decrease of 234,000; barley, 125,000 bushels, an increase of 12,000.

## Dried Fruits.

NEW YORK, June 20: Raisins—Three-crown, loose and layers, at \$1.20@1.40; two-crown, 95c. Apricots good at 9½c; prime at 10c. Peaches—Unpeeled at 9@11c. Prunes—Dull. There are sellers of best at 10c; large size prove poor keepers, being puffy and watery. Plums—Pitted quiet at 12c; fancy at \$2.40@5.50.

## Lima Beans.

NEW YORK, June 20.—Unsatisfactory; irregular prices. Large lots have cost too a bag to reclean. Unmerchantable defects should be avoided in new crops. Futures inquired for at 2½c.

## Eastern Wool Markets.

NEW YORK, June 20: There seems more interior inclination to part with wool at softened rates, though the best as a rule keeps up, a policy likely to prolong the selling season. Seaboard markets not stronger. The failure of a Pennsylvania manufacturer makes a cautious feeling.

London—Active stock not of a style likely to come this way; home goods market active for delaines; other fabrics at no better margins. Active dealings at Boston—Sales of 2,400,000, 640,000 of which was foreign, chiefly Australian. Philadelphia is getting more stock, but trade does not rally.

## Hops.

NEW YORK, June 23.—A few samples of really choice hops show holders to all accounts firm at about 30c for that class of goods. Medium and lower grades are offered at somewhat reduced prices, however, without leading to business of any importance. A fair-sized lot of medium quality is said to have been secured at 23c or less in the interior. Reports of the condition of the growing crop in this State are better than those of one week ago. A London cable reports an improvement in the English crop outlook, and business as slow, with a sagging tendency.

## Local Markets.

Tuesday.....	1.181	1.181	1.181	1.181

\*After July. †After August.

BAGS—The market has ruled fairly steady at around 7c for standard-sized hand-sewed.

BARLEY—The spot market has been forced to lower prices by the usual systematized movements when buyers want supplies at lower prices. On Call, trading is light. The following are to-day's reported sales on Call:

Morning Session: Seller 1891—200 tons, \$1.04½; Buyer 1891, after August 1st—100 tons, \$1.11½; 100, \$1.11½ cwt. Afternoon Session: No sales.

BUTTER—The market is weak under accumulating supplies. The East is sending us considerable. It is claimed that more butter will be packed in California this season than ever before.

CHEESE—The market is weak and heavy under free receipts and only a fair demand.

EGGS—The market is overstocked with Eastern, and with more to arrive, prices are against sellers. Warm weather forces consignees to close out consignments.

FLOUR—The market is weak, with the tendency to lower prices.

WHEAT—The spot market is being forced to lower prices. Export buyers are not operating beyond immediate wants, expecting forced sales in next month which will enable them to buy at lower figures. Speculative buyers are waiting further developments in the markets abroad. Favorable weather in England is reported, which causes the market to shade off. The French and German crops are unquestionably short, the former decidedly so. In futures, trading in our market has been light. The following are to-day's reported sales on Call:

Morning Session: Buyer 1891, after August 1st—100 tons, \$1.59½c 500, \$1.59½ cwt. Afternoon Session: Buyer 1891, after August 1st—200 tons, \$1.59½ cwt.

## Market Information.

## Produce Receipts.

Receipts of produce at this port for the week ending June 23, were as follows:

Flour, qr. sks.	137,276	Middlings, sks.	2,200

## Cereals.

The local wheat market has held dull with a slight shading on former quotations. Many claim that after the present month prices will shade off still more. This opinion, no doubt, is grounded on the impression that season 1890-91 contracts expire with July, and all wheat now held against them will be available for export. While this may be the case, yet the fact must not be lost sight of, that there are in port for new crop loading an engaged tonnage of nearly 33,000 tons register, equal to a carrying capacity of about 50,000 tons. This is aside from the engaged tonnage for 1890-91 wheat. This tonnage with the large fleet on the way, will no doubt tend to keep the wheat market fairly strong, unless farmers by free offers force prices down. It may be barely possible that operators will help to maintain prices until after farmers, those who will hold, have borrowed on their grain, and then by a bear raid in futures on Call try and break prices to such figures as to force those who have advanced the money, to call for more margin or else sell the wheat, and in doing the latter the buyers will come in and take everything sold. This has been done before. Farmers in borrowing money ought to allow for sufficient fall in prices—provided a bear raid is made—so they will not be forced to sell at a sacrifice. Grain operators, or at least the most of them, have very little compunction of conscience.

New wheat coming in shows a most excellent grade; better than the average of five years past.

Oregon crop advices report as follows per bulletin issued by the Oregon Weather Bureau June 20th: Western "Fall wheat has lodged to some extent and clover is injured. Weeds have grown rapidly while the ground has been too wet to cultivate. Spring sown crops are generally doing well, though sunshine and warm weather are greatly needed." Eastern Oregon: "The acreage of wheat in Union, Umatilla and Walla Walla counties has been increased 20 per cent and the yield per acre will be equal or greater than last year. In some localities, especially in the west and north of Pendleton and west of Walla Walla the wheat has been burnt some. Some few fields will not be cut. On the foot hills and high lands the wheat was never better. The quality of the wheat will be even better than last year. The output from Eastern Oregon and Washington from present indications will be from one to two million or more bushels than that of last year."

In the sample barley market the same adverse bear influences reported in our last week's issue still prevail. Dealers who are engaged in forcing prices down, make fictitious sales and get the daily press to report the same. When this is done they then take consignments to account, or else sell to another party and divide the profits. All do not do this, but there are enough engaged in such disreputable work as to greatly influence the market against sellers. The crop is turning out splendidly, yet the total output will barely equal our requirements. Oregon and Washington will, as usual, have to contribute toward meeting our wants. Old brewing barley is scarce and wanted.

Oats in sympathy with barley are lower, with dealers taking only for immediate wants. The stock of spot is light, but new will soon be available. The crop in this State will be larger than it was in 1890, but unless the weather in Western Oregon changes for the better, it is claimed that the output north will be short.

The first consignment of corn received for over a year from the Central States, came to hand the past week. Central America is still drawing from us. The crop in this State promises a large increase over that of 1890.

Rye is being inquired for, for export.

## Feedstuff.

Bran and middlings are scarce and high. They will doubtless continue up until the mills are able to start on new crop wheat. Feedmeal is high and slow. The lower prices ruling for rolled and ground barley is turning attention to them.

Notwithstanding the receipts of hay are heavy, the market holds up well. The high cost of ground feed is in favor of hay. Oregon advices are conflicting regarding the crop, but the general tenor is that the output will not be more than in 1890, if that.

## Live-stock.

Bullocks and mutton sheep are slow, the free supply of vegetables and fruits are against fresh meats. From the country an increased call is reported for cured meats—hams, bacon, etc., but this is usually the case in harvest. Hogs are firmer, with a good demand ruling for block hogs. Milch cows are slow, the high price of feed appears to be against them. In horses there is no change to note, outside of a better demand for medium to large-sized draft horses.

The market for dressed cattle is quoted as follows [to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent]:

HOGS—On foot, light grain fed, 5½@5¾c lb; dressed, —@—c lb; heavy, 5½@5¾c lb; dressed, —@—c lb. Stock hogs, 4½@4¾c lb.

BEEF—Stall fed, 6½@—c lb; grass fed, extra, 6@—c lb; first quality, 5½@—c lb; second quality 5@—c lb; third quality, 4@—c lb.

VEAL—Small, 6@7½c lb; large, 5@6½c lb.

MUTTON—Wethers, 7½@8c lb; ewes, 7@7½c lb; spring lamb, 7½@9c lb.

## Fruits.

Gooseberries are about out of market. Cherries are going out—the bulk of the crop has been marketed. Oregon advices report heavy damage by rains to the cherry crop. Apricots are in better supply. The peaches coming in are taken by dealers and hucksters; the market is lower. River Astrachan apples, if choice have a ready sale. The market is overstocked with poor stuff. Pears are showing to better advantage, although large quantities of poor are still coming in. Figs are putting in an appearance. Strawberries are steady. Blackberries and raspberries are selling at lower prices. Canners will soon start up on the former.

Oranges are in over supply and hard to place; but this usually obtains when the market is well supplied with deciduous fruits. Lemons and limes have a steady sale.

The market for fresh fruits in the country is quoted as follows for cannery varieties: Peaches, per ton, freestone, \$25@47.50; clingstone, \$37.50@52.50; apricots, \$20@30, with some very choice selling at an advance; plums, \$25@42.50; pears, \$32.50@40. Shippers to the Eastern markets also pay above prices. Driers are paying from \$40 to \$52.50 per ton for prunes—price regulated by size and locality grown.

The market is almost bare of dried fruits. Buyers' attention is being drawn to the incoming crop. The following prices are bid: Bleached apricots, 9½@11c, driers ask 10@12½c. Bleached peaches, 8@9½c, driers ask for higher figures and will not contract at the prices buyers name. For the four sizes of prunes, 6½@7½c is named. Dried grapes are being contracted for at 3@3½c, although buyers name a lower range. Raisins in sweat range from 4c to 5½c according to locality, reputation of curer, etc.

## Vegetables.

Seasonable garden truck continues in good supply. Rhubarb is going out. Peas and beans are in good supply. Tomatoes, cucumbers, summer squash, and green corn are in liberal supply and declining.

Free receipts of onions cause a weak market with some shading in prices. Only well matured good keepers fetch top prices. The receipts of potatoes are heavy, with a lessened home call owing to better local supplies. Shipments overland have assumed still larger proportions, but notwithstanding this the supply for home use will be very heavy. The crop this year is enormous—due largely to many orchardists planting between trees.

In poultry the market continues poorly supplied, with large well-conditioned stock. The large proportion of receipts are more or less scrubby.

Beans are moving off slowly. To force sales, low prices are in order. Liberal supplies of fresh vegetables and favorable prospects for a large crop of beans are against sellers.

## Miscellaneous.

The hop market is in a blissful state of uncertainty, both buyers and sellers appear to be watching crop advices, and hop louse developments. Old hops are virtually out of the market. The growing crop is reported doing well.

The wool market continues sluggish, but all advices tend to warrant the belief that better prices will prevail later on. The greatest drawback to the market is, that the high duties have increased the manufacture of shoddy goods, and this has always been against the wool industry. The high duties on wool are particularly in favor of shoddy manufacturers, for it prevents manufacturers who use wool exclusively from selling their goods except at a loss.

New crop honey is coming in more freely, but, as yet, the supply is light.

At the sale of wool held at Cloverdale, Sonoma Co., the prices realized were not as good as the grade of wool justified. The range of prices paid is reported at 19@21½c, with the bulk sold around 20@20½c.

## Auction Sales of California Fruit.

CHICAGO, June 18.—One carload Royal apricots brought \$1.85@1.90; Alexander peaches, \$1.55@1.75; Royal Anne cherries, fair and small, 85c, fancy, \$1.50; cherry plums, \$1.35@1.50; three carloads Royal apricots brought \$1.90@2.10; seedlings, \$1.70@1.80; peaches, \$1.10@1.25; Koenig Claude plums, \$2.75@3.25; Cherry plums, \$1.45@2.30; Royal Anne cherries, 80c to \$1.75; black cherries, very poor order, 60c to \$1.30; Clyman plums, \$3.25.

CHICAGO, June 19.—Two carloads cherries were in very bad order and sold at 30c@95; apricots, \$1.65@1.95; peaches, \$1.15@1.40; Koenig Claude plums, \$2.75; Cherry plums, \$2; Clyman, \$2.95.

CHICAGO, June 20.—One carload Cherry plums brought \$1.85; Royal apricots, \$1.75@1.90; peaches, \$1.15@1.35.

CHICAGO, June 20.—Two carloads Royal apricots brought \$1.75@1.80; Alexander peaches, \$1.25; Cherry plums, \$1.75@1.80; Tartarian cherries, 90c@1.15; Royal Anne, in fair condition, \$1.20@1.25.

NEW YORK, June 20.—Cherries made a show never equalled here in elegance. There was sold during the week by our firm 3,100 boxes at 55c@1.55. Royal Anne and Black Tartarian made best money; apricots, \$1.25@3.30; Cherry plums, \$1.50@2.80; peaches, few at \$1.75@2.75.

CHICAGO, June 22.—Four carloads apricots brought \$1.20@1.95; peaches, 95c@1.75; Cherry plums, \$1.35@2.05; Clyman, \$2.60@2.85; Black cherries, 65c@1.20. Two carloads sold as follows: Royal apricots brought \$1.70@1.80; Alexander peaches, 95c@1.75; Cherry plums, \$1.35@2.00; Clyman, \$2.60@2.85; Black cherries, 65c@1.20.

CHICAGO, June 23.—Three carloads apricots brought \$1.40@2.25; peaches, 85c@1.35; Clyman plums, \$3.25; Jackson, \$2.60; Black cherries, mostly in bad order, 65c@1.20; Royal Anne \$1.25; Tragedy prunes, \$5.10; Koenig Claude plums, \$3.15. Two carloads sold as follows: Royal apricots brought \$1.45@1.75; Black Tartarian cherries, 90c@1.25; Royal Anne, \$1@1.30; Biggears, 95c@1.15; peaches, \$1.05@1.20; Cherry plums, \$1.75.

## Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations. WEDNESDAY, June 24, 1891.

SQUIRREL AND GOPHER EXTERMINATOR!  
IN 1-LB. AND 5-LB. CANS.

THE RELIABLE  
CYCLONE WINDMILL.

No story need be told of the Cyclone or of the number that have been sold. They can be seen working in every inhabited part of the Pacific Slope whilst hundreds are exported every year.  
The Cyclone mill is not an experiment, but acknowledged by all who have used it to be the most powerful and durable mill on the market.  
It is simple in construction, has no cogs or complicated gearing to get out of order. Has only three principal bearings, heavily babbited boxes and self oiling apartments.  
The wheel and vane of the Cyclone (which are the most durable parts of any solid wheel mill) are made strong and of well seasoned wood finished with the best lead and oil which neither blister in the sun nor is consumed by rust

THE JUDSON RABBIT-PROOF WIRE & PICKET FENCE.

CHEAPER and BETTER than Ever. Their 2-ft. high 3-cable fence has taken the trade. Farmers put barbed wire above it and have the CHEAPEST GOOD Fence that can be made in ANY WAY. Rabbits cannot get through. Hogs cannot break it and Horses or Cattle cannot get over it. All our fence colored RED by boiling in a chemical solution that preserves the wood. Address JUDSON MANUFACTURING COMPANY, 14 and 16 Fremont Street, San Francisco.

Raisin, Fruit and  
Grain Lands

AT EXTREMELY LOW PRICES,

Seven miles S. W. of Tulare city. 164 acres of rich land is offered for sale, with well-improved homestead, large flowing artesian well, reservoir, alfalfa, orchard (seven years old), pasturage, one of the healthiest and most comfortable seven-room, two-story residences in Tulare valley. Must be seen to be appreciated. Will be sold soon at a very low price and extraordinary reasonable terms to a good purchaser. Some 320 acres of good and well-cultivated land adjoining is also offered low.  
Address E. M. Dewey, Publisher, Porterville, Tulare Co.; A. T. Dewey, 220 Market St., S. F.; or call on Capt. Thos. H. Thompson, Tulare City, Cal.

S. F. OFFICE, 29 STEUART ST.

ENGRAVING—SUPERIOR WOOD AND  
Metal Engraving, Electrotyping and Stereotyping  
done at the office of this paper.

**AGRICULTURAL SCIENCE—THE ORIGIN AND USES OF HUMUS.**—Mr. Naeid of Florida, says an exchange, is deeply interested in science applied to farming. We write this especially for his consideration. When the putrefaction of dead plants is completed, there remains a soft black mass, known as vegetable mold or humus. One hundred parts of the humus of wheat straw contains 26 parts of humic acid; the remainder is lime, peroxide of iron, phosphate of lime and carbonaceous matter. This humic acid contains carbon 47 parts, hydrogen 20 parts, oxygen 33 parts. Chemical action in the soil converts part of this into carbonic acid which is absorbed by the roots of plants as part of their food, while the phosphates, potash and other simple have their effect in dissolving the inert principles in the soil, independent of the humus, reducing the whole to plant food. Of course, when we speak of any acid or any alkali in the soil as having destructive action on mineral, animal or vegetable substances, we understand them to be in a very diluted form. We all know that acids and alkalis in their commercial forms are among the most powerful destructive agents known. The operations of nature, especially in promoting vegetable growth, are toned down to suit the tender, delicate nature of the tissues to be acted upon. In the rise and growth and in the fall and decay of vegetation there is no violence, the reduction of animal tissue and the extraction of mineral properties from soils and rocks is very gentle.

**MOSQUITOES.**—The bill of a mosquito is a complex institution. It has a blunt fork at the head, and is apparently grooved. Working through the groove, and projecting from the angle of the fork, is a lance of perfect form, sharpened with a fine bevel. Beside it the most perfect lance looks like a hand-saw. On either side of the lance two saws are arranged, with the points fine and sharp, and the teeth well defined and keen. The backs of these saws play against the lance. When the mosquito lights, with his peculiar hum, it thrusts its keen lance, and then enlarges the aperture with the two saws, which play beside the lance until the forked bill, with its capillary arrangement for pumping blood can be inserted. The sawing process is what grates upon the nerves of the victim, and causes him to strike wildly at the sawyer.

You can never know till you try, how quickly a dose of Ayer's Pills will cure your sick headache. Your stomach and bowels need cleansing, and these Pills will accomplish it more effectually and comfortably than any other medicine you can find.

**ANOTHER LEATHER SUBSTITUTE.**—The scarcity of leather is causing inventors to seek for substitutes for that important material. The latest in this direction is reported for a German inventor who is said to have devised a new substitute for leather in many of its uses. This material consists of panels of wood with wire netting between, the whole being glued together under heavy pressure. The sheets thus made are said to be very tough and pliable, and suited for making trunks and other uses that require strength.

#### NEWSPAPER AGENTS WANTED.

Extra inducements will be offered for a few active canvassers who will give their whole attention (for a while at least) to soliciting subscriptions and advertisements for this journal and other first-class popular newspapers. Apply soon, or address this office, giving address, age, experience and reference. Special inducements to old agents.

DEWEY & CO., Publishers,  
No. 220 Market St., S. F.

**PHOSPHORUS BY ELECTRICITY.**—Phosphorus is now manufactured at Wolverhampton, England, by the aid of electricity. The process consists in decomposing the mixture of phosphoric acid, or acid phosphates and carbon, by the heat of an electric arc imbedded in the mass, and the inventors urge that the local application of heat in this form is more economical than the heating of large retorts containing the mixture in the ordinary process.

#### Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and as far as practicable aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription, paid in advance, 5 mos., \$1; 10 mos., \$2; 15 mos., \$3. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

## The Use Of

Harsh, drastic purgatives to relieve constipation is a dangerous practice, and more liable to fasten the disease on the patient than to cure it. What is needed is a medicine that, in effectually opening the bowels, corrects the costive habit and establishes a natural daily action. Such an aperient is found in

### Ayer's Pills,

which, while thorough in action, strengthen as well as stimulate the bowels and excretory organs.

"For eight years I was afflicted with constipation, which at last became so bad that the doctors could do no more for me. Then I began to take Ayer's Pills, and soon the bowels became regular and natural in their movements. I am now in excellent health."  
—Wm. H. DeLauret, Dorset, Ont.

"When I feel the need of a cathartic, I take Ayer's Pills, and find them to be more

### Effective

than any other pill I ever took."—Mrs. B. C. Grubb, Burwellville, Va.

"For years I have been subject to constipation and nervous headaches, caused by derangement of the liver. After taking various remedies, I have become convinced that Ayer's Pills are the best. They have never failed to relieve my bilious attacks in a short time; and I am sure my system retains its tone longer after the use of these Pills, than has been the case with any other medicine I have tried."—H. S. Sledge, Weimar, Texas.

## TO SHIPPERS!

## California Ventilated Barrel

EXCELS ALL OTHERS!

IT IS LIGHTER, STRONGER, MORE DURABLE AND BETTER VENTILATED THAN ANY OTHER BARREL.

This engraving of the CALIFORNIA VENTILATED BARREL makes plain to the practical shipper its points of superiority over the common barrel, which may be enumerated as follows:

It weighs from five to seven pounds less than the ordinary barrel, making a material saving in freight charges.

It costs less than one-half for trimming, and does not require an experienced hand to cooper it.

It is the only thoroughly ventilated barrel made, a very important point.

The heads are warranted not to come out in transit, and no liners are required.

It is stronger and more durable than any other barrel.

Never varies in size, even to the extent of a quart.

—ALTOGETHER MAKING IT—

**The Cheapest and Best Barrel on the Market.**

It is Made of the Best Quality of Spruce, Woven Together with Copper Wire,

And can be furnished in any size desired.

THE CALIFORNIA BARREL IS ADAPTED TO SHIPPING THE FOLLOWING ARTICLES:

Apples,  
Oranges,  
Onions,  
Potatoes,

Sweet Potatoes,  
Dried Meats,  
Bottled Goods,

Glassware,  
Canned Meats,  
Crockery,

Eggs,  
Poultry,  
Walnuts,  
Almonds,

And Vegetables of All Descriptions.

A factory making these barrels is now in operation in San Francisco, with a capacity of 4000 barrels a day. The success of the barrel is almost unprecedented, and it is bound to become the package in a very short time. EVERY ONE USING IT IS ENTHUSIASTIC IN ITS PRAISE. IT HASN'T A FAULT. When shipped in knock-down form, about 2500 barrels can be placed in a single car. Special rates given on car lots. WRITE FOR PRICES AND PARTICULARS.

## MERY'S IMPROVED PIONEER BARLEY CRUSHER

— USING —

The Benoit Corrugated Rollers.

STILL AT THE FRONT.

This Mill has been in use on this Coast for 10 years,  
**TAKEN THE PREMIUM AT THE STATE FAIR**

Four years in succession, and has met with general favor,  
there now being

Over 250 of them in use in California, Nevada and Oregon.

It is the most economical and durable Feed Mill in use.

I am sole manufacturer of the Corrugated Roller Mill. The Mills are all ready to mount on wagons.

GRAINLAND, BUTTE CO., CAL., June 9, 1887

Mr. M. L. MERY—Dear Sir: We have used one No. 2 Roller Barley Crusher now for eight years and have used it steady during that time; have crushed 45 tons a day and the Crusher is as good to-day as when it came out of your shop. I am satisfied that it is the best mill made. You may reconstruct this testimonial to the best advantage for you and sign our names, for you cannot overrate the merits of your mill.  
F. E. REAM,  
JNO. P. SUTTON.

DURHAM, May 21, 1887.

Mr. M. L. MERY—Dear Sir: In reply to yours of the 19th, would say that I crushed from two to two and a half tons per hour, but could crush three and a half tons if my elevators were large enough to carry the barley from the machine. The No. 1 machine I used at Gridley was run on a sack a minute, but if we got behind we could run through five tons an hour and do good work. The machine I use here is a No. 2. Yours,  
WM. M. TAYLOR.

I thank the public for their kind patronage received thus far, and hope for a continuance of the same.

M. L. MERY, Chico Iron Works, Chico, Cal.
